ANTIOCHIANS [Gk *Antiocheis* (Ἀντιοχεις)]. Hellenized Jews living in Jerusalem enrolled as privileged citizens of Antioch (2 Macc 4:9, 19; see 1 Macc 1:13–14). "Antiochians" is the rendering of 2 Macc 4:9, 19 in the NAB. The term is variously rendered in other versions: "citizens of Antioch" or "Antiochian citizens" (RSV, GNB), "Antiochenes" (NEB), and "Antiochists" (JB, NJB). When Jason bought the high priesthood from Antiochus IV, his deal included the Hellenization of Jewish citizens through institution of the gymnasium, citizenship training, and enrollment as Antiochian citizens.

These Hellenized Jews did not form a united party in Jerusalem. In 175 some supported Jason, an Oniad, while by 172 another group supported Menelaus, a Tobiad whom Antiochus appointed high priest in Jason's place for a bribe (2 Macc 4:23–50). In 169, Jason and his supporters tried to retake Jerusalem upon hearing the false rumor that Antiochus IV had died in Egypt. Jason took the city, forcing the supporters of Menelaus to flee to the citadel for their lives. However, Antiochus' return forced Jason to flee. This power play among the Antiochian Jews incited Antiochus' violence against Jerusalem and his despoiling of the temple treasury, with Menelaus' help (2 Macc 5:1–16). In 167, Antiochus built a fortress and a mercenary garrison in Jerusalem to protect the Antiochians (2 Macc 5:22–26; 1 Macc 1:29–33). The Antiochian citizens became irrelevant after the success of the Maccabean revolt.

Three theories try to explain the nature of the Antiochian citizenship. First, Antiochus gave privileges to cities of his empire by making them into "Antiochs" and their citizens into "Antiochians" (Bevan 1966; Tcherikover 1959). Second, the Antiochians were a group of Hellenized citizens who gathered around the gymnasium as a surrogate for a true polis until a polis could be established (Bickermann 1979). Third, Antiochus, formerly a hostage in Rome, tried to imitate Roman extension of citizenship to people in cities of his empire in order to insure their loyalty (Goldstein *Maccabees* AB).

MITCHELL C. PACWA

ANTIOCHIS (PERSON) [Gk *Antiochis* (Ἀντιοχις)]. Concubine of Antiochus Epiphanes IV (2 Macc 4:30). Antiochus IV's official queen was Laodice, who may have been his sister. According to oriental custom, Antiochus IV assigned the maintenance of Tarsus and Mallus, two Cicilian towns, to Antiochis' care. The Seleucid kings ruled by right of conquest and had sovereign authority over their conquered domain to dispose of their lands as they wished. The revenues of the two cities were assigned to Antiochis for her maintenance, and she was probably given authority to intervene in official affairs of state, perhaps affronting the Cicilians' pride. The citizens of the two cities revolted in A.D. 170, demanding the immediate attention of Antiochus IV.

The coins of Tarsus indicate that Antiochus conferred the privileges of an Antiochene city upon Tarsus. An inscription from A.D. 166 indicates that Tarsus continued to enjoy the privileges of Antiochene citizenship after the revolt against Antiochis. Nothing is known of Antiochis or this rebellion apart from the reference in 2 Maccabees.

SCOTT T. CARROLL

ANTIOCHUS (PERSON). A Macedonian name (*"opposer"*) borne by the father of Seleucus I, founder of the Seleucid dynasty of Syria, hence favored by the following kings of the dynasty.

1. Antiochus I Soter (*"savior"*) (281–261 B.C.). Born 324 B.C., the son of Seleucus I and the Bactrian princess Apama, he was coregent before becoming king after his father was assassinated in 281 B.C. Having consolidated control over Syria, Antiochus renounced the Macedonian ambitions of Seleucus (a treaty made with Antigonus Gonatas, 278 B.C.) and concentrated upon expanding Seleucid power into Asia Minor. This brought him into conflict in 280/279 B.C. with Ptolemy II of Egypt, and later with the Gauls (Galatians), who had crossed the Hellespont in 278/277 B.C. after devastating Greece and Macedonia. The exact outcome of the First Syrian War (274–271 B.C.) with Ptolemy II is unclear, except that Coele-Syria continued under Egyptian control. It was Antiochus' victory over the Gauls in the so-called elephant battle of 275 (or 270) B.C. which gained him his title Soter, but he was defeated at Sardis in 262 B.C. by the Galatian mercenaries of Eumenes of Pergamum (paid for by Ptolemy). Like his father, Antiochus keenly promoted Hellenism through colonization, founding many cities particularly in Iran, and it was he who established the Seleucid ruler cult.

2. Antiochus II Theos (*"god"*) (261–246 B.C.). Coregent (from 268 B.C.) before succeeding his father, Antiochus I. His control of Asia Minor was soon challenged by Ptolemy II (Second Syrian War, 260–253[?] B.C.). Antiochus seems to have emerged the overall victor, but by offering a huge dowry Ptolemy prevailed upon him to make a dynastic marriage with his daughter Berenice. His repudiated wife, Laodice (Antiochus' half-sister), set up a rival court at Ephesus, which Antiochus had recently liberated (259/258 B.C.) from the tyrant Timarchus (it was this action which gained Antiochus his title Theos). Strife between the two queens was to culminate after Antiochus' death (246 B.C.) in the murder of Berenice and her son by Antiochus, and the Third Syrian (or Laodicean) War (246–241 B.C.) between Ptolemy III, Berenice's brother, and Seleucus II, Antiochus' son by Laodice. The events of his reign are alluded to in Dan 11:6–9.

3. Antiochus III the Great (223–187 B.C.). Born 241 B.C., the younger son of Seleucus II Callinicus, he succeeded his brother Seleucus III Soter in 223 B.C. In the Fourth Syrian War against Egypt (221–217 B.C., but interrupted in 220 B.C. by the revolt of Molon in Media) he reached Ptolemais in Phoenicia in

winter 218/217 B.C. before being defeated by Ptolemy IV Philopator at Raphia in Gaza on 22 June 217 B.C. (Polybius 5.51–87). Ptolemy thus regained control of Coele-Syria and Antiochus turned his attention eastward against Parthia, Armenia, and Bactria; it was his conquests there (212–205 B.C.) which gained him the title of the Great. On the accession of the young Ptolemy V Epiphanes (204 B.C.), he formed a secret alliance with Philip of Macedon to conquer and partition Egypt (Livy 31.14), and the Fifth Syrian War (202–200[?] B.C.) saw him extend Seleucid domination to the Sinai. An invasion of his kingdom from Pergamum, engineered by the Romans, who were becoming alarmed by Antiochus' energy and ambition, allowed the Egyptian general Scopas to recover the lost ground temporarily but Antiochus finally defeated the Egyptians at the Battle of Panium (200 B.C.). He thus gained control of all of Palestine. Military governors and a system of tax farming were introduced throughout Judea but the high temple of Jerusalem was guaranteed inviolate and granted subsidies (Josephus, *Ant* 12.3.3–4 §§129–53). Under the peace settlement of 195 B.C., Antiochus gave Ptolemy his daughter Cleopatra I with the revenues of Coele-Syria and Palestine as dowry but kept control of those areas himself. He now turned toward Asia Minor, settling 2000 Jewish families from Mesopotamia in Lydia and Phrygia as part of his pacification effort. His invasion of Thrace (194 B.C.) finally wore out Roman patience and a lengthy war ensued, which ended in his defeat at Magnesia in 190 B.C. The treaty of Apamea (188 B.C.) compelled him to send twenty hostages, including his son Antiochus IV, to Rome and to yield any claim to Asia Minor W of the Taurus. Warlike to the last, Antiochus was killed in 187 B.C., plundering the temple of Baal in Susa. The major events of his reign are alluded to in Dan 11:10–19.

4. Antiochus IV Epiphanes (*"manifest" [as a god]*) (175–164 B.C.). Younger son of Antiochus III, he returned from Rome when his brother Seleucus IV Philopator sent his own son Demetrius as hostage in his stead, and usurped the throne after Seleucus was assassinated. His unpredictable character—at one time generous to a fault, at another fiercely tyrannical—is described by Polybius, who gave him the nickname Epimanes (*"utterly mad"*) (26.1a.1), and by Diodorus (29.32) and Livy (41.20). It was his instability, verging upon insanity, which was to lead to the excessively harsh treatment meted out to the Jews by this otherwise energetic and capable ruler.

Antiochus' ambition was to use the common culture of Hellenism to unify the diversity of the Seleucid empire. Accordingly, he was easily won over by promise of payment from Jason, leader of the pro-Greek faction in Jerusalem, to make him high priest in place of his brother Onias III, and willingly allowed him to Hellenize the city by establishing a gymnasium and an ephebic class and by inscribing its citizens as Antiochenes (i.e., Jason may have wished to reorganize Jerusalem as a Greek polis called Antioch, although the exact interpretation is disputed).

This state of affairs, described in 2 Macc 4:7–22, lasted from ca. 174 B.C. to ca. 171 B.C. until Menelaus, another pro-Hellenist whose conduct was to be even more offensive to the orthodox, supplanted Jason by offering Antiochus even more for the high priesthood. Jason, however, reasserted his claim, apparently believing Antiochus had died while on his second campaign against Egypt (170/169 B.C.). He seized Jerusalem and besieged Menelaus in the citadel (2 Macc 5:5). Antiochus construed this as rebellion and, returning with his army to Syria in late 169 B.C., he savagely attacked the city, butchering its inhabitants and looting the high temple (2 Macc 5:11–23; Josephus, *Ant* 12.5.3 §§246–47).

Worse followed. Invading Egypt again the next year, Antiochus was met outside Alexandria by a Roman delegation led by C. Popilius Laenas and given an ultimatum to desist at once from all hostilities against Egypt or her territories. With his stick Popilius drew a circle in the sand around Antiochus, who had asked for time for consultation, and insisted that he decide before stepping out of it (Polybius 29.27; a famous incident retold by many other sources). Antiochus had no choice but to withdraw his forces. According to Dan 11:30, it was outrage at this affront that decided Antiochus to enforce his Hellenization policy upon the Jews, even to the extent of completely exterminating them and their religion.

In 167 B.C., Apollonius, his chief tax collector, was dispatched with 22,000 men and attacked Jerusalem on the Sabbath. Most of the male population was killed and the women and children enslaved; those few who could left the city. The city walls were demolished and the old city of David refortified (the Akra) and furnished with a military garrison (1 Macc 1:29–36; 2 Macc 5:24–26). There followed the prohibition

of all Jewish rites and the rededication of the high temple to Olympian Zeus. A monthly check was made, and anyone found with a copy of the Book of the Law or a child who had been circumcised was put to death (1 Macc 1:54–64; *Ant* 12.5.4–5 §§248–64). In December 167 B.C. (on 25 Kislev) the first pagan sacrifice was performed on the altar to Zeus which had been erected over the altar of burnt offering in the temple: this is *"the abomination of desolation"* alluded to in Dan 11:31 and 12:11 (cf. 1 Macc 1:54; Mark 13:14 in a Gk version).

Antiochus' decree, promoted vigorously throughout all his domains (2 Macc 6:8–9), was met at first only with passive resistance from the Jews, although of the most heroic kind (2 Macc 6:10–7:42; further elborated in *4 Maccabees*). Open defiance, however, soon followed, first at Modein, a village NW of Jerusalem, where the priest Mattathias refused to obey the local Syrian commissioner and sacrifice to the heathen gods. He killed the commissioner, overturned the altar, and fled with his sons to the hills (1 Macc 2:1–28; *Ant* 12.6.1–2 §§265–72). They were joined by others but many were massacred in a Syrian attack when they refused to defend themselves on a Sabbath (1 Macc 2:32–38; *Ant* 12.6.2 §§272–78). Mattathias persuaded the survivors that the right of self-defense had to take precedence and he was now joined by many of the Hasidim. His guerrilla bands traveled Judea, defying the prohibitions and harassing the Syrians (1 Macc 2:42–48).

When Mattathias died (166/165 B.C.), the leadership was taken over by one of his five sons, Judas Maccabeus, advised by his brother Simon. As the Jewish forces grew more confident, Judas continued his father's successes. These culminated in the rout of one Syrian force under Apollonius, whom Judas himself killed, and then another larger army under Seron, the local commander-in-chief (1 Macc 3:10–24; *Ant* 12.7.1 §§287–92).

News of the widespread revolt in Judea reached Antiochus when he was about to embark on a campaign in the E (165 B.C.). Lysias, left as vice-regent and guardian of Antiochus V, was ordered to depopulate the country. His generals Ptolemy, Nicanor, and Gorgias arrived in Judea with a large force, so confident that they had with them slave traders ready to purchase the Jewish prisoners (1 Macc 3:38–41; 2 Macc 8:8–11; *Ant* 12.7.3 §§298–99). That confidence, though, was misplaced. The Jewish forces under Judas, now organized into a regular army, evaded a large search party under Gorgias and fell upon the main force in camp at Emmaus, completely routing it. Finding their camp ablaze when they returned and the Jews ready to offer battle, Gorgias and his troops fled the country (1 Macc 4:1–25; 2 Macc 8:12–36; *Ant* 12.7.4 §§305–12).

The campaign was resumed (probably in fall or winter 165/164 B.C.) by Lysias himself with a larger army (1 Macc 4:28–35; *Ant* 12.7.5 §§313–15; although the historicity of this campaign is disputed). Judas met him near Beth-zur and once again won the day. The subsequent peace negotiations, which resulted in an amnesty for the Jews and an end to their active persecution, are probably reflected in the letters quoted in 2 Macc 11:16–21, 27–33, and 34–38.

Judas was now established in control of all Judea, except for the Akra (occupied by Syrian troops until their final expulsion by Simon in 142/141 B.C.), and could attend to purifying and restoring the temple. The new altar of burnt offering was dedicated in December 164, three years to the day (25 Kislev) after it had first been profaned (1 Macc 4:52–59; *Megillath Taanith* [ed. Lichtenstein] §23).

Antiochus meanwhile, after quelling the revolt of Artaxias of Armenia (165 B.C.), had invaded Elymais (Elam), where he was foiled in an attempt to sack the temple of Artemis (Aphrodite in some accounts). He withdrew to Tabae in Persia and died there in late 164 B.C. of consumption (according to Appian, *Syr.* 66), although several lurid accounts of his death through divine retribution are given by 1 Macc 6:1–17 (cf. *Ant* 12.9.1 §§354–59) and 2 Macc 1:13–17 and 9:1–29.

5. Antiochus V Eupator (*"born of a noble father"*) (164–162 B.C.), second son of Antiochus IV. Left under the guardianship of Epiphanes' foster brother Philip, he was only nine years old when he became king in 164 B.C. and was seized by the army commander Lysias, who made himself guardian and regent. After the Maccabean recovery of the high temple (December 164 B.C.; the letter in 2 Macc 11:22–26, purporting to be from Antiochus to Lysias, which guarantees Jewish religious rights, may come here rather than be part of the settlement of 162 B.C.), Judas laid siege to the Syrian garrison in the citadel

(163/162 B.C.). Antiochus and Lysias responded by invading Judea and besieging Beth-zur (1 Macc 6:18–31). After defeating Judas' army at Beth-zachariah (1 Macc 6:32–46; misrepresented as a Jewish victory by 2 Macc 13:15–17), they took Beth-zur and put Mt. Zion under siege. But news that Philip was advancing on Antioch compelled them to lift the siege and grant lenient terms. The Jewish fortifications were destroyed and the Jews again made subject to Syria but they had kept their religious freedom intact. Antiochus and Lysias soon defeated Philip but shortly afterward they were betrayed to a new pretender, Demetrius I Soter (162–150 B.C.) and were murdered (1 Macc 7:1–4; 2 Macc 14:1–2; *Ant* 12.10.1 §§389–90).

6. Antiochus VI Epiphanes Dionysus (*"the manifest Dionysus"*) (145–142 B.C.), son of Alexander Balas and Cleopatra Thea. He was still a child when Alexander's general Diodotus Tryphon promoted him as a claimant to the Seleucid throne, then occupied by Demetrius II Nicator (145–140/139 B.C.). Jonathan, who had initially helped Demetrius quell a revolt in Antioch by sending 3000 armed men (1 Macc 11:38–53), took their side when Demetrius broke his promise to withdraw from the fortresses of Judea. After Antiochus was set up as king, Jonathan and Simon were made his generals (1 Macc 11:54–59) but their subsequent successes alarmed Tryphon. He captured Jonathan by trickery and eventually killed him in 143/142 B.C. (1 Macc 12:39–53; 13:23–4) before having Antiochus murdered (by corrupt surgeons, according to some sources) and assuming the throne himself (1 Macc 13:31–32; *Ant* 13.7.1 §§218–20).

7. Antiochus VII Sidetes (*"man of Side"*) (138–129 B.C.), so called because his youth was spent at Side in Pamphylia. Younger brother of Demetrius II Nicator, he successfully contested the throne after the latter's capture by the Parthians, defeating the usurper Tryphon (*Ant* 13.7.1–2 §§221–24; Strabo 14.5.2 §668). To ensure Jewish support, he granted Simon the right to mint coinage as well as confirming all earlier privileges (1 Macc 15:1–9), but after his success he reneged and demanded the surrender of Joppa, Gazara, and the citadel of Jerusalem and the arrears of their tribute (1 Macc 15:26–36). Refusal led to war and the rout of his general Cendebeus by Simon's sons (1 Macc 15:38–41; 16:1–10; *Ant* 13.7.3 §§225–27). Later Antiochus himself invaded Judea and besieged John Hyrcanus in Jerusalem (135/134 B.C.). After a lengthy siege the city was surrendered on terms and its walls demolished (*Ant* 13.8.2–3 §§236–48; the exact dates of the siege remain uncertain). Antiochus was killed in 129 B.C. while campaigning against the Parthians, leaving the way clear for Hyrcanus to continue the expansionist policies of Jonathan and Simon.

8. Antiochus VIII Grypus (*"hook-nosed"*) (125–96 B.C.). Born 141 B.C., the second son of Demetrius II Nicator and Cleopatra Thea. He reigned jointly with her from 125 to 121 B.C. In 114/113 B.C. he was deposed by his half-brother Antiochus IX Cyzicenus but returned in 111 B.C. and regained most of Syria, Cyzicenus retaining only Coele-Syria (Porphyry, Eusebius *Chron.* I. col. 260). The continuing conflict between them meant that Judea under John Hyrcanus was once more completely independent of Syria (*Ant* 13.10.1 §§273–74).

9. Antiochus X Eusebes (*"pious"*) (95–83 B.C.). Son of Antiochus IX Cyzicenus, he spent most of his reign in dynastic struggles with the five sons of Antiochus Grypus (Seleucus VI, deposed in 95 B.C.; Antiochus XI Philadelphus, defeated and killed after a brief time in power [94 B.C.]; Philip I Philadelphus [94–83 B.C.]; Demetrius III Philopator [95–88, B.C.]; and Antiochus XII Dionysus [87–84 B.C.], killed in battle against the Nabateans). These years, described in detail by Josephus (*Ant* 13.13.4 §§365–71; 14.3–15.1 §§384–91), represent the death throes of the Seleucid dynasty. In 83 B.C., Tigranes, king of Armenia, seized Syria and ruled it for fourteen years via a viceroy until his own defeat by the Romans (69 B.C.).

10. Antiochus XIII Asiaticus (69–64 B.C.), son of Antiochus X Eusebes. Set up as a client king by Lucullus after the defeat of Tigranes, Antiochus was challenged and deposed by Philip II, grandson of Antiochus Grypus, in 65/64 B.C. The Seleucids' rule over Syria was finally ended by Pompey in 64 B.C. and Syria was made a Roman province (63 B.C.).

11. Unrelated to the Seleucid dynasty is Antiochus, father of the Numenius who was one of the envoys sent by Jonathan Maccabeus in 144/143 B.C. to negotiate friendly relations with Sparta and to renew the treaty made by Judas Maccabeus with the Romans (1 Macc 12:16; 14:22; *Ant* 13.5.8 §§163–70).

JOHN WHITEHORNE

ANTIPAS (PERSON) [Gk *Antipas* (Ἀντιπας)]. An abbreviated form of the name *Antipatros* (Antipater).

1. A martyr of the Church in Pergamum, described as Christ's faithful witness (Rev 2:13); the same description is given to Christ himself (Rev 1:5). Legend among later hagiographers (e.g., Simon Metaphrastes and the Bollandists) has it that Antipas was slowly roasted to death in a brass bull during the reign of Domitian (Mounce, *Revelation* NICNT, 97).

2. Father of Antipater (see no. 3, below). According to Josephus, King Alexander and his wife made Antipas "general of all Idumea" (*Ant* 14.1.3).

3. Father of Herod the Great, also known as Antipater. Josephus described him as an Idumean who was procurator of Judea (*Ant* 14.1.3). See HEROD THE GREAT.

4. Son of Herod the Great and Malthrace who was appointed tetrarch of Galilee and Peraea (Hoehner 1980; *HJP²* 1: 340–53). In the NT he is always referred to as Herod and is mentioned in the gospels as the king who had John the Baptist arrested and executed (Matt 14:3–12 = Mark 6:17–29; *Ant* 18.5.2) and subsequently interrogated Jesus during his trial in Jerusalem (Luke 23:6–12). See also HEROD ANTIPAS; HERODIAS.

ANTIPATER (PERSON) [Gk *Antipatros* (Ἀντιπατρος)]. Son of Jason (1 Macc 12:16; 14:22). He is mentioned twice as an envoy sent by Jonathan with Numenius, son of Antiochus, to Rome and Sparta. Their purpose was to seek the renewal of friendship and alliance with Rome and Sparta (1 Macc 12:1–23). The successful completion of their mission to Sparta is recorded in a letter from Sparta (1 Macc 14:20–23) which mentions the honorable reception of the envoys. If, as scholars suggest, 1 Macc 15:15–24 is dislocated in the present text and should be relocated after 14:24, then the Roman response would be seen in the letter from the consul Lucius. In this case Antipater would still be in the company of Numenius (1 Macc 15:15), who would have been directed back to Rome after Jonathan's death on behalf of Simon (Goldstein *1 Maccabees* AB, 492–500). Antipater was chosen as envoy because of his father Jason, son of Eleazar, who undertook a similar mission under Judas Maccabeus (1 Macc 8:17–32).
RUSSELL D. NELSON

ANTIPATRIS (PLACE) [Gk *antipatris* (ἀντιπατρις)]. The city to which Paul was taken on his way from Jerusalem to Caesarea (Acts 23:31). Also, at Matt 13:54 Codex Sinaiticus originally had Jesus "coming to Antipatris," but the *anti-* was subsequently crossed out so that it read (correctly) "home country" (Gk *patris*). Antipatris has been identified with Tell Ras el-ʿAin (M.R. 143168) on the source of the Yarkon River 26 miles S of Caesarea. One of the five biblical towns named "Aphek/Aphekah" occupied this site in pre-Hellenistic times. See APHEK, no. 4. Extensive archaeological excavations (see bibliography) and the abundance of written documents mentioning this city make it possible to reconstruct the long history of the site.

A. Bronze Age

The earliest occupation at Ras el-ʿAin dates to the Chalcolithic period (4th millennium B.C.), but the first walled city was erected there only in the EB Age (ca. 3200 B.C.). The site was therefore one of the earliest walled cities in Palestine, comprising more than 30 acres at the time. Fine earthenware bowls

produced in this EB city were appreciated by many of the inhabitants of the cities in the central hill country and Negeb. This town was probably the central city of the Sharon plain during most of the 3d millennium B.C.

After the collapse of the EB civilization the site was deserted for a time (2300–2000 B.C.), but a new town was built there at the advent of the MB Age (2000–1550 B.C.). The archaeological finds and the historical sources demonstrate that during the MB Age this city—Aphek—was once again the most prominent city of the Sharon plain. In the Egyptian Execration Texts of the 19th–18th centuries B.C. it was listed as the town of "Apiqum," ruled by "Yanakilu," a prince with an Amorite name. Its importance at that time is probably reflected in the appelation "Aphek of the Sharon" in the LXX (Josh 12:18). Six archaeological stages have been distinguished at MB Aphek: (1) resettlement of the site; (2) building of the city walls and of Palace I; (3) building of Palace II and restoration of the city walls; (4) Palace II abandoned; (5) building of Palace III; and (6) restoration of Palace III. There was violent destruction of the site by the mid-16th century B.C.

Under the Egyptian empire (LB Age), the city of Aphek was reduced to a strategic stronghold on the Via Maris. It appears among the cities on the coastal road in Thutmose III's topographical lists and as a town in the S Sharon in the annals of Amenhotep II (*ANET,* 246). Palaces IV and V (of the 15th–14th centuries B.C.) were built on the acropolis on a smaller scale but with the same orientation as the MB palaces. Palace VI of the 13th century, however, was just a small fortified residency built for the Egyptian governor who now ruled Aphek in place of a local prince. This reverse in government probably occurred when Rameses II took measures to strengthen his military bases in Canaan before marching into battle against the Hittite forces in Syria. Two similar lime-coated winepresses were found near this Palace VI residency, containing Canaanite wine jars of the same type as those from the residency's storerooms. Egyptian pottery bowls and other Egyptian artifacts were found in the debris, fallen from the residency's upper story.

The Palace VI residency appears to have been attacked, conquered, and put to fire during the last third of the 13th century. Egyptian artifacts and various inscriptions were found in the debris of its upper floor; however, two cuneiform tablets warrant special mention. One is a trilingual lexicon (the first and only of its kind) that has, in addition to Akkadian and Sumerian, Canaanite written in its third column. The other is a letter sent from the governor of Ugarit to the Egyptian high commissioner of Canaan. Written in Akkadian, it deals with the transactions of wheat between Canaan and Ugarit, taking place in the harbor cities of Jaffa and Acco. The letter has been dated to ca. 1230 B.C. on prosopographic grounds (see Owen et al. 1987), and this must have also been the date of the final destruction of Canaanite Aphek. In the OT, Aphek is mentioned for the first time in the roster of Canaanite cities conquered by Joshua (Josh 12:18).

B. Iron Age

Aphek was resettled during the 12th century B.C. by a people of unknown origin. The architecture of their houses is paralleled only at Tell Abu Huwam in Haifa Bay. Fishing was essential in their subsistence economy. Typical Philistine artifacts, including several female deity figurines ("Ashdodah"), attest to the presence of the Philistines at Aphek during the 11th century B.C. A clay tablet from this level, bearing an undeciphered inscription, may be a clue to the yet unknown Philistine script. This Aphek is mentioned several times in the Bible as a Philistine base. It was there that the Philistines had gathered their armies before the Battle of Ebenezer (1 Sam 4:1) and from there David was sent back to Ziklag when the Philistines summoned their armies before the Battle of Gilboa (1 Samuel 29). ›Izbet Sartah, an early Israelite settlement located 2 miles E of Aphek, has been suggested as the possible site of Ebenezer.

Israelite Aphek was rebuilt during the period of the united monarchy, but was devastated by an enemy around 900 B.C. and never totally recovered. Because of its strategic location the site was mentioned in several documents of the time. The OT states that Hazael took from the hands of Jehoahaz king of Israel the seacoast as far as Aphek (2 Kgs 13:22b). Esarhaddon, king of Assyria, mentioned "Apiqu, which is on the border of Samaria," as a station on his march toward Egypt. In an Aramaic letter of about 600 B.C., written to the pharaoh probably by the king of Ekron, Aphek is mentioned as the place at which the marauding Babylonians were last intercepted.

C. Hellenistic and Roman

The town prospered again in the Hellenistic period under the name of Pegai, and it was renamed "Antipatris" by Herod the Great, in honor of his father Antipater (*Ant* 16.5.2; *JW* 1.21.9). Its importance during the Roman period was mainly as a crossroad town, halfway between Jerusalem and Caesarea. Paul stayed there overnight on his two-day journey from Jerusalem to Caesarea (Acts 23:31). The town was destroyed by Vespasian during the Jewish War (*JW* 4.8.1), was rebuilt again on a larger scale, and was totally decimated by the earthquake of A.D. 363, never to be restored.

Archaeological rescue excavations were carried out at Ras al-ʿAin (or Tel Aphek) by the Palestine Department of Antiquities and by the Israel Department of Antiquities. Major excavations were carried out at the site by Tel Aviv University Institute of Archaeology from 1972 to 1985.

ANTIPHRASIS. Saying the opposite of what is meant, as for example when Job's wife urges Job to "bless" (*brk;* i.e., curse) God and die (Job 2:9). See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

ANTONIA, TOWER OF (PLACE) [Gk *to anastēma tēs Antonias* (το ἀναστημα της Ἀντονιας); Lat *turris Antonia*]. Primary military fortification of Jerusalem adjoining Herod's temple under both Herodian and Roman rule and called the Antonian Fortress (*JW* 5.5.8 §240).

Specific reference to the fortress does not occur in the NT, but rather in the pages of historians, particularly Josephus. The latter describes the structure in meticulous detail, providing information that it was located where the N and W angles of the temple conjoined, built upon a rock 50 cubits high and from there rising an additional 40 cubits. At each corner of its rectangular walls the fortress was surmounted by turrets that reached the height of 50 cubits in all but its SE corner. There, in a commanding position, a great turret of 70 cubits overlooked the temple and its courtyards. Inside, the fortress was furnished as lavishly as a palace with baths, courtyards, and quarters for a large number of troops (*JW* 5.5.8 §§238–45). Clearly the fortress was strategically located to accomplish Herod's purpose of dominating the temple through a garrison which could readily allay any disturbance that might arise in the temple precincts (*JW* 1.21.1 §401).

The fortress was not actually a new construction by Herod, but rather a major renovation and expansion of an existing fortification known as the Baris [Heb *bira* fortress]. According to Josephus (*Ant* 15.11.4 §403), this structure dated from the time of Hyrcanus I (135–105 B.C.) and occupied the site of an even earlier fortification, the Tower of the Hundred in Nehemiah's wall (Neh. 3:1). The Baris was much used and "formed a safe and convenient residence for the Hasmonean princes at the times when they were obliged to perform high priestly duties in the temple" (Paton 1977: 131). The exact ground on which the Antonian tower was constructed has yet to be determined. The fortress itself was destroyed during Titus' siege of Jerusalem in 70 A.D. when it was invested and later razed by the V and XII Roman legions (*JW* 5.11.4 §467; 6.2.1 §93). The site of the tower, along with the whole temple area, comprised the location of one of two fora in Hadrian's Aelia Capitolina, built over the ruins of Jerusalem a century after its

destruction. Foundation stones often attributed to Herod's fortress complex seem rather to belong to Hadrian's forum, and archaeological efforts to locate the fortress precisely remain inconclusive (Benoit 1976: 87–89; Benoit 1952: 545–50; Peters 1985: 76).

Herod named his fortress in honor of his friend, the Roman triumvir Marcus Antonius (Tac. *Hist.* 5.11; *JW* 1.21.1 §401; *Ant* 15.11.4 §409). It was to Mark Antony that Herod owed his rule over Judea. When the Hasmonean Antigonus, with the aid of Parthian intervention, wrested back control from Herod's father, the Roman procurator Antipater, Herod fled to Rome and, with Antony's support and a compliment of 11 legions under the command of Antony's lieutenant Sosius, reasserted his authority in Judea. At Antony's urging, the Roman Senate created Herod king of Judea (Tac. *Hist.* 5.9; App. *BCiv.* 5.75; Dio Cass. 49.22; *JW* 1.14.3 §280–18.3 §357; *Ant* 14.14.3 §377–16.4 §491; Huzar 1978: 160–66). The strategic position of the Antonian fortress on a height commanding both city and temple did not escape the notice of the Romans, who after Herod also garrisoned the tower (Tac. *Hist.* 5.11–12; Peters 1985: 75–76). Whether the tower served as the *praetorium,* or administrative headquarters of the Roman procurator, is questionable. Herod's palace was more likely used in this capacity and as residence of the governor (Benoit 1952: 531–45).

ANTONY, MARK. See MARK ANTONY.

ANUB (PERSON) [Heb *ʿānûb* (עָנוּב)]. A son of Koz recorded in a from the genealogy of Judah (1 Chr 4:8). The name has been identified with ANAB in Josh 11:21 and 15:50. Grammatically, Anub is a passive participle ostensibly from the root *ʿnb,* the nominal form of which means "grape." The meaning of the name itself is not clear and has been variously defined as "bound, tied" or "modest."

JAMES M. KENNEDY

APAME (PERSON) [Gk *Apamē* (Ἀπαμη)]. A concubine of Darius I (521–486 B.C.) who wielded much power over her king, according to 1 Esdr 4:29–32. The apocryphal author informs us that it was not one of Darius' wives, i.e., Atossa, Artystone, Parmys, and the daughter of Otanes, but Apame, daughter of Bartacus the Illustrious (or Thaumastos Bartacus), who "dominated" the king. Apame's historical significance is preserved solely through an illustration of women's power given at "The Banquet of Darius" (1 Esdr 3:1–4:63). Darius probably captured Apame during his conquest of the Greeks (Herodotus 3–6).

Concubines were commonplace at the Persian court. Darius' father, Artaxerxes, had 360 concubines, seeing one per day. Persian soldiers had permission to take concubines on military excursions. However, Apame's actions—teasing and mocking the king—are inconsistent with the contemporary mores and gender roles. Even the queens survived under the mercy of the king (Esth 1:15–20; and the role of Darius' queen Atossa in Aeschylus' *Pers.*). The context of the Apame story obviously stands in stark contrast to the biblical account (Ezra 1–8). Three major differences between the accounts are (1) the king under whom Zerubbabel returned—Cyrus (Ezra 2:2) or Darius (1 Esdr 4:13); (2) the nature of Zerubbabel's authority—God of Israel and King Cyrus (Ezra 4:3) or King Darius (1 Esdr 4:47–58); and (3) Zerubbabel's reason for involvement—heritage and the law of Moses (Ezra 3:2) or cleverness and application of the Apame story (1 Esdr 3:1–4:63).

Numerous cognates of Apame and references to Persian concubines are known: wives of Seleucus I Nicator, Magas, and Prusias were all named Apama. And at least six ancient sites were named Apamea.

JERRY A. PATTENGALE

APELLES (PERSON) [Gk *Apellēs* (Ἀπελλης)]. A Roman Christian who received greetings from Paul in Rom 16:10. Paul called him "approved in Christ." Within the literary sources and in more than 37,000 Roman inscriptions, Apelles' name occurs only twenty-seven times (Lampe *StadtrChr,* 138–42, 149, 153). Since the name was not common there, it probably indicates that Apelles had immigrated to Rome from the east of the Roman Empire.

Sinaiticus and some minuscules read *apellēs* instead of *apollōs* in Acts 18:24 and 19:1. These writers probably identified the Christian Alexandrian scholar of Acts 18:24–28 with the Roman Christian of Rom 16:10, and suggested that the latter was "approved" because "through grace he greatly helped [the Christians in Greece] … showing by the scriptures that the Christ was Jesus" (Acts 18:27–28). Indeed, in the 2d century C.E. a (gnostic-Marcionite) scholar named Apelles had studied in Alexandria and afterward taught in Rome (see Lampe *StadtrChr,* 350–51). With this in mind and by confusing the 1st and 2d centuries, Sinaiticus may have merged the two NT persons. All other important manuscripts correctly read *apollōs* in Acts 18–19 (cf. also 19:1 with 1 Cor 1:12; 3:4–15).

PETER LAMPE

APHAIREMA (PLACE) [Gk *Aphairema* (Ἀφαιρεμα)]. Samarian district that became part of Judea during the early Hasmonean era (1 Macc 11:34). The unprincipled Demetrius II Nicator ("the conqueror"; 145–141 B.C.) promised Aphai-rema ("separation") to Judea's high priest/governor in exchange for loyalty (1 Macc 11:34). The Seleucid king also promised the Samaritan districts of Lydda (Lod) and Ramathaim (Arimathea). But Judea did not realize the actual confirmation of these transfers until the reign of Antiochus VI—who was still preoccupied with the Seleucid-Ptolemaic power struggle. Aphairema consisted of the SE region of Samaria, which was predominantly mountainous (Ezra 2:33; Neh. 7:37). Later, as the NE region of Judea, Herod the Great (d. 4 B.C.) renamed Aphairema as the Thamniticam toparchy, after its new capital Thamna—W of the town Ahairema. During Rome's municipal territory system, the town Ahairema (*et Taiyibe,* Eusebius' Ephraim, *On.* 24.3) was in the Aelia Capitolina territory and just S of the Neapolis boundary. The Romans most likely routed the Jerusalem–Gophna road through Aphairema during the Bar Kokhba revolt (Avi-Yonah 1976: 185).

JERRY A. PATTENGALE

APHEK (PLACE) [Heb *ʾăpēq* (אֲפֵק)*; ʾăpēqâ* (אֲפֵקָה)*; ʾăpîq* (אֲפִיק)]. Var. APHIK; APHEKAH.

The place name Aphek appears eight times in the MT as *ʾăpēq* or *ʾăpēqâ* (Josh 12:18; 13:4; 19:30; 1 Sam 4:1; 29:1; 1 Kgs 20:26, 30; 2 Kgs 13:17). A ninth reference to *ʾăpēqâ* (Josh 15:53) is translated "Aphekah" in the RSV (see APHEKAH; and no. 5 below). The form *ʾapîq* (RSV "Aphik") occurs in Judg 1:31. The Lucianic version of the LXX provides a final scriptural reference to Aphek in a verse appearing after 2 Kgs 13:22 (see no. 4 below).

To the earliest scholars it was already clear that these referred to several places. Eusebius, for example, already distinguished four places of this name (Klosterman 1904: 22, line 21; 26, line 15; 30, line 16; 34, line 11). However, the exact number and their geographical locations remain a matter of controversy. The name also appears in other ancient written sources. Some of these references—such as those appearing in the topographical list of Thutmose III, in the description of the military campaign of Amenhotep II, and the reference to "the tower of Aphek" by Josephus (*JW* 11.19.1)—can each be related to one of the biblical Apheks (see no. 4 below). Other references, such as that in the Execration Texts (Posener 1940: 69, E9), lack additional geographical information and are therefore difficult to relate to one specific Aphek.

Albright's (1922) suggestion that there were five biblical Apheks is accepted here. Albright also suggested, however, that the name Aphek is connected with the Assyrian *apēqu*—"be strong, firm, solid"—and means a fortress. Other scholars relate the name to the Hebrew *ʾapîq*—valley bed/river

torrent (Alt 1925: 52–53, 53 n.1). Since some of the sites proposed for these various Apheks are situated alongside rivers or near springs of water, the latter explanation seems preferable.

1. Aphek of Asher. A town in the tribal territory of Asher listed in the group of cities at the end of the description of the territory of Asher (Josh 19:29–30) and again (as Aphik) in the list of cities that the tribe of Asher did not inherit (Judg 1:31). These two lists were almost certainly derived from a common source. Some have identified this Aphek with Tel Kurdana (M.R. 160250) at the sources of the Na'aman River 9 km SE of Acco (Alt 1928: 58–59; Mazar 1939), and consequently the kibbutz founded nearby has been named Aphek. Alternatively, others (Saarisalo 1929: 32, no. 1) have associated it with Tel Kabri (M.R. 164268), a large site of 32 hectares, 4 km E of Nahariya. There are four large springs in its vicinity, the richest in the center of the site. The name Tel Kabri is a modern one, the site encompassing the ruins of the villages et-Tell, en-Nahr, and the N area, Dhahrat et-Tell. The site is presently being excavated (Kempinski and Miron 1987; Kempinski 1987; 1988). The cities not inherited by Asher were more probably in the northerly parts of the coastal plain, and therefore the identification with Tel Kabri is preferable. Both Tel Kurdana and Tel Kabri contain considerable MB remains, allowing for the identification of the Aphek of the Execration Texts at either site.

2. Aphek of Aram. A town in or near the territory of Aram (Syria) from which Ben-hadad, king of Damascus, departed for battle against Ahab, and to which he retreated after being defeated (1 Kgs 20:26–30). The reference to the God of Israel being a God of the mountains (1 Kgs 20:23, 28) implies that the battle took place in the plain. Elisha's prophecy (2 Kgs 13:17) presumably refers to the same Aphek. Thus, Aphek is to be sought in Aramean territory but near or in the plain and on the route to Israel.

Eusebius (Klosterman 1904: 22, lines 19–22) refers to "a large village called Apheka of the town Hippos" in the Golan area; however, there he located the Aphek (Heb *ʾăpēqâ*) of Josh 13:4 (see no. 3 below), not the one mentioned in 1–2 Kings. The Apheka of Eusebius is to be identified with modern Fiq (M.R. 216242), 4 km E of Qalat al Hisn (Hippos-Suseita). Early finds have not been reported from this site, and Aharoni (*LBHG,* 304, n.60) suggested placing the biblical Aphek instead at Kh. el'Asheq (ʿEin Gev) on the shore of Lake Kinnereth (M.R. 210243). Recently, however, D. Ben Ami has discovered a tell by the name of Tel Soreq (M.R. 215242) in the valley to the NW of Fiq and suggested that it is the biblical Aphek. In excavations carried out at this site Iron Age fortifications of the 8th and 9th centuries have been uncovered, as have finds from the EB IV, MB II, and LB II periods (Beck and Kochavi 1987–88). The site is very small, however, so that identification with Aphek remains in doubt.

3. Aphek in Lebanon. A town defining a portion of the border of "the land that yet remains (to be possessed)," mentioned alongside references to Sidonian and Amorite territories (Josh 13:4). Eusebius, who understood "the borders of the Amorites" to refer to Transjordan (Exodus 21; Numbers 21, 32, etc.), located this Aphek in the Golan (Klosterman 1904: 22, lines 19–22). However, although the text is corrupt and attempts at complete restoration remain conjectural, vv 4–6 almost certainly demarcate a region the N border of which is the border of the land of Canaan (Num 34:7–9), while its S border constitutes the N limit of the tribal territories as described in Joshua (Aharoni *LBHG*, 215–17; Naʾaman 1986: 39–73). Noth (1938: 48–49) understood Aphek to mark the S border of "the land that remains" and suggested that it was probably the Aphek of Asher (see no. 1 above) or even that in Sharon (see no. 4 below). The other portions of the description are from S to N, however, and the identification of Aphek with Afqa (M.R. 231382) on the sources of Nahr Ibrahim in Lebanon NE of Beirut seems likely (Dussaud 1927:14). This reinforces the identification of Lebo Hamat ("the entrance to Hamath," Num 34:8) with Lebwe to the E of Afqa (Elliger 1936: 44), thus placing Aphek on the N border of Canaan.

4. Aphek in Sharon. A town in the Sharon plain area whose king was listed as being defeated by the Israelites at the time of Joshua (Josh 12:18). The text is problematic, however. The MT reads, "the king of Aphek, one; the king of Lasharon, one," while the LXX seems to presuppose "the king of Aphek of Sharon, one." Its relative proximity to Philistine territory is confirmed by 1 Sam 4:1 and 29:1, as well as by the Lucianic version of the LXX, in which the note that "Hazael took from [Jehoahaz'] hands all Philistia from the Western Sea to Aphek" appears after 2 Kgs 13:22 (=4 Kgdms 13:22). This Aphek on the coastal plain is referred to in a number of other ancient sources, most notably Thutmose III's

topographical list (No. 66) (Simons 1937: 117), Amenhotep II's second Asiatic campaign (Edel 1953; *ANET,* 246), Esarhaddon's campaign to Egypt (*ANET,* 292), an Aramaic papyrus mentioning the king of Babylon at Aphek (Porten 1981: 36), and the tower of Aphek in or near Antipatris (*JW* 2.19.1).

Early scholars did not identify a town by the name Aphek in the Sharon; without exception they followed Eusebius in placing the Aphek of 1 Sam 29:1 in the Jezreel Valley (Klosterman 1904: 30, line 16). The current identification of this Aphek with the tell of Ras el-ʿAin (M.R. 143168) at the sources of the Yarkon River was the result of the work of a series of scholars over a period of several decades. Wellhausen (1889: 254) was the first to show that the Philistines mustered their forces at Aphek *before* going up to Jezreel, demonstrating that the events took place in the following order: (1) 1 Sam 28:1–2; (2) 1 Samuel 29; and (3) 1 Sam 28:3–25. He also suggested that at the Battle of Ebenezer (1 Sam 4:1) the Philistines mustered their forces at this same Aphek, and that the later battles against Aram (see no. 2 above) were fought at the same Aphek somewhere in the N Sharon. Smith (1895), however, was the first to utilize Egyptian documents to show that Aphek was in the S Sharon. Guthe (1911) showed that Josephus' reference to the tower of Aphek connected Aphek to Antipatris, which was already known to be on Tel Ras el-ʿAin. Alt was the first to suggest that Aphek was actually on the tell, but it was Albright (1923a; 1923b) who published his views first, Alt only publishing his later (Alt 1925: 50–53). See also ANTIPATRIS.

5. Aphekah in Judah. One of the nine towns listed in the sixth district of Judah, the capital of which is presumed to have been Hebron; the RSV renders the name as APHEKAH (Josh 15:33). Alt (1932: 16–17) identified this town with Kh. el Hadab (M.R. 155098) 7 km SW of Hebron, while Abel (*GP,* 2: 247) identified it with Kh. Kan'an (M.R. 157102) 3 km SW of Hebron. Kochavi's recent survey, however, confirms the identification of this Aphekah with Kh. el Hadab, a site 4.5 acres in size with remains of fortifications and large quantities of Iron Age sherds. Below the site are two large springs, ʿEin el Dibleh and ʿEin Fawar (Kochavi 1972: Site 176, 22, 29, 62, 68).

RAFAEL FRANKEL

APHEKAH (PLACE) [Heb ʾ*ăpēqâ* (אֲפֵקָה)]. A town situated in the central hill country of Judah (Josh 15:53), within the same district as Hebron. The only OT reference to this settlement, whose name perhaps means "enclosure" or "fortress" (from the root ʾ*pq*, "hold," "be strong"), occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). The location of Aphekah is not well known, although it most probably lay SW of Hebron. Suggested identifications include Khirbet Kana'an (*GP*, 247; M.R. 157102), Khirbet el-Hadab (Alt 1925; M.R. 155098), and Khirbet Marajim (Boling and Wright *Joshua* AB, 389; M.R. 152099). Only the latter identification is supported by evidence of occupation during the Iron Age (Kochavi 1974: 3 n.2).

WADE R. KOTTER

APHERRA (PERSON) [Gk *Apherra* (Ἀφερρα)]. A servant of Solomon whose descendants returned from exile in Babylon with Zerubbabel (1 Esdr 5:34). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:57; Neh 7:59). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and persons described in 1 Esdras have cast doubt on the historicity of the text. Heltzer (1977: 66) suggests that Apherra is a Gk rendering of the Heb ʾ*prḥ*.

MICHAEL DAVID MCGEHEE

APHIAH (PERSON) [Heb ʾ*ăpîaḥ* (אֲפִיַח)]. The ancestor of Saul ben Kish, the first King of Israel (1 Sam 9:1). The name may mean "sooty" (McCarter *1 Samuel* AB, 168) or, alternatively, "large foreheaded" (*IPN*, 227). LXX^{A} offers the variant form Aphech, which presumes a final *qop* instead of a final *ḥet*.

The genealogy for Saul in 1 Sam 9:1 probably represents a use of the motif of the seven-generation pedigree as a literary device to emphasize Saul's destiny to greatness from birth (Sasson 1978: 185). Apparently only six generations of names from Saul's family were known, forcing the author to include an unnamed "Yimnite man" as Aphiah's father and the founding generation to enable him to employ the literary device. The MT and LXX^{B} both describe Aphiah as "the son of a Yim (i)nite man." The LXX offers a variant reading, "a Yim (i)nite man," which would appear to indicate Aphiah's own clan affiliation instead of that of his father, and which loses the seventh generation from the genealogy. Since the opening phrase in the verse describes Kish as a Benjaminite, there is no need to repeat the Benjaminite affiliation of the founding ancestor, and the Hebrew text does not read "*Ben*jaminite" for Aphiah's father, but merely "Yiminite."

It appears that the founder of the Saulide family is not to be associated with the tribe of Benjamin, which is the common presumption (i.e., Hertzberg *1 and 2 Samuel* OTL, 75; McCarter *1 Samuel* AB, 164, 167), but rather with the neighboring Asherite clan of Yimnah (1 Chr 7:35), probably located in southeastern Mt. Ephraim in the vicinity of Bethel (Edelman 1988: 44–58). The same clan is found subsequently in the story in v 4 as the third territory within Mt. Ephraim that Saul traversed in search of his father's lost asses. The author of the story appears to have deliberately introduced word play between *Ben*jaminite (*bny-myny*) and Yimnite (*ym (y)ny*) and to have used it to foreshadow Saul's kingship over the portion of Mt. Ephraim that was toured in quest of the asses, the symbol of royalty par excellence in

Israel and other Semitic ANE societies. He was implying that Saul had a legitimate claim to dominion in the area because of his ancestral roots in Yimnah. Later editors apparently misunderstood the original author's intention and presumed that "Yimnite" was a shortened or defective reference to "Benjaminite," leading one to introduce the medial *yod* into both occurrences of the name in 1 Samuel. A similar misunderstanding probably produced "Yiminite" from an original reading "Yimnite" in 2 Sam 20:1 and Esth 2:5. The Syr and Targum readings reflect the same presumption that the phrase designates Benjamin.

It is possible to suggest that the MT and LXX^B text preserves a conflated reading of the two variants "Yim (i)nite man" and "Benjaminite" (i.e., Hertzberg *1 and 2 Samuel* OTL, 75; McCarter *1 Samuel* AB, 168). However, four factors indicate that the MT and LXX^B reading is correct as it stands: the genealogical context of the list, which would favor the retention of the term "son" to express the filial relationship between Aphiah and the following person; the existence of the seven-generation motif as a documented ancient literary device; the introductory identification of Kish as a Benjaminite that would render a subsequent mention of Benjamin superfluous; and the identification of Aphiah's father as a Yim (i)nite rather than a *Ben*jaminite. The LXX^L would appear to reflect a loss or dropping of the word "son" by a scribe who did not understand the force of the phrase.

Aphiah's absence from the Saulide genealogy in 1 Chr 8:33–40 and 1 Chr 9:39–44 is probably due to the Chronicler's artificial grafting of the Saulide family tree onto the postexilic genealogy of the clans inhabiting Gibeon, which resulted in the deletion of the names of four known Saulide ancestors (for details and alternate suggestions, see NER and ABIEL).

APIS (DEITY). The sacred bull-god of Egypt, whose sudden departure is ridiculed by the prophet Jeremiah as a signal of the catastrophe that is about to befall Egypt (Jer 46:13–15). The biblical passage is problematic. The MT suggests that v 15 is a bicolon: *maddûaʿ nisḥap ʾabbîreykā / lōʾ ʿāmad kî yhwh hădāpô* ("Why was your majesty [?] swept away? / It could not stand because Yahweh expelled it")—although some Heb mss read a singular *ʾbyrk*, "your bull." The LXX translates the verb *nisḥap* ("it was swept away") as *ephygen ho Apis* ("Apis has run away"), suggesting a Heb *Vorlage* of **nās ḥap* ("Apis has fled")—*ḥap* being the Heb form for the name of this bull-god (cf. Eg *ḥpw*). Thus, v 15 would be rendered as a tricolon that makes explicit reference to this well-known Egyptian deity: "Why has Apis fled? / Your bull not stand? / Surely Yahweh has expelled him!"

Festivals associated with Apis began very early in Egyptian history and are recorded on 1st Dynasty inscriptions as well as on the Palermo stone (recto iii:12; see also Ael. *NA* 11.10). Although he was a fertility deity associated with procreation as well as agricultural bounty, Apis also enjoyed celestial associations. During the New Kingdom period he came into close association with Ptah, the principal deity of Memphis, and was invoked as the "manifestation" and "hypostasis" of Ptah (Sandman 1946: 196–98). While this might suggest that Apis was simply the visible form of Ptah (Hornung 1982: 136), the two were nevertheless distinct deities and were never confused.

When an Apis bull died, his successor was diligently sought throughout Egypt and could be identified by coloration and distinctive markings: black coat with a white triangle on the forehead, a white vulture on its back, and a "scarab" beneath its tongue (Herodotus 3.28). The temple to which he was immediately taken stood S of the Ptah temple in Memphis, and comprised *inter alia* a colonnaded court where the bull could be viewed (Herodotus 2.153; Stabo 17.807) as well as an embalming chamber. Classical sources which mention the ritual drowning of an aged bull (Griffiths 1970: 511) are not confirmed by native Egyptian texts, and during the 1st millennium B.C. the average life span of a bull was 16–19 years (Kitchen 1982: 62).

The obsequies attendant upon the death of an Apis entailed lavish expense and involved the entire kingdom. Until the Ramesside age the bulls were buried above ground in the Saqqara necropolis; but during the reign of Rameses II a special hypogeum with galleries and chambers was carved out in the same area (Lauer 1976: 11ff., 217ff.). An adjacent gallery was devoted to the burials of the "Mothers of Apis." At each interment, numerous commemorative steles were deposited by the priests and workmen who had officiated at the ceremony, and these memorials (especially those dating from the 8th century B.C. through Ptolemaic times) often contain important genealogical and chronological information (Malinine et al. 1968).

During the late period, as Memphis became a key political center where accreditation had to be secured by those who aspired to rule Egypt (see MEMPHIS), the worship of Apis took on the form of a national cult. In this connection, Jeremiah's ridicule of the fleeing Apis (44:15) can be seen as a metaphorical reference to the dissolution of the Egyptian kingdom. Libyan, Kushite, Saite, and Ptolemaic kings all carefully honored the bull cult (Crawford 1980; Redford 1986: 276ff.); and Apis, when identified with Osiris, became a major ingredient of the Greco-Roman deity "Serapis" (Stambaugh 1972). Roman emperors, while generally acting against the interests of its priests, were nevertheless careful not to offend Apis (Redford 1986: 301f.), and the cult survived probably until the late 4th century A.D.

APOCALYPSES AND APOCALYPTICISM. This entry consists of five separate articles. The first two discuss the genre of "apocalypse" and provide an introductory overview to the subject. The third covers "apocalyptic" literature in Mesopotamia and the question of its connection to biblical apocalyptic writings. The fourth and fifth articles respectively provide more in-depth discussions of early Jewish and early Christian "apocalyptic" writings.

THE GENRE

A. Definition

In recent attempts to add precision to the terminology used in discussing the phenomenon loosely called apocalyptic, "apocalypse" has come to designate a literary genre in contrast to the related concepts "apocalyptic eschatology" and "apocalypticism" (see also the heading "Early Jewish Apocalypticism" later in this article). This triad and the specific definitions given to each of its members are of considerable heuristic value in the scholarly attempt to clarify a complex ancient phenomenon (Koch 1972: 23–28; Hanson *IDBSup,* 27–28). Heuristic devices must not be regarded as more than they are, however, namely, tools useful to the extent that they shed light on the ancient materials themselves. In using such tools, one does well to remember that the ancient apocalyptic writers did not distinguish rigidly between genre, perspective, and ideology, and from this it follows that such categories should be used only with great sensitivity to the integrity and complexity of the compositions themselves.

In using the term "apocalypse" to designate a genre, we are utilizing a derivative of the Greek noun *apokalypsis* ("revelation, disclosure"). The first attested use of the term to refer to a literary work is in the opening line of the book of Revelation, "The *apokalypsis* of Jesus Christ." This bears both historical and formal significance: historical inasmuch as the book of Revelation has exercised considerable influence on the Western understanding of the genre; formal inasmuch as the book exhibits nearly all of the principal characteristics of this genre (pseudonymity being one notable exception).

The first two verses of the book of Revelation contain *in nuce* the narrative structure of the genre: a *revelation* is given by God through an otherworldly *mediator* to a *human seer* disclosing *future events.* V 3 contains an added feature commonly found (or implied) in apocalypses, namely, an *admonition.* Beyond these three verses the book of Revelation as a whole casts further light on this genre. It offers descriptions of the seer's response to awesome revelatory experiences that resemble those recurring in other apocalypses. True to the structural complexity of many apocalypses, the book of Revelation embraces a series of vision accounts, interspersed with smaller genres like the epistle, the doxology, the victory song, and the blessing. And while the emphasis is on the visionary experience of the seer as the mode of revelation, in chap. 4 the seer, following a heavenly summons to "come up hither," finds himself in the heavenly throne room, thus providing an example of the "heavenly journey" found, often in vastly elaborated form, in other apocalypses.

A group headed by J. J. Collins expanded on earlier studies of the genre apocalypse by analyzing all of the texts classifiable as apocalypses from the period 250 B.C.E. to 250 C.E. and concluded with this definition: " 'Apocalypse' is a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an other-worldly being to a human recipient, disclosing a transcendent reality which is both temporal, insofar as it envisages eschatological salvation, and spatial, insofar as it involves another, supernatural world" (Collins 1979: 9). The distinction between a temporal and a spatial axis in the mode of revelation found in this definition reflects the fact that, while the eschatological perspective stemming from prophecy is of central importance in early Jewish and Christian apocalypses, descriptions of otherworldly journeys, lists of natural phenomena, and diverse kinds of cosmic and celestial speculations also are found in some of those apocalypses. When consideration is given to the perennial tension between temporal and spatial definitions of salvation (e.g., mythic versus epic views of reality in antiquity and historical versus existential views today), the juxtaposition of temporal and spatial axes within ancient apocalypses seems conceptually fitting.

B. Antecedents

While fully developed apocalypses first appear in the 3d and 2d centuries B.C.E., two biblical books from the 6th century B.C.E. adumbrate many of the formal features of the genre and can be viewed as important sources. In the opening verse of the book of Ezekiel the prophet reports that "the heavens were opened and I saw visions of God." In its present form the book of Ezekiel is constructed around five visions, revealing both future judgment and future salvation. In a series of eight visions in Zechariah 1–6 the prophet views supernatural phenomena which are then explained by an interpreting angel as bearing on future events. It seems plausible to assume that later visionaries considered themselves to stand in the tradition of such worthy predecessors.

C. Important Apocalypses

Smaller units embedded in the gospels and epistles of the NT aside, chaps. 7–12 of the book of Daniel share with the book of Revelation the distinction of alone representing the genre of the apocalypse in the Bible. Like the book of Revelation, Daniel 7–12 contains a series of visions (7, 8, and 10–12). In all three cases the seer receives the vision through an angelic mediator and the content has bearing on future judgment and salvation.

1 Enoch, which is actually an anthology of apocalyptic writings ascribed to the antediluvian figure Enoch and arising over a period of at least two centuries, is preserved in an Ethiopic translation of a Greek version (partially preserved) of Aramaic originals (fragments discovered among the Dead Sea Scrolls). The earliest of the Enochic apocalypses originated at least a half century before Daniel 7–12. Notable among these earliest materials are chaps. 6–11, which trace the rise of evil in the world to the rebellion in heaven alluded to in Gen. 6:1–4, and chaps. 17–36, which describe the heavenly journeys of Enoch. Clearly datable to the period of the Maccabean revolt is the allegorical history of the world in chaps. 89–90 referred to as the "Animal Apocalypse," and the "Apocalypse of Weeks" in *1 En.* 93 and 91:12–17. These apocalypses from *1 En.* illustrate the eclectic nature of the genre as it took shape in the Hellenistic period, for we find eschatological visions in continuity with earlier prophecy combined with sapiential and speculative materials reflecting other influences. Nevertheless, the dominant emphasis of these

apocalypses and those discussed below is harmonious with the themes of earlier Israelite religion, for they reveal a time/place beyond the fallen present in which God's sovereignty will be restored and the righteous will be vindicated.

4 Ezra and *2 Baruch.* These two works are closely tied together by common themes and a shared setting in the aftermath of the Roman destruction of Jerusalem and the temple. In *4 Ezra* three dialogues between seer and an angel are followed by three visions which, in an allegorical fashion recalling Daniel and the Maccabean period apocalypses of *1 Enoch,* desribe the movement of history through the ages down to the concluding divine denouement. *2 Baruch* similarly combines dialogue and visions into a tapestry of apocalypses and other genres subservient to the eschatological theme of the fulfillment of human history in final judgment and salvation.

D. Setting and Function

Though the degree to which the above-mentioned apocalypses preserve traces of their historical setting varies, it is evident in general terms that they all reflect a situation of crisis and aim at offering assurance of salvation to those alienated from the power structures of this world and suffering for their religious convictions. Daniel envisions the imminent destruction of Antiochus IV and the conferral of the kingdom on the "saints of the Most High." In *4 Ezra* the angel explains that the vision of the transformation of the woman from mourning and weeping to glory signifies the transformation that is about to happen to Zion. In the book of Revelation, visions of the downfall of the beast and the victory of the lamb gave assurance of the final vindication of those suffering under Roman persecution. Though more difficult to integrate into the theme of assurance in time of crisis, even those sections revealing the mysteries of the heavens and the secrets of the vast cosmos contribute to the effort to establish a basis for hope transcending the ever changing experiences of this world. The setting and function that can be glimpsed behind the Jewish and Christian apocalypses thus indicate that, while those communities and movements that we can characterize under the rubric of "apocalypticism" expressed themselves in genres ranging all the way from the testament to the song of victory, the genre of the apocalypse is more intimately related to the phenomenon of apocalyptic than any other literary form.

PAUL D. HANSON

INTRODUCTORY OVERVIEW

The word "apocalyptic," though properly an adjective, in common parlance has come to designate the phenomenon of the disclosure of heavenly secrets in visionary form to a seer for the benefit of a religious community experiencing suffering or perceiving itself victimized by some form of deprivation. The book of Daniel is the foremost literary example of this phenomenon in the world of Jewish antiquity, though Jewish apocalyptic writings range far beyond the Bible and betray connections with related phenomena in other cultures.

The problem with the proper usage is that it leaves unclear what qualities determine whether a given experience or written account fits the category apocalyptic: whether literary characteristics, a particular world view or pattern of ideas, or a certain type of social setting. This unclarity has led scholars to prefer a triad of definitions, differentiating between "apocalypse" as a literary genre, "apocalyptic eschatology" as a religious perspective, and "apocalypticism" as a community or movement enbodying an apocalyptic perspective as its ideology (Koch 1972; P. Hanson *IBDSup,* pp. 28–34; Collins 1984).

A. Apocalypse

Though the phenomenon designated "Jewish apocalyptic" comes to expression in more than one genre, the specific genre "apocalypse" occupied a privileged position. First used explicitly as the designation of a writing in antiquity in Rev. 1:1, the structure of the apocalypse reflects more closely than any other genre

the essential characteristics of the apocalyptic phenomenon, and its history is more closely intertwined with the history of Jewish apocalyptic than is the history of any other genre.

B. Apocalyptic Eschatology

The ideas and concepts that come to expression in apocalyptic writings range broadly from ancient mythic motifs to biblical themes to speculation reflecting a Hellenistic milieu. Nevertheless, as the genre "apocalypse" enjoys pride of place on the literary plane, a world view we can designate "apocalyptic eschatology" more frequently than any other perspective provides the conceptual framework within which the diverse materials encompassed by the apocalyptic writings are interpreted.

Eschatology, as the study of "end-time" events, developed earlier in biblical prophecy. The perspective of apocalyptic eschatology can best be understood as an outgrowth from prophetic eschatology. Common to both is the belief that, in accordance with divine plan, the adverse conditions of the present world would end in judgment of the wicked and vindication of the righteous, thereby ushering in a new era of prosperity and peace. In an early postexilic prophetic oracle, Yahweh announces:

> For the former troubles will be forgotten,
> For now I create new heavens
> and a new earth (Isa 65:16b–17a).

Prophetic eschatology and apocalyptic eschatology are best viewed as two sides of a continuum. The development from the one to the other is not ineluctably chronological, however, but is intertwined with changes in social and political conditions. Periods and conditions permitting members of the protagonist community to sense that human effort would be repaid by improved fortune tended to foster prophetic eschatology, that is, the view that God's new order would unfold within the realities of this world. Periods of extreme suffering, whether at the hands of opponents within the community or those of foreign adversaries, tended to cast doubts on the effectiveness of human reform and thus to abet apocalyptic eschatology, with its more rigidly dualistic view of divine deliverance, entailing destruction of this world and resurrection of the faithful to a blessed heavenly existence.

C. Apocalypticism

The social and political setting within which most of the Jewish apocalyptic writings arose is a matter of scholarly conjecture. A noteworthy exception is the corpus of sectarian writings found at Qumran. Though actual examples of the genre of the apocalypse at Qumran are rare and fragmentary in form, the sectarian writings are permeated with the perspective designated above as "apocalyptic eschatology." Within the community at Qumran, the perspective of apocalyptic eschatology had been elevated to the status of an ideology, functioning to inform its interpretation of Scripture, to provide the basis for its understanding of Jewish and gentile adversaries, and to supply a historiographic point of view from which to develop a detailed scenario of final conflict and divine vindication of the elect.

Apocalypses and other writings sharing the perspective of apocalyptic eschatology originating outside of the Qumran community were copied and studied within that community (e.g., the writings within the Ethiopic corpus designated *1 Enoch,* minus the parables, and *Jubilees*). Though these writings differ at important points from the Qumran writings, shared views on calendar, angelology, demonology, cosmology, and eschatology suggest that different communities embodying the perspective of apocalyptic eschatology maintained contact with one another, possibly with the consciousness of being united under the umbrella of a wider Essene movement.

Hopefully future archaeological findings coupled with intensified study of existing written and archaeological material will shed further light on Jewish apocalypticism. In such scholarship the temptation to try to homogenize all apocalyptic writings into one broad movement must be eshewed. *4 Ezra* and *2 Baruch,* bearing affinities as they do with Pharisaic teachings, illustrate that not all apocalyses come from the Essenes. Apocalyptic themes in later rabbinic writings indicate that an apocalyptic motif in a literary composition does not constitute proof of origin in an apocalyptic movement (Block 1952). Apocalypticism, as a designation for a movement that has adopted the perspective of apocalyptic eschatology as its ideology, must accordingly be used with great caution and only in cases where

sufficient evidence accumulates to point to a community that has constructed its identity upon the world view of apocalyptic eschatology.

D. Sources of Jewish Apocalyptic

What were the influences that fostered the development of Jewish apocalyptic? Scholars were once confident that the source could be traced to a form of Persian dualism with which Judaism came into contact in the Second Temple period. Support for this view has evaporated as the result of studies indicating that the Persian sources upon which the hypothesis rested were written over a half millennium after the period of alleged influence.

Gerhard von Rad, reviving an idea advanced in the 19th century, argued that the Wisdom tradition was the source of Jewish apocalyptic (Von Rad 1972). This he did by identifying the heart of apocalyptic not in eschatology but in a deterministic interpretation of history. Von Rad's hypothesis has found few followers and many critics, largely due to the fact that apocalyptic eschatology—while not excluding other patterns of thought—frequently provides the conceptual framework into which other materials are integrated and on the basis of which they are interpreted (Von der Osten-Sachen 1969).

The source that continues to emerge from the debate concerning origins with the highest degree of credibility is biblical prophecy. Here the key lies within a group of writings that can either be designated "late prophecy" or "early apocalyptic" (e.g., Isaiah 24–27; Isaiah 56–66; Zechariah 9–14), insofar as they occupy a transitional position between the more historically oriented perspective of classical prophecy and the more transcendent view of salvation characteristic of the apocalyptic writings. Challenges to the prophetic source theory, however, have also made a contribution: they have indicated that Jewish apocalyptic becomes increasingly complex over the course of the centuries and especially as it enters the Hellenistic era, at which point it draws freely upon rather refined sciences such as learned speculation on celestial and terrestrial phenomena and sapiential reflection betraying stronger connections with Mesopotamian mantic traditions than with Egyptian or Israelite wisdom (Collins 1977; Stone 1976).

E. Theological Meaning

As the writer of the book of Daniel drew upon the words of the prophet Jeremiah to explain his troubled times, and as the teachers of Qumran expounded on the books of Habakkuk and Nahum to reveal the eschatological significance of current events, so too Herbert Armstrong and Hal Lindsay command the attention of millions with their biblically based predictions of apocalyptic denouement. Diligent historical-critical study, combined with hermeneutical theory that pays attention to the multivalence of symbols and the complexities involved in the transfer of meaning from ancient settings to a world far removed in time, can restrain reckless readings of Jewish apocalyptic writings that abet international tension and can serve instead as a guide to a more accurate understanding of these mysterious compositions and to a more fitting appreciation of the abiding significance of the messages addressed by ancient apocalyptic seers to those engulfed by suffering and overwhelmed by dread (Hanson 1987).

PAUL D. HANSON

AKKADIAN "APOCALYPTIC" LITERATURE

Research in Akkadian literature over the last decade or so has led to the suggestion that the origins of apocalyptic literature may be found there. The particular type of Akkadian literature in question is the so-called "Akkadian prophecies." This article will first describe briefly the Akkadian prophecies and their

purpose, then go on to discuss the question of whether or not these are eschatological in nature and what possible relationship they may have to Jewish apocalyptic literature.

Akkadian prophecies are actually pseudoprophecies, for they consist in the main of predictions after the event (*vaticinia ex eventu*). The predictions are presented as a chronological sequence of reigns and are often introduced by some such phrase as "a prince will arise." It is a feature of Akkadian prophecies that the rules are never mentioned by name but it is often possible to identify them since various details such as the length of their reigns are often given. The reigns themselves are described as "good" or "bad" and the vocabulary and literary style of these prophecies generally is that of Akkadian omen literature.

Akkadian prophecies are a purely literary phenomenon and there is no evidence for any oral background. This is in contrast to Akkadian oracles which, as the name implies, were oral pronouncements to the king by ecstatics and are not relevant to our discussion of apocalyptic literature. The number of Akkadian prophecies so far recovered is quite small; in fact only five main compositions are as yet known. Of these five only two are directly relevant to the present topic: the *Dynastic Prophecy* and the *Uruk Prophecy*.

Scholars generally agree that the writer of an Akkadian prophecy wished to justify or advocate an idea, institution, or development in his own time by means of a long preamble in which he pretends to have predicted other ideas, events, and institutions of previous times. He then concludes this series of pseudopredictions with a prophecy that the particular idea or institution which he wished to justify or advocate would be established by the gods. Now the peculiarity of the two prophecies just mentioned, the *Dynastic Prophecy* and the *Uruk Prophecy*, is that each seems to conclude with a real prophecy; that is, something that the writer himself only wished would come about but had not actually done so in his lifetime. Thus the *Dynastic Prophecy* seems (the text is unfortunately badly broken) to conclude with a prediction that the Seleucid Empire in Babylonia will fall. In other words, it is the product of anti-Macedonian feeling in Babylonia. The conclusion of the *Uruk Prophecy* is even more significant. After prophesying various good and bad reigns for the city of Uruk, the writer ends with a prediction that a king will arise in Uruk and rule the four quarters: that is, the world. The last two sentences read, "His reign will be established forever. The kings of Uruk will exercise dominion like the gods." There is no doubt that this is a real prediction since in fact such an event never happened. There is more significance, however, than that to these sentences; they are clearly eschatological in nature.

The evidence for eschatology in the Akkadian prophecies immediately provides a major link with apocalyptic literature. The idea that world history will end in a millennium, when all wrongs will be righted and all just people rewarded, is a major feature of Jewish apocalyptic literature, such as the book of Daniel and, by extension, the Christian book of Revelation, and of the apocalyptic tradition which developed in medieval times. We cannot give any specific date to the *Uruk Prophecy* in Mesopotamia but it is well established that the genre called Akkadian prophecy was present before 1000 B.C. It cannot yet be shown that the earlier Akkadian prophecies had eschatological ideas in them; indeed this has been debated in scholarly circles. Nevertheless, the presence of eschatology in the later prophecies seems to fit well in the context of this genre and probably is an indigenous development. Thus there is good reason to suggest, even though it cannot be proven, that apocalyptic literature has its origin in the Mesopotamian literary genre called Akkadian prophecies.

EARLY JEWISH APOCALYPTICISM

The term "apocalypticism" is derived from the Greek word *apokalypsis,* "revelation," which is used to designate the book of Revelation in the NT (Rev 1:1). The term is variously used to refer to a social movement or movements, a system of thought, or, more vaguely, a spiritual movement. The starting point, however, for any use of "apocalyptic," "apocalypticism," and related terms is a distinctive body of literature from ancient Judaism and early Christianity.

———

A. Literary Genre

Historically this corpus has been recognized because of its resemblance to the canonical Apocalypse of John, or book of Revelation. "Apocalypse" was a well-known genre label in Christian antiquity, beginning from the end of the 1st century C.E., when it appears as the introductory designation in Rev 1:1 (Smith 1983: 18–19). Thereafter apocalypses are attributed to both NT (Peter, Paul) and OT figures (e.g., the gnostic *Apocalypse of Adam,* the Cologne Mani Codex speaks of apocalypses of Adam, Sethel, Enosh, Shem, and Enoch). Prior to the late 1st century C.E. the title is not used. (Its occurrence in the manuscripts of *2* and *3 Baruch* may be secondary.) It is possible, nonetheless, to identify a corpus of Jewish writings from this earlier period which fit a common definition (Collins 1979: 21–59). This definition is first of all formal: *an apocalypse is a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an otherworldly being to a human recipient.* It also recognizes a common core of content: an apocalypse *envisages eschatological salvation and involves a supernatural world.* Finally, there is, on a rather general level, a common function: an apocalypse is *intended to interpret present, earthly circumstances in light of the supernatural world and of the future, and to influence both the understanding and the behavior of the audience by means of divine authority* (Yarbro Collins 1986: 7). This definition fits all the Jewish writings which are generally classified as apocalypses: Daniel, *1 Enoch, 2 Enoch, 2 Baruch, 3 Baruch, 4 Ezra, Apoc. Abraham,* and a few works of mixed genre (*Jubilees, T. Abraham*). Note also *T. Levi* 2–5 which is part of a larger work, and *Apoc. Zephaniah,* which is problematic because of its fragmentary character. It also fits an extensive corpus of Christian writings, beginning with Revelation, *Hermas,* and *Apoc. Peter.* Examples can also be found, with some distinctive variations, in Gnosticism (*Apoc. Adam,* 2 Apoc. James), among the later Jewish mystical texts (e.g., *3 Enoch*), and also in Greek, Latin, and Persian literature (see the various essays in Collins 1979).

The definition of apocalypse given above fits an extensive body of literature, which was produced over several hundred years. It is not suggested that the genre remained static or was consistently uniform. In fact, the definition serves only to delimit the corpus, and allows for considerable variation and development within it. To begin with, it is possible to distinguish two broad types of apocalypses: the historical type (e.g., Daniel) in which revelation is most often conveyed in symbolic visions and presents an overview of history culminating in a crisis, and the otherworldly journeys (of which the earliest example is found in the *Book of the Watchers, 1 Enoch* 1–36), which are more mystical in orientation. It is also possible to distinguish various historical clusters of apocalypses which have their own distinctive emphases and concerns—e.g., within the Jewish corpus one might distinguish the early Enoch literature, the apocalypses of the Diaspora, or those composed after the fall of Jerusalem, *4 Ezra* and *2 Baruch* (see Collins 1984). Moreover, there is always some overlap between the apocalypses and other genres, e.g., the historical reviews which are characteristic of the historical apocalypses are also typical of the *Sibylline*

Oracles and of the testamentary literature. While the apocalypses constitute a distinct genre, they cannot be understood in isolation from the various types of related literature.

B. From Apocalypse to Apocalypticism

We have seen that the genre apocalypse is characterized in part by core elements of content, specifically a lively belief in the supernatural world and the expectation of eschatological salvation.

Belief in a supernatural world is, of course, characteristic of religion in general. Against the background of the Hebrew Bible, however, the apocalyptic literature shows a heightened interest both in otherworldly regions and in supernatural beings. So Enoch describes the abodes of the dead and the places of judgment, and ascribes the origin of evil to the sin of the Watchers, or fallen angels. This aspect of apocalypticism has often been overlooked because of a preoccupation with eschatology, but it has been repeatedly emphasized in recent years (e.g., Gruenwald 1980; Rowland 1982). It is an important feature of all the apocalypses, not only of the heavenly journeys.

Eschatology, too, was characteristic of much of the prophetic tradition. In the apocalyptic literature, however, it takes on a new character. The distinctive novelty here was the belief in the judgment of the dead. An apocalypse like Daniel might still proclaim an eschatological kingdom of Israel, but it also promised that the faithful would rise in glory, and thereby offered a perspective on life which was very different from that of the Hebrew prophets.

Taken together, these core elements of content constitute *a world view,* which was new and distinctive in Judaism when it first emerged in the Hellenistic period, although it subsequently came to be widely accepted. The belief in a judgment beyond death and in the influence of angels and demons on human life created a framework for human decisions and actions. *This world view or "symbolic universe" which is extrapolated from the apocalypses is what we call "apocalypticism."* It can also be expressed in other literary forms. The *Discourse on the Two Spirits* and the *War Scroll* from Qumran are not presented as revelations mediated by an angel, but they are generally and rightly recognized as apocalyptic in the broader sense that they exhibit the apocalyptic world view. Apocalypticism, then, is a broader phenomenon than the literary genre. From the historical point of view, the world view is prior to the production of apocalypses (i.e., people who believe in angels and demons and in an eschatological judgment are likely to write apocalypses, although they may also express themselves in other genres). From the viewpoint of the modern scholar, however, the literary genre is prior (i.e., the world view is recognized by analogy with the apocalypses).

In his influential article in *IDBSup,* Paul Hanson defined apocalypticism not only as a "symbolic universe" but as "the symbolic universe in which an apocalyptic movement codifies its identity and interpretation of reality" (*IDBSup,* 30). One of the strengths of Hanson's article lay in his realization that one cannot speak simply of *the* apocalyptic movement: there is no demonstrable historical link between the people who produced the early Enoch literature and those who wrote *4 Ezra* and *2 Baruch,* or the other distinct clusters of apocalyptic texts. He was also right in recognizing that apocalypticism *can* serve as the "symbolic universe" of a movement. Nonetheless, there is no automatic connection between apocalypticism and social movements. In many cases we know very little of the social matrix in which apocalyptic literature was produced. A work like *4 Ezra* may have been the product of a relatively isolated individual, who was not part of a movement in any meaningful sense of the word. We should beware of inferring social movements too readily from literary evidence.

C. Israelite Background

Jewish apocalypticism first emerges clearly in the Hellenistic age, but it is in many respects a development of old strands in the religion of Israel (see Collins 1987: 548–50). There is obvious continuity between the apocalyptic expectation of a final judgment and the prophetic "day of the Lord." The idea of a cosmic day of judgment is widely attested in the prophets and the psalms (e.g., Pss 96, 98; Isa 2:4). The apocalyptic interest in the heavenly world is a development of older ideas of the heavenly council (e.g., Ps 82:1) which can be traced back to Canaan and Mesopotamia in the 2d millennium (Mullen 1980). The degree of continuity between the apocalyptic world view and the older religion of Israel is hard to assess, because the mythological elements in Israelite religion are not well represented in

the Hebrew Bible. We read in Isa 24:21–23 that "on that day the Lord will punish the host of heaven, in heaven, and the kings of the earth, on the earth … They will be shut up in a prison, and after many days they will be punished." This passage evidently presupposes a fuller narrative than is now extant. In *1 Enoch* 18, Enoch is shown the prison of the host of heaven. We cannot infer that all the transcendent world toured by Enoch was presupposed in Isaiah 24, but we must recognize that the apocalyptic writers had at their disposal a much fuller mythology than is now extant in the Hebrew Bible. Light has been shed on some apocalyptic passages, notably Daniel 7, by the Ugaritic myths, which were written down over a millennium earlier (Collins 1977: 96–103). Because of the high degree of selectivity in the editing of the Hebrew Bible, the lines by which this material was transmitted down to the Hellenistic age are no longer in evidence.

Paul Hanson claims to find the perspective of apocalyptic eschatology already in the late 6th century B.C.E., especially in the oracles of Isaiah 56–66 (Hanson 1975). On Hanson's reconstruction, the authors of these oracles belonged to a disenfranchised group, which was excluded from power in the restored Jerusalem temple. As they despaired of rectifying this situation by human means, they called on their God to "rend the heavens and come down" (Isa 64:1) and envisaged "a new heaven and a new earth" (Isa 65:17). Hanson traces a movement which persisted from the time of the Exile to the end of the 5th century and is attested in Zechariah 9–14, Isaiah 24–27, Malachi, and possibly Joel. Perhaps the most radical vision is found in Isaiah 24–27, where we are told that God "will swallow up death forever" (Isa 25:8).

This bold reconstruction of a social movement is quite hypothetical, but its historical plausibility does not concern us here. For our purposes, the essential point is that the world view of these postexilic writings is significantly different from what we will later find in *1 Enoch* and Daniel. The crucial difference can be seen in the nature of the eschatology. In Isaiah 65 the new creation is one where "the child shall die a hundred years old, and the sinner a hundred years old shall be accursed," but they will die nonetheless. There is no question of personal immortality. Even Isaiah 24–27, which speaks of the destruction of death and says that God's dead shall live (Isa 26:19), most probably only envisages the resurrection of the Israelite people, in the manner of Ezekiel 37. There is still no suggestion that a human being can pass over to the world of the angels or become a companion to the host of heaven. Consequently these oracles retain the this-worldly emphasis traditional in biblical prophecy. In view of this, the oracles of Isaiah 56–66 and other postexilic prophecies are best regarded as examples of late prophecy, even though some of their themes are later taken up in a new context in the apocalypses. This is also true of the visions of Zechariah 1–6, which are closer formally to the apocalyptic visions than any material in the Hebrew Bible before the book of Daniel, and which are more obviously supportive of the cultic institutions than Isaiah 56–66. There again, the goal envisaged is the restoration of Israel so that everyone would invite his neighbor under his vine and under his fig tree (Zech 3:10).

D. Foreign Influences

The development of apocalypticism in the Hellenistic period cannot be understood exclusively against the background of older Israelite religion. Judaism was exposed to a wide range of influences in the postexilic era and there were some analogous developments in other traditions at this time. The earliest Jewish apocalypses are those attributed to Enoch and Daniel, both of whom have strong links with Mesopotamia. The figure of Enoch seems to be modeled to a great degree on legendary Mesopotamian sages, especially Enmeduranki, founder of the guild of *barus* or Babylonian diviners (VanderKam 1984: 38–45). One of the earliest of the writings attributed to him is primarily concerned with the movements of the stars, a topic which enjoyed much greater prominence in Babylonian tradition than in Israel. The book of Daniel is set in the Babylonian Exile, and Daniel is portrayed as a professional sage, skilled in the interpretation of dreams like his Chaldean colleagues. There is, then, reason to suspect that the earliest stages of Jewish apocalypticism developed in the eastern Diaspora, though conclusive evidence is lacking.

It is not surprising, then, that some scholars have sought the background of Jewish apocalypticism in Mesopotamian traditions (Lambert 1978; VanderKam 1984; Kvanvig 1987). There is no evidence that the Babylonians ever developed an apocalyptic tradition, but some aspects of Babylonian thought may have had an influence on the development in Judaism. Many scholars have observed the affinities between

apocalyptic revelation and the "mantic wisdom" of the Chaldeans (Müller 1972). Both involve the interpretation of mysterious signs and symbols and both carry overtones of determinism. The omen collections, which are the primary literature of Babylonian divination, are very different from the Jewish apocalypses. There are, however, two Mesopotamian genres which are significant for the background of Jewish apocalypticism. One is the dream vision, whose influence is undeniable in the case of Daniel, but is also in evidence in the Enochic *Book of Dreams* (*1 Enoch* 83–90). The most interesting example is the 7th-century Assyrian *Vision of the Netherworld,* in which a prince, in his dream, is taken before the king of the netherworld, issued a warning, and allowed to return to life. The attempt to demonstrate direct influence of this composition on the apocalypses of Enoch and Daniel has not been convincing (Kvanvig 1987), but it is potentially important for the development of the subgenre of otherworldly journeys. Unfortunately we have as yet few examples of such visions of the netherworld (see also the death dream of Enkidu in the Epic of Gilgamesh). The second Mesopotamian genre which is relevant here is more closely related to the historical apocalypses and has only come to light in recent years. This is the genre of Akkadian prophecy, defined as "a prose composition consisting in the main of a number of 'predictions' of past events. It then concludes either with a 'prediction' of phenomena in the writer's day or with a genuine attempt to forecast future events" (Grayson 1975: 6). In at least some cases they are pseudonymous (Marduk, Shulgi; the attribution of other oracles is uncertain because of fragmentary preservation). Examples range in date from the 12th century to the Seleucid era. Such *vaticinia ex eventu* figure prominently in the historical apocalypses (e.g., Dan 8:23–25, Daniel 11. See Lambert 1978). These Babylonian prophecies do not end with the transcendent, cosmic eschatology which characterizes apocalypticism, and are not properly called "apocalyptic," but they provide one of the building blocks for one type of apocalypse.

Unlike the Babylonians, the Persians had a well-developed apocalyptic tradition, which has often been assumed to be the source of Jewish apocalypticism (e.g., Bousset 1966: 478–83). In recent years scholars have become reticent about positing Persian influence, because of the notorious difficulties of dating. Most of the relevant Persian material is extant in Pahlavi works, which are as late as the 9th century C.E. The traditions involved are certainly much older than this but are difficult to date with any confidence. One of the primary texts in dispute is the *Bahman Yasht,* or *Zand-i Vohuman Yasn,* a full-blown apocalypse of the historical type, which includes a vision of a tree with four metal branches symbolizing kingdoms (cf. the statue in Daniel 2). This composition has been widely thought to be based on a lost Zand of the Avesta, which was widely influential in the Hellenistic age (Eddy 1961: 17–20; Widengren 1983: 105–27). Recently, however, the existence of this Avestan Zand has been questioned, and the possibility of Jewish influence on Persian apocalypticism has been raised (Gignoux 1987: 355). Another major witness to pre-Christian Persian apocalypticism is the *Oracle of Hystaspes,* which is not extant and must be reconstructed from the writings of Lactantius. This work has sometimes been regarded as a Jewish pseudepigraph (so Flusser 1982) and, while most scholars accept it as Persian, the uncertainty of provenance is symptomatic of the problems of Persian apocalypticism.

Despite the problems, the possible influence of Persian apocalypticism of Judaism cannot be discounted. A brief (and problematic) account of Persian religion attributed to Theopompus (about 300 B.C.E.) attests a belief in an ongoing dualistic struggle between light and darkness, the activity of angelic and demonic beings, and the division of history into periods (Plut. *De ls. et Os.* 47). Belief in resurrection is undisputedly old in Persian religion (Widengren 1983: 81), as is the motif of the heavenly journey (Gignoux 1987: 364). Persian influence on the dualism of the Dead Sea Scrolls is widely admitted. The full relationship between Persian and Jewish apocalypticism, and the degree of influence of the one on the other, remains one of the major unresolved problems in the study of apocalypticism.

Many of the features of apocalypticism which are paralleled in Babylonian and Persian material are also paralleled more widely in the Hellenistic world. There was a long-standing tradition of political prophecy in Egypt, which was adapted in the Hellenistic period in the *Potter's Oracle* (Griffiths 1983: 283–93). The *Sibylline Oracles,* adapted in Judaism and Christianity, were in origin a Greek genre. The motif of the otherworldly journey was widespread in the Hellenistic-Roman world, as were various forms of belief in

immortality. The currency of these ideas in the general environment may have stimulated their acceptance in Judaism. This is not to detract from the thoroughly Jewish character of apocalypticism as it developed in *1 Enoch* and Daniel, but to recognize that Hellenistic Judaism was a product of its age and should be studied in its cultural context.

E. Earliest Jewish Movements

The earliest Jewish apocalyptic movement is that associated with the figure of Enoch. In this case we have a cluster of apocalypses (the *Book of the Watchers,* the *Astronomical Book,* the *Book of Dreams,* the *Apocalypse of Weeks,* all now gathered in *1 Enoch*) which are in demonstrable continuity with one another. All are ascribed pseudonymously to the antediluvian figure of Enoch. The Aramaic fragments from Qumran require a 3d-century date for the earliest stages of this movement (Milik 1976; Stone 1980: 27–35). The earliest documents of this corpus (the *Astronomical Book* and the *Book of the Watchers*) are largely concerned with cosmological lore. In both cases, however, the order of the cosmos has been disrupted: in the *Astronomical Book* by "many heads of the stars" who go astray (*1 Enoch* 80) and in the *Book of the Watchers* by the fallen angels. It is disputed whether the *Book of the Watchers* is a reflection on the problem of evil in general (Sacchi 1982) or a more specific reaction to the cultural changes of the Hellenistic age (Nickelsburg 1977). Neither of these early apocalypses shows the expectation of imminent divine intervention which is often taken to be constitutive of apocalypticism (cf. Daniel and Revelation), but they do affirm an ultimate divine judgment. The Mesopotamian parallels to the figure of Enoch and the interest in the astral world in the *Astronomical Book* suggest that the earliest stages of this tradition were formed in the eastern Diaspora, although the evidence is not conclusive (VanderKam 1984). The Enoch tradition undergoes some development in the *Apocalypse of Weeks* and the *Book of Dreams.* These documents were produced closer to the time of the Maccabean revolt and were certainly written in Palestine. Both apocalypses contain lengthy reviews of history in the guise of prophecy and culminate with divine intervention and a final judgment. Both also give clear indications of the formation of a distinct group, called "small lambs" in *1 Enoch* 90:6 and "the chosen righteous from the eternal plant of righteousness" in *1 Enoch* 93:10. We know nothing of the organization of this group. They endorsed the military action of Judas Maccabee and the use of the sword against sinners (91:11), and claimed to have a sevenfold teaching (93:10) of which the writings attributed to Enoch are presumably representative. It is possible that they are identical with the Hasidim who are mentioned as supporters of Judas Maccabee in 2 Macc 14:6 (cf. 1 Macc 2:42; 7:12–13) but the Hasidim are not otherwise known to have had the range of cosmological interests attested in the books of *Enoch.*

A contemporary but distinct apocalyptic movement is attested in the book of Daniel. In Daniel 11–12 we read of wise teachers (*maskilim*) who instruct the many in a time of persecution and some of whom are martyred. Unlike the militant "lambs" of Enoch, these people appear to be quietists, who look to their heavenly patron Michael for victory. Some of their traditions are related to those of the Enoch literature (compare the visions of the divine throne in Daniel 7 and *1 Enoch* 14) but the two groups cannot be simply identified.

The book of Daniel has its own tradition history, which is reflected in the tales in Daniel 1–6. Here again there is reason to suspect that the early stages of the tradition were formed in the eastern Diaspora, although the apocalyptic visions of chaps. 7–12 were certainly composed in Palestine.

F. Qumran

The Qumran community presents a special set of problems for the study of Jewish apocalypticism. The Qumran library included multiple copies of the apocalypses of Daniel and Enoch. It also included some fragmentary works which are possibly apocalypses (4Q‹Amram, *The New Jerusalem*) and some eschatological revelations related to Daniel, which contain the four-kingdom motif (4QPsDan ar, and an unpublished vision of four talking trees, Garcia-Martínez 1987: 206–7). On the other hand, none of the major works of the sect is in the form of an apocalypse, and it is not clear that any apocalypse was composed at Qumran (Stegemann 1983: 495–530). Nonetheless, Qumran has often been described as an apocalyptic community, and with justification (Collins 1990). The *Community Rule* (1QS), the most authoritative description of the community we have, contains a treatise on the two spirits, which is

thoroughly apocalyptic in its world view: human life is ruled by the warring spirits of light and darkness, but in the end God will intervene and reward the children of light with life without end (1QS 3–4). The *Damascus Document* (CD), which legislates for a wider community, alludes to this cosmic dualism (CD 5:18) although it does not expound it in the manner of 1QS, and it anticipates the destruction of the wicked by the hand of the angels of destruction (CD 2:6). The *War Scroll* (1QM) provides the rule for the eschatological war of the sons of light against the sons of darkness, in which the heavenly host mingles with the human combatants, and Michael is finally exalted over Belial. The sectarians believed they were living in the age of wrath, the last age, when the final battle was imminent (CD 1:5; 1QH 3:28). Other documents reflect the community's interest in the heavenly world. The *Hōdāyôt* express the belief that the members of the community were already in fellowship with the angelic council (1QH 3:19–22), and the *Songs of the Sabbath Sacrifice* describe the divine praises uttered by the various classes of angels. The fact that the community did not produce apocalypses may be due to the belief that the Teacher of Righteousness had become the medium of revelation for the community (1QpHab 7:4–5).

There is no doubt that the Qumran community was influenced by the world view expounded in the apocalypses of Daniel and Enoch. The precise relation of the community to those apocalyptic movements is unclear, however. CD 1 describes the emergence of "a plant root" in the "age of wrath." Many scholars have noted the similarity to the "chosen righteous from the eternal plant of righteousness" in the *Apocalypse of Weeks* (*1 Enoch* 93:10) and assumed that the Enoch movement was simply the early stage of the Essene sect, before the arrival of the Teacher of Righteousness or the settlement at Qumran, or that both texts refer to the formation of the Hasidim, who are then taken to be the percursors of the Essenes (see Nickelsburg 1983: 641–54). The Qumran sect shared with the Enoch group the 364-day calendar, and we know that a dispute over the calendar was an important factor in the formation of the sect. Nonetheless it is too simple to identify either the early Essenes or their precursors with the Enoch movement. We have seen reason to believe that the book of Daniel was the product of a different group than the Enoch literature. Yet it was no less influential at Qumran. Moreover, the halachic (legal and ritual) concerns which are so important at Qumran are not reflected at all in either *1 Enoch* or Daniel. We must resist the temptation to conflate all apocalyptic groups of the early 2d century into one movement. The Dead Sea sect was certainly influenced by the apocalypses, but it is best considered as a distinct movement.

The Qumran community provides the only instance in which we have substantial evidence about the social organization of an apocalyptic movement. In many respects it runs counter to the stereotypical ideas of such movements. It is rigidly hierarchical, legalistic, and preoccupied with questions of purity. We should not infer that all apocalyptic movements were organized in this way. The character of the Qumran community was shaped to a great degree by the priestly traditions of its members. An apocalyptic world view does not in itself imply a particular form of social organization.

G. Other Jewish Apocalyptic Movements

We are very poorly informed about Jewish apocalyptic movements apart from the Dead Sea sect, but it is salutary to remember that even the Qumran community was unknown half a century ago. The *Similitudes of Enoch* speak of "the community of the righteous" (*1 Enoch* 38:1) but tells us nothing about how that community was organized. We know of various movements in the 1st century C.E. which may have had an apocalyptic character. The preaching of John the Baptist evidently concerned "the wrath to come" but our information about his world view is very sketchy. Josephus writes of "deceivers and impostors, who under the pretense of divine inspiration fostering revolutionary changes, persuaded the multitude to act like madmen" (*JW* 2.13.4 § 258–60). Again, we do not know enough about these people to say whether their world view can properly be described as apocalyptic. At the end of the 1st century, *4 Ezra* and *2 Baruch* witness to a debate going on in some circles about the justice of God, which was conducted within an apocalyptic world view. Whether this debate implies any significant social movement, however, is an open question. In the Diaspora, the *Sibylline Oracles* attest a tradition which extended over more than 200 years. That tradition, in its earlier phase (Book 3), was closer to the this-worldly eschatology of the prophets than to apocalypticism but it developed strongly apocalyptic features in later books (especially Books 1–2 and 4, see SIBYLLINE ORACLES).

H. Function of Apocalypticism

It is apparent from this brief sketch that our knowledge of the social settings of Jewish apocalypticism is quite limited. This limitation cannot be overcome by adopting ideal models from cultural anthropology and deducing social settings from them, but only by the discovery of new information about the actual historical circumstances of ancient Judaism. It should be apparent, however, that those settings are diverse.

It has been generally assumed that apocalypticism arises from the experience of alienation, or in times of crisis (e.g., Hanson 1987: 75). This assumption is defensible if we grant that alienation, and crises, may be of many kinds. Apocalypticism can provide support in the face of persecution (Daniel), reassurance in the face of culture shock (the *Book of the Watchers*) or social powerlessness (the *Similitudes of Enoch*), reorientation in the face of national trauma (*2 Baruch, 3 Baruch*), consolation for the fate of humanity (*4 Ezra*). What is constant is not the kind of problem addressed but the manner in which it is addressed. In each case the apocalyptic revelation diverts the attention from the distressful present to the heavenly world and the eschatological future. This diversion should not be seen as a flight from reality. Rather it is a way of coping with reality by providing a meaningful framework within which human beings can make decisions and take action (compare the *maskilim* in Dan 11: 32–34).

Finally we should note that, just as apocalypticism cannot be identified with a single social movement, so it cannot be identified with a single strand of theology. To be sure, it involves some consistent assumptions about the way the world works, e.g., the inevitability of a final judgment. Within the framework provided by these assumptions, however, there is room for diversity of theological traditions. There is a great difference between the priestly legalism of Qumran and the sapiential traditions which inform *4 Ezra* and *2 Baruch,* which are closer to the mindset of the rabbinical schools. It could also be adapted to a radical departure from traditional Judaism in the rise of Christianity.

A. The Milieu of Jesus

As is now generally accepted, Judaism in the time of Jesus was diverse (Nickelsburg and Stone 1983: 1). Although Jesus lived between the two main periods during which most of the Palestinian Jewish apocalypses were composed (the 3d–2d centuries B.C.E. and the late 1st century C.E.), there is evidence that the apocalyptic world view was widespread in Palestine during his time and that this world view was frequently linked to political issues. As was noted above, the community at Qumran had copies of Daniel and apocalypses attributed to Enoch. Even if they did not compose apocalypses themselves, their major works expressed an apocalyptic world view. Their expectations of the future included an eschatological battle in which foreign rulers (the Romans in the later documents) and their Jewish collaborators would be defeated. There is no evidence that Jesus had direct contact with the community at Qumran. Nevertheless, the fact that Philo and Josephus wrote descriptions of their way of life and beliefs shows that these were not unknown, even outside Palestine, assuming that the members of the community were ESSENES; (for the texts from Philo and Josephus in English translation, see Dupont-Sommer 1973: 21–36). The fact that at least some of the manuscripts of the *War Scroll* are in Herodian script shows that this document was very important from about 30 B.C.E. to about 70 C.E. (Cross 1961: 118, 120 n.20).

The *Assumption* or *Testament of Moses* is not an apocalypse but is closely related to the genre. This work was composed in the 2d century B.C.E. but was updated after the death of Herod in 4 B.C.E. (Collins 1979: 45). This work is especially important for the context of Jesus' teaching because it refers to God's kingdom in an apocalyptic context (*Testament of Moses* 10). That context includes vengeance on the enemies of Israel (vv 2, 7, 10). In the revised form of the work, the enemies were understood to be the Romans (Yarbro Collins 1976: 186).

It is likely that the occasion for the revision of the *Testament of Moses* was the unrest that followed the death of Herod the Great in 4 B.C.E. (Jos. *Ant* 17.9.1 § 206–17.12.2 § 338). This unrest included the activities of three messianic pretenders, Judas the Galilean, Simon, and Athronges (9.5 § 271–9.8 § 285). The *Testament of Moses*, however, has greater affinity with the earlier nonviolent protest of Judas and Matthias, the interpreters of the law, than with the activist royal pretenders (Yarbro Collins 1976: 186; see Horsley and Hanson 1985: 110–17).

When Archelaus was deposed and exiled, Judea, Samaria, and Idumea were annexed to the Roman province of Syria. Unrest broke out again in 6 C.E. when Quirinius, Octavian's legate, took a census of the

property of the Jews. Judas the Galilean led the revolt (Jos. *Ant* 18.1.1 § 1–18.2.1 § 26; see Fitzmyer *Luke 1–9* 393, 401–2). Besides this violent uprising, two further incidents of nonviolent resistance occurred. The first, in 26 C.E., involved opposition to Pilate's bringing Roman standards into Jerusalem, because of the images of the emperor (presumably Tiberius) on them (Jos. *Ant* 18.3.1 § 55–59; *JW* 2.9.2 § 169–2.9.3 § 174). The other centered on Gaius' command, in about 40 C.E., that his legate to Syria, Petronius, erect his statue in the temple (*Ant* 18.8.2 § 261–18.8.9 § 309; *JW* 2.10.1 § 184–2.10.5 § 203).

At some point during the reign of Tiberius, and probably during the time of Pontius Pilate was prefect of Judea, John the Baptist preached a message and performed a baptism of repentance (in addition to the gospels of the NT, see Jos. *Ant* 18.5.2 § 116–19). Josephus' account of John's message is very uneschatological, whereas the accounts of the gospels are thoroughly eschatological. The lack of eschatology in Josephus' picture is probably due to his well-known bias in that regard. It is likely that John announced the "wrath to come" (see the saying from Q, the Synoptic Sayings Source, preserved in Matt 3:7–10 = Luke 3:7–9). This "wrath to come" was probably an element of the apocalyptic eschatology shared by John and the fourth book of the *Sibylline Oracles* (see especially lines 152–74).

Besides the evidence for the prevalence of apocalyptic eschatology during the time of Jesus, it is probable that at least one apocalypse was written around that time in Palestine. The *Similitudes of Enoch,* preserved in *1 Enoch* 37–71, was apparently not part of the collection of Enoch books at Qumran. This lack allowed J. T. Milik to argue that the *Similitudes* is a Christian work of the 3d century (1976: 89–98). His argument has not won support, however, and most specialists date the work between the reign of Herod the Great and the destruction of the temple in 70 C.E. (Yarbro Collins 1987: 404–5). Since the latest historical allusions relate to the Parthian invasion of Palestine in 40 B.C.E. and Herod's treatment in the warm springs of Callirrhoe, the usual methods of dating lead to a date around the turn of the era (Collins: 1979: 39; cf. 1984: 143).

The apocalyptic texts mentioned in this section, especially Daniel, had an influence on the people living in Jesus' time and no doubt on Jesus himself. The political unrest following Herod's death was still vivid for those who had experienced it, and they probably spoke of it now and then to their children. The tensions that gave rise to that unrest were not far beneath the surface and, at least in some circles, were linked to apocalyptic eschatology.

B. Jesus

During most of the 19th century, Jesus was viewed primarily as a teacher and social reformer (Schweitzer 1968). In 1892, Johannes Weiss published a study that led to the rediscovery of the apocalyptic aspect of the teaching of Jesus. Much of the work of biblical scholars and theologians in the first half of the 20th century centered on the task of assimilating this discovery and its consequences. A certain shift occurred in 1960 when Ernst Käsemann declared that, although Jesus made the apocalyptically determined message of John his point of departure, his own preaching was not fundamentally apocalyptic but proclaimed God as near at hand. Käsemann was "convinced that no one who took this step can have been prepared to wait for the coming Son of Man, the restoration of the Twelve Tribes in the Messianic kingdom and the dawning of the Parousia …" (1969: 101). The positions of Philip Vielhauer (1965: 87–91) and Norman Perrin (1967: 154–206) are similar.

In recent work on the historical Jesus, his life and teaching have been placed in the context of Jewish restoration eschatology (Sanders 1985). Events of Jesus' life that make this reconstruction credible are his baptism by John; his choosing twelve disciples to have a special role, presumably a role symbolic of the renewal of the twelve tribes of Israel; his carrying out a prophetic symbolic action in the temple that probably foretold its destruction and renewal; and his execution by the Romans for sedition. Jesus' proclamation of the kingdom of God and the miracles attributed to him can and ought to be interpreted in the context suggested by the major features of his life, namely Jewish restoration eschatology.

If Jesus' teaching about the eschatological restoration included the activity of the heavenly "son of man" foretold in Daniel 7, it would be appropriate to speak of his teaching as apocalyptic. Scholars are divided on this issue. Some argue that the Son of Man sayings were composed by Jesus' followers after the appearances to them of Jesus as the risen Lord (e.g., Vielhauer 1965; Perrin 1974: 10–93). Others argue

that Jesus spoke of a heavenly Son of Man but did not identify himself with that figure (e.g., Bultmann 1968: 112, 122, 128, 151–52; Yarbro Collins 1987). Others argue that Jesus not only spoke of a Son of Man but identified himself with that heavenly being (e.g., Caragounis 1986: 174–75).

An argument in favor of Jesus' having an apocalyptic orientation is that the movement with which he associated himself (that of John the Baptist) seems to have been apocalyptic and the movement that commenced among his followers very shortly after his death, the earliest Christian community in Jerusalem, also seems to have been apocalyptic (Perrin and Duling 1982: 71–79; Käsemann 1969: 102). It is more credible historically that Jesus' life and teaching stood in continuity with these movements rather than in discontinuity.

C. The Synoptic Tradition

The synoptic tradition is a diverse body of oral and written materials centering on the life and teaching of Jesus that circulated in Christian circles in the first two centuries C.E. It is known primarily from the Synoptic Gospels, Mark, Matthew, and Luke, but also from several early apocryphal gospels (Koester 1980: 112). As indicated above, there is a widespread consensus that the earliest Christian community was an apocalyptic community (see also *BTNT* 1: 37–42; Allison 1985; Sanders 1985: 91–95).

1. The Sayings Source. According to the explanation of synoptic relationships called the Two Source Theory, the authors of Matthew and Luke used two written sources, the gospel of Mark and the Synoptic Sayings source, often referred to as "Q" (from the German *Quelle*, meaning "source"). The latter does not survive independently but must be reconstructed by synoptic comparison. The soundest method of reconstruction is to include material found in Matthew and Luke but not in Mark, or in all three but in two forms in either Matthew or Luke (a Markan form and a Q form). Such a reconstruction suggests that Q contained a variety of smaller literary forms, including brief narratives, such as the story of Satan's testing Jesus, wisdom sayings, pronouncement stories, and prophetic and apocalyptic sayings. It is likely that Q concluded with an apocalyptic or eschatological discourse (Kümmel 1975: 66, Perrin and Duling 1982: 102).

As reconstructed from Matthew and Luke, the Sayings Source is heavily influenced by apocalyptic eschatology. Most often its apocalyptic hope is expressed in sayings about the return of Jesus from heaven as the Son of Man, e.g., Luke 12:40 = Matt 24:44. His coming was expected to be like lightning or the primordial flood (Luke 17:24 = Matt 24:27; Luke 17:26 = Matt 24:37). The social setting of this apocalyptic material was an environment of persecution by "this generation," leaders in Jerusalem, and Pharisaic leaders (Perrin and Duling 1982: 103–7).

Recently, John Kloppenborg has argued that the apocalyptic form of Q is secondary and that, in its original form, the Sayings Source was a nonapocalyptic wisdom document, belonging to the genre "instruction" (Kloppenborg 1987a). Kloppenborg has certainly advanced the discussion of the genre of Q, but his argument regarding an early nonapocalyptic form is problematic because of its differentiation of source and redaction along "pure" formal lines (Yarbro Collins, forthcoming a and b). Kloppenborg has also argued that the Sayings Source, even in its latest recoverable form, is not apocalyptic because "it does not fully share the situation of anomie which impels apocalypticism towards its vision of a transformed future" (1987b). This argument is not compelling because it uses a single hypothetical characteristic of apocalypticism to determine whether a work is apocalyptic or not.

2. Mark. With Mark the gospel tradition reaches its apocalyptic peak. Its genre has been seen as parabolic (Kelber 1983: 117–29). Joel Marcus has pointed out the apocalyptic character of the parables in Mark (1986: 62–65, 229–33). According to Norman Perrin, the gospel of Mark presents "an apocalyptic drama" in three acts, involving the work of John the Baptist, the work of Jesus, and finally the mission of the disciples into the world (Perrin and Duling 1982: 238). Although in some ways the gospel of Mark resembles ancient biographies (Aune 1987: 46; Talbert 1988), its genre is better described as historiography in the apocalyptic mode (Yarbro Collins 1990: 148).

Mark begins with the words, "The beginning of the good news of Jesus the Messiah." The "good news" (gospel) here refers to the entire work and teaching of Jesus. Mark's account of this good news begins with a prophecy attributed to Isaiah (1:2–3) and the indication that this prophecy was fulfilled in the

activity of John the Baptist (1:4). John himself then prophesies the coming of one mightier than he (1:7–8). This prophecy is fulfilled in the narrated arrival of Jesus to be baptized (1:9–11). Jesus later prophesies his own death and resurrection (8:31; 9:31; 10:32–34). The reader is led to understand the narration of the fulfillment of this prophecy as an apocalyptic-eschatological event in light of the two major discourses of Jesus, both of which are apocalyptic in character (chaps. 4 and 13; see Marcus 1986; Brandenburger 1984; Allison 1985: 26–39). The ending of Mark is open-ended (Kelber 1983: 129). It does not signify closure at the point of the failure of the male disciples of Jesus to stand by him at the cross or of the female disciples to announce the resurrection. Rather, it demands that the readers bring to mind the unnarrated portion of the story (Magness 1986: 114–17). The rest of the story includes the apocalyptic-eschatological events of the proclamation of the good news to all nations (13:10) and the revelation of the Son of Man (13:24–27).

3. Matthew and Luke. Besides preserving the apocalyptic material of Mark and adding that of Q, the gospel of Matthew has modified, in an apocalyptic direction, certain passages taken from Mark. For example, Matthew's parable chapter has become even more apocalyptic than Mark's with the addition of the parable of the weeds and its interpretation (13:24–30, 36–43). To Mark's account of the transfiguration, Matthew has added elements typical of apocalyptic visions (17: 2, 6–7). To the apocalyptic discourse, Matthew has added phrases like "the close of the age" (24:3), "the sign (of the Son of Man)" (v 30), and the reference to a loud trumpet call that will accompany the sending out of the angels to gather the elect (v 31). Likewise, the death and resurrection of Jesus are accompanied by apocalyptic signs not mentioned by Mark (27:51b–53; 28:2–4). The emphasis in Matthew is more on the aspect of fulfillment than on expectation of the conclusion of the apocalyptic scenario. This impression is given primarily by the theme of the presence of the risen Lord with the community (18:20; 28:20).

It is now generally agreed that Conzelmann overstated the degree to which the author of Luke-Acts departed from the world view of apocalyptic eschatology (see, e.g., Fitzmyer, *Luke* AB, 18–23, commenting on Conzelmann 1960 et al.). Nevertheless, a shift is evident from the expectation of an imminent revelation of the Son of Man to the concerns of the daily life as a Christian. This shift is evident in the use of apocalyptic traditions in ethical exhortation (Tannehill 1986: 243, 246–51).

D. Paul

It is widely agreed that Paul's world view was apocalyptic (Käsemann 1980; Beker 1980). Paul viewed the resurrection of Jesus as the beginning of the apocalyptic event of the general resurrection (1 Cor 15:12–20; cf. Dan 12:2–3). In his earliest letter, the focus is on the imminent return of the risen Lord and the union of Christians in fellowship with him, both the few Christians who have died and the majority expected to survive (1 Thess 4:13–18; cf. 1 Cor 15:51–52). In his later letters, Paul accepts the possibility that he will die before the return of Christ (Phil 1:19–26; cf. 2 Cor 5:1–10). Since the literary genre apocalypse and related texts expressing apocalyptic eschatology are not always characterized by imminent expectation, this shift in Paul's thought may not be used to argue that his later letters are not apocalyptic. The understanding of history expressed in Rom 8:18–25, for example, is apocalyptic. The primordial past is portrayed indirectly as a lost age of glory and freedom from decay (note the allusion to Gen 3:17 in v 20). The sufferings of the present time are the eschatological woes that precede the new age of glory and freedom that will begin with the general resurrection, the "redemption of our bodies" (v 23; cf. 1 Cor 15:20–28).

Besides the temporal apocalyptic dimension, Paul reflects interest in the spatial dimension of apocalyptic revelation (Segal 1986). His conversion or call is described as "a revelation of Jesus Christ" (Gal 1:12). In 2 Cor 12:1, he speaks of "visions and revelations of the Lord." By way of example, he speaks of a man who was caught up to the third heaven, to paradise, where he received secret revelations (vv 2–4). His remark that "a thorn was given me in the flesh" to keep him from being too elated by the abundance of revelations (v 7) implies that the "man" taken up to the third heaven was Paul himself. In 1 Corinthians 2, Paul speaks of "a secret and hidden wisdom of God, which God decreed before the ages for our glorification" (v 7). This combination of heavenly and eschatological revelation in Paul is comparable to what we find in the book of Daniel.

E. The Book of Revelation

The book of Revelation is the only apocalypse in the NT, and even it is a mixed genre, since the account of the revelation received by John is embedded in an epistolary framework (1:4–6; 22:21). Like the book of Daniel, Revelation brings heavenly mysteries to bear on a social crisis. In this case, the crisis is the tension between Roman ideology and Christian messianism (Yarbro Collins 1984; cf. Schüssler Fiorenza 1985). For a discussion of this work, see the article on REVELATION, BOOK OF.

F. The Apostolic Literature

Among the works conventionally called the "apostolic fathers" by modern scholars is one apocalypse, the *Shepherd of Hermas.* Internal evidence suggests that this work was composed by a Jewish Christian freedman in Rome. It was written, perhaps in stages, between about 90 and 150 C.E. (Osiek forthcoming in *NTApocr* 3). The work consists of three parts: visions, mandates, and similitudes. At least the part containing the visions is an apocalypse (Hellholm 1980), but it is appropriate to speak of the entire work as an apocalypse (Osiek 1986).

Heavenly revelation plays a major role in the work. In Visions I–II, a heavenly figure, an elderly lady, allows Hermas to copy the content of a heavenly book so that he can communicate it to the faithful. The mandates or commandments and the similitudes or parables, that constitute the bulk of the work, are presented as the revelation given to Hermas by a heavenly being in the dress of a shepherd (Visions V.1–5). The work also has a strong eschatological interest. The term *thlipsis* is used both for persecution and for the impending eschatological crisis (Vis II.ii.7–8, iii.4; III.vi.5; IV.i.1, ii.5, iii.6; cf. Sim VIII.iii.6–7). Apparently the apocalyptic eschatology of this work included the transformation of the faithful to an angelic state after death (Vis II.ii.7).

Although the *Didache* is a church order in terms of genre, it expresses apocalyptic eschatology. This is especially apparent in the concluding chapter (16), a short apocalyptic discourse. This discourse is related to Mark 13 and parallels, especially to Matthew 24. *Didache* 16, however, does not follow that text closely, but seems to be largely independent, perhaps drawing on oral tradition. It shares with Matthew 24 the notion of a "sign" linked to the appearance of the Lord (Son of Man) on the clouds and the motif of a trumpet call. Its distinctive elements, relative to the synoptic apocalyptic discourse, are the fiery trial and the deceiver of the world. The latter is presented in terms reminiscent of the lawless one in 2 Thessalonians 2 (cf. Holland 1988).

G. The Gnostic Apocalypses

There is an emerging consensus that the religious philosophy called "Gnosis" (or Gnosticism, especially in its more developed forms) originated in the diverse matrix of Judaism in the late Hellenistic period (Rudolph 1983: 277). Thus, Gnosticism should no longer be described as a Christian heresy. In spite of the essential independence of Gnosticism from Christianity, the two movements came into contact early, perhaps already in Paul's time (Rudolph 1983: 300–2) and a gnostic form of Christianity emerged in the 2d century (Layton 1987: 20–21).

The literature produced by Christian gnostics included a number of apocalypses (Fallon 1979: 124). An early and classic example is the *Apocryphon* or *Secret Book of John* (Fallon 1979: 130–31; Layton 1987: 23–51). This work was composed in Greek (although it survives only in Coptic), probably in the 2d century C.E. The narrative framework involves Jesus' appearance after his resurrection to John the son of Zebedee on the Mount of Olives. In a dialogue between the two, the Savior reveals the nature of God as the source of all being, the structure of the divine world (*pleroma*) before creation, the story of creation (Genesis 1–4 retold from a gnostic perspective), and the secrets of salvation. John is commissioned to relate these mysteries to those who are like him in spirit. In the concluding narrative framework he communicates the revelation to his fellow disciples.

Several gnostic apocalypses include a heavenly journey (Fallon 1979: 136–39). One of these is the *Apocalypse of Paul* (preserved in Coptic and not to be confused with the Christian aprocyphal *Apocalypse of Paul* preserved primarily in Latin). The narrative framework involves an appearance of the Holy Spirit as a little child to Paul on a mountain near Jerusalem. The Spirit then takes Paul on a journey through the ten heavens (the longer, later version of *2 Enoch* also has a journey through ten heavens). In the seventh

heaven is an "old man," probably the God of the Jewish Bible, who tries to prevent Paul from going beyond that heaven. Paul, however, with the help of the Spirit and a special sign, is able to ascend further. In the tenth heaven Paul meets his fellow spirits. The descent of Paul is not narrated and there is no concluding narrative framework.

H. The Christian Apocrypha

The *Apocalypse of Peter* (preserved in Greek fragments and in Ethiopic) is one of the oldest Christian apocryphal apocalypses. It was probably composed around 135 C.E., since the activity of the Jewish messianic claimant, Bar Kokhba is indirectly portrayed as the eschatological crisis. Like many of the gnostic apocalypses, its narrative setting seems to be after the resurrection of Jesus (Yarbro Collins 1979: 72–73). Jesus is the mediator of heavenly revelation, in this case, of the signs and events of the end and visions of the places of reward and punishment (Himmelfarb 1983: 8–11). Other Christian apocryphal apocalypses in which revelation is mediated through epiphanies, visions, and auditions include *Jacob's Ladder,* the *Book of Elchasai,* the *Apocalypse of St. John the Theologian* (modeled on the canonical book of Revelation), the *Questions of Bartholomew,* the *Book of the Resurrection of Jesus Christ by Bartholomew the Apostle,* and parts of other works (Yarbro Collins 1979).

The oldest Christian apocryphal apocalypse of the heavenly journey type is the *Ascension of Isaiah.* This work is probably a composite made up of two originally independent works, a Martyrdom of Isaiah and a Vision or Ascent of Isaiah. The latter is the apocalypse and is contained in chaps. 6–11 (Yarbro Collins 1979: 84). Isaiah's journey is through the seven heavens and involves revelation of the different kinds of angels inhabiting each. The climax is a "prophecy" of the descent of "the Beloved" (Christ) through the seven heavens, his mission on earth, and his ascent back into the seventh heaven. In the present time it is the wicked angel Sammael and the angels of the firmament who determine events on earth. The strife on earth reflects the strife among the angels. Other Christian apocryphal apocalypses of the journey type include the Latin *Apocalypse of Paul,* the Greek *Apocalypse of Ezra,* the Ethiopic *Apocalypse of the Virgin Mary,* the *Story of Zosimus,* the Greek *Apocalypse of the Holy Mother of God,* a Coptic *Apocalypse of James* unrelated to the two discovered at Nag Hammadi, a Coptic work entitled *The Mysteries of St. John the Apostle and Holy Virgin,* the Greek *Apocalypse of Sedrach,* and parts of other works (Yarbro Collins 1979). Many of these works are concerned with punishments (Himmelfarb 1983) and rewards after death. They are important for many reasons, one of which is that they formed the raw material for Dante's *Divine Comedy.* On apocalypticism in the Middle Ages, see McGinn (1979).

APOCRYPHA. The Greek noun *apokrypha* (ἀποκρυφα) means "hidden." It is used to denote writings on the fringes of the canon of the OT and NT. See also the CANON articles.

OLD TESTAMENT APOCRYPHA

The term "Old Testament Apocrypha" signifies numerous Jewish religious writings that date from approximately 300 B.C.E. to 70 C.E.

Today "apocrypha" does not refer to "hidden" secrets, as in Dan 12:9–10 and *4 Ezra* 14:44–48. According to a wide consensus, and to the definition of PSEUDEPIGRAPHA as an open literary category, the OT Apocrypha should be defined as a closed and focused collection. This ancient literary collection, therefore, contains 13 works found in the old Greek codices of the OT—namely Codex Vaticanus, Codex Sinaiticus, and Codex Alexandrinus—but not in the *Biblia Hebraica* or OT.

All were written in a Semitic language and in Palestine, except for the Wisdom of SolomonSolomon and 2 Maccabees, which were composed in Greek, probably in Alexandria. All are preserved in Greek, in one or more of the Greek uncials already mentioned, and sometimes also in other languages.

Many Jews by the 2d century B.C.E. contended that prophecy lasted only from Moses to Ezra (see Josephus, *AgAp* 1; *4 Ezra* 14; *B. Bat.* 14b–15c). The Apocrypha were composed long after Ezra and were thus attributed to biblical heroes, like Jeremiah, Baruch, and Solomon, who antedated Ezra, were internal expansions to Esther or Daniel, or were "histories" of the successes or excesses of the Maccabees.

These Jewish documents were considered authoritative and inspired by many early Jews. They were not used, however, by Alexandrian Jews to fill out the canon in contrast to a Palestinian canon. While different Jewish groups, especially the Essenes and the Samaritans, had expanded or contracted collections of sacred writings, there were not two Jewish canons in prerabbinic Judaism. Philo of Alexandria did not use the Apocrypha as authoritative scripture. He quoted especially the Torah. Today Jews do not consider the Apocrypha canonical; their canon is the *Biblia Hebraica,* which is completed by the Mishna, Tosephta, and the two Talmuds.

The early Greek codices of the Bible are Christian collections; they contain not only the OT but also the NT, the Apocrypha, sometimes one or more of the Pseudepigrapha, and even additional Christian compositions. Hence, the inclusion of the Apocrypha into a canon may well be a Christian innovation.

In the 4th century C.E. Jerome was dissatisfied with the Old Latin version of the OT. He translated the canonical books from Hebrew into Latin, and produced the Vulgate, which is still authoritative in Roman Catholicism. Since he worked from the Hebrew and not the Greek version of the OT, he limited his Vulgate to the Hebrew canon. He considered the additional documents in the Greek canon of scripture to be "apocryphal." Later the Western church added to the Vulgate the Apocrypha, probably using the Old Latin version. In reaction to the Protestant Reformation and Luther's relegation of the Apocrypha, the Roman Catholic Church, on April 8, 1546, at the Council of Trent, declared the Apocrypha to be part of the Christian canon. Hence, today Roman Catholics contend these works are "Deuterocanonical" and inspired.

In the 16th century, Luther and the early Protestants rejected as canonical the additional books in the canon. They were antipathetic to apocalyptic thought, and had a distorted view of 2 Maccabees, because 12:43–45 had been used to support the Roman Catholic idea of purgatory, and of Tobit and other works in the Apocrypha, because they had been used to prove the doctrine of works righteousness. Luther placed the apocryphal works at the end of his translation of the OT and labeled them "Apocrypha." Protestants today do not consider the Apocrypha canonical, even though some books, especially Ben Sira, are often considered authoritative and even inspired.

The *Epistle of Jeremiah* was written well before 100 B.C.E. Confirmation of this date is now evident, because a Greek fragment was found in Qumran Cave VII that dates from circa 100 B.C.E. The original was composed sometime around 300 B.C.E. Containing only 72 or 73 verses, the work, influenced by Jeremiah 10:1–16, is an exhortation not to fear or worship idols.

Tobit was probably composed around 180 B.C.E. It is a romantic story instructing, among other values, that God does indeed help those faithful to his laws. The *dramatis personae* are Tobit, a righteous exile in Nineveh; Anna, his wife; Tobias, his son; Sarah, a bride who loses seven bridegrooms in succession; Asmodeus, a demon who successively slays Sarah's bridegrooms on their wedding nights; and Raphael, the angel who defeats the demon.

Judith, composed around 150 B.C.E., is a story about how the heroine Judith defeats and beheads Holofernes, the Assyrian general, and delivers her nation. The author intended to exhort Jews to reject evil, especially when it is represented by an invading enemy, and to be obedient to Torah. One of the most startling features of *Judith* is that the author had Judith pray to God to help her to lie.

3 Ezra (also named 1 Esdras and even III Esdras), was written sometime between 150 and 100 B.C.E. It is a conserted attempt to rewrite 2 Chr 35:1–36:23, Ezra, and Nehemiah 7:38–8:12. 3 Ezra 3:1–5:6 is independent of the OT. Tendencies in the book are the elevation of Ezra as "high priest," the celebration of the Temple, and the preoccupation with Zerubabel.

Additions to Esther are six expansions to Esther in its Greek form: Mordecai's dream, Artaxerxes' letter which orders the Jews to be exterminated, prayers by Mordecai and Esther, Esther's successful audience before King Artaxerxes, the king's second letter which praises the Jews, and the interpretation of Mordecai's dream. The date for these additions is clearly pre-70 C.E., but they may have been added to Esther in different years from 167 to 114 B.C.E., or sometime in the 1st century B.C.E. The authors of these additions added color to the story, provided an apology for Judaism, and—most importantly—supplied God's name, the theological words, and ideas conspicuously absent in Esther. For example, salvation now comes not as a result of Esther's courage but because of her piety.

The Prayer of Azariah and the Song of the Three Young Men, *Susanna*, and *Bel and the Dragon* are three documents added to Daniel and date between 165 and ca. 100 B.C.E. *The Prayer of Azariah* turns the reader's attention to the Jews facing martyrdom and away from the wicked king. It stresses that there is only one God and that he is just.

Susanna is an attractive tale about a desirable and virtuous woman who is charged by two elders because she refuses to have sex with them. She is rescued by Daniel, who cross-examines them and reveals that they are lying.

Bel and the Dragon preserves two stories. One describes how Daniel proves that the priests, not the idol Bel, eat the food presented to it. The other tells how Daniel destroys an idol but is saved by Habakkuk, who is aided by angels.

1 Baruch dates from the 1st or 2d centuries B.C.E., and is composite. It opens with an acknowledgment that Jerusalem was destroyed because of Israel's sins and with a plea for God's forgiveness. It then moves through a poetic celebration of wisdom, to a description of how the lament from Jerusalem was heard.

Ben Sira (Sirach or Ecclesiasticus) was probably composed around 180 B.C.E. by a conservative teacher in Jerusalem. It is an apology for Judaism and a critique of Greek culture. Typical themes are the reverence for the Temple, the Torah, and the belief in one God who is just and merciful. A Heb mss of *Ben Sira* was found at Masada.

The *Wisdom of Solomon*, perhaps written in the 1st century B.C.E., is a blend of Jewish wisdom traditions with Greek and Egyptian ideas. Wisdom is clearly personified.

1 Maccabees, composed near the end of the 2d century B.C.E., celebrates the military exploits of the Maccabees up to the rule of John Hyrcanus. The author is pro-Hasmonean, but does not articulate the importance or value of martyrdom. This document is a major source for studying the history of 2d-century Palestine.

2 Maccabees, written in the latter part of the 2d century or the early decades of the 1st century B.C.E., is an epitome of the lost five-volume history by Jason of Cyrene. Much more theologically oriented than 1 Maccabees, 2 Maccabees stresses the resurrection of the body, the efficaciousness of martyrdom, and the revelatory dimension of miracles. It is anti-Hasmonean. Two letters introduce the Epitome. The first is probably authentic, was composed around 124 B.C.E. in a Semitic language, and is an appeal to celebrate Hanukkah. The second letter is probably inauthentic, dates between 103 and 60 B.C.E., and may have been composed in Greek.

Formerly *4 Ezra* (also called II Esdras and even the Apocalypse of Ezra) and the *Prayer of Manasseh* were considered a part of the OT Apocrypha. However, they are not found in the oldest Greek codices of the LXX, are pseudepigraphical, are not found in many collections of the Apocrypha, and are now frequently and rightly considered among the books in the OT Pseudepigrapha.

For additional information, consult the entries on each of the documents mentioned above. For texts, see *APOT* and *APAT*. See also JSHRZ and *HJP²* 3/2.

NEW TESTAMENT APOCRYPHA

Although there are problems with the definition (see below), the term "New Testament Apocrypha" has generally come to refer to various early Christian writings that are not included in the canonical NT.

———

A. The Problem of Definition
B. The Range of NT Apocryphal Literature
C. The Value of NT Apocrypha
D. Sources

———

A. The Problem of Definition

In general, the term "New Testament Apocrypha" has come to refer to that corpus of early Christian literature that shares with the writings of the NT proper—with respect either to form and content, or to similar claims to apostolic derivation—a common self-consciousness in laying claim to the authority that derives from the age of Christian origins. Like the books of the NT, the apocryphal NT writings derive from various early Christian communities and from various time periods. But unlike the books that have come down to us as the "canonical NT,"the apocryphal writings generally did not achieve the level of widespread ecclesiastical use that would have prompted their inclusion in most of the early Christian canonical lists.

When one attempts to go beyond a definition of this general sort, one inevitably encounters difficulty. For example, if one follows the natural inclination to develop a definition of "apocrypha" based upon the use of its cognate Greek and Latin terms by early Christian authorities, the inconsistency with which the word is applied to various works inevitably poses a problem. The dilemma is illustrated by the disparate uses of the term in the latter part of the 2d century and the beginning of the 3d. On one hand, Clement of Alexandria can use "apocryphal" in quite a literal sense to refer to certain "secret" books said to be in the possession of followers of the heretic Prodicus (*Strom.* 1.15.69.9). The books in question, incidentally, have little to do with the NT at all but are of Persian origin, and thus fall outside of what most scholars today would choose to treat as NT Apocrypha. On the other hand, Tertullian seems to use the term without regard for its literal meaning "secret." For him it has become simply a term of disparagement, since he uses it in tandem with the adjective *falsa* to indicate his low opinion of the *Shepherd of Hermas* (*De pud.* 10.6). And again, it is instructive to note that the term is applied to a book which few today would treat under the rubric of NT Apocrypha, assigning it instead to that special (though similarly ill-defined) category of early Christian literature known as the "Apostolic Fathers." Finally, one finds the term employed by Irenaeus to refer to certain writings of the Marcosians, who have as their intent, as he puts it, the "perversion" of scripture (*Adv. haer.*, 1.20 [xiii], 1), as though the books in question were simply heretical adaptations of writings Irenaeus regards as having scriptural authority. Though the Secret Gospel of Mark provides at least one example where this was in fact the case (Koester 1980a), Irenaeus' use of the term here would not apply to most of the books modern students would consider to fall within the category "NT Apocrypha."

Scholars have not shown any greater degree of unanimity in defining just what is meant by the term "NT Apocrypha." The use of "apocrypha" generally to denote early Christian works not found in the canonical NT occurs already in the title of Michael Neander's 16th century collection of apocryphal NT writings: *Apocrypha: hoc est, narrationes de Christo, Maria, Joseph, cognatione et familia Christi, extra Biblia.* It is doubtful that this usage bears any direct relationship to ancient uses of the word "apocrypha," but derives instead analogically from the Protestant reformers' use of "Apocrypha" to refer to those OT writings accepted as canonical by the Council of Trent, but rejected by Luther as "not held equal to the sacred scriptures," and thus relegated to an appendix in his landmark German translation of the Bible.

But in this century, prominent scholars have pressed for a definition of NT Apocrypha which goes beyond the simple meaning "extrabiblical," or "noncanonical." In his learned volume on the *Apocryphal New Testament,* M. R. James used the term "apocryphal" primarily in its common, or popular, sense of connoting "false or spurious" (p. xiv), thus implying that the chief characteristic separating this material from the NT proper is the fact that it, unlike the canonical writings, does not derive from the apostolic hands to which it lays claim. However, today, when most critical NT scholarship entertains similar doubts about roughly two thirds of the canonical NT itself, such a definition clearly will not suffice. Wilhelm Schneemelcher also sought a definition in history, calling apocryphal those books which "from the point of view of Form Criticism further develop and mould the kinds of style created and received in the New Testament …, which are distinguished by the fact not merely that they did not come into the New Testament but also that they were intended to take the place of the four Gospels of the canon (this holds good for the earlier texts) or to stand as enlargement of them side by side with them." (*NTApocr* 1:27–28). But as Koester (1980a) has pointed out, this sort of stratifying approach, which regards the corpus of

canonical writings as necessarily early, and all of the apocryphal literature as part of a late, secondary effort to continue that which the NT had already started, is not supported by the MSS evidence, and may reflect more our own canonical predispositions than the literary histories of the books themselves. At the very least, such a definition could only be applied with great difficulty to a work such as the *Gospel of Thomas,* which is certainly not modeled upon any NT writing (and possibly predates many of them), a problem Schneemelcher himself could already foresee (*NTApocr* 1:60–64).

B. The Range of NT Apocryphal Literature

Most recent collections have chosen to organize and present the corpus of NT apocryphal literature in terms of the four genres represented in the NT itself: gospels, acts, letters, and apocalypses. This, of course, presupposes the sort of definition proffered by Schneemelcher, in which apocryphal works are regarded primarily as secondary attempts to supplant various NT writings. If one can no longer accept this view of apocryphal literature, it serves no useful purpose to retain these categories, especially since the parameters suggested by them, if taken seriously, would exclude from consideration many important early Christian apocryphal works. Schneemelcher himself was already testing the limits of these parameters by including in his collection such works as the *Books of Jeu* or *Thomas the Contender* under the rubric of "gospels." These two works are but a few droplets of the great flood of new material that has recently come onto the field owing largely to the discovery in 1945 of a hoard of Coptic gnostic texts at Nag Hammadi in upper Egypt. As the publication and study of these new documents proceeds, the range of types and genres of literature to be considered under the heading of NT Apocrypha will have to be expanded greatly. It clearly will no longer suffice to organize all of NT apocryphal literature into the four traditional categories represented in the canonical NT. The categories of material indicated in the following list of apocryphal works is suggestive of the great variety of NT apocryphal literature written and used by early Christians (see also related entries in the ABD).

New Testament Apocrypha

1. Gospels and Related Forms
   a. Narrative Gospels
      - *The Gospel of the Ebionites*
      - *The Gospel of the Hebrews*
      - *The Gospel of the Nazoreans*
      - *The Gospel of Nicodemus (The Acts of Pilate)*
      - *The Gospel of Peter*
      - *The Infancy Gospel of Thomas*
      - P. Egerton 2 (a fragment of an unknown narrative gospel)
      - P. Oxy. 840 (a fragment of an unknown narrative gospel)
      - *The Protevangelium of James*
   b. Revelation Dialogues and Discourses
      - *The (First) Apocalypse of James* (NHC V)
      - *The (Second) Apocalypse of James* (NHC V)
      - *The Apocryphon of James* (NHC I) (a revelation discourse cast in an epistolary framework)
      - *The Apocryphon of John* (NHC II, III, IV, and BG 8502)
      - *The Book of Thomas the Contender* (NHC II)
      - *The Dialogue of the Savior* (NHC III)
      - The *Epistula Apostolorum* (a revelation discourse cast in an epistolary framework)
      - *The Gospel of the Egyptians* (distinct from the Coptic Gospel of the Egyptians—cf. below under Treatises)
      - *The Gospel of Mary* (BG 8502)
      - *The Gospel of Philip* (NHC II)
      - *The Letter of Peter to Philip* (NHC VIII) (a revelation discourse cast in an epistolary framework)
      - *Pistis Sophia*
      - The Questions of Mary

- The Questions of Bartholomew
- The Second Treatise of the Great Seth (NHC VII)
- *The Sophia of Jesus Christ* (NHC III and BG 8502)
- The Two *Books of Jeu*
- Bodlian Copt. MS d54 (a fragmentary dialogue between Jesus and John)

c. Sayings Gospels and Collections
- *The Gospel of Thomas* (NHC II)
- The Synoptic Sayings Source (Q)
- *The Teachings of Silvanus* (NHC VII)

2. Treatises
- *On the Origin of the World* (NHC II)
- *The (Coptic) Gospel of the Egyptians* (NHC III and IV)
- *The Gospel of Truth* (NHC I and XII)
- *The Hypostasis of the Archons* (NHC II)
- *The Treatise on Resurrection* (NHC I) (a treatise cast in epistolary form)
- *The Tripartite Tractate* (NHC I)

3. Apocalypses
- *The (Coptic) Apocalypse of Elijah*
- *The (Arabic) Apocalypse of Peter*
- *The (Coptic) Apocalypse of Peter* (NHC VII)
- *The (Greek/Ethiopic) Apocalypse of Peter*
- *The (Coptic) Apocalypse of Paul* (NHC V)
- *The (Latin) Apocalypse of Paul*
- *The Apocalypse of Sophonias*
- *The Apocalypse of Thomas*
- *The Ascension of Isaiah* (chap. 6–11)
- *The Christian Sibyllines*
- *The Concept of Our Great Power* (NHC VI)
- *The Book of Elchasai*
- *V* and *VI Ezra*
- *Melchizidek* (NHC IX)
- *The Mysteries of St. John the Apostle and the Holy Virgin*

4. Acts
- *The Acts of Andrew*
- *The Acts of Andrew and Matthias*
- *The Acts of John*
- *The Acts of Paul (and Thecla)*
- The (Coptic) Act of Peter (BG 8502)
- *The (Greek) Acts of Peter*
- *The Acts of Peter and the Twelve* (NHC VI)
- *The Acts of Philip*
- *The Acts of Thomas*
- *The Kerygmata Petrou*

5. Letters
- The Abgar Legend
- *The Correspondence between Paul and Seneca*
- *The Epistle of Pseudo-Titus*
- *Paul's Letter to the Laodiceans*

6. Liturgical Materials

a. Homilies

- *The Interpretation of Knowledge* (NHC XI)
- *The Kerygma of Peter*
- *The Testimony of Truth* (NHC IX)
- *A Valentinian Exposition* (NHC XI)

b. Psalms
- *The Odes of Solomon*

c. Prayers
- *On the Annointing* (NHC XI)
- *On Baptism A* (NHC XI)
- *On Baptism B* (NHC XI)
- *On the Eucharist A* (NHC XI)
- *On the Eucharist B* (NHC XI)
- *A Prayer of the Apostle Paul* (NHC I)

Though this list is relatively inclusive, it is not exhaustive of all the works that might come under consideration as NT Apocrypha. For example, in the early editions of his *Neutestamentliche Apokryphen,* Edgar Hennecke included the *Didache,* the letters of Clement of Rome, and other works normally associated with the corpus "Apostolic Fathers," which some today would still insist on including in any complete listing of the NT Apocrypha. There is also the question of how far to extend the chronological limits of the designation NT Apocrypha. For example, should one consider the later apocryphal acts, such as the *Acts of Xanthippe and Polexena* or the *Martyrdom of Peter,* as also belonging to this corpus? The current trend seems to be toward inclusivity rather than limitation, since such a designation as NT Apocrypha, as abstract as it may be, does tend to be suggestive of a "canon" of texts worthy of scholarly attention. Over the last two decades, a group of Swiss scholars forming *l'Association pour l'étude de la litterature apocryphe chrétienne* has been attempting to rectify the years of scholarly neglect under which many such later apocryphal works have suffered by publishing new critical editions and French translations of (eventually) all the Christian apocrypha (including OT Apocrypha) in the Series Apocryphorum of Corpus Christianorum.

C. The Value of NT Apocrypha

It has been customary to speak of the NT Apocrypha in terms of their value in bearing witness to the history of early Christianity only as it developed in the 2d and 3d centuries or later. More recent investigations of particular apocryphal works, however, have called into question this scholarly convention by dating certain books, or the traditions of which they have made use, to the 1st century. For example, Helmut Koester and James M. Robinson have argued for a view of Christianity in the 1st century that takes account of the traditions and tradition-historical tendencies at work in the *Gospel of Thomas,* which many today have come to view as a 1st-century Christian text (Robinson and Koester 1971: 71–113, 114–57, 158–204). In a separate article Koester (1980b) has suggested that in addition to the *Gospel of Thomas,* the *Dialogue of the Savior* may also bear witness to the development of the early Christian sayings tradition in the 1st century. Following upon an earlier suggestion of Koester (1980a: 126–30), John Dominic Crossan has argued in a recent monograph (1988) that the *Gospel of Peter* can be used to reconstruct a version of the passion narrative that predates both the synoptic version and that of John. Finally, Charles Hedrick (1988) has edited a collection of essays by various scholars exploring the value of apocryphal gospel traditions for addressing the question of the historical Jesus. All of these efforts reflect a current trend, especially among American scholars, to reexamine old historical assumptions about apocryphal literature in general, and to view apocryphal literature as the product, not of various attempts to rewrite or supplement the canonical texts, but of the great diversity of belief and practice that existed in early Christianity almost from its inception.

D. Sources

English translations or summaries of most of the works listed above may be found in M. R. James, *The Apocryphal New Testament,* or Edgar Hennecke and Wilhelm Schneemelcher, *New Testament Apocrypha (NTApocr),* an English translation of the 4th edition (1959) of their German collection, *Neutestamentliche*

Apocryphen. The latter has recently appeared in a new German edition (1987), and a new edition of James' collection is currently being prepared by J. Keith Elliott. A new four-volume collection of apocryphal texts sponsored by Polebridge Press is also currently in production. For the Nag Hammadi texts, and those found in BG 8502, English translations are to be found in James M. Robinson, General Editor, *The Nag Hammadi Library.*

Critical editions of most of these texts are also available. Greek texts of many of the apocryphal gospels are to be found in Tischendorf, *Evangelia apocrypha,* published originally in 1853, and reissued in 1966. The standard text for the apocryphal acts is that of Lipsius and Bonnet, *Acta apostolorum apocrypha* (1959), also an update of an earlier volume assembled by Tischendorf (1851). Members of *l'Association pour l'étude de la litterature apocryphe chrétienne* have begun issuing new editions of the apocryphal acts in the Series Apocryphorum of Corpus Christianorum, including Eric Junod and Jean-Daniel Kaesteli, *Acta Iohannis* (1983), and Louis Leloir, *Acta Apostolorum Armenaica* (1986). Critical editions of the Nag Hammadi texts have appeared in the series Nag Hammadi Studies, including *Codex I* (H. W. Attridge, ed.), *Codices III,2 and IV,2: The Gospel of the Egyptians* (A. Bohlig, F. Wisse, P. Labib, eds.), *Codex III,5: The Dialogue of the Savior* (S. Emmel, ed.), *Codices V,2–5 and VI with P. Berol. 8502, 1 and 4* (D. M. Parrott, ed.), *Codices IX and X* (B. A. Pearson, ed.). Critical editions of all of the Nag Hammadi Codices are currently in production or imminently forthcoming in this series. Carl Schmidt's text of the *Pistis Sophia* has been published in the same series (Nag Hammadi Studies 9, R. McL. Wilson, ed.), as well as his text of the *Books of Jeu* from the Bruce Codex (Nag Hammadi Studies 13, R. McL. Wilson, ed.). The entire text of BG 8502 was published originally by Walter Till in 1955, and reissued in a revised edition by Hans-Martin Schenke in 1972. The Syriac text of the *Odes of Solomon* is published with an English translation by James H. Charlesworth in the SBLTT series. The texts pertinent to the reconstruction of the Synoptic Sayings Source (Q) have been published by John Kloppenborg. A new fragment of P. Egerton 2 has just been published by Michael Gronewald, and should thus be added to the fragment originally published by Bell and Skeat. For critical texts of other NT apocryphal works and fragments, one should consult the appropriate sections of Hennecke-Schneemelcher, *NTApocr*.

STEPHEN J. PATTERSON

APOLLO (DEITY). After Zeus, the most important deity in the Greek pantheon, and the most Greek of all the gods. His cult was prominent throughout the Mediterranean world. As a vegetation deity, he guards against plagues of mice, grasshoppers, and plant diseases, and as a god of herds, he offers protection, especially against wolves. Very early he has a reputation for healing powers, but in time his son Asclepius takes over this function. Warding off evil usually implies power to effect its opposite, and as the god of purity, Apollo sends in retribution destructive plagues or sickness. Hence purification and expiation rites were a strong feature in his cult.

In the Greco-Roman world, prophetic powers were associated especially with Apollo, whose principal oracle was located at Delphi. Strabo (9.3.12) reports that Apollo slew the Python, a serpent or dragon that guarded this oracle. The Greek term *pythōn* came to be used in reference to the Python's spirit of divination that inspired the deity's medium at the shrine in Delphi (Plut. *De def. or.* 414e). Acts 16:16 uses the term in apposition to *pneuma* (spirit) in a description of a woman similarly possessed.

That Paul sets high value on prophecy is apparent from 1 Cor 14:1–5. Since women were used as oracular media for Apollo at some oracles in Greece, it is not surprising that prophecy is associated also with female members of the Corinthian church (1 Corinthians 11). But Apollo is a deity of order, and Paul, for whatever other reasons, relates to this cultural feature with his insistence that female prophets wear appropriate head covering (vv 11–16).

The Greek instinct for moderation found in Apollo the balance to Dionysos, who was especially associated with ecstatic worship and had found an early welcome at Delphi. Since Apollo sponsors reasoned discourse, his priest at Delphi interpreted the Pythia's responses. A related concern for harmony is evident in Paul's instruction concerning prophecy and the interpreter's role in connection with ecstatic speech ("tongues" 1 Cor 14:22–25). He also teaches that the "spirits of prophets are subject to prophets, for God does not encourage disorder (*akatastasia*) but harmony (*eirēne*)" (vv 32–33). Paul's declaration that he would rather speak five intelligible words than tens of thousands in ecstatic utterance (v 19) would be well understood in Hellas.

The broad range of talent exhibited at Corinth (1 Cor 14:26) parallels the beneficent civilizing influence that was traditionally associated with Apollo. At the same time it attests the depth of Paul's awareness of basic Hellenic values (Rom 1:14; 1 Cor 9:19–23), the cultivation of which contributed to a pervasive symmetry that was so highly prized among Greeks and expressed in maxims that were inscribed at Delphi: *gnōthi sauton* (know yourself), *mēden agan* (nothing too much). These maxims attest the reputation that Delphi had for a civilizing influence.

Apollo's oracle at Delphi became world-renowned for the counsel it gave in ordering the lives of those who sought advice on commercial ventures, political issues, and a variety of personal problems, but in St. Paul's time its influence had declined. Yet Apollo's reputation for moral earnestness was so well established that if Christianity was to prevail in Greece, it was imperative that spirit-filled leaders in Christian communities be able to assist people in need of counsel. Paul met the need by including in his Corinthian correspondence a number of answers to perplexing problems. Of special interest is the fact that his letters to Corinth contain the highest concentration of his own claim to be spirit-inspired.

Numerous stories illustrate that Apollo's advice was not to be taken lightly, for sacrilegiousness paid an especially dreadful fee (Parke and Wormell 1956:1. 378–92). In like manner, Christian rites are to be approached with due reverence and concern for their moral implications (1 Cor 5). As at Delphi, trivializing of rites can be disastrous. Unworthy participation in the Eucharist accounts for an unusual incidence of sickness and death (11:30).

In one most vital respect there was an unbridgeable gulf between Apollo and Jesus Christ. Apollo in all his purity remains at a distance from humanity. No devotee of his would ever have said, "I live in Apollo

and Apollo lives in me." Apollo had no defense against Paul's oracle in Gal 2:20 and one in 2 Cor 13:4: "Jesus was crucified in weakness, but lives by the power of God. For we are weak in him, but in dealing with you we shall live with him by the power of God."

FREDERICK W. DANKER

APOLLONIA (M.R. 131178). A Persian to Byzantine site located on a sandstone cliff on the shore of the S Sharon Plain, 17 km N of Jaffa, and 34 km S of Caesarea. The site in Arabic is called ʿArsuf. The shoreline includes a small natural haven, still used by local fishermen.

A. Research and Excavations

The site was first identified with Apollonia by Reland (1714: 570). Its main remains aboveground, which include the Early Arabic city wall and the Crusader castle, have been described by Guérin (1875: 375–82) and by Conder (1882: 137–40). Rescue excavations were conducted in 1950 (Ben-Dor and Kahane 1951: 41–43), and in 1962 and 1976 (Israel Dept. Ant. 1962: 11; 1976: 63; see Ovadiah and Birnbaum 1989). Excavations on a larger scale were undertaken in 1977 in the commercial quarter in the city's center (areas A–D), and in 1980–81 on both sides of the S city wall (area E), as well as in the *donjon* of the Crusader castle (area F^1; Roll and Ayalon 1989: 23–117). Since 1982, excavations have been carried out by I. Roll in the W of the city (area H) and in the castle's chapel (area F^2).

B. Early Remains

Scattered surface finds of Neolithic flint tools and some sherds from EB I indicate sporadic occupation of the site in those early periods. A few sherds from Iron Age IIA (9th century B.C.) found at the bottom of area H, and an Ushebti statuette of the 26th Dyn. (late 7th–early 6th centuries B.C.) from the surface (Giveon 1970: 347–8), indicate occasional occupation also in OT times. Therefore, there are no grounds for identifying the site with the biblical "town of Resheph" supposedly mentioned in 1 Chr 7:25 (Clermont-Ganneau 1896b: 259–60; see Kallai 1986: 155 n. 121), nor with one of the cities named in the campaign lists of Tiglath-pileser III (Forrer 1920: 61; see Tadmor 1985: 180–82).

C. The Persian Period

Architectural remains from two consecutive phases, uncovered in area H on the virgin soil, indicate that the earliest permanent settlement on the site belongs to that period. Infant burials in jars found in the NE and a large rubbish pit uncovered in area D show that this settlement was confined to the cliff's W edge. The finds include: (1) local pottery—mainly storage jars typical to the inland; (2) imported pottery—mainly Black Glazed Ware from Greece; (3) a great number of *Murex brandaris* shells, from which royal purple has been extracted; (4) a lot of twenty coins—all, except one, minted in Sidon; (5) an ostracon that mentions Eshmun, the chief god of Sidon. Clermont-Ganneau (1876: 374–75) was the first to point out that the Arabic toponym *ʿArsūf* derives from the name of the Phoenician god Resheph; hence it has been suggested that the original name of the site was *(A)rsôp* (Albright 1931–32: 167 n. 20) or rather *(A)ršōf* (Yzreel 1989). That makes one more link with the kingdom of Sidon, which was also known as "the Land of the Reshephs" (*KAI* 15; see Fulco 1976: 47). This data indicates that the earliest settlement at Apollonia was Sidonian, that it served as a trading center which had commercial ties with inland Palestine on one hand and with the Greek world on the other, and that it possessed a purple dye industry. The beginnings seem to date to the early 5th century B.C., when the Sidonian king Eshmunazar II was rewarded by the Persians with "Dor and Jaffa [and] the rich corn lands in the Plain of Sharon," as attested in the inscription on his sarcophagus (*KAI* 14.1.19), in return for the employ of his fleet against the Greeks (Kelly 1987: 39–56).

D. The Hellenistic Period

This period is represented mainly by assemblages of pottery uncovered in areas D and H and in two more spots along the cliff's W end, which indicate that the inhabited area was more or less the same as previously. The pottery includes local types, as well as imported wares from the main Hellenistic centers of the E Mediterranean. Large numbers of unbroken *Murex brandaris* shells have been found, and some *Murex trunculus* shells with their back knocked off; these seem to indicate that not only Royal purple (*ʾargāmān*) was produced in Hellenistic times, but also the much appreciated Hyacinthine purple (*tĕkēlet*) (Ziderman 1987: 15–33; see, however, McGovern et al. 1988: 81–90). Josephus, who provides the earliest historical records on the site, mentions Apollonia as a town that belonged to the Jews under Alexander Jannaeus (*Ant* 13.15.4 §395), then as a city restored by Gabinius (*JW* 1.8.4 §166). The name "Apollonia" derives from that of the Greek god Apollo, who was identified with the Phoenician god Resheph already in the early 4th century B.C. (*KAI* 39, 41; see Clermont-Ganneau 1876: 374–75; 1896b: 260; Fulco 1976: 50–52). Hence, there is no reason to think that the town was founded by Seleucus I (Hölscher 1903: 60), or by Apollonius, the Seleucid general under Demetrius II (Conder 1882: 137; Tcherikover 1970: 93).

E. The Roman Period

To the Roman period belongs an architectural complex with underground storage rooms, from the 2d (phase I) and early 3d (phase II) centuries A.D., uncovered in area E close to the main descent to the haven. The pottery includes large numbers of rough local storage jars, as well as finer pieces of Eastern Sigillata ware and African Red Slip ware. The latter indicate commercial ties with the main centers of pottery making along the Syro-Phoenician coast and in N Africa. Finds from the surface include: the sculpture of an eagle with a monogram of Emperor Julian and two inscribed stelae (Clermont-Ganneau 1882: 96, 134; Vincent 1909: 445–46), an ostracon with a love formula and a ring with a wish for good health (*SEG* 1957: 846; 1964: 466), all in Greek. That reflects a typical Greco-Roman city of the Mediterranean Orient and Apollonia is indeed recorded as such, between Caesarea and Jaffa (Shürer 1979: 114–15), by Pliny (*HN* 5.13.69), by Ptolemy (*Geog.* 5.15.2), and on the *Tabula Peutingeriana.* Apollonia is not mentioned in the Rabbinic literature nor in the NT. However, one may consider the possibility that the men sent by the centurion Cornelius from Caesarea to Jaffa to bring Peter (Acts 10:1–9) did spend the night at Apollonia, which is at the distance of one day's travel from Caesarea.

F. The Byzantine Period

This is the period when the city reached its largest expansion, up to 130 acres according to the pottery spread over the surface. It included a commercial area in the center, a large church in the SE, an industrial area in the N where oil, wine, and glass have been produced, and an anchorage along the shore. More manufacturing installations were found in the S and in the W. Byzantine Apollonia emerged as a main commercial, industrial, and maritime center, which served not only the whole of S Sharon, but also much of W Samaria. Various finds indicate that the city's prosperity was due mainly to its growing and lucrative Samaritan community (Sussman 1983: 71–96). There are no grounds for thinking that the name of the city was changed to Sozousa and to Aphthoria—a theory suggested by Clermont-Ganneau (1896a: 337–39; 1897: 18–20) and widely accepted ever since. Stephanus of Byzantium (ed. Meineke 1849: 106, 596) mentions both, Apollonia (no. 13, "near Jaffa") and Sozousa ("in Phoenicia"), as two different cities. Aphthoria is described by Petrus the Iberian (ed. Raabe 1895: 112) as a village located only 12 miles S of Caesarea.

ISRAEL ROLL

APOLLONIUS (PERSON) [Gk *Apollōnios* (Ἀπολλωνιος)]. The name of five men mentioned in their several capacities in 1 and 2 Maccabees.

1. The Son of Thraseas or (with a slight emendation) a son or native of Tarsus (2 Macc 3:5), and governor of Colesyria under Seleucus IV Philopater (the brother of Antiochus Epiphanes). Polybius (31.13.2–3) tells of a man named Apollonius who was removed from office after the murder of Seleucus by his minister Heliodorus in 175 B.C. (cf. Hengel 1974: 2.11, 272) and retired to Miletus. Polybius' Apollonius could be the son of Thraseas, but certainty is impossible. During the reign of Seleucus IV (187–175 B.C.), a Benjaminite (or a man from the clan of Bilgah) named Simon opposed the high priest Onias III, and turned to Apollonius for help. To entice Apollonius to act, Simon told him about money deposited at the Temple. Apollonius, in turn, informed Seleucus, who dispatched Heliodorus to Jerusalem to investigate (2 Macc 3:4–8). When Heliodorus attempted to confiscate Temple funds, he was struck by a heavenly apparition and nearly died (3:22–25). (In the account of this same event in *4 Macc. 4:1–14*, Apollonius himself, rather than Heliodorus, attempted the confiscation with similar results.)

The identity of the next-mentioned Apollonius (2 Macc 4:4) is debated, because the text is obscure. If one accepts the reading *Apollònion Menestheōs* (Apollonius, son of Menestheos), he is the same person who appears in 4:21. Goldstein argues (*2 Maccabees* AB, 222) that he is different from the Apollonius in 3:5 or 5:24. Bartlett (*Maccabees* CBC, 236) also accepts the reading, but identifies him with the native of Tarsus (as opposed to the son of Thraseas) in 3:5. The defective text, however, gives reason for suspecting the name *Menestheōs,* which could have been supplied from 4:21. On the whole, in fact, it appears that the Apollonius of 4:4 was the same as Apollonius, the son of Thraseas/Tarsus (3:5, 7) since both passages describe an Apollonius who (1) was governor of Colesyria and Phoenicia during the life of Seleucus and (2) supported Simon against Onias III. The author mentions the death of Seleucus in 4:7, so if the son of Thraseas was the same as the Apollonius mentioned by Polybius, he left office for Miletus.

2. The Son of Menestheus, sent by Antiochus IV Epiphanes (ruled 175–163 B.C.) to Egypt for the coronation of Philometer ca. 172 B.C. (2 Macc 4:21). Scholars often assume that this Apollonius was also the unnamed collector of tribute sent by Antiochus IV with 22,000 soldiers to Jerusalem in 167 B.C. (1 Macc 1:29–30). The same event is retold in 2 Macc 5:24–26, in which the official, Apollonius, was called a "captain of the Mysians," who were mercenaries from Mysia in NW Asia Minor (Goldstein *1*

Maccabees AB, 211). As mentioned above, it is possible that this Apollonius was the same as the native of Tarsus or even the governor of Samaria (see below; cf. Dickson *HDB* 1: 123–24). Also, one cannot exclude the possibility that the son of Menestheus and the captain of the Mysians are different people. On the whole, however, it seems best to see 2 Macc 4:21, 5:24–26 and 1 Macc 1:29–30 as referring to the same person, the son of Menestheus, who seemed not to have been a governor but to have been a trusted emissary of Antiochus.

3. The Governor of Samaria, killed in battle by Judas Maccabeus (who captured and used the sword of Apollonius the rest of his life [1 Macc 3:12]). This Apollonius appears suddenly in 1 Macc 3:10, with no introduction and no further designation. Josephus, however, identifies him as the governor of Samaria (*Ant.* 12.7.1 §287). Goldstein accepts that identification and argues that his army would have included surrounding gentiles (Arabs, Idumeans) and Greeks from Samaria itself, but no Samarians (*1 Maccabees* AB, 245–46).

4. The Son of Gennaeus, one of five regional rulers under Antiochus V Eupater (ruled 164–162) who persecuted Jews (2 Macc 12:2).

5. The Governor of Colesyria and Phoenicia under Alexander Balas (see Joseph. *Ant* 13.4.3 §88, who calls him Apollonius Daus) and Demetrius II Nicator. He is sometimes considered to be the son of Apollonius, son of Thraseas/Tarsus. Polybius mentions (31.19.6 and 21.2) an Apollonius who was the foster brother and confidant of Demetrius I Soter, and who helped him escape from Rome, where he was held hostage. Demetrius landed in Tripolis and ousted Antiochus V Eupater (1 Macc 7:1; 2 Macc 14:1). If the Apollonius in Polybius is the same as the Apollonius in 1 Macc 10:69, his close relationship to Demetrius II Nicator (ruled 145–139 and 129–125) would be explained on the basis of his previous relationship to the father Demetrius I. At any rate, in 147 B.C. Demetrius II sailed to Cilicia from Crete with a large mercenary army, intending to unseat Alexander Balas. As governor of Colesyria he named Apollonius, who apparently already held that position under Alexander Balas (Jos. *Ant* 13.4.3 §88), if not Demetrius I. Apollonius gathered a large army and besieged Jamnia. Meanwhile, he threatened Jonathan, the high priest, in Jerusalem, who attacked Joppa with an army of ten thousand men. Apollonius appeared to retreat from Joppa toward Azotys, taking 3,000 cavalry with him, but leaving 1,000 in hiding to surround Jonathan when he followed. The ambush failed; Jonathan attacked, and at the height of the battle Simon and his forces joined Jonathan. The Seleucids were routed, Azotus and the Temple of Dagan burned (1 Macc 10:67–85).

PAUL L. REDDITT

APOLLOPHANES (PERSON) [Gk *Apollophanēs* (Ἀπολλοφανης)]. A Syrian whom the army of Judah the Maccabee slew at the fortress of Gazara (2 Macc 10:37). The Maccabean forces had pursued Timotheus, the defeated commander of an invading Syrian army, to the fortress at Gazara, in the low hills of W Judaea. Jason of Cyrene, the author of 2 Maccabees, should have written Jazer, a town in Moab where this action probably took place (see 1 Macc 5:6–8; and *Ant* 12.8.1). The Maccabean soldiers killed Timotheus and his brother, Chaireas, the only other inhabitants of the town mentioned by name along with Apollophanes. Nothing is known about Apollophanes' position in the city. (See Goldstein *2 Maccabees* AB.)

MITCHELL C. PACWA

APOLLOS (PERSON) [Gk *Apollōs* (Ἀπολλως)]. A charismatic young convert in the early Christian community, described as "a man of learning, powerful in the scriptures" (Acts 18:24, NEB) who eventually had some impact on the churches of Achaia, notably Corinth (Acts 18:27; cf. 1 Cor 1:12; 3:4–6; etc.). As a native of Alexandria, Apollos (or Apollonios, according to Codex D) grew up in the leading

center of Hellenistic and Platonic thinking E of Greece. We can only speculate about his intellectual links there, and a number of scholars have suggested he had direct acquaintance with Philo or the Therapeutae. He is presented in Acts as an eloquent speaker with more than a little skill at debating, although it is possible (if not probable) that Luke has exaggerated Apollos' abilities; regardless, there is no doubt that in general his credentials, at least within the context of the synagogue, were impressive.

The note that he was "instructed in his own country (Codex D) in the word of the Lord" (Acts 18:25), if genuine (as claimed by Foakes-Jackson, *Acts* MNTC), does not prove that Christianity had reached Alexandria by A.D. 50. The phrase "word of the Lord" probably refers to the LXX, not the Christian gospel. The possibility that he had contact with John the Baptist is also tenuous, even though according to Luke "he knew only the baptism of John" (Acts 18:25). It is most likely that this knowledge came either from contact with some of John's disciples or from a fragmentary report of the events in Palestine between A.D. 25–30. Apollos is also said to have "taught accurately the things concerning Jesus" (Acts 18:25), which for Luke apparently meant an accurate acquaintance with the facts of Jesus' life (cf. the "orderly account" of Luke 1:3), probably including the account of the resurrection. Yet it seems not to have included any knowledge about what took place immediately after Jesus' ascension; i.e., the coming of the Holy Spirit. Thus, the note in Acts 18:25 that Apollos was *zeōn tō pneumati* ("fervent in spirit," RSV) cannot refer to the Holy Spirit, since this would be inconsistent with his subsequent experience with Aquila and Priscilla (v 26) and with Paul's subsequent experience preaching in Apollos' wake (Acts 19:1–7).

Apollos' fervor appears to have impelled him to become an itinerant Jewish preacher, whose travels eventually brought him to Ephesus. There he began "to speak boldly in the synagogue" (Acts 18:26), an activity made possible by the customary invitation to visitors to make any comments they wished. At that time, Priscilla and Aquila—already introduced in Acts 18:2 as residents of Corinth who had earlier been victims of Claudius' general expulsion of all Jews from Rome (A.D. 49)—were present in the synagogue at Ephesus. They appear to have found his message deficient, and "they took him and expounded to him the way of God more accurately" (18:26). This would appear to have been more than just a casual exchange, and may have involved taking Apollos to their home for an indefinite stay. The "way" they expounded was probably stamped with Paul's distinctive influence, since the couple appear to have been Paul's friends and colleagues from their earlier days together in Corinth.

From Ephesus, Apollos wished to take his freshly supplemented message to Achaia (i.e., Greece), and he received the enthusiastic support of the Ephesian Christians in this endeavor (18:27). According to Codex D, Apollos' trip was urged by some Corinthian Christians currently living at Ephesus (Aquila and Priscilla might possibly fit into such a category). At Corinth, Apollos "greatly helped those who through grace had believed" (18:27), apparently a reference to catechetical instruction of new converts, and he "powerfully confuted the Jews in public, showing by the scriptures that the Christ was Jesus" (18:28). It is not clear what kind of scriptural exegesis is intended by this phrase, although it may be safe to infer that it was stamped by Paul's own christological exegesis of the OT (cf., e.g., Rom 10:6ff.; 1 Cor 10:1ff.; Gal 4:22ff.). That it was "allegorical" in the tradition of Philo's exegesis is purely a guess drawn from Apollos' Alexandrian background.

The church at Corinth apparently lionized Apollos to the point of making him the object of partisan loyalty, a point that is readily apparent in Paul's first epistle to that church (1 Cor 1:12). In that letter, Paul met the challenge not by directly confronting Apollos, but by attacking the Corinthian tendency toward factiousness (1 Cor 4:6). Indeed, Paul lists Apollos as among those who were with him at Ephesus when he composed 1 Corinthians (15:12). Some in the Corinthian church apparently wanted Apollos to return to minister to them, but Apollos refused, presumably out of concern for (and disapproval of) their factiousness. The only other NT reference to Apollos occurs in Titus 3:13, where Titus is asked "to speed Zenas the lawyer and Apollos on their way." The apparent meaning of these words is that the two had been commissioned by Paul to take the letter to Titus, but that they should not tarry long at Crete after delivering it.

The figure of Apollos has become symbolic of both eloquence and knowledge of scripture. Certainly the picture of him that emerges from the NT is of one who was a firm supporter of Paul, and of one who was, despite his natural abilities, in no way interested in competing with or subverting Paul's influence and authority. He seems to have preferred taking the subsidiary role of helping to strengthen churches which had already been established.

Luther suggested that Apollos was the author of the Epistle to the Hebrews, a suggestion which has received renewed popularity in recent years because of the implied connection with Alexandrian exegesis (cf. Heb 11:8–16 with Philo *Abr*) and to the suggestion that there is a complex interplay between Hebrews and Paul's Corinthian correspondence (Montefiore *Hebrews* BHNTC). But since we have no sample of writing from Apollos with which to compare Hebrews, the suggestion appears to be extremely tenuous (Hurst 1985).

L. D. HURST

APOLLYON [Gk *Apollyōn* (Ἀπολλυων)]. The Greek name, meaning "Destroyer," given in Rev 9:11 for "the angel of the bottomless pit" (in Hebrew called ABADDON), also identified as the king of the demonic "locusts" described in Rev 9:3–10. These "locusts" rise out of the bottomless pit (see ABYSS) and for five months torture "those of mankind who have not the seal of God upon their foreheads."

In one manuscript (syr^{ph}), instead of Apollyon the text reads "Apollo," the Greek god of death and pestilence as well as of the sun, music, poetry, crops and herds, and medicine. Apollyon is no doubt the correct reading. But the name Apollo (Gk *Apollōn*) was often linked in ancient Greek writings with the verb *apollymi* or *apollyō,* "destroy" (cf. Aesch. *Ag.* 1080–82). From this time of Grotius, "Apollyon" has often been taken here to be a play on the name Apollo (*TDNT* 1:397). The locust was an emblem of this god, who poisoned his victims, and the name "Apollyon" may be used allusively in Revelation to attack the pagan god (Ford *Revelation* AB, 152) and so indirectly the Roman emperor Domitian, who liked to be regarded as Apollo incarnate (Caird *Revelation* BHNTC, 120). HERBERT G. GRETHER

APOLOGETICS, NT. Apologetics in the NT comprises a study of the "art of persuasion" employed by the early Christians. Such persuasion evolved in a context of Jewish and Hellenistic thought and laid a foundation for the 2d century apologists.

A. Introduction
B. Judaism
C. Paganism
D. Roman Empire
E. Other Forms of Christianity
F. Conclusion

———

A. Introduction

Much of early Christian literature, including the NT, was written to promote and defend the Christian movement. As the early Christians attempted to appeal to the inhabitants of the Greco-Roman world at large, use was made of the strategies and methods of Hellenistic religious propaganda. The appropriation of such apologetic-propagandistic forms was essential if Christianity was to succeed in the face of competition from other religions (Fiorenza 1976: 1–25; cf. Georgi 1971: 124–31).

The study of early Christian apologetics typically begins with the writings of the Greek apologists of the 2d century: Quadratus and Aristides, but especially Justin, Tatian, Athenagoras, Melito, and Theophilus. It would be incorrect, however, to presume that these were the *first* Christian apologists. As early as the 1st century, Christians were compelled to defend their religious convictions against a variety of opponents, both within and without, and their apologetic arguments can be discerned in the NT itself.

Indeed, many of these arguments were subsequently picked up and developed by the apologists of the 2d century (Droge 1988).

Apologetics as the "art of persuasion" is a function of rhetoric, specifically the rhetoric of the law courts (Betz 1976: 100). An "apology" (*apologia*) is, *sensu strictu*, a speech of defense in reply to a speech of the prosecution. The earliest Christian preaching is reported to have occurred in a context of this sort (Acts 2:14–35; cf. 22:1; 24:10; 25:8, 16; 26:1, 24; Phil 1:7, 16; 2 Tim 4:16). According to Luke, Jesus himself predicted that his disciples would be required to make an apology (*apologeomai*) before the legal authorities of their day (Luke 12:11). More generally, the author of 1 Peter exhorts his readers to "be prepared to make a defense (*apologia*) to anyone who calls you to account for the hope that is within you" (3:15). Yet, examples of apologetic arguments can also be found in the NT where the terms *apologia/apologeomai* are not explicitly used. For convenience these may be arranged into four broad categories: defense against (1) Judaism, (2) paganism, (3) the Roman Empire, and (4) other forms of Christianity. The impression should not be left, however, that these categories are mutually exclusive. In some instances, apologetic arguments have two or more opponents in view at one time.

B. Judaism

Apologetics in the NT takes as its starting point the crucifixion of Jesus, because the idea that the messiah was to suffer and die completely contradicted Jewish expectation. The historically undeniable fact of the crucifixion therefore required a defense of Jesus' messianic status against the Jewish objection that "a hanged man is accursed by God" (Deut 21:23; cf. Gal 3:13–14). The Christian response came most often in the form of an appeal to the Jewish scriptures themselves, for it was believed that these ancient oracles had predicted that the messiah would suffer, die, and be raised from the dead: "Was it not necessary that the Christ should suffer these things and enter into his glory? And beginning with Moses and all the prophets, he [sc. Jesus] interpreted to them in all the scriptures the things concerning himself" (Luke 24:26–27; cf. Acts 3:18–25; 8:30–35; 26:22–23; 1 Cor 15:3–8). The OT passages which figure prominently in this "passion apologetic" include Isaiah 42–44; 49–51; 52–53; 61; Psalms 22; 31; 34; 41; 42–43; 69; 109; 118; and Zechariah 9–14. The argument from prophecy (in reality an act of historical imperialism) became the hallmark of Christian apologetic toward Judaism, not only in the NT but also in Christian apologetics of the 2d century (e.g., the *Preaching of Peter;* Aristo's *Dialogue of Jason and Papiscus;* and Justin's *Dialogue with Trypho*). However, it was not without its appeal to Greeks (cf. Acts 10:43; Justin, *1 Apol* 33.5; 34.1–11; 48.1–6).

Matthew carries this hermeneutical principle one step further, for he is concerned to demonstrate that not only Jesus' passion but his entire life and teaching were in agreement with the Jewish scriptures. For example, he expands upon sayings of Jesus by adding quotations from the OT (9:13; 12:5–8, 40; 21:16), and he repeatedly emphasizes that the events of Jesus' life fulfilled divine prophecy: "This took place to fulfill (*hina plērothē*) what the Lord had spoken by the prophet …" (1:22; 2:15, 17, 23; 4:14–16; 8:17; 12:17–21; 13:14–15, 35; 21:4–5). Matthew also enters into controversy with Judaism in the Sermon on the Mount by criticizing popular Jewish piety (6:2, 5, 16; 7:5) and presenting Jesus as the legislator of a righteousness superior to that of the scribes and Pharisees (5:20).

Mark takes a somewhat different approach. In addition to the argument from prophecy, he places the necessity for Jesus' suffering and death on the lips of Jesus himself in the form of "passion predictions" (8:31; 9:30–31; 10:32–34, 45). Like the other evangelists, Mark is also anxious to respond to Jewish accusations that Jesus was demon-possessed (3:19b–30 par.), that he did not fast (2:18–22 par.), keep the sabbath (2:23–3:6 par.), or observe laws of ritual purity (7:1–23 par.), and that he associated with sinners (2:15–17 par.) and claimed authority to forgive sins (2:1–12 par.).

Obviously, the resurrection itself was used by Christians as an important argument for the messianic status of Jesus, predictions of it being found, for example, in Psalms 16; 110; and Jonah 1. Apparently, however, allegations were made that the disciples of Jesus had stolen his body and thus faked the resurrection. The apologetic story of the setting of the guard at the tomb of Jesus is clearly an attempt to refute this accusation (Matt 27:62–66; 28:4, 11–15; cf. Craig 1984: 273–81).

The argument from prophecy gave rise to another problem. If Jesus had indeed been the promised messiah, why did the Jews for the most part reject him? The answer comes again in the form of OT citations about the failure of Israel to recognize the messiah (Ps 118:22; Isa 6:9–10; 8:14; 28:16; 29:10). Paradoxically, the unbelief of the Jews becomes a *proof* for Jesus having been the messiah! In the gospels, Jesus repeatedly draws attention to the failure of the Jews to believe in him, just as their ancestors had refused to believe the prophets (Matt 13:10–15 par.; 21:33–45 par.; cf. Acts 4:11; 28:26–27; 1 Pet 2:7–8). Paul expresses a similar view in Rom 9:30–33 and 11:7–10. The author of the Fourth Gospel also shares this perspective (12:37–41), but he carries it to a sinister extreme by demonizing the Jews (8:43–47). The problem of Jewish unbelief is one of the themes of Stephen's speech in Acts (7:51–53), but the speech goes considerably beyond this to argue that Christianity has superseded Judaism as a world religion. In particular, Stephen is sharply critical of the Jewish law and temple cult (Acts 6:11, 13), as Jesus himself seems to have been (Mark 7:18–19; 14:58; John 2:19).

In Gal 3:1–29 Paul engages in a critique of Judaism and presents a theoretical justification for his rejection of the Jewish law. A striking feature of Paul's argument is that the *lateness* of the law proves its lack of validity (Grant 1952: 223–24). On the other hand, God's covenant with Abraham (who is a type of the pagan convert) has both chronological and theological priority. According to Paul, the law of Moses represents a decline from an originally superior state of affairs. Indeed, the law brings with it a "curse" (Gal 3:10, 19–25; cf. Betz, *Galatians* Hermeneia, 144–46). A similar view was expressed before Paul's time by the influential polymath Posidonius of Apamea in his studies of primitive religion (Grant 1952: 224). His account of the origin of Judaism (preserved by Strabo 16.2.35–39; Nock 1959: 8, however, posits a Jewish source for Strabo) describes how the pure religion which Moses established in Jerusalem was later corrupted by "superstitious and tyrannical men" who instituted dietary regulations, ritual observances, and circumcision. Something like this informs Paul's rejection of the law in Galatians. He radicalizes it, however, by placing the point of decline earlier: the corruption of Moses' successors has become the corruption of Moses *himself*, or of the (fallen?) angels who gave him the law (Gal 3:19; cf. Grant 1952: 224). Paul takes a similar position with respect to Judaism in Rom 2:1–4:25, though his tone is far more conciliatory.

The appeal to the Jewish scriptures also had a positive apologetic value. In addition to vindicating the "crucified messiah," the appeal had the effect of providing Christianity with a past history, indeed, an ancient and venerable one. In the Greco-Roman period, it was axiomatic that nothing could be both new *and* true (cf. Celsus, according to Origen, *Cels* 4.14). The attempt to anchor Christianity backward in the ancient writings of Moses and the prophets gave the impression at least that Christianity had antiquity on its side. Thus, Christianity becomes the "true Israel," and Christians the true descendants of Abraham (Gal 3:7, 9, 14, 29; 6:16; Rom 9:6–8). It was the task of the apologists of the 2d century to draw out the implications of this (see especially Justin, *1 Apol* 23.1; 31.8; 44.8–10; Tatian, *Orat* 31.1; Theophilus, *Autol* 3.16–30; Tertullian, *Apol* 19.1).

C. Paganism

If the idea of a crucified messiah was scandalous to Jews, it also offended Greek sensibilities (Celsus, according to Origen, *Cels* 1:54: "Celsus … reproaches the savior for his passion, saying that he was not helped by his father, nor was he able to help himself"; cf. 1.66, 69; 2.16, 36, 55, 63, 67–70). In the NT almost no attempt is made to alleviate the offense of the cross. Paul, for example, admits that the doctrine of "Christ crucified" (*Christos estauromenos*) is foolishness, at least according to recognized standards of wisdom; but he insists nevertheless that through the crucified (and resurrected) Christ, God has accomplished what human wisdom and philosophy could not: the redemption of mankind from the demonic powers of the cosmos (1 Cor 1:18–2:16; cf. 2 Cor 13:4; Gal 6:14). It is really only the author of the Fourth Gospel who, in gnosticizing fashion, reinterprets the crucifixion and thereby reduces its importance as a vicarious sacrifice.

One way the NT attempts to establish the divinity of Jesus is through the miracles he is said to have performed. The gospels of Mark and John, for example, portray Jesus as a wandering miracle worker who demonstrated his divine power by his deeds (Mark 4:35–5:43; 7:24–8:9; John 2:1–11; 4:46–5:9; 6:1–14;

9:1–7; 11:1–44). There is, however, an inherent weakness in the "argument from miracle," because opponents of Christianity could use the miracles as evidence that Jesus was a *magician,* not the son of God (so Celsus, according to Origen, *Cels* 1.68; 2.48–53). The 2d-century apologists are acutely aware of this. There is relatively little appeal in Justin to the miracles as evidence of Jesus' divinity. Justin recognizes that miracles only carry conviction to those who are actual eyewitnesses, and evoke no wonder in those who are dependent on secondhand testimony (*Dial. Trypho* 69.6).

In its attitude toward Greek religion the NT adopts a tradition going back to Hellenistic Judaism (Wisdom of Solomon 13–15). This tradition finds its clearest expression in Rom 1:18–32, where Paul criticizes pagan religion (Castellino 1963: 255–63). According to him, the history of Greek religion is one of degradation and corruption spurred on by men who have suppressed the truth. It therefore stands under divine wrath (1:18). This was not always the case, however, for originally mankind had a better, albeit approximate, conception of deity. These initial religious beliefs arose from man's intellectual contemplation of God's invisible nature insofar as it could be discerned in the creation (1:20; cf. Wis 13:1, 5; Philo, *Praem* 43). Paul characterizes this primordial religion simply as the knowledge of God (1:21). At some point, however, a process of corruption began. Instead of rendering proper worship to God, men "directed their thoughts to worthless things" and began to worship the images of men and animals (1:21–23; cf. Wis 13:10, 13–14; 14:17; 15:18). Thus, "they exchanged the truth for a lie and worshipped the creation instead of the creator" (1:25). The corruption of religion consequently brought about the perversion of morality, for having abandoned a proper understanding of God, men fell prey to their passions and engaged in unnatural sexual practices and assorted crimes (1:26–28). Indeed, according to Paul, it is the invention of idolatry which is the origin and cause of all the vices which destroy society (1:29–31; cf. Wis 14:12, 17). In this way the curse of God's wrath accomplishes its purpose. Paul's concern here is to demonstrate on the basis of a *theologia naturalis* that the Greeks are "without excuse" (*anapologētoi,* 1:20; 2:1), for there is a sufficient knowledge of God available to all men to ensure their responsibility (Ferguson 1962: 193).

Elsewhere Paul exhorts Christians to "shun the worship of idols," for whoever participates in pagan religious ceremonies is in reality worshipping *demons,* not God (1 Cor 10:14, 20–21; cf. 1 Thess 1:9–10; 2 Cor 6:15–16; 1 John 5:21; Rev 9:20). The belief that the traditional gods of Greek religion and myth were actually demons derives from Jewish tradition (*1 En.* 19:1; 99:7; *Jub.* 1:11; 22:17), but it is also found in the Academic critique of popular religion (Plut. *De def. or.* 417 CE; *De Is. et Os.* 360F; 361B; cf. Decharme 1904: 220–32, 454–64). The apologists of the 2d century employ both traditions to support their criticism of Greco-Roman religion (Justin, *1 Apol* 5.2–6.1; *2 Apol* 5.2–5; Athenagoras, *leg.* 24.3–27.2). The fact that many Christians refused to participate in pagan worship led directly to the charge that they were "atheists."

There are two passages in Acts in which Luke brings Christianity into direct confrontation with paganism (Acts 14:8–18; 17:16–34; cf. Grant 1986: 25–26, 49–51). In the first episode, Paul and Barnabas visit the Roman colony at Lystra, where Paul heals a man who had been crippled from birth. The Lystrans are so awed by the miracle that they suppose "the gods have come down … in the likeness of men" (14:11). Indeed, Barnabas and Paul are called Zeus and Hermes, and sacrifices are prepared for them. Paul, however, delivers a brief speech to dissuade the Lystrans (14:15–17). This is the first instance in Acts where Paul preaches to pagans without any link to the synagogue or Judaism (Haenchen *The Acts of the Apostles* MeyerK, 431). Paul urges the Lystrans to turn from "vain idols" (*ta mataia;* cf. LXX Jer 2:5) to a living God who created the world (14:15, citing Exod 20:11; cf. 1 Thess 1:9–10). Although in past generations God has allowed the pagans (*ta ethnē*) "to walk in their own ways" (Acts 17:30), he can still be perceived in the natural order of the cosmos: "For he did good and gave you from heaven rains and fruitful seasons, satisfying your hearts with food and gladness" (14:16–17; cf. Rom 1:20). It is interesting that in this non-Jewish context Paul's preaching is based on a kind of natural theology instead of the argument from prophecy. The fact that the name of Jesus is never used (not even in the miracle) is striking.

The apologetic theme of Paul's speech at Lystra is more fully developed in his speech at Athens (Acts 17:16–34). Once again Paul condemns idolatry, but this time the debate is with Epicurean and Stoic philosophers as well as with the officials of the Areopagus (on the historical problems, see Haenchen *Acts* MeyerK, 527–29). Furthermore, Paul's preaching at Athens contains an explicit reference to "Jesus and the resurrection." The Epicureans dismiss Paul as a "babbler" (*spermologos*), while the Stoics regard him as a "preacher of foreign divinities" (*kataggeleus xenōn daimoniōn*), presumably Jesus and his consort "Anastasis" (17:18). The educated reader of Acts could scarcely overlook the similarity to the charge against Socrates (*kaina daimonia eispherōn,* Xenophon, *Mem* 1.1.1; cf. Haenchen, *Acts* MeyerK, 527). Consequently Paul is brought before the court of the Areopagus in order to determine what his "new teaching" is (17:20). Paul begins his defense by calling the Athenians "very religious" (*deisidaimonesteroi*, 17:22; cf. 25:19), for while wandering through the city he discovered an altar dedicated "To an unknown god" (*agnostō theō,* 17:23). Paul concludes from this that the Athenians, or pagans generally, stand in a positive and negative relation to the one, true God: they worship him (along with many other gods!), yet they do not know him (Haenchen, *Acts* Meyer K, 521). Hence, Paul proclaims him. Alluding to Isa 42:5, he argues that the creator and lord of the cosmos does not live in man-made temples, nor is he in need of sacrifices from men. On the contrary, he is the one who "gives to all men life and breath and everything" (17:24–25; cf. 14:17). It is man's obligation therefore to seek God, for "he is not far from each one of us" (17:27). As proof of this, Paul quotes a line from the Stoic Aratus' poem *Phainomena* (5), a widely read and valued text: "For we are indeed his [according to Aratus, Zeus'] offspring" (17:28; cf. Cadbury 1955: 46–49). Paul goes on to point out that since we are God's offspring, we should not imagine that the deity is like an idol (17:29). The Hellenistic-Jewish philosopher Aristobulus (2d century B.C.) had cited this passage from Aratus to make a similar point (according to Eus. *Praep. Evang.* 13.12.3–7). Paul's polemic is directed not so much at the religion of the philosophers as it is aimed at Greek popular religion (Haenchen, *Acts* Meyer K, 525). At this point the speech takes a different turn. In the past, God has overlooked "the times of ignorance" (i.e., he had not punished the Greeks as they deserved; cf. 14:16; *contra* Rom 1:18–32); but now a decisive change has occurred: all men must repent because God is going to judge the world by "a man" (Jesus, though he is not named). The proof of this is that God has raised Jesus from the dead (17:30–31). With this, God ceases to be *unknown* (Haenchen, *Acts* MeyerK, 525). Once again the proclamation of the resurrection is incomprehensible to Paul's hearers: the Epicureans openly mock it, while the Stoics postpone a decision. "Some," however, are converted (17:32–34).

Both the Areopagus speech and Paul's address at Lystra anticipate some of the main lines of 2d-century Christian apologetics (Geffcken 1907: xxxii–xxxiii).

D. Roman Empire

Examples of political apologetic abound in the NT, especially in the Lukan writings. It is Luke alone, for example, who connects the birth of Jesus with the census decree of Augustus (2:1–7; similarly, 3:1–2), implying thereby that Christianity rightfully belongs to the general course of world history (cf. Acts 26:26, "for this was not done in a corner"). The 2d-century apologist Melito of Sardis delights in pointing out that the birth of Christ coincided with the establishment of the Roman Empire by Augustus (according to Eusebius, *Hist. Eccl.* 4.26.7–8). Like the other evangelists, Luke is concerned to prove that Jesus was devoid of revolutionary intentions. In response to the provocative question about the payment of taxes to the emperor, Jesus insists that they should be paid (20:20–26 par.). Paul makes much the same point in Rom 13:1–7, as does the author of 1 Pet 2:13–17. In the Fourth Gospel an attempt is made to clear Jesus of the charge of being a political revolutionary by having him refuse to become king by popular acclamation (6:15; cf. 18:36). Luke is also anxious to demonstrate that Jesus was innocent of the charge of sedition. According to Luke, Pilate does not condemn Jesus (23:25; *contra* Mark 15:15; Matt 27:26); instead he pronounces him innocent on three occasions (23:4, 14, 22; cf. John 18:38; 19:4, 6). Furthermore, Luke exonerates the Romans of all culpability in the execution of Jesus: the Jewish authorities are the ones who willfully conspire to have Jesus condemned as a political revolutionary (20:20; 23:2, 5, 18–19, 23; cf. Matt 27:24–25). This in turn prepares the way for the defense of

Christianity against the charge of sedition in Acts (Légasse 1981: 249–55). Once again it is the Jews who make the accusation: "They are all acting against the decrees of Caesar, saying that there is another king, Jesus" (Acts 17:7; cf. 24:5). Paul's response is typical: "Neither against the law of the Jews, nor against the temple, nor against Caesar have I offended at all" (25:8). Throughout Acts, Luke introduces an impressive array of Roman officials who display benevolence toward Christian missionaries (especially Paul) and who repeatedly attest that the charges brought against them have no factual basis (Acts 13:7, 12; 16:37–39; 18:12–16; 19:35–40; 23:26–30; 25:24–27; 26:30–32). Indeed, Paul is permitted to carry on his missionary work "openly and unhindered" even while being detained under military surveillance in Rome (28:30–31). Luke's political apologetic is intended to emphasize that there is nothing seditious about Christianity; on the contrary, Christians are law-abiding subjects of the Roman Empire. The apologists of the 2d century make the same claim (Justin *1 Apol* 17.1–3; Tertullian, *Apol* 21–24; 30–4; 32.1–3; 39.2).

An altogether negative evaluation of the Roman Empire is found in the Apocalypse of John, the result perhaps of active persecution of Christians by the state. The Pauline and Lukan view of the Empire as, on the whole, just and beneficent is here replaced by one which sees the Empire as energized by demonic forces bent on destroying the churches of God. This hostility is expressed through two principal agents: the "beasts" of Revelation 13. The first of these, the beast from the sea, is the Roman Empire itself (13:1–10); the second, the beast from the earth (or the false prophet), is the imperial cult (13:11–18). In the face of this onslaught, the apocalyptic writer advocates martyrdom, not violent resistance, for he is convinced that God and Christ will eventually triumph over the forces of evil in a great cosmic battle. The importance of Revelation should not be underestimated even though it is scarcely at the center of the NT.

E. Other Forms of Christianity

In the 1st century, Christianity lacked a uniform church structure and theology. Instead Christian communities tended to be shaped theologically and organizationally by their respective founders. Relations among these groups often ranged from close cooperation to competition and outright hostility. Nowhere is this clearer than in the Galatian churches established by Paul. His letter to these churches presents the first systematic apology for Christianity, not to outsiders but to Christians themselves (Betz 1976: 99–114). In Galatians, Paul defends what he calls "the truth of the gospel" (2:5, 14), that is, *his* gospel, "the gospel of the uncircumcision" (2:7; cf. 1:6–7; 5:6; 6:15).

Sometime after Paul's departure from Galatia, Jewish-Christian missionaries arrived from Jerusalem and attempted to persuade the Galatians that they were obligated to observe the law of Moses and receive circumcision if they hoped to achieve salvation (2:15–21; 3:2–5; 4:21; 5:2–12; 6:12–17). Paul's defense takes the form of an "apologetic letter" (Betz, *Galatians* Hermeneia, 14–15, 24, 28, 30). He begins by placing his opponents in historical perspective, identifying as their predecessors the dissenting faction at the Jerusalem council: the "false brethren" (2:4–5), the "men from James" (2:12), and the "circumcision faction" (2:12), as well as the Cephas group at Antioch (2:11–14). Furthermore, Paul contends that his "law-free" gospel was officially recognized by the "pillar apostles" of the Jerusalem church (2:1–10). Next, Paul appeals to scripture to prove that his gospel to the Gentiles represents the fulfillment of God's covenant with Abraham (3:1–29). Since Paul's opponents had success in winning the Galatians over to their side (i.e., to a form of Christian Judaism), Paul is compelled to define and defend his theology over against Judaism (see above, section B). Finally, in the allegory of Hagar and Sarah (4:21–31), Paul argues that only those who rely on faith and not the law are the true children of Abraham.

In its polemic against the doctrine of justification by faith, the letter of James provides evidence for the theology and continued existence of Paul's Jewish-Christian opponents (Jas 2:14–26; cf. Luedemann 1983: 194–205).

Galatians was not the only letter in which Paul had to defend himself against rival missionaries. In the letter fragment preserved in Phil 3:2–4:3 we learn that, like the opponents in Galatia, the adversaries encountered in Philippi also advocated a form of Christianity which included observance of the Jewish law and circumcision. Paul angrily refers to these opponents as "dogs" (3:2), turning on them the common term of abuse used by Jews of pagans (cf. Mark 7:27). In hyperbolic fashion Paul redefines circumcision

as a form of ritual mutilation (3:2; cf. Gal 5:12) and argues that righteousness cannot be obtained through the law but only through faith in Christ (3:9; cf. Gal 2:16).

Paul also encountered Jewish-Christian missionaries in Corinth who boasted that they were "Hebrews, Israelites, and descendants of Abraham" as well as "servants of Christ" (2 Cor 11:22–23; cf. Georgi 1964: 31–82, 219–46). These "superapostles" (11:5; 12:11) arrived in Corinth carrying letters of recommendation (3:1, from Jerusalem?) and claiming that they had performed miracles (12:11–12) and received mystical experiences (12:1–9). Since, however, they do not mention the law or circumcision, they appear not to have been the same opponents Paul encountered in Galatia and Philippi. These missionaries criticized Paul, saying that "his letters are weighty and strong, but his bodily presence is weak, and his speech of no account" (10:10–12). Furthermore, they argued that Paul's refusal to accept money from the Corinthians was either because he had no apostolic authority (12:11–18; cf. 11:7–9) or because he planned to steal from the collection (12:17). Paul first responded to these opponents in the letter fragment of 2 Cor 2:14–6:13 and 7:2–4. This letter appears to have been unsuccessful, however, for after a personal visit to Corinth, Paul was again compelled to defend himself in a letter partially preserved in 2 Corinthians 10–13, the so-called "letter of tears" mentioned in 2:4. This letter is a defense (cf. *apologeomai* in 12:19) of Paul's apostleship and ministry and displays a considerable amount of literary and rhetorical sophistication (Betz 1972: 13–42). Although Paul asks the Corinthians not to evaluate him by his opponents' criteria (10:1–18), he finally does so himself in the "fool's speech" of 11:16–12:13. Paul contends that he fully measures up to his opponents in terms of pedigree and spirituality (11:22–23; 12:1–16). Paradoxically, however, he insists that his superiority consists of the dangers, insults, and misfortunes that have plagued his career as an apostle: "If I must boast, I will boast of the things that show my weakness" (11:23–33; cf. 12:7–10, the "thorn in the flesh"). In this way, Paul makes clear that the Corinthians should not judge him in comparison with his opponents. Instead they must examine themselves to see whether they are holding the faith and whether Christ is present among them (13:5). If this is the case, then Paul has stood the test (Koester 1982: 2.130).

A completely different situation is presupposed by Paul's first letter to the Corinthians. Here Paul is not contending with *outside* rivals (but note the references to Apollos, 1:12; 3:4–6, 22; 4:6; 16:12). His polemic is addressed instead to the Corinthians themselves. In fact, the problems with which Paul deals seem to have resulted from a misunderstanding of what he himself had preached. Since he does not accuse the Corinthians of believing a "different gospel," 1 Corinthians is not an apologetic letter like Galatians or 2 Corinthians 10–13 (Koester 1982: 2.121).

In Colossians, Paul (or a Paulinist) is once again arguing with Jewish-Christian opponents who advocate circumcision (2:11) and the observance of dietary regulations and festivals like new moon and sabbath (2:16, 21). This is reminiscent of the situation in Galatians and Philippians, but in Colossians there is a gnostic dimension to the opponents' theology (*philosophia,* 2:8; cf. Koester 1982: 2.264–65). The opponents regard Christ as the head of a hierarchy of cosmic powers (1:16; 2:10). Union with Christ therefore could only be achieved through the mediation of angelic powers, probably in the context of a mystery-like initiation (2:18). In responding to this form of Christianity, the author of Colossians admits that Christ is the chief of the cosmic powers (1:15–20; 2:10; cf. Eph 1:21–22); but he maintains that through Christ's death these cosmic powers have been conquered and disarmed (2:15). At the same time the author contends that the Jewish law has also been canceled through Christ's death (2:14).

The precise identity of the opponents attacked by the author of the Pastoral Letters is difficult to determine. There are references which seem to fit both Jewish-Christians (1 Tim 1:7; 4:3; Titus 1:10, 14) and "gnostics" (1 Tim 6:20; 2 Tim 2:18), as well as false teachers generally (1 Tim 6:5, 10; 2 Tim 3:6–7; Titus 1:11). Only rarely, however, does the author enter into theological debate with his opponents (1 Tim 4:1–5). Instead, he prefers name-calling (Karris 1973: 549–64). The Pastorals seem therefore to have been designed as a manual or handbook to enable church leaders to identify and reject "heretical" brands of Christianity (Koester 1982: 2.304).

The author of the document known as 2 Peter warns his readers about those who distort the scriptures, including Paul's writings (3:16), with "cleverly designed myths" (1:16; cf. 2:1–22). In particular, these

opponents reject the doctrine of Christ's parousia: "Where is the promise of his coming? For ever since the fathers fell asleep, all things have continued as they were from the beginning of creation" (3:4). The author of 2 Peter does not defend the traditional understanding of the parousia, but presents a general eschatological view of the dissolution of the cosmos, similar to the Stoic doctrine of "conflagration," *ekpy-rōsis* (3:5–13; cf. Käsemann 1964: 169–95), with criticisms by Neyrey 1980: 407–31).

The author of 1 John argues against a "gnostic" interpretation of the Gospel of John. He identifies his opponents as those who deny that Jesus "came in the flesh" (4:2) and who refuse to identify the heavenly Christ with the earthly Jesus (2:22). In response, the author of 1 John insists on their identity (5:6–8) and maintains that such a view is in full accord with the intentions of the gospel (1:1–4). The author of 3 John is critical of a certain Diotrephes, who "does not acknowledge my authority" (9–10). The problem, however, seems to be more one of ecclesiastical politics than of theological controversy.

F. Conclusion

On the basis of this general survey of apologetics in the NT, the following conclusions may be drawn: (1) The appeal to the Jewish scriptures lies at the heart of the apologetic enterprise, both with respect to Judaism and the wider Greco-Roman world. It is on this basis that Jesus' messianic status is said to be proven and that Christianity's claim to be a world religion is established. In some instances even intramural controversies are resolved by an appeal to the OT. (2) The NT response to Greek religion is decidedly negative. Greek religion is rejected as idolatrous and the gods of the Greeks are exposed as demons who have deceived and enslaved mankind. Here the NT adopts the perspective of Hellenistic Judaism and, indeed, of Greek philosophy itself. Nevertheless, on the basis of an appeal to natural theology, pagans are held accountable, for there is sufficient knowledge of God available to them to ensure their responsibility. (3) With one exception, the NT uniformly views the Roman Empire as just and beneficent. Likewise, Christians are portrayed as loyal, law-abiding subjects of the Empire. (4) Many of the apologetic arguments found in the NT anticipate the main outlines of 2d-century apologetics. (See Bardy *RAC* 1: 533–43; Kamlah *RGG*^{3} 1: 477–500.)

APOPHTHEGM. New Testament interpreters have used five different terms to refer to brief narratives that culminate in a saying of Jesus: (1) apophthegm; (2) paradigm; (3) pronouncement story; (4) chreia; and (5) anecdote. R. Bultmann, who used the term apophthegm, defined the form as "sayings of Jesus set in a brief context" (1963: 11). M. Dibelius, who used the term "paradigm," defined the form as an example narrative, "a record of a particular situation in a form which is as far as possible free of tendency and therefore of individuality and color" (1934: 37). He added that "many a Paradigm reaches its point in, and at the same time concludes with, a word of Jesus" (1934: 56). V. Taylor, using the term "pronouncement story," defined the form as stories that "quickly reach their climax in a saying of Jesus which was of interest to the first Christians because it bore directly upon questions of faith and practice" (1949: 23). R. Tannehill, using at one time the term "apophthegm" (*ANRW* 2/25/2: 1792–1829) and at another time "pronouncement story" (1981a, 1981b), expanded the definition to: a brief narrative in which the climactic (and often final) element is a pronouncement which is presented as a particular person's response to something said or observed on a particular occasion of the past. There are two main parts of a pronouncement story: the pronouncement and its setting, i.e., the response and the situation provoking the response. The movement from the one to the other is the main development in these brief stories (Tannehill 1981a: 1; cf. *ANRW* 2/25/2: 1792–93).

In recent years, as rhetorical analysis of the New Testament has come under the influence of the study of ancient rhetoric, a growing number of interpreters have started to use the term "chreia" for these units. According to our earliest extant definition, a chreia is a concise statement or action attributed with aptness to some specified character or to something analogous to a character (Butts 1987: 187; cf. Hock and O'Neil 1986: 83). This definition calls attention to action as well as speech, but even more important is the rhetorical framework in which the definition occurs. Ancient rhetoricians manipulated the chreia by adding comments at the beginning and end, by expanding situations, questions and answers, and by elaborating the chreia into an argumentative sequence of units or into an essay. This means that a concise statement or action attributed to a specific person was a primary means for exploring, transmitting, and clarifying information about life in the world. The form, therefore, was not closed and unchangeable, but open and fluid. Since most of the features of the chreia discussed by the rhetoricians appear in the NT (see Robbins 1988a), interpreters have begun to analyze brief, medium, and longer units as instances of abbreviated, expanded, and elaborated chreiai (Mack 1988; Mack and Robbins 1988).

With the use of the term "chreia," interpreters have broadened the understanding of the relation of early Christian stories to stories in Hellenistic and Roman literature and society. Many more instances of chreiai exist in contemporary Greek and Roman literature than in contemporary Jewish literature. In the context of this observation, K. Berger, B. Mack, and V. K. Robbins have used the more general term "anecdote" as well as chreia, pronouncement story, and apophthegm to refer to the units (Berger *ANRW* 2/25/2: 1034–1432; 1984; Mack 1987; Robbins 1988b). This terminology reflects an awareness of fluidity within the form and of widespread existence of the form in Hellenistic and Roman culture.

No matter which of the five terms interpreters have used, all of them consider eleven well-known stories to represent the form: Eating with Tax Collectors and Sinners (Mark 2:15–17); the Question about Fasting (Mark 2:18–22); Plucking Grain on the Sabbath (Mark 2:23–28); True Relatives of Jesus (Mark 3:31–34); Blessing the Children (Mark 10:13–16); The Rich Young Man (Mark 10:17–22); The Sons of Zebedee (Mark 10:35–40); Paying Taxes to Caesar (Mark 12:13–17); On the Resurrection (Mark 12:18–27); The Anointing at Bethany (Mark 14:3–9); and Healing of the Man with Dropsy (Luke 14:1–6).

Dibelius, using the term "paradigm," discussed seven stories beyond this common group. One of them, Prophet without Honor (Mark 6:1–6), has been included by most interpreters except Taylor, who called it a "story about Jesus" rather than a "pronouncement story" (1949: 75). Cleansing the Temple (Mark 11:15-17) often is not included since the saying of Jesus derives from scripture. A third story, the Inhospitable Samaritans (Luke 9:51–55), often is not included since most early manuscripts do not contain the response, "and he [Jesus] said, 'You do not know what manner of spirit you are of; for the Son of Man came not to destroy men's lives but to save them.' " Dibelius also included four healing stories in addition to Luke 14:1–6: The Demoniac in the Synagogue (Mark 1:23–28); The Paralytic (Mark 2:1–12); The Man with the Withered Hand (Mark 3:1–6); and Blind Bartimaeus (Mark 10:46–52). Many interpreters today include the first three, because of the decisive speech and action of Jesus, but only a few include the healing of blind Bartimaeus.

Bultmann discussed forty-seven stories in the section on apophthegms in the Synoptic Gospels. During the 1980s this list expanded dramatically. In 1984, Berger presented a list of sixty-seven units (1984: 80–82) and Tannehill discussed approximately eighty-five units (*ANRW* 2/25/2: 1792–1829). In addition to the eleven units universally accepted and Prophet without Honor (Mark 6:1–6), Berger and Tannehill discussed twenty-two units Bultmann had discussed in his investigation of apophthegms: Beel-zebul Controversy (Mark 3:22[23]–30); Defilement (Mark 7:1–15); Dispute about Greatness (Mark 9:33–37); Strange Exorcist (Mark 9:38–40); Who Can Be Saved? (Mark 10:23[26]–27); Already Left Family (Mark 10:28–31); Question of Authority (Mark 11:27–33); Greatest Commandment (Mark 12:28–34); Widow's Penny (Mark 12:41–44); Temple Destruction (Mark 13:1–2); Following (Matt 8:19–22; Luke 9:57–62); Baptist's Question (Matt 11:2–6; Luke 7:18–23); Praise of Children (Matt 21:14–16); Shekel in Fish's Mouth (Matt 17:24–27); Mary and Martha (Luke 10:38[40]–42); Woman Blesses Jesus' Mother (Luke 11:27–28); Parable of Rich Fool (Luke 12:13–21); Repentance or Destruction (Luke 13:1–5[9]); Prophet Perish in Jerusalem (Luke 13:31–33); Kingdom of God in You (Luke 17:20–21); Zaccheus (Luke 19:1–10); and Disciples Praise Mighty Works (Luke 19:37–40). In addition, Berger and Tannehill included ten units not included by Bultmann among apophthegms: Sign Request (Mark 8:11–12); Question about David's Son (Mark 12:35–37); Temptation of Jesus (Matt 4:1–11; Luke 4:1–13); Forgiveness (Matt 18:21–35); Inquiries to the Baptist (Luke 3:10–15); Return of the Seventy (Luke 10:17–20); Continuation of the Greatest Commandment (Luke 10:29–37); Narrow Door (Luke 13:22–30); Lovers of Money (Luke 16:14–15[31]); and Faith and Worthy Servant (Luke 17:5–6[10]). Beyond this, Tannehill (1981b) includes approximately thirty-five Synoptic Gospel units that Berger (1984) does not include. In turn, Berger introduces ten units from the Gospel of John and two from Acts: Why Do You Baptize? (John 1:24–27); Temple Cleansing (John 13:22); Question to John about Jesus (John 3:25–36); Jesus' Food (John 4:31–34); Work of God Is to Believe (John 6:28–29); Request for Sign (John 6:30–34); Refusal to Go to Jerusalem Openly (John 7:1–9); Adulterous Woman (John 8:1–11); Going to Jerusalem Again? (John 11:8–10); Mary Anoints Jesus (John 12:1–8); What Should We Do? (Acts 2:37–39); What Should I Do? (Acts 16:30–31).

When the lists of Berger and Tannehill are combined, approximately one hundred units in the Gospels and Acts now are being discussed as apophthegms or pronouncement stories. Along with this expansion of the list has come significantly new systems for classifying the units. A classification system among the forms began with Bultmann, who distinguished biographical apophthegms from controversy and didactic apophthegms. Tannehill grouped the synoptic units under five categories: (1) correction stories; (2) commendation stories; (3) quest stories; (4) objection stories; and (5) inquiry stories (1981a; 1981b; *ANRW* 2/25/2: 1792–1829). Berger and Robbins have introduced the categories of deliberative, judicial,

and epideictic rhetoric in their classifications of stories (Berger 1984: 91–92; Robbins 1984). In addition, Robbins has grouped more than 1700 stories from antiquity according to the life cycle of a person and the major groups of people with whom the person interacts during the adult stage (1988b). The life-cycle categories are: (1) conception and birth; (2) childhood through beginning of adult career; (3) adult career; (4) old age; and (5) death. During the adult stage, the main character interacts with eight different kinds of people or groups: (1) associate or friend (individual); (2) associates or friends (group); (3) family; (4) feminine person(s); (5) general person or audience; (6) leader or representative (of a group or type); (7) specified group; (8) young person(s). This classification shows that these brief stories, each attributed to a specific person, are natural constituents in a biography of a person's life (cf. Berger 1984: 82).

APOSTASY. See PUNISHMENTS AND CRIMES.

APOSTLE. An apostle in the NT is an envoy, an ambassador, or a missionary. In the NT the term "apostle" is applied to one who carries the message of the gospel.

———

A. Definition and Origin
B. Apostles as Missionaries
C. Jesus' Disciples as Apostles
D. Paul as Apostle of the Gentiles
E. False Apostles
F. Christ as Apostle

———

A. Definition and Origin

The early Christian title of apostle, although well attested in the NT and other early Christian sources, presents a number of still unresolved problems. The noun "apostle" (*apostolos*) is originally an adjective derived from the verb *apostellō* ("send"), found in the NT with a considerable range of meanings. The basic concept is that of the sending of messengers or envoys; an apostle can also be called *angelos* ("messenger," e.g., Luke 7:24; 9:52) or *kērux* ("herald," e.g., 1 Tim 2:7, 2 Tim 1:11; cf. Mark 1:45; 2 Cor 5:20). Apostles can be human or divine, sent by human or divine authorities.

The original adjective *apostolos* is attested only infrequently in Greek literature, referring to an envoy or a bearer of a message in a general sense (e.g., Herodotus 1.21; Plato, *Ep.* 7.346a). This technical meaning conforms to the Aramaic *selîaḥ* (Ezra 7:14; Dan 5:24; cf. 2 Chr 17:7–9; for references and bibliography, see Spicq, 1982). In the Hellenistic era, the concept of the divine envoy was applied by Epictetus to the ideal cynic (*Diss.* 3.22.3; 4.8.31), but the term *apostolos* does not occur. Christianity, therefore, appears to have picked a secular term and made it into a specific office and title.

In addition to evidencing a bewildering range of applications of the title of apostle, the NT and the early patristic literature also attempt to define it. Since scholarship is still divided on many of the questions, the following definitions must be seen as part of the argument and not as final answers.

The basic definition given by Origen (*Jo.* 32.17, ed. Preuschen 1903: 453, line 17) is simple: "Everyone who is sent by someone is an apostle of the one who sent him." The concept involves legal and administrative aspects and is basic to all types of representatives, envoys, and ambassadors. In the area of Christian religion, the term "apostle" can refer to a messenger, human or divine, sent by God or Christ to reveal messages or to reveal *the* message of the gospel. Origen's definition, although later, is grounded in the NT itself; e.g., John 13:16: "Truly, truly I say to you, a servant is not greater than his master; nor is he who is sent greater than the one who sent him" (cf. also Matt 10:40–42; Gal 4:14). More specific is the definition given in Acts 1:21–22, according to which an apostle must be "one of the men who have accompanied us during all the time that the Lord Jesus went in and out among us, beginning from the baptism of John until the day when he was taken up from us …" Paul mentions (2 Cor 12:12; cf. Rom 15:19; Acts 5:12) the practice of the apostle legitimating himself by "the signs of the apostle" (*ta sēmeia tou apostolou*): i.e., "by signs and miracles and wondrous deeds." In the Petrine traditions, the task of the apostle is seen as transmitting the words of the prophets and of Jesus to the church (2 Pet 3:2; cf. the prophetic function of the apostles in Jude 17). Paul did not conform to any of these definitions, a fact that explains his position as an outsider and the difficulties he had obtaining recognition.

B. Apostles as Missionaries

Chronologically, in the earliest use of the term in the NT, *apostolos* is an administrative designation for envoys, delegates, and representatives. Their title and function are given in 2 Cor 8:23 (cf. Phil 2:25) as "envoys of the churches" *(apostoloi ekklēsiōn)*, that is, envoys appointed and sent out by the churches to represent them (see Betz *2 Corinthians 8 and 9* Hermeneia, 73, 81, 86). In other places, the term "apostle" is understood in a more religious sense as a missionary and preacher of the gospel. Acts 1:21–26 and 13:1–3, passages describing the appointment of different types of "apostles," show that such appointments did not exclude divine intervention and authorization. The tasks of these apostles could vary but they seem to be centered in the proclamation of the gospel and the founding and administering of new churches (see 1 Cor 9:5, 12:28; Eph 2:20; 3:5; 4:11; Rev 18:20; *Did.* 11:3–6). Rom 16:3–16 includes a long list of greetings, among them the two apostles Andronicus and Junias (Rom 16:7). Perhaps the name "Junias" was corrected by scribes to replace Junia, a female name; such a correction would indicate that a woman (here possibly a married couple like Prisca and Aquila in 16:3, and Philologus and Julia in 16:15, although none of them is called apostle) could serve as a missionary apostle (see BAGD: 380, s.v. *Iounias*; Schüssler-Fiorenza 1983: 160–204).

C. Jesus' Disciples as Apostles

A different concept of apostle is presupposed when the title is attributed to former disciples (*mathētai*) of Jesus who had been witnesses of his resurrection (Matt 10:2, 28:16–20; Mark 16:14–18; Luke 24:47–49; John 20:19–23; cf. 1 Cor 9:1). There are, however, complications. The decisive passage, 1 Cor 15:3–7, cites a composite formula combining different terminological usages (see Conzelmann *1 Corinthians* Hermeneia, 251–60): v 5 names Cephas, Peter and the Twelve, v 7 includes James, the brother of Jesus (not called apostle in Gal 1:19; 1 Cor 9:5; see Betz *Galatians* Hermeneia, 78), and "all the apostles" without clarifying how they are related to the "500 brothers" (v 6) not called apostles. At a later stage, the gospel writers, especially Luke, identify the disciples of Jesus during his life on earth with the apostles and the Twelve, creating the concept of the Twelve Apostles (see Matt 10:1–2; Mark 3:14 with variant readings; Luke 6:13; Acts 1:23–26; Klein 1961). Originally, either in the earliest church or in Jesus' life-time, the Twelve (*hoi dōdeka*) were a separate institution (see 1 Cor 15:5; Acts 6:2) representing the twelve tribes of Israel (Matt 19:28; see Sanders 1985: 98–106). While their number was fixed, the names in the lists of the apostles vary to some extent (see Mark 3:16–19; Matt 10:2–4; Luke 6:14–16; Acts 1:13, 23, 26; for later lists, see *NTApocr,* 35–79; cf. also Mark 14:10, 43 and parallels; John 6:71, 12:4, 20:24; Acts 6:2). Luke's concept of the Twelve Apostles in effect limits the number to the disciples of the historical Jesus and denies the title of apostle to Paul (except Acts 14:4, 14, where Barnabas and Paul,

owing to a pre-Lukan source, are called apostles). For Luke, the Twelve Apostles are the leaders of the Jerusalem church (see especially Acts 4:35–37; 5:2, 27–32; 6:6; 8:1, 14, 18; 9:27; 11:1; 15:1–6, 22–23; 16:4 [the last time apostles are mentioned in Acts]). Consequently, Luke does not call the missionaries apostles.

D. Paul as Apostle of the Gentiles

The origins of Paul's concept of apostleship are still shrouded in mystery. In early Christianity the term was controversial, as can be seen from the NT. Paul's letters reveal some developments. In accordance with an earlier stage of the tradition, Barnabas and Paul served as missionary "apostles" (cf. Rom 16:7; Acts 13:2–4; 14:4, 14; 1 Thess 2:1–7). Paul's bold attempt to rank himself alongside Cephas and the Twelve (1 Cor 15:3–10), however, met resistance, especially in the churches not founded by Paul, causing fierce debates about what constitutes apostleship. These debates reflect the fact that Paul's own interpretation of the title and office rested on rather different theological presuppositions by which he gave apostleship a completely new interpretation. This can have occurred only at a somewhat later time, not at the beginning of Paul's ministry. At the conference in Jerusalem (Gal 2:8; see Betz *Galatians*, 98–99; Lüdemann 1984: 76–77; 1980–83, 2: 62–63), and even in the prescript of the early letter of 1 Thessalonians (cf. also Phil 1:1; 2:25; Phlm 1), he did not call himself apostle (cf. its ambiguous usage in 1 Thess 2:7). The title appears as Paul's self-description in an epistolary prescript first in Gal 1:1, perhaps as a result of the conflict in Antioch (2:11–14), and then becomes standard (1 Cor: 2:7; 2 Cor 1:1; Rom 1:1; then Col 1:1; Eph 1:1; 1 Tim 1:1; 2 Tim 1:1, 11; Tit 1:1; differently 2 Thess 1:1).

Paul's reinterpretation of the concept questioned fundamental assumptions held by the church before Paul. He rejected the idea that having known the historical Jesus personally was a valid criterion (2 Cor 5:16). Indeed, the gospels point out that those who knew Jesus best during his life on earth—his disciples and his family—came to understand his message only after the resurrection. On the other hand, if witnessing the resurrection was the criterion, Paul qualified as an apostle, since he too had a vision of the risen Lord (Gal 1:16; 1 Cor 9:1–5; 15:1–10). If founding churches was the criterion, Paul had worked more in this task than everyone else (1 Cor 15:10). Looking back at his mission, he calls himself the "apostle of the Gentiles" (Rom 11:13; cf. 1:5–7, 13–15). When Christ appeared to him and called him to preach the gospel to the Gentiles (Gal 1:15–16), Paul took this call to mean that he was given a unique role in salvation history. In Rom 1:1; 1 Cor 1:1, Paul claims to be a "called apostle" (*klētos apostolos*), analogous to the former disciples of Jesus (cf. Mark 1:16–20 and parallels; 6:7; Matt 10:1, etc.). Not appointed by human authorities (Gal 1:1, 12) but by the risen Christ himself, he came to regard himself as the personal representative (*mimētēs*) of Christ on earth (1 Thess 1:6; 11:1 Phil 3:17; see Betz 1967). This fact implied that Paul's entire physical and spiritual existence was to be understood as an epiphany of the crucified and resurrected redeemer (Gal 6:14, 17; 2 Cor 2:14–5:21; 6:4–10; 12:7–10; 13:3–4; Phil 3:10). His missionary campaigns were to be regarded as a decisive phase prior to the *parousia*, in which the gospel had to be preached "from Jerusalem in a wide curve as far as Illyricum" (Rom 15:19) and indeed as far as Spain (Rom 15:24). This mission, when completed, would be regarded as the "offering of the gentiles" in which he officiated as the chief "celebrant" (Rom 15:16). In the Last Judgment, Paul expected to present his gentile churches unblemished and pure to Christ (1 Thess 2:10–12; 5:23; 1 Cor 1:8; 2 Cor 1:14; 11:2; Phil 2:15; furthermore Col 1:22; Eph 5:27).

Paul's concept of apostleship, while not conforming to the common criteria as exemplified by Luke-Acts, effectively changed these criteria, a process reflected in the NT. In this reinterpretation, other influences came into play. Widengren (1950; for bibliography, see Betz *Galatians*, 75) pointed to notions in Syriac Gnosticism that may have contributed to Paul's concept of apostleship. Betz (1972) showed that Paul was influenced by the Socratic tradition in which Socrates was seen as a messenger sent by the deity. Whatever influences there may have been, however, Paul, through his debates and struggles, and through his own suffering and death (cf. Col 1:24), defined the concept of apostleship in a radically new way that also determined its understanding and application in the post-NT era.

E. False Apostles

Paul's claim to apostleship reflects a more general confusion about the question of who was truly an apostle. Was James, "the brother of the Lord," an apostle (see Gal 1:19; 1 Cor 9:5; see Betz *Galatians,* 78)? The evidence is ambiguous. Contrary to Acts 14:4, 14, Paul himself evidently avoided attributing the title to Barnabas (cf. Gal 2:1–10, 13; 1 Cor 9:6). Paul sometimes mentions other missionary apostles whom he apparently considers to be inferior in status when compared to himself (see B, above). When he ridicules his opponents as "false apostles" (*pseudapostoloi,* 2 Cor 11:13) or "superapostles" (*hyperlian apostoloi,* 2 Cor 11:5; 12:11), he unfortunately does not reveal their names. That these opponents had even less respectful titles for him is suggested by the term "miscarriage" *ektrōma,* 1 Cor 15:8). The struggle over the definition and criteria of true and false apostleship (see also Rev 2:2), in analogy to that over true and false prophecy, raged well into later church history as part of the battles against heresy (see *NTApocr,* 35–74; furthermore HERESY AND ORTHODOXY IN THE NT).

F. Christ as Apostle

Peculiar is the fact that only Heb 3:1 calls Christ an apostle: "Jesus, the apostle and high priest of our confession" (see Braun *An die Hebräer* HNT, 71–74, 78). This, however, appears to be a late application of the term which may have older roots (cf. Matt 15:24; Luke 4:18, 43). The Fourth Gospel still contains what seem to be traces of an older usage. We find here not only the definitive statement of 13:16 (cited above, A) but also, through the terminology of sending (*apostellō*), the description of Christ's entire mission. Jesus Christ, the Logos and Son of God, was sent by God into this world (3:16–17, 34; 5:36–38; 6:29, 57; 7:29; 10:36; 11:42; 17:3, 8, 18, 21, 23, 25; 20:21; cf. 1 John 4:9, 10, 14). In turn, Jesus sends out his disciples (4:38; 17:18; 20:21). They are called the Twelve, not apostles (6:67, 70–71; 20:24). It seems that the Fourth Gospel, without offering reasons, studiously avoids the title of apostle, while presuming the concept and terminology of sending. Perhaps the matter is related to the general similarity between Johannine christology and Pauline apostleship, a similarity which may reflect the still unexplained relationship between Johannine and Pauline Christianity.

HANS DIETER BETZ

APOSTLES, EPISTLE OF. The *Epistle of the Apostles* (or *Epistula Apostolorum*) is an early apocryphal Christian work of unknown authorship. Originally written in Greek, the *Ep. Apos.* survives only in Ethiopic (complete text), Coptic (approx. two thirds), and Latin (fragments). The title has been inferred from the opening sentence, "What Jesus Christ revealed to his disciples as a letter …" (1.1;

Duensing 1963: 191); but this translation of Ethiopic *maṣ-ḥaf* ("book," "writing") has been questioned (Vanovermeire 1962: 112; Hills 1989: 2). The date and place of writing are disputed. Schmidt (1919) argued for 170–180 C.E. and Asia Minor; more recently Hornschuh (1965) has made a strong case for Egyptian provenance and a date ca. 120 C.E.; late 2d-century Syria has also been suggested (De Zwaan 1933).

What is clear is the *Ep. Apos.*'s genre. Chaps. 1–12 and 51 frame the body of the work (chaps. 13–50), which is a post-Easter dialogue between Jesus and the apostles. The former speaks as the risen Revealer, the latter as united witnesses to the Revealer's words and deeds (see esp. 29.5). The speeches' stereotyped introductions (e.g., "He [± answered and] said to us"; "We said to him") and rhetorical expressions (e.g., "Until what day do you ask?" [22.2]; "What you wish, say to me, and I will tell you without grudging" [24.5]) are conventional in contemporary literary dialogues (e.g., in *Shep. Herm.* and the Nag Hammadi tractates *Ap. Jas.* [NHC I,*2*], *Thom. Cont.* [NHC II,*7*], and *Dial. Sav.* [NHC III,*5*]).

The principal topics of the dialogue are the Lord's heavenly descent and incarnation (chaps. 13–14); the remembrance of his death and his second coming (15–18); resurrection and judgment (19–29; 38–39); the mission of Paul (31–33); the signs of the end (34–37, adapted from an apocalypse; cf. the 5th-century *Testament of the Lord* 1–11, where the same apocalypse has been used); the commission of the disciples to preach, teach, and baptize (40–42); and orthodoxy and discipline (43–50). These diverse topics are unified by the author's concern to define the community in terms of keeping the Lord's commandments, to summarize the "faith" of the apostles (see esp. 5.21–22), and to offer a "revelation" that has present and ethical, as well as future and heavenly, content.

Of special interest is the use of gospel traditions, both in the dialogue (chaps. 13–50) and in its preface (1–12). For example, in *Ep. Apos.* 4–5 a list of miracles is expanded to include dialogue; this list is in turn appended to the hymnic or poetic chap. 3. Chaps. 3–5 thus constitute a christological aretalogy, whose function is to affirm the authority of the apostles and the traditions they reveal. In chaps. 41–42 a dominical saying prohibiting titles (cf. Matt 23:8–9) is reformulated to suit the author's situation. In *Ep. Apos.* 43–45 the parable of the Wise and Foolish Maidens, familiar from Matt 25:1–13, is narrated and explained through dialogue. In each of these sections some knowledge of the NT Gospels is probable. But there are no certain quotations from any NT writing, and the author appears to write without any awareness of a "canon" of NT scriptures. Indeed, among the proof texts quoted in the *Ep. Apos.* are several sayings not found in extant Jewish and Christian literature (see esp. 11.8).

Most commentators have seen as the work's primary purpose an orthodox defense against gnostic Christianity, since the author warns against "Simon and Cerinthus" in chaps. 1 and 7; these two are commonly identified as first among heretics by other 2d- and 3d-century writers. But this judgment must be treated with caution. First, the position of the "opponents" is never spelled out, nor is it explicitly contradicted. Second, the *Ep. Apos.* itself falls short of later 2d-century definitions of orthodoxy (e.g., in Irenaeus). Third, the author appears as much concerned with catechism and church order as with theological debate; the condemnation of heresy is standard in later church orders (e.g., Hippolytus *Apostolic Tradition* [ca. 215 C.E.] and the several church orders deriving from it; cf. also the *Catechetical Lectures* of Cyril of Jerusalem [d. 386 C.E.]).

More conspicuous is the author's emphasis on the disciples, as successors to the risen Lord and as "founders" of the Church (see esp. *Ep. Apos.* 33.2). The importance of baptism is stressed (e.g., in 5.21, where the best mss read "great Christians," an Ethiopic idiom for "the baptized"; 27.2; 42.3, 7), as is the eucharist (or "agape," in chap. 15) and the idea of a universal mission (e.g., in 30.1). This suggests that the *Ep. Apos.* is witness to the flowering of an ecclesiastical self-consciousness in an environment of competing Christian groups, but before the emergence of the "Great [or Catholic] Church."

JULIAN V. HILLS

APOSTOLIC CONSTITUTIONS AND CANONS. An early church manual of liturgical and ecclesiastical regulations that usually is dated to the end of the 4th century (ca. C.E. 380) and is ascribed to the region of Syria. The text is divided into 8 books, each of which incorporates several more ancient writings. Ancient Syriac texts, and subsequently Ethiopic and Arabic translations, indicate a knowledge of only the first 6 books, which suggests that these books formed the original core of the work to which Books 7–8 were added later. The complete corpus of materials has been preserved in Greek, Latin, and Coptic editions.

With the addition of occasional editorial alterations, Books 1–6 are formulated around the *Didascalia Apostolorum* (3d century). Book 7 utilizes much of the *Didache* (2d century) and the *Kadusha* prayer of early Jewish liturgy. The *Apostolic Tradition of Hippolytus* serves as a foundation for the 85 legislative canons that appear in Book 8, where a familiarity with the *Clementine Liturgy* also is evident.

The author of *Apos. Con.* has not been identified with certainty. The complete form of the title *(Constitutions of the Holy Apostles)* suggests that the 1st-century apostles have authored these materials, but this undoubtedly is a pseudepigraphical feature. So, too, the attestation within the text that these instructions originally were transmitted through the agency of "Clement" (6.18.11; presumably Clement I of Rome) should be rejected. It is much more likely that a later compiler, perhaps the Pseudo-Ignatius, who is responsible for the "longer recension" of the epistles of Ignatius, should be considered as the appropriate compiler of the text. The consistency in style and editorial technique further support the argument that a single editor is responsible for the final form of the text.

The contents of *Apos. Con.,* which include numerous moral exhortations and the outline of specific religious obligations, have been carefully arranged to meet the needs of early Christian believers. Throughout the text there is a strict dependence upon the authority of the OT and the NT, in addition to a rigid, legalistic interpretation of both. Book 1 is directed toward the circumstances of the laity, who are encouraged to follow a strictly ethical code of daily existence. Book 2 focuses upon the qualifications and obligations of the clerical orders. The offices of deacon and widow are addressed in Book 3, as are instructions for the correct observation of baptism ritual. Specific issues with regard to charity are discussed in Book 4. The fate and situation of those who are persecuted and martyred for the Christian faith are summarized in Book 5, followed by a review of heresies and schisms in Book 6. The "Two Ways" motif of early Jewish-Christian literature serves as the background of Book 7, where numerous ancient exhortations and liturgical traditions have been preserved. Book 8 concludes the text with a review of spiritual gifts and numerous points of worship and ecclesiastical order for the clergy.

Several special features characterize the corpus. The text recognizes a well-developed series of ecclesiastical offices, which includes the positions of bishop, presbyter, deacon, widow, sub-deacon, door keeper, and others. The role of the bishop in this structure is exalted greatly. At the conclusion of *Apos. Con.,* a list of canonized texts is offered which omits Revelation, but which includes *3 Maccabees, 1* and *2 Clement,* and *Apos. Con.* itself. While the text incorporates a significant number of prayers that reveal distinctly Jewish origins (see Books 7–8; Goodenough 1935: 306–58), it bears a distinct antipathy toward Jewish customs as they were practiced among early Christians.

The authenticity of *Apos. Con.* ultimately was rejected by the Council of Trullo in 692, an act which served to diminish its influence within later ecclesiastical tradition. The entire corpus of the Canons was

accepted as genuine by John of Constantinople, however, and subsequently it gained authority throughout the Eastern Church, where it still is used today.

CLAYTON N. JEFFORD

APOSTOLIC COUNCIL. See JERUSALEM, COUNCIL OF.

APOSTOLIC FATHERS. A collection of early Christian writings traditionally regarded as having been set down by people directly or indirectly associated with the apostles. A complete modern edition will include the following (the order varies considerably): *1 Clement, 2 Clement, Ignatius, Polycarp, Didache, Barnabas, Papias, Hermas, Martyrdom of Polycarp, Diognetus,* and *Quadratus* (cf. Bihlmeyer, Fischer). Separate discussions of each of these writings is provided in this dictionary. The purpose of the present article is to discuss the history of the collection as a whole and to indicate the bearing that the study of the Apostolic Fathers (AF) has on the study of the NT and early Christianity.

A line of distinguished editions of the AF leads back to a work published by the French scholar, J.-B. Cotelier, in Paris in 1672. The attention given to this body of material in the 17th century was prompted as much by the concern of humanism to return to the authentic sources of Western civilization as by the theological polemics of the reformation and counterreformation. The use of the expression "Apostolical Fathers" can be traced back at least as far as William Wake, who in 1693 published a translation of *1 Clement, Polycarp, Ignatius, Martyrdom of Ignatius, Martyrdom of Polycarp, Barnabas, Hermas,* and *2 Clement* (de Jonge). The subtitle of the work spoke of these writings as "being together with the Holy Scriptures of the NT, a complete collection of the most primitive antiquity for about CL years after Christ." And in the introduction to the third edition (1719), we are told that these works were "truly written by those whose names they bear, and that those writers lived so near the apostolical times, that it cannot be doubted, but that they do indeed represent to us the doctrine, government, and discipline of the church, as they received it from the apostles; the apostles from Christ, and that blessed Spirit, who directed them both in what they taught, and in what they ordain'd." Wake (now Archbishop of Canterbury) also noted that all this "is so exactly agreeable to the present doctrine, government, and discipline of the church of England by law establish'd; that no one who allows of the one can reasonably make any exceptions against the other." The expression "Apostolic Fathers" was also soon employed by the Lutheran theologian and scholar Thomas Ittig in his edition of 1699 (with reference only to materials associated with the names of Clement, Ignatius, and Polycarp) and by the Reformed (Armenian) biblical scholar and theologian Joh. Clericus (Jean Le Clerc) in his reedition of Cotelier in 1698 (with reference to materials associated with the names of Barnabas, Hermas, Clement, Ignatius, and Polycarp).

The previous work of two other English scholars—Patrick Young and James Ussher—is important in accounting for the emergence of the special attention given to the AF in this period. As early as 1633, Young in his capacity as Royal Librarian published *1 Clement* from Codex Alexandrinus, the celebrated 5th-century biblical manuscript presented in 1628 to Charles I by Cyril Lucar, patriarch of Constantinople. Young refers to the author as being "of almost the same time as the apostles, the disciple of Paul, and the successor of Peter," and to the writing as "this divine and clearly apostolic epistle." He also expresses the wish that the English king may be granted in his own realm the peace and harmony urged by Clement on the dissenters in Corinth long ago.

Even more important from the point of view of the impetus given to the scholarly investigation of the AF and the early church was the brilliant discovery by Archbishop Ussher of the shorter form of the letters of Ignatius (1644), which is generally accepted as genuine today. The discovery also had the effect

of upholding the episcopal system as a feature of the earliest period. This was one reason that not long afterward the Reformed theologian and scholar, Jean Daillé, published an important study of Dionysius the Areopagite and the (shorter form of the) letters of Ignatius (1666) in which he attempted to prove the inauthenticity of both bodies of writings (Harrison 1936: 135). Posterity has accepted his judgment about the Areopagite but not (for the most part) about Ignatius. John Pearson, bishop of Chester, wrote an especially influential book defending the authenticity of the shorter form of the letters of Ignatius (1672). In the long run, however, Daillé's general insistence that the fathers of the church possess no special theological authority and must be approached historically was prophetic of the spirit that was to dominate the study of the early church in Western Christianity.

Additions to the roster of AF were subsequently made by Andreas Gallandi (a forerunner of Migne), who included also the letter to Diognetus, the fragments of Papias, and the fragment of Quadratus (1765). And finally, the startling discovery of the Didache by Bryennios (published in 1883) led to the inclusion of that document also among the AF.

The Bryennios manuscript (an A.D. 1056 codex of the Greek patriarchate in Jerusalem, formerly in the library of the Hospice of the Church of the Holy Sepulchre in Constantinople) represents a convenient point from which to look back to the role of the AF before modern times. The first writing in the codex is a brief "Synopsis (Survey) of the Old and New Testament" attributed (wrongly) to John Chrysostom. This is followed by *Barnabas, 1 Clement, 2 Clement,* the *Didache,* and the long recension of the letters of Ignatius (Harnack 1893: 11–12). The manuscript suggests an interest in the AF comparable in some ways to that of the later and more critical age already discussed. This is all the more surprising since the collection was put together at a time when (from the end of the 7th century on) little had been heard of the AF (other than Ignatius), and people's conception of the early period had been shaped primarily by forgeries long associated with the names not only of Ignatius but also of Clement of Rome, Dionysius the Areopagite, and Justin Martyr (Grant 1962: 428–29).

More real knowledge of the AF was available to the contestants in the Christological debates of the 5th and 6th centuries. Here interest in the AF centered primarily on Ignatius, who was appealed to by all sides. What stands out in this connection is that ultimately the short (and presumably authentic) recension of the letters of Ignatius proved most congenial to the monophysite cause (Grant 1962: 426–27). Much less significant use was made of *Polycarp, 1 Clement, 2 Clement,* and *Hermas* in this period; and appeals to *Papias* were even more isolated (Grant 1967: 24–32). Moreover, authentic early materials had to compete with the whole range of pseudepigraphical writings already noted.

Clearer conceptions of who and what the AF represented can be found in the 2d, 3d, and 4th centuries. Irenaeus, Clement of Alexandria, Origen, and Eusebius shed particularly important light on their reception (Grant 1962: 421–26). In these writers most of the AF were provided with rather direct links to the apostolic age; but forgeries were only beginning to cloud the horizon, and in some quarters problems of authenticity were discussed. Thus Eusebius set *Hermas, Barnabas,* and the *Didache* among the "spurious" items that make up the second component of the writings "not universally accepted" as scriptural (antilegomena); he noted that *1 Clement* was still read in many churches; he observed that *2 Clement* was not used by the ancients; he declared the romances written in the names of Clement of Rome forgeries; he suggested (in line with Alexandrian tradition) that *Hermas* was useful for elementary instruction; and he expressed his doubts about the intelligence of *Papias.* A wide range of concerns affecting theology, spirituality, ethics, and church order were involved in the appeal to these writings in this period. Although they rarely dominate any discussion, their importance should not be underrated. It may be noted (for example) that Irenaeus' millennialism owed a good deal to what he knew of *Papias;* that striking passages such as the lines from *Hermas* on the oneness of God who contains all but is himself contained by nothing, or the verses from *Ignatius* on the hidden entrance of Christ into the world, set the tone in a variety of contexts; and that the reworking of the material of the *Didache* in later church orders (the *Didascalia* and the *Apostolic Constitutions*) attests to its prestige.

It follows from what has been said that attention to the AF in the early church often took the form of a consideration of their possible canonicity (Ruwet 1942; 1948; 1952; Andry 1951; Grant 1964: 13–33;

Kümmel 1966: 344–51). For the presumed association of their authors with the apostles gave them credentials as strong as some of the writings ultimately accepted into the NT. The most important points are these (though some are matters of dispute): Irenaeus came close to treating *1 Clement* and *Hermas* as scripture (but seems not actually to have done so). Tertullian dealt with *Hermas* as scripture in his pre-Montanist period. Clement of Alexandria regarded *1 Clement, Hermas, Barnabas,* and the *Didache* as inspired writings. Origen dealt with *Hermas, Barnabas,* and the *Didache* similarly, but at the same time seems not to have regarded them as canonical. Eusebius, as we have seen, is less receptive to these three books and regards them as spurious. Finally, Athanasius (in his famous festal letter on the topic) clearly sets the *Didache* and *Hermas* outside of the canon, but does so in such a way as still to reflect the high evaluation of these writings in the Alexandrian tradition. It should also be noted that Codex Sinaiticus (4th century) included *Barnabas* and *Hermas;* that Codex Alexandrinus (5th century) contained *1 Clement* and *2 Clement;* and that a catalog found in Codex Claromantanus (6th century) lists among the books of the NT (in addition to two other unusual works) *Barnabas* and *Hermas* (though all four items are set off by a dash).

Clearly the criterion that obtained most widely in thinking about the AF and drawing them together as a group in ancient and modern times was their presumed connection with the apostles or at least their presumed antiquity relative to (most) other noncanonical writings of the early church. In other respects they are very diverse indeed, and the difficulties inherent in defining the collection have grown rather than lessened over time (Jouassard 1957). As regards form, most of the AF in the modern collections are letters. But whereas *1 Clement, Ignatius,* and *Polycarp* are true letters, *Barnabas* (a theological tract), the *Martyrdom of Polycarp* (a martyrology), and *Diognetus* (an apology) are letters only in an external sense. The other writings of the AF represent a homily *(2 Clement),* a church order (*Didache*), and a kind of apocalypse (*Hermas*). Papias' discussion of the words and deeds of Jesus is known to us only in a series of fragments, and we have but one tiny quotation from the apologist Quadratus.

The status of the authors of these writings is also diverse: Ignatius, Polycarp, and (probably) Clement had some kind of official standing in their churches; the author of the *Martyrdom of Polycarp* recedes behind the authority of the church for which he writes; the individual who wrote to Diognetus is unknown; *Barnabas, 2 Clement* and the *Didache* are pseudonymous; *Hermas* was written by a man who sets himself apart from the clergy.

Moreover, rather different forms of the early Christian experience are represented by these writings. Aspects of the literary and theological world of Paul are reflected in some of the letters. But whereas *Polycarp* breathes the spirit of the Pastorals, and *1 Clement*'s Christianity is almost equally unadventuresome, Ignatius infuses his Paulinism with qualities reminiscent of John and other mystical (perhaps even quasignostic) strands of thought. Yet both Clement with his idea of succession and Ignatius with his emphasis on monepiscopacy set the stage for the further development of a catholic conception of ministerial authority. And this in turn may well be connected with the greater openness of *1 Clement* and *Ignatius* to elements derived from the popular culture of the Greco-Roman world. Indeed, the remarkable fact about most of the other Apostolic Fathers is the extent to which they remain indebted to various forms of Judaism. Thus the *Didache* not only looks like an extension of the concerns of Matthew's gospel, but also falls back on Jewish and Jewish-Christian materials in the realm of ethics and ritual that are not derived from the NT. *Barnabas* is reminiscent especially of Hebrews, but is even more clearly indebted to Jewish lore and at the same time more negatively disposed to Judaism as a historical and social fact. *2 Clement* represents (in the words of Hans Windisch) "a Synoptic-Gospels Christianity reformulated and domesticated in the light of late Judaism" (cf. Bihlmeyer 1956: xxix). And *Papias'* millennialism shows that themes from fully developed forms of apocalyptic thought were still alive in some circles. Similarly, *Hermas* registers the impact of a wide range of Jewish theological, angeological, and ethical ideas within the framework of an apocalyptic outlook (though elements from popular Greco-Roman culture also play an interesting role in his thought). Different again is the *Martyrdom of Polycarp,* which represents a complex weaving together of Jewish, Christian, and more popular elements that gave

rise to the church's version of the holy man. And finally, the apologetic strategies of *Diognetus* (and *Quadratus*) belong to another whole order of theological and literary activity.

Modern views about the authenticity, dating, and historical setting of the AF have robbed even the criterion of antiquity of much of its significance. Most of the AF are, to be sure, relatively early. But no significant link between any of them and the apostles now seems particularly likely. Indeed, the *Didache, Barnabas,* and *2 Clement* all seem to be pseudonymous. And the reason for including *Diognetus* in the collection is undercut by the recognition that its last two chapters, which include the ambiguous reference to the author as "a disciple of apostles" (11.1), do not belong to the writing. A glance at the articles on the separate writings will also show that there is much dispute about the dating of most of these books and that at least some of them probably fall outside the period in question. Conversely, there are other early Christian works, both canonical and noncanonical, that seem to fall into this period. Above all, we are much more acutely aware today of the striking differences between the forms of Christianity reflected in the AF whatever their date may be. The conclusion seems inescapable that as a collection they represent nothing very definite in either theological or historical terms. NT scholarship, then, is moving even more consciously (in spite of the many difficulties involved) toward an integration of the AF with the later materials of the NT and with early noncanonical literature not included in the AF (cf. Koester 1982, 2: 147–347).

The very diversity of the AF has meant, however, that studies that have focused on this collection as a whole (usually with the exception of the apologetic materials) have worked with a sample of early Christian literature sufficiently broad to guarantee interesting results. Of particular importance here for NT scholarship have been the efforts to read the AF for the light they can shed on the reception of the various books of the NT. The report of the committee of the Oxford Society on this problem (1905) is still fundamental. But commentaries on the biblical books and studies of the individual writings of the AF have introduced many refinements. Nothing like an adequate summary of these discussions is possible here (for a survey of the findings, see Kümmel 1966: 337–40). It may be noted, however, that especially interesting investigations have been undertaken regarding the use of the Synoptic Gospels and of synoptic tradition in the AF. The debate is dominated by two books: Massaux (1950) and Koester (1957). The full range of possibilities are taken into account in these works: quotation of (or allusion to) one or the other of the Synoptic Gospels, reliance on some kind of harmonization of the written Gospels, knowledge of oral tradition, independent access to tradition peculiar to one of the Gospels, and so forth. In general, it may be said that Massaux (who worked with the whole range of Christian literature to the time of Irenaeus) emphasized the importance of Matthew to the church from the earliest times and the reliance by the majority of authors on Matthew in a written form. Koester, on the other hand, emphasized the extent to which the AF were indebted to oral tradition. Many of Koester's conclusions have been questioned by Grant (1964: 35–86), and the whole issue has been thoroughly reviewed by Köhler (1987), who finds himself closer to the position of Massaux than of Koester. It is clear, however, that the work of Koester has contributed to a considerably more flexible notion of the possibilities in the reception of the Synoptic Gospels and of synoptic tradition in the early church.

Other studies devoted to the AF as a whole also retain their value in characterizing the Christianity of the period. Thus Torrance's classic treatment of grace in the AF (1948) is still useful even though he measured them too exclusively against Paul, took a Barthian approach to Paul too much for granted in so doing, and failed to note the elements in the AF that represent to some extent functional equivalents of the category of grace. Klevinghaus' demonstration of the eclipse of the significance of Israel as a historical reality in the AF (1948) remains generally convincing. More recently, Eijk's careful analysis of the doctrine of the resurrection in the AF (1974) is distinguished by special sensitivity to the differences between the individual writings. Other more or less useful studies on the AF as a whole are to be found on such topics as the connection between ethics and dogma (Hörmann 1952), the terminology for evil spirits (Gokey 1961), views of material re-creation (O'Hagan 1968), and moral teachings (Liébaert 1970). Naturally attention to the AF (sometimes as a distinct group) will also be found in histories of Christian thought, the ministry, the liturgy, spirituality, and so forth. Although peculiarities of one kind or the other

are associated with each of the AF, it is perhaps Ignatius who strikes commentators most as rising above expectations in literary and theological terms.

It should be noted in conclusion that the basic tools for the study of the NT—Bauer's lexicon, Kittel's theological wordbook, and the grammar of Blass and Debrunner—give significant attention also to the AF. An excellent concordance to these writings was published by Heinrich Kraft in 1963.

WILLIAM R. SCHOEDEL

APPAIM (PERSON) [Heb *ʾappayim* (אַפַּיִם)]. One of the two sons of Nadab (1 Chr 2:30). Since his brother died childless, Appaim's descendants are an important part of the family of Jerahmeel, the firstborn son of Hezron, grandson of Judah. The MT uses the plural "The sons of" in recording Appaim's issue (1 Chr 2:31); however, the single son, Ishi, may be understood here as the progenitor of a clan or family bearing his name. Appaim is a dual form meaning "nostrils" but may also mean "nose," "anger," or "temper" and is derived from the verb meaning "to be angry."

W. P. STEEGER

APPEAL TO CAESAR. Under the Empire, all holders of Roman citizenship possessed among their citizen rights the *ius appellationis ad Caesarem,* or right of appeal to Caesar. According to the great 3d-century jurist, Ulpian, the right of appeal was guaranteed to all Roman citizens, whether residents of Italy or the provinces under the provisions of a *lex Iulia de vi publica,* ennacted at the beginning of the Empire by Augustus, who thereby instructed Roman magistrates and officials that citizens should not only have the right of appeal from local judicial authority to Rome, but should also not be inflicted with death, scourging, prolonged imprisonment, or torture without full due process of law, including the right of *appellatio* (*Dig.* 48.6.7). There is some question as to when Augustus' law came to be extended to the provinces (Millar 1977: 508–9; Jones 1960: 54–55), but "late in the reign of Augustus there is a clear instance, in the second edict of Augustus from Cyrene, … that by that date the *lex Iulia* was being applied to actions in the provinces" (Sherwin-White 1963: 60). This process, along with other aspects of the emperor's judicial role, seems to have been regularized under successive emperors (Millar 1977: 509–14) so that by the early 3d century Severus Alexander was quick to warn provincial officials of any obstruction or abuse against those who made appeals. (*Dig.* 49.1.25 = *P.Oxy.* 2104).

The right of *appellatio* in the Empire replaced an earlier basic citizen right of the Roman Republic, the *ius provocationis ad populum,* or right of calling (*provocare*) on the entire body of citizens in assembly to overturn the judicial decisions of magistrates. Extended to all Roman citizens by the terms of a *lex Valeria* of 300 B.C., the exercise of *provocatio* was guaranteed in all capital cases, and could be exercised as well in other criminal cases, but apparently not in civil cases (*OCD* 892–93). Before 300 B.C. *provocatio* may have been utilized, but without assurance of receiving hearing before the *populus* assembled in the *Comitia Tributa,* or Tribal Assembly. The tribune of the plebs (*tribunus plebis*) was the presiding officer of this assembly and may have referred appeals to the body as a function of his *ius auxilii,* the right of rendering aid to any citizen whom he judged the victim of unjust magisterial authority (*coercitio*). The tribune could take action himself, or through the assembly, to overturn magisterial decisions either upon appeal or on his own initiative (Kunkel 1966: 54, 72; *OCD* 892–93). It is likely that the *appellatio ad Caesarem* derived directly from this tribunician *ius auxilii.* Cassius Dio (51.19.6–7) reports that in 30 B.C. Octavian Caesar was granted the tribunician authority of *ius auxilii* for life. The remaining powers of the tribune (*tribunicia potestas*) were granted to Octavian after his accession as Augustus, and it was from this tribunician power that Augustus and all subsequent emperors exercised judicial authority as the special protector of the Roman citizen body, a role which under the Republic had belonged to the plebeian tribune (Millar 1977: 509; Jones 1960: 54; Crook 1967: 70–71).

The exercise of *appellatio* was common among provincial Christians with Roman citizen status who had been accused of wrongdoing. The most familiar instance of appeal to Caesar is, of course, that of Paul. When about to be subjected to scourging under the direction of Felix, Procurator of Judaea (*OCD* 434), Paul "lays claim to the protection afforded by his Roman citizenship" (Millar 1977: 511), under the provisions of the *lex Iulia,* demanding that as a Roman he not be beaten uncondemned of any crime and protected from the same at the hands of the Jews (Acts 22:25–30; 23:27). It was when Paul was about to be tried before the tribunal of Porcius Festus, the successor of Felix as Judean procurator, that he proclaimed his appeal to Caesar (Acts 24:27–25:22). There is some difficulty, however, in understanding the precise nature of Paul's *appellatio,* since "it has the character of a rejection of one court in favor of

another one rather than of an appeal from a verdict" (Millar 1977: 511). It has been suggested that the *lex Iulia* entailed not only appeal to the emperor after verdicts were rendered, but also the right to challenge the jurisdiction of a particular court by requesting a change of venue to Rome, a process that may more properly be referred to as *provocatio* than *appellatio* (Sherwin-White 1963: 115–16). Apparently provincial governors were not strictly bound to refer criminal cases to Rome. The well-known correspondence between Pliny and Trajan concerning the procedure for trying Christians with Roman citizenship indicates some confusion in the matter of jurisdiction (Pliny, *Ep.* 10.96.4). Certainly there is ample attestation of governors both trying and executing citizens in the provinces, suggesting that as a matter of practicality jurisdiction was retained by local magisterial authority unless there was by the defendant formal recourse to *provocatio* or to *appellatio* (Sherwin-White 1963: 58–63).

JOHN F. HALL

APPHIA (PERSON) [Gk *AApphia* (Ἀαπφια)]. A Christian greeted in the salutation of the letter to Philemon (Phlm 2). While some have proposed that this woman's name was spelled incorrectly in the aspirated form "Apphia" in Philemon, rather than the more familiar unaspirated Roman name "Appia," copious documentation exists for the aspirated form from Phrygian inscriptions, where the name appears to be of native origin (Lightfoot 1879: 306–8). A Phrygian provenance for Apphia's name also accords with the widely held opinion that Philemon was addressed to Christians living in Phrygia, most probably in the small town of Colossae.

Why Apphia, along with PHILEMON and ARCHIPPUS, was singled out for special greetings in Philemon 1–2 has occasioned much speculation. A common assumption has been that she was Philemon's wife (or daughter) and Archippus was their son (or her brother). This is related to the supposition, based on the phrase "your house" (Philemon 2), that all three lived in the same household. However, the possessive in this instance is singular in the Greek, leaving open the possibility that the house referred to was the domicile of Archippus, although many commentators nevertheless read the "you" as referring back to Philemon. The latter tend to see Apphia as having a leadership role in the house church owing to the presence of that group in the home where she and her husband (or her father) lived. That may be a correct analysis, but it remains possible that, if the house was rather that of Archippus, then Apphia's mention by Paul, with her obvious importance among the Colossian Christians, must rest on different grounds.

In this connection, it is noteworthy that Paul addresses Apphia as "sister" in the same context in which he calls Timothy "brother," Philemon "beloved fellow-worker," and Archippus "fellow-soldier." While the RSV prefaces each of these appellatives with "our," the Greek refers to Timothy as "the brother" (*ho adelphos*) and Apphia as "the sister" (*tē adelphē*). Paul thus appears to distinguish between titles with which he uses the definite article and those with the possessive pronoun (cf. Phil 2:25 where the Gk identifies Epaphroditus as "*the* brother and *my* fellow worker and fellow soldier").

It has been argued that in using the definite article rather than the possessive pronoun, Paul focuses on the social positions of brother and sister, not on the individual's relationship with him. Further, whenever Paul uses the definite article with "brother(s)" or "sister(s)," the general sense conveyed is that one is a believer. This leads N. Petersen, for example, to conclude that "the brother or sister is thus an egalitarian identification applicable to all members of the church, whereas the use of the possessive pronoun has … a hierarchical connotation because it links those of whom it is used to Paul's *position" e.g. as his* fellow-worker or *his* fellow-soldier (1985: 172; his italics in quote).

These observations suggest that in Paul's greeting of Apphia, her role as a believer and community member was foremost in his mind. Thus, he probably did not single her out because of her relationship to

Philemon or Archippus, nor to himself, but because she was an outstanding, faithful member and leader of the Colossian community whom he happened to know.

FLORENCE MORGAN GILLMAN

APPHUS (PERSON) [Gk *Apphous* (Ἀπφους)]. Nickname of Mattathias' youngest son Jonathan (1 Macc 2:5), the successor of Judas Maccabeus. Two Hebrew roots may be conjectured for the nickname: *hpṣ*, "to seek, search," or *ḥpṣ*, "to desire." The second one may best suit a child's nickname—"desired, favorite." For the nicknames of Mattathias' sons, see GADDI. See also JONATHAN.

URIEL RAPPAPORT

APPIAN WAY (PLACE). Roman road connecting Rome, Capua on the Bay of Naples, and Brundisium on the Adriatic. It was constructed under the Roman censor Appius Claudius Caecus in 312 B.C.

Until the harbor of Ostia was developed by the emperors Claudius and Trajan, Puteoli, on the Bay of Naples, served as the major seaport for Rome. From the 2d century B.C. until the 1st century A.D., the normal route in approaching Rome by sea was to sail to Puteoli, as Paul did (Acts 28:13–15). The traveler then used the suburban roadways to reach Capua, from which the journey to Rome, 132 Roman miles, normally took five or six days. Landmarks of the journey were the rich fields of Campania, the shore of the Gulf of Gaeta, the plain of Fundi, and the seaside bluff at Tarracina. Here the wetlands of the Pomptine Marshes permitted a canal to be built, 19 Roman miles long. Canal boats allowed the traveler to continue the journey during the night somewhat more comfortably than on the road: the poet Horace (*Sat.* 1.5) includes an account of this boat in his colorful, detailed description of a trip on the Appian Way from Rome to Brundisium. At Forum Appii, the canal ended and the road continued in a straight line past Tres Tabernae and the hill towns of Lanuvium and Aricia to the Porta Capena in Rome, located at the end of the Circus Maximus.

The roadway, 14 Roman feet wide, was covered with gravel, and flanked by wide pedestrian walkways of pounded earth. Travelers used horses, carriages, or their feet, and could stay overnight at inns or the villas of acquaintances. All along the road were tombs, houses, shrines, and commemorative monuments. Towns and villages like Forum Appii and Tres Tabernae ("Three Taverns") offered lodging, stables, and food. Under Domitian (A.D. 95) a shortcut, the Via Domitiana, bypassed Capua and went directly along the coastline from Sinuessa to the harbor at Puteoli—its construction is the subject of Statius, *Silv.* 4.3: 40–55.

APRON. Translates a word in Gen 3:7 that is rendered "girdle" in other passages in which it is used and represents an item of clothing. The Hebrew word has its root in a verb, *hgr*, which has a primary meaning of "gird." Thus it refers to a garment that is wrapped around the body.

Its basic usage in the Bible is to indicate an undergarment of some sort, that is, a garment that covers the upper part of the lower body. For men, at least, such a garment would have been one that covered the genital organs. Apparently, in ancient Semitic custom, young children ran about with a loose shirt or cloak. As they reached sexual maturity, they began to wear an "apron" or loincloth. This custom seems to underlie a passage in 2 Kgs 3:21, which describes a comprehensive military muster involving all who were able to bear arms, from youngest to oldest. The youngest in this instance were those who had begun to wear the apron or girdle; wearing that item of clothing represented adulthood with respect to military

service. In this sense, it might also be linked with military garb, since a warrior would be stripped down to this minimal garment when going into battle.

The appearance of "apron" in the Eden story in Genesis also points to its meaning as a fundamental item of clothing, one that would cover the sexual organs of females as well as males. The woman and man in the garden, after eating of the forbidden fruit, gain human cognition. This involves realization that they are naked, a condition to which they respond with the human characteristic of making clothing—aprons of fig leaves—for themselves.

Although the apron is a basic item of clothing, listed along with "sandals" in 1 Kgs 2:5 to represent the garb of a man, David, upon whom innocent blood had been spilled in peace time, it evidently also came to mean a decorative piece of clothing, such as a belt or sash. Such accessory items could be extravagantly made, either of costly fabrics or perhaps even studded with precious gems. The prophet Isaiah contrasts the ostentatious apparel of wealthy women with what they will wear in the day of God's judgment. Among the radical changes in their garb will be the use of a rope in place of a "girdle" (Isa 3:24). Similarly, the value of the apron or girdle appears in 2 Sam 18:11, where Joab says he would have given a lot—"ten pieces of silver and a girdle"—if only the man who brought him news of Absalom's hanging had cut the body down from the tree.

CAROL MEYERS

AQIBA (PERSON). See AKIBA, RABBI.

AQUILA (PERSON) [Gk *Akylas* (Ἀκυλας)]. Aquila, an important Christian missionary in the mid-1st century C.E., is mentioned in 1 Cor 16:19, Rom 16:3–5, Acts 18:2–3 (historically reliable traditions; Lüdemann 1987: 206, 209–10); 18:18, 26; and 2 Tim 4:19.

A. Pontus and the First Stay in Rome

Aquila was probably freeborn; the epigraphical material indicates that ordinarily the name "Aquila" was not a slave name (see Lampe *StadtrChr,* 142, 151–52). A Jew from Pontus (Acts 18:2), Aquila was among the first Christians in Rome who still belonged to the synagogues of the city. Together with his wife, Prisca, and others, he propagated Christianity in at least one of the Roman synagogues. This Christian proclamation led to tumultuous controversies among the Roman Jews, so that the administration of the emperor Claudius expelled the main quarrelers, including Aquila and Prisca, from the city in 49 C.E. (Acts 18:2, Suet. *Claud.* 25.4: "*Iudaeos impulsore Chresto [sic] assidue tumultuantes Roma expulit,*" *Oros.* 7.6.15–16, cf. Cass. Dio 60.6.6–7). Alternative interpretations would be that the commotion was caused not by Christians but by a Roman Jew, Chrestus (e.g., Solin *ANRW* 2/29/2: 659, 690), and that Aquila was not converted before he arrived at Corinth (e.g., Lüdemann 1987: 209). This is not probable for several reasons (for detailed discussion see Lampe *StadtrChr,* 4–7): (1) The Roman inscriptions never show the name "Chrestus" as a Jewish name; (2) it would have been a strange coincidence if, as a Jew in Rome, Aquila had been involved in a commotion caused by a certain Jew "Chrestus" and later, as a Christian, had worked as a missionary of "Christus;" (3) since Lat *Christus*/Gk *christos* was unusual for pagan ears and *Chrestus* a common pagan name (see Lampe *StadtrChr,* 6), both could easily be confused by pagan writers like Suetonius. The Christians were indeed often called *Chrestianoi* by pagan people (see Tac. *Ann.* 15.44; Tert. *Apol.* 3; *Ad Nat.* 1.3; Lactant. *Div. Inst.* 4.7). (4) Aquila was already a Christian before Paul settled in Corinth: Paul lived in Aquila's dwelling in Corinth (Acts 18:3), but his first christening in the city was Stephanas, not Aquila. In addition, Paul baptized no one else in Corinth except Crispus, Gaius, and Stephanas' household (1 Cor 1:14–16; 16:15). If Aquila had been christened by somebody other than Paul in Corinth, e.g., by Silas or Timotheus, Luke would have liked to report such success (cf. e.g., Acts 18:8). (5) It is not likely that the unbaptized Jew Aquila housed the Christian missionary Paul in Corinth and even gave him a job to support him (Acts 18:2–3), especially if the Jew Aquila had acted on the Jewish side of the controversies in Rome, fighting Christian preaching about Christ. Finally, (6) Gk *Ioudaios* in Acts 18:2 can be easily understood as Jewish-Christian (see Acts 16:1,20; 21:39; 22:3,12; cf. 9:10; Gal 2:13).

B. Corinth Profession and Social Status

From Rome the couple moved on to Corinth, where Paul first met and lodged with them and worked in Aquila's workshop (Acts 18:2–3). Their craft was tent making (Acts 18:3). Contrary to the traditional view that both were leather workers selling primarily to the military, they more likely sewed linen tents for private customers for use as tents on the beach, sunshades in the atrium, or market stalls (see Lampe 1987; leather tents for the military were sewn mainly by imperial slaves and freedmen or by the soldiers themselves, many of whom were craftsmen, as attested in Vegetius *de re militari* 2.11 and inscriptions at Hadrian's Wall).

Aquila has often been described as a wealthy man who owned one or more houses and ran a rather large business which employed several workers (e.g., Hengel 1973: 46; Lüdemann 1987: 209; Ollrog 1979: 26–27; Wilckens *Romans* EKKNT, 134) but evidence points in a different direction (Lampe *StadtrChr,* 158–64). Like most independent craftsmen, Aquila belonged to the poor strata of society; only a few craftsmen—mostly producers of luxury articles such as goldsmiths and jewelers—were wealthier. Paul "was in want" while he made his living by working in Aquila's shop (2 Cor 11:9). He himself considered his choice of work as a tentmaker as humiliating (2 Cor 11:7; cf. 1 Cor 4:11–13; 1 Thess 2:9). In Corinth, he did not preach in Aquila's dwelling, although he lodged there. Also, Aquila's dwelling in Ephesus did not seem to have enough space for Paul's audience, although a subgroup of the Ephesian Christians met there as a house church (Acts 18:7, 2; 19:9; on these as historically reliable traditions, see Lüdemann 1987: 209–11, 222). Aquila's ability to travel (Lüdemann 1987: 209) is not an indication of considerable financial means (Lampe, *StadtrChr,* 162–64).

C. Ephesus

After more than one and a half years (Acts 18:11, 2; cf. Lüdemann 1987: 207), Aquila and Prisca moved from Corinth to Ephesus, where they were again active as missionary co-workers of Paul and formed a church in their home (1 Cor 16:19; cf. 2 Tim 4:19; Acts 18:18). The couple "risked their necks" for Paul's life (Rom 16:4) probably during their stay in Ephesus, where Paul was exposed to serious dangers (1 Cor 15:32; 2 Cor 1:8–9). The historicity of the Ephesian episode about Apollos told in Acts 18:26 is very doubtful (Lüdemann 1987: 215–16); *parrēsiazesthai* is a Lukan word, and there is a tension between v 25 and v 26: Apollos already taught "accurately" about Jesus (v 25) before he was instructed "more accurately" by Prisca and Aquila (v 26). Luke, the advocate of the apostle Paul, suggests in v 26 that Prisca and Aquila turned Apollos into a staunch supporter of Pauline Christianity. The pre-Lukan tradition (cf. vv 24–25), however, only knew that Apollos once worked in Ephesus at the same time Paul, Prisca, and Aquila did (cf. also 1 Cor 16:12, 19), and that Apollos was a Christian pneumatic (cf. also the Apollos party in Corinth [1 Cor 1:12] in the context of the Corinthian pneumatics and enthusiasts, e.g., 1 Corinthians 12–14). As such, Apollos was more likely a competitor of Paul (1 Cor 1:12; cf. 3:10b, 12–15) on whom the apostle could not impose his plans while he stayed in Ephesus (1 Cor 16:12). We do not know whether Prisca and Aquila at least housed Apollos in Ephesus (Acts 18:26; Weiser 1985: 508).

D. Second Stay in Rome.

Around 55–56 C.E. (after Claudius' death in 54 C.E. and between the writing of 1 Corinthians and Romans), the couple returned to Rome (majority opinion now holds that Rom 16:3–5 is part of the original letter to the Romans, Lampe *StadtrChr,* 124–35). This last move may have been strategically motivated: Aquila and Prisca were possibly sent as Paul's vanguard to Rome, where he wanted to get a firm footing with his gospel before continuing to Spain. In Rome, Aquila and Prisca again hosted a house church (Cranfield *Romans* ICC, 786). They were the first to receive greeting from Paul in Romans 16, where Paul praised them. Their prominence as Paul's co-workers was remembered by the later church: 2 Timothy used their names for the epistle's fictitious historical frame, at the beginning of a list of greeting (4:19). Church tradition of the 6th century claimed that the house church of Aquila and Prisca was the basis of the later Roman "title" church, "Prisca" on the Aventine. There is no proof for this connection (Lampe *StadtrChr,* 11).

PETER LAMPE

AQUILA'S VERSION. Aquila was a Jewish translator active in the first quarter of the 2d century C.E. His Greek version of the OT was preserved by Origen in the third column of his Hexapla (compiled during the second quarter of the 3d century). According to tradition, Aquila, born a pagan, converted to Christianity and thence to Judaism. He studied with a number of rabbis, of whom Akiba was one. His version of the biblical text is marked by extreme literalism, in which he sought to reproduce closely not only the meaning, but also the form of his Hebrew *Vorlage.* In so doing, he does not seem to have been influenced by the exegetical emphases of Akiba or of any other particular rabbinic tradition (cf. Barthélemy 1963). Although it has been suggested that Aquila and Onqelos (to whom a Targum on the Pentateuch is attributed) are one and the same, the evidence for such an identification is not convincing.

As argued persuasively by Barthélemy (1963), Aquila should be seen as the culmination of at least a century's worth of translational activity within the Jewish community. Most of his techniques find their antecedents in an earlier recension designated by Barthélemy as *kaige* (see THEODOTION). In fact, it is likely that Aquila's version was a revision of this *kaige* Greek text and that he had no independent knowledge of the Old Greek (or original Greek translation) for most books of the OT. It is difficult to imagine that a reader with no knowledge of Hebrew could have easily followed Aquila's text, so completely did he shape his Greek into the Semitic mold. It would, however, be useful as a textbook and as a source for quotations on the Jewish side of the continuing polemics with Christians.

Because of its many literalistic tendencies and its frequent recourse to stereotyped or etymological renderings for Hebrew words and phrases, Aquila's version is also valuable for modern textual critics and exegetes. Up until the beginning of this century, his work was known mainly through brief citations in rabbinic and patristic sources and from textual notes in the margins or body of a few manuscripts. (It is also suggested that the "Septuagint" text of Qoheleth was produced by Aquila.) Today we have, in addition, some continuous text (for details, see Jellicoe 1968). Although for some this material simply confirms a negative assessment of Aquila's efforts, a fairer assessment of it serves to remind contemporary scholars that his approach was not nearly so heavy-handed and mechanistic as it is often portrayed. Moreover, the literalism Aquila exemplified was undoubtedly compatible with the exegetical concerns of his own day, and for this he was praised even by Christians like Origen and Jerome.

AR (PLACE) [Heb *ʿār* (עָר)]. A Moabite toponym used as the name of a town, a region, or both. As the name of a town, Ar could refer to a particular site (i.e., the proper name of a town), or it could be used as a general term for "city." (Moabite *ʿār* is the equivalent of Hebrew *ʿīr,* "city.") Because of the diverse usage of the term, the exact location of Ar cannot be determined with certainty on the basis of the OT, though the historical and geographical data in the Bible provide tantalizing clues for this task.

In the biblical tradition, the designation Ar is found almost exclusively in Numbers and Deuteronomy, in passages dealing with the Israelites' passage through and around Moabite territory. Most of these verses bear directly upon the subject of Moab's northern border at the time of the Hebrew migration, with

all data supporting the view that Ar—as the name of a town or a region—was located near this northern boundary, the Arnon. In Num 21:14–15, the "seat of Ar" (i.e., "dwelling of Ar") is mentioned in connection with "the valleys of the Arnon," "the slope of the valleys," and "the border of Moab." Deut 2:18 refers to Ar's proximity to "the boundary of Moab" and, like the forementioned text, probably refers to the name of a prominent town on or near the Arnon (cf. Num 21:28, though some read "as far as" or "cities of" in place of the proper noun "Ar" in this verse). It is possible that "the city of Moab" (*ʿīr moab*), mentioned in Num 22:36, and "the city that is in the valley" (Deut 2:36; Josh 13:9, 16; 2 Sam 24:5) allude to Ar, but this is quite uncertain.

In contrast to the passages that use the designation Ar with reference to a city, specifically or generally, are verses that seem to use Ar as the name of a region, as a synonym for Moab (Deut 2:9, 29). The appearance of Ar in Isa 15:1 may be still another way in which this term was used in the OT. In this verse, the only occurrence of Ar in a poetic text, the prophet refers to a successful campaign against the Moabites. Ar and Kir are named in parallel lines, and it is difficult, if not impossible, to decide which of the following interpretations is correct: (1) Ar and Kir were the two principal towns of Moab (perhaps capitals in different periods), south of the Arnon, and Isaiah narrates the spread of news about the attack from city to city; (2) these terms refer to the towns of Moab in general (*ʿār* = Moabite for "city" and *qir* = Heb for "wall" or "walled city"); or (3) Ar and Kir are identical, with the poetic parallelism requiring two different designations for the same place (cf. Schottroff 1966: 179–81; Weippert 1979: 17–18).

Among the sites that have been identified as Ar of Moab are Kerak (probably ancient Kir/Kir-hareseth), Rabbah (ancient Areopolis/Rabbath Moab), Khirbet el-Miṣnaʿ (M.R. 223767), Khirbet el-Medeineh (M.R. 330768), and Khirbet el-Bālūʿ (M.R. 244855). Although it is impossible, at present, to state with certainty that any of these sites was ancient Ar, it is fair to say that the available geographical, historical, and archaeological evidence seem to favor Khirbet el-Bālūʿ (Miller 1989).

GERALD L. MATTINGLY

ARA (PERSON) [Heb *ʾărāʾ* (אֲרָא)]. One of the descendants of Asher listed in the select genealogy in 1 Chr 7:30–40. Ara, whose name, perhaps, means "lion," is described as one of the "heads of fathers' houses, approved, mighty warriors, chief of the princes," in Asher's genealogy. Perhaps since Asher was a lesser tribe, originating from the Jacob-Zilpah union (cf. Gen 46:17–18), little emphasis is placed on his lineage. One third of the names listed in this genealogy in 1 Chronicles 7 are found only here in Scripture. Indeed, the name "Ara" appears nowhere else.

J. RANDALL O'BRIEN

ARAB (PLACE) [Heb *ʾărāb* (אֲרָב)]. A town situated in the central hill country of Judah (Josh 15:52), within the same district as Hebron. This settlement, whose name perhaps means "hiding place" (from Heb *ʾrb* "to lie in ambush"), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62; see also BETH-DAGON). Arab may also have been the home of PAARAI the Arbite (Heb *haʾarbî*), one of David's champions (2 Sam 23:35). The ancient name is clearly reflected at modern Khirbet er-Rabiyeh (*LBHG* 372; M.R. 153093), which lies approximately 13 km SW of Hebron. Although the location is quite acceptable, it is not yet known whether Khirbet er-Rabiyeh was occupied during OT times.

WADE R. KOTTER

ARABAH (PLACE) [Heb *ʿărābâ* (עֲרָבָה)]. A biblical term variously used referring to all or portions of the Great Rift valley in Palestine, running from the Sea of Chinnereth (Galilee) in the N, through the Jordan Valley to the Dead Sea, and from there to the Gulf of Aqaba in the S. Along with the coastal plains, the Shephelah, the Negev, and the mountains, it is one of the principal geographical regions in Palestine (Josh 11:16). This region is a depression in the earth, for the most part below sea level, which provided a natural barrier and a border between Israel and her neighbors Ammon, Moab, and Edom to the E.

———

A. Description
B. Terminology and Occurrences
C. History

———

A. Description

Arabah refers to the section in Palestine of the Syrian-East African Rift—the Great Rift—which runs from Turkey to Mozambique. It can be divided into three distinct areas: the Jordan Valley, extending from the Sea of Chinnereth, including both sides of the Jordan river, to the Dead Sea; the region of the Dead Sea itself, including the desert wasteland on either side; and the modern Wadi el-ʿArabah, which designates the region running from the southern end of the Dead Sea, slightly W and S to the Gulf of Aqaba. While the biblical term was used in reference to the whole or parts of this entire area, in modern usage the designation "Arabah" refers specifically to the wilderness area in the S portion, the Wadi Wadi el-ʿArabah, from the S end of the Dead Sea to the Gulf of Aqaba.

The Jordan Valley extends from the S end of the Sea of Chinnereth to the Dead Sea and is divided between the Galilee-Beth-sheʾan Basin in the N and the Ghôr in the S by a narrowing referred to as the "Jordan waist." The Jordan winds its way from the Sea of Chinnereth 65 mi (105 km) before entering the Dead Sea (all statistics from Orni and Efrat 1980), and the valley ranges in width from 15 mi to 4 mi and dropping from about 700 ft (213 m) below sea level at the Sea of Chinnereth to 1300 ft (396 m) below sea level at the Dead Sea. See also JORDAN RIVER. The N half of the valley is well watered and relatively fertile while the S portion is drier and less cultivated. In the lower Ghôr is found the site of the ford of Adam (Josh 3:16) and farther S a rugged territory called in the Bible the "jungle of the Jordan" (Jer 12:5; 49:19; 50:44; Zech 11:3), a wilderness area known for its lions. From the E the Jordan River is joined by the rivers Yarmuq, ʿArab, Taiyebeh, Ziqlab, Yabis (perhaps biblical "brook Cherith" 1 Kgs 17:3), Jabbok, and Fariʿa. On the E bank of the southernmost portion of the Jordan River is the area called the well-watered "plains of Moab" (*ʿarĕbôt-môʾab*), the site of biblical Abel-shittim (Num 33:49; Josh 2:1, 3:1; Mic 6:5), while the W bank is the area of the "plains of Jericho" (*ʿarĕbôt-yĕrʾiḥô*).

The Dead Sea, sometimes referred to as the "Sea of the Arabah" (*yām hāʿărābâ*), extends 50 mi (80 km) S from the mouth of the Jordan, and at its widest point is 11 mi (18 km) wide. The level of the water has fluctuated throughout history but presently is about 1300 ft (396 m) below sea level. The Rift Valley extends beneath the level of the water another 1300 ft (396 m) to 2625 ft (800 m) below sea level, making it the deepest continental depression in the world. The sea is surrounded by a narrow shore on either side at the foot of the mountains—the highlands of Judah to the W and the plateau of Moab on the E. Besides the Jordan River, the Dead Sea is fed by the rivers Zerqa, Maʿin, Arnon, and Kerak from the E, while on the W are found the springs of ʿAin Feshka (near Qumran), En-gedi, and En Bokek. In biblical times the cities of Sodom and Gomorrah were located along with the cities of the plain somewhere in the S part of this region which, according to the Bible, was consideraly more fertile than it is today (Gen 13:10). Today this whole region is largely desolate, the S portion containing a salt plain and mountain, Har Sdom.

The southernmost section of the Arabah or Great Rift in Palestine extends from the S end of the Dead Sea 103 mi (165 km) to the S and slightly W to the Gulf of Aqaba. It varies in width from 20 mi (32 km) in the central sections to only 3 mi (5 km) in the S section near Elat. It rises abruptly in altitude going S from about 1300 ft (396 m) below sea level at the Dead Sea to 690 ft (210 m) in only a couple of miles

and then ascends gradually to sea level at Elat in the area of ancient Ezion-geber. This area is covered with alluvial sand and gravel, and because of the lack of precipitation, the vegetation consists of sagebrush, camel thorns, and acacia. This area was of particular significance throughout history because it contained the only deposits of iron and copper in ancient Israel (Deut 8:9) which have been mined and smelted since Chalcolithic times. This area and the copper industry have been documented by Glueck (1970: 59–103) and Rothenberg (1962; 1972). See TIMNA. In addition, the port of Ezion-geber and/or Elat was the gateway for trade with Egypt, Africa, and Arabia and hence was the beginning of important trade routes that led N connecting with Gaza and the Via Maris to the W and through Edom, to the King's Highway in the E.

The route leading from the Gulf of Aqaba to Syria through the Great Rift is called by some the Rift Valley Road. It diverged into two roads from the Gulf of Aqaba to Syria interrupted by the cliffs of the Dead Sea and a basalt dam N of the Sea of Chinnereth. The W branch ran from Elat through Oboth to En-gedi and the E branch from Elat to Punon and the Wadi Kerak. From the Dead Sea N, both roads continued to Galilee but continuing from there to the N there was only one road (Baly, *GB,* 98).

B. Terminology and Occurrences

In the past some have argued the root of the word "Arabah" (Heb *ʿ-r-b*) originally meant "arid" or "sterile" (*BDB,* 787). In recent times this view has been seen as tenuous. The term "arabah" does often occur in contexts suggesting a general reference to "desert" or "wilderness" without a specific geographical point of reference. In most of these cases the term occurs without the definite article. It is possible the word developed the general sense of "wilderness" or "desert" simply from the fact that much of the area within the Arabah, especially in the S section of the Arabah, is in fact arid and desolate. This general usage is primarily found in poetry, especially in the prophets, and RSV usually translates "desert." See, for example, "Sharon is like a desert" (Isa 33:9); "a wolf from the desert" (Jer 5:6). The word is rendered as "plain" in "the whole land shall be turned into a plain" (Zech 14:10). Often the term "arabah" occurs in conjunction with other words meaning "wilderness" or "dry land." It is found as a parallel term to *midbār,* RSV "wilderness," in several passages: "waters shall break forth in the wilderness (*bammid-bār*) and streams in the desert (*bāʿărābâ*)" (Isa 35:6). See also Isa 33:9; 40:3; 41:19; 51:3; Jer 17:6; Job 24:5. In addition, it is found in conjunction with other terms meaning "wilderness" or "dry land": "the wilderness (*midbār*) and dry land (*ṣiyyâ*) shall be glad, the desert (*ʿărābâ*) shall rejoice and blossom like a crocus" (Isa 35:1). See also Jer 2:6; 50:12; 51:43, where it occurs with *ṣiyyâ* and *midbār* and with "salt land" (*mlḥ*) in Job 39:6. Even where such a general sense is intended, it is possible that some of these contexts are a reference to the Arabah proper.

When "arabah" occurs with the definite article (*hāʿărābâ*), it is rendered by RSV as "Arabah," and in most cases designates a specific geographical place or area within the Rift Valley. Josh 11:16 lists this region as one of the major geographical areas in the Promised Land: "Joshua took all the land, the hill country, and all the Negeb, and all the land of Goshen, and the lowland, and the Arabah and the hill country of Israel" (Josh 11:16). There is a reference to the Arabah as the region on both banks of the Jordan Valley crossed by Abner on his way from Gibeon to Mahanaim (2 Sam 2:29). Several references are made to the Arabah as the E bank of the Jordan Valley from the Sea of Chinnereth to the Dead Sea (Deut 3:17; 4:49; Josh 12:1, 3), and there are references to the W bank of the Jordan Valley where Gilgal is located (Deut 11:30) and where the men of Ai went out to meet Israel in battle (Josh 8:14). The "plains of Jericho," where the fleeing King Zedekiah was apprehended by the Babylonians (2 Kgs 25:4; Jer 39:4; 52:7), are also referred to as the Arabah. The region to the W of the Dead Sea is referred to in 1 Sam 23:24: "David and his men in the wilderness of Maon, in the Arabah to the south of Jeshimon." Ezek 47:8 ("the water flows towards the eastern region and goes down into the Arabah") refers to the region of the Dead Sea and perhaps by extension to the whole of the S Arabah. The only explicit reference to the S portion of the Arabah, present-day Wadi el-ʿArabah, is found in Deut 2:8, where the children of Israel moved S from Kadesh "from the Arabah road from Elat and Ezion-geber."

The term "arabah" is occasionally used as a designation of a road or route, and Heb *derek hāʿărābâ* is variously translated: "Arabah road" (Deut 2:8), the road in the vicinity of Elat and Ezion-geber; "way of

the Arabah" (2 Sam 4:7), the route from Mahanaim to Hebron; and "direction of the Arabah" designating a route from Jerusalem to the area of Jericho (2 Kgs 25:4; Jer 39:4; 52:7). The plural form (*ʿărābôt*) occurs in two expressions where it is translated as "plains": *ʿarĕbôt-mô ʾāb* "plains of Moab" (Num 22:1; 26:3, 63; 31:12; 33:48–50; 35:1; 36:13; Deut 34:1, 8) and *ʿarĕbôt-yĕr'iḥô* "plains of Jericho" (Josh 4:13; 5:10; 2 Kgs 25:5; Jer 39:5; 52:8).

Several times the Dead Sea is referred to as the "Sea of the Arabah" (*yām hāʿărābâ*), often qualified as the Salt Sea. This term is found referring to the Dead Sea as a landmark delineating the boundaries of the tribes of Israel across the Jordan (Deut 3:17; 4:49; Josh 12:3), as well as in the description of the Jordan "flowing down toward the sea of the Arabah, the Salt Sea" (Josh 3:16). It is also found as the border of the N kingdom when Jeroboam II "restored the border of Israel from the entrance of Hamath as far as the Sea of the Arabah" (2 Kgs 14:25). In Amos 6:14 there is mention of the "brook of the Arabah" (*naḥal hāʿârābâ*) also in the context of the borders of Israel "from the entrance of Hamath to the Brook of the Arabah" in a passage that suggests Amos might be parodying Jeroboam's achievement mentioned in 2 Kgs 14:25. It is not certain if Amos intends a specific brook of water in the region such as the Wadi Qelt or the brook Zered (called in Isa 15:7 *naḥal hāʿârābîm* "brook of the willows") as the S border. Some have suggested that Amos may intend the Wadi el-ʿArabah, and Arabic term, referring to the whole area from the Dead Sea to the Gulf of Aqaba.

In addition there is a reference to the "plains of the wilderness" (*ʿrbwt hmdbr*; Qere in 2 Sam 15:28 and 17:16), which in its context suggests that part of the Arabah on the borders of the Judean wilderness, probably the Jordan Valley N of the Dead Sea. RSV, however, follows the Kethib reading "fords of the wilderness" (*ʿabĕrôt hāmmidbār*), referring to the crossing point of the Jordan in this area.

C. History

While not specifically mentioned, the area of the Arabah played a significant part in the patriarchal narratives. When there was conflict between the servants of Abraham and Lot over the shortage of pastureland, they divided the land between them. Lot chose the Jordan Valley because it was well watered, and he settled in the area around Sodom (Gen 13:2–13). The wealth and prosperity of the cities of the plain attracted the kings from the E, who sacked the cities of Sodom and Gomorrah and were pursued and caught by Abraham (Genesis 14). Later the cities of Sodom and Gomorrah were totally destroyed by "brimstone and fire from the Lord out of heaven" (Gen 19:24).

In the 14th–12th centuries B.C. mines in the S Arabah were heavily worked by the Egyptians, but later in Iron Age I–II production was left again to the local tribes of Midianites and Kenites. As prophesied by Moses, it was the site where iron and copper could be found in the Promised Land (Deut 8:9).

The children of Israel passed through the Arabah on their journey from Kadesh-barnea to Ezion-geber (Deut 2:8) before turning N and E to avoid the borders of Edom and Moab. The Amorites under Sihon had seized the Moabite portion of the Arabah, which was in turn captured and populated by the Israelites (Num 21:21–30; Deut 2:24–37). This area was the scene of the apostasy at Abel-shittim (Numbers 25). The plains of Moab (*ʿarĕbôt-môʾāb*) on the E bank of the Jordan N of the Dead Sea was the site of the Israelite camp that witnessed the final acts and received the final words of Moses (Numbers 32–36; Deut 1:1, 7). It is the area where the Israelites camped before they crossed to Jericho (Num 22:1; 3:48–50; 35:1; 36:13); where the census of Israel was taken before the entry into the Promised Land (Num 26:3, 63); where the booty was taken after the defeat of the Midianites (Num 31:12); the place from whence Moses ascended to Mt. Nebo in order to view the Promised Land (Deut 34:1, 8); and a landmark in the designation of the inheritance allotted to the tribes on the other side of the Jordan (Deut 3:17; 4:49; Josh 12:1, 3). Israel witnessed the miraculous parting of the Jordan (Josh 3:14–17) and crossed the Jordan under the direction of Joshua to the "plains of Jericho" (*ʿarĕbôt-yĕr'iḥô*), camping at Gilgal, which became the headquarters for the first phase of the Conquest. On the plains of Jericho, Israel prepared for the capture of Jericho (Josh 4:13), here is where they renewed the covenant through circumcision, celebrated Passover, and where the manna stopped (Josh 5:1–10).

The N portion of the Arabah is the scene of the incident of Abner fleeing after his defeat at Gibeon (2 Sam 2:29), and the area which the assassins of Ishbosheth crossed from Mahanaim to bring the head of

their king to David at Hebron (2 Sam 4:7). Throughout the history of Israel the S Arabah was a strategic area, both because of the copper industry as well as the seaport. It is recorded that Solomon "built a fleet of ships at Ezion-geber" (1 Kgs 9:26–28; 10:11; 2 Chr 8:17–18; 9:10–11), which pursued trade with Arabia and Africa. After Solomon's death, the area reverted to the Edomites, only to be reconquered by Jehoshaphat of Judah, who also built a fleet of ships (1 Kgs 22:48; 2 Chr 20:36). The dispute with Edom continued as Elath was recaptured by Amaziah (2 Kgs 14:22) or Uzziah (2 Chr 26:2), finally falling to the Edomites (2 Kgs 16:6). When Zedekiah fled Jerusalem toward the wilderness, he was captured by the Babylonians in the plains of Jericho in the Arabah, near Jericho (2 Kgs 25:5; Jer 39:5; 52:8).

The S section of the biblical Arabah was inhabited by the Nabateans in the 3d century B.C., and the Romans reopened copper mining in this area in the 1st–3d centuries A.D.

ARABAH, BROOK OF THE (PLACE) [Heb *naḥal hā‹ărābâ* (נַחַל הָעֲרָבָה)]. A place mentioned in Amos's pronouncement of doom against Israel (Amos 6:14). Together with the "entrance of Hamath," the Brook of the Arabah is used to delineate the geographical extent of Yahweh's punishment: since the former (Heb *lĕbo› ḥămat*) seems to designate the N border of the promised land (Num 34:7–9; Josh 13:5; Ezek 47:15–16), the latter presumably designates the S border. However, elsewhere the S border is characteristically referred to as the "Brook of Egypt" (Josh 15:4; Ezek 47:19) or as "the Shihor, which is east of Egypt" (Josh 13:3). On the one hand, it is possible that the Brook of the Arabah is one of these, and therefore provides a coastal referent for the S boundary of Yahweh's punishment. The Brook of Egypt is usually identified with Wadi el-‹Arish, which drains the central Sinai N into the Mediterranean, while Shihor (Eg *š hor*) may be the easternmost branch of the Nile delta (*IDB* 4: 328; *ISBE* 1:549). On the other hand, it is possible that the Brook of the Arabah provides an inland referent for the S boundary. It may be equivalent to the Brook of Zered SE of the Dead Sea, a suggestion supported by the fact that the word "Arabah" is usually used to designate the Dead Sea basin and the area directly S of it to Aqaba. See also ARABAH; EGYPT, BROOK OF; SHIHOR.

ARABIA (PLACE) [Heb *‹ărab* (עֲרַב)]. ARABIAN. The OT has no true geographical place name "Arabia," the collective noun *‹ărāb* ("Arabs") being used to designate the region; the geographical term "Arabia" appears only in Greek texts. Arabs are also sometimes referred to in the OT as *bĕnê qedem* "people [literally "sons"] of the East" (*e.g.*, Judg 6:3, 1 Kgs 4:30) and their region as *›ereṣ qedem*, "land of the East," or simply *qedem*, "East" (so Gen 25:6, Isa 2:6).

A. History and Geography

The origin of the Arabs is debated; the conventional view is that they originated in the central or S part of the Arabian peninsula (e.g., Montgomery 1934, Hitti 1970). The inclusion of the S part of the peninsula in the designation "Arabia" is not, however, attested until Roman times, nor do people identified as "Arabs" appear in ancient texts as inhabitants of the S region until the same period (Eph‹al 1982:8); prior to that time the S region was known by the names of the various kingdoms that inhabited it, such as Saba, Qataban, and Hadhramaut. Considerable evidence favors the theory that the Arabs first appeared on the N, W, and E edges of the Syrian desert, with an extension into the Negev, the Sinai peninsula, and the N part of the Hejaz (the NW coast and mountain range of the Arabian peninsula).

Egyptian texts as early as the 3d millennium B.C. refer to inhabitants of the S Levant as "sand-dwellers," a term that originally must have alluded to nomads, although even at that early date it also applied to

sedentary Levantine peoples. The homeland of these Asiatics was sometimes designated, as in the Egyptian story of Sinuhe which originated in the 20th century B.C., by the Semitic word *qedem.* Archaeological investigations have shown that nomads were much in evidence in Syro-Palestinian life during the period 2200–1900 B.C., following the collapse of the EB cultures, but partially withdrew to the S and E desert regions during the subsequent centuries of ascendancy of the Canaanite city-states. The tendency of nomads to press into Palestine and W Transjordan as the Canaanite culture began to disintegrate during the latter part of the 1st millennium B.C. was impeded by the establishment of Edom, Moab, Israel, and other fledgling kingdoms. During much of the 1st millennium B.C. Arabs moved about on the fringes of the settled regions, not only providing the sedentary peoples with sheep, goats, camels, asses, and animal by-products such as skins and wool, but also serving as itinerant merchants trading in spices, dates, embroidery, incense, iron, copper, gold, precious stones, pearls, and other commodities, some of which originated in distant places (see Gen 2:11, 1 Kgs 10:2, Ezek 27:21–22).

Arabs were also active in the extreme S part of Palestine and Transjordan during the OT period. Nomadic groups, often called by tribal names rather than the generic term "Arab," had long moved about in the W part of the Negeb between Judah and the "Brook of Egypt" (Wadi el-ʿArish, the traditional border between Palestine and Egypt) and in the rugged terrain E toward Edom and Midian. The Midianites, who were related to, if not identical with, the biblical Ishmaelites, were of Arab stock, and engaged in caravaneering. The biblical story of Joseph describes a Midianite caravan on its way from Gilead in the Transjordanian highlands to Egypt, passing through the vicinity of Dothan in N Palestine (Gen 37:25–28). The traders carried with them stock items of resin, balm, and myrrh, and also trafficked in slaves. Some Arab tribes probably made their living, as they did at later times in history, by preying upon such caravans, or by raiding villages or the encampments of other Arabs.

The earliest known appearance of the word "Arab" in extrabiblical texts is in an Assyrian record from the time of Shalmaneser III which states that an Arab leader named Gindibuʾ, who probably had his home on the SW edge of the Syrian desert, went with troops and 1000 camels to participate in a military coalition against the Assyrians that culminated in the battle of Qarqar in 853 B.C. Arabs appear frequently in the records of a number of later Assyrian monarchs, from Tiglath-pileser III through Ashurbanipal (745–627 B.C.), sometimes as allies and sometimes as the vanquished. Tiglath-pileser's annals identify various Arab tribes or leaders that were nominally integrated into the Assyrian empire. Under Sargon II, some Arabs were resettled in Palestine and elsewhere, either voluntarily or otherwise (see Ephʿal 1982: 105–8). Arabs also appear sporadically in the records of the subsequent Neo-Babylonian and Persian empires. None of the Near Eastern empires could, however, effectively control these nomads or their territories permanently; at most they could make incursions into the inhospitable desert regions, and usually had to content themselves with striking bargains with the Bedouin leaders to achieve their main goal, that of keeping commercial routes open. See BEDOUIN AND BEDOUIN STATES.

During the Greco-Roman period, the Arabs became much better known than previously. Geographers began to make rudimentary distinctions among the regions inhabited by Arabs, referring to the North Arabian region as "Arabia Deserta" and the SW coast of the Arabian peninsula as "Arabia Felix." Damascus was generally regarded as standing at the NW corner of Arabia Deserta (cf. Jdt 2:25). A third region, Arabia Petraea, emerged in Edom as one group of Arabs, the Nabataeans, rose to prominence during the 3d–1st centuries B.C. Transforming tribal leadership into kingship and their nomadic way of life into a sedentary existence, the Nabataeans gradually increased their cultural sphere N and W during this time, becoming prosperous through trade. They vigorously and creatively adapted Hellenistic-Roman culture to their indigenous traditions, particularly in their capital city of Petra. By the early 1st century A.D., at its zenith, the kingdom of Nabatea dominated a large part of Transjordan and the Negev (see Glueck 1959 and 1970, Bowersock 1983, and Negev 1986). See also NABATEANS.

The Romans, who had actively entered the governance of the Levant with Pompey's conquest of Syria and Palestine in 64–63 B.C., maintained the Nabataeans as a client state within the larger geographical region they called "Arabia" (comprising portions of Transjordan, S Syria, the Negev, and the NW Arabian peninsula) for well over a century, but in A.D. 106 annexed a large part of the Nabatean kingdom as a

Roman province. Subsequently, attempting to prevent the still populous non-Nabatean Arab groups situated farther to the E and S from encroaching upon the boundaries of the empire, the Romans established a series of military posts in Transjordan (see Bowersock 1983 and Parker 1986), but these only partially achieved their purpose and after several centuries were abandoned; ultimately the Romans proved to have little more success than previous empires in controlling the Arabs. During the 4th–6th centuries A.D. the Arabs had considerable contact with the Byzantine world, but it was only when Islam emerged in the 7th century A.D. that they moved to the forefront of Near Eastern history.

B. In the OT and Intertestamental Literature

Eph'al (1982: 60–63) points out that in the earlier historical texts in the OT bedouin peoples are referred to by various tribal names (chiefly Amalekites, Midianites, and Ishmaelites) or simply as people of the East; in later passages they still sometimes appear as people of the East, but are also designated by the generic term "Arab" or by names representing kingdoms, oasis cities, or other previously unknown groups. Eph'al suggests that the change of terminology occurred in the mid-10th century B.C., at the end of the reign of King David. While such may have been the case, the biblical evidence for the change in terminology is scanty and somewhat questionable prior to the 7th century B.C. The first mention of Arabs in the records of the Hebrew monarchy appears in 1 Kgs 10:15 (=2 Chr 9:14), where the somewhat uncertain Hebrew text can be read as stating that Solomon received gold from "all the kings of the Arabs [or Arabia]." Inasmuch as Solomon is reported to have fostered commerce via the Red Sea, the passage may attest to gifts proffered by rulers of the kingdoms of the SW Arabian peninsula; the LXX, however, does not mention Arabs or Arabia but states that Solomon received tribute from "all the kings of the coast"—by which is perhaps meant the N Hejaz, where Tema, Dedan, and other caravan centers were located. Similarly the account of the visit of the Queen of Sheba to Solomon's court (1 Kgs 10:1–13) may have concerned the ruler of a N branch of the Sabaeans, located in the Hejaz and conducting operations both S along the Red Sea and N into the Negev. A case can, however, be made for the traditional interpretation of the story, which identifies Sheba with the Sabaean kingdom of the SW Arabian peninsula (see Eph'al 1982: 63–64, 88–89, 227–29). Vv 11–12 of the account, which mention wood and precious stones that Solomon is said to have brought from Ophir, concern trade with more distant places than the Hejaz, but this information is an addition to the story.

Arabs are referred to several times in the Chronicler's history of the Northern and Southern Kingdoms. 2 Chr 17:11 states that Arabs gave large gifts of sheep and goats to Jehoshaphat, king of Judah (873–849 B.C.), who had attempted to reactivate Solomonic trade routes through the Red Sea (1 Kgs 22:47–49). 2 Chr 21:16 (cf. 22:1) alludes to a brief but destructive invasion carried out against Judah by the Philistines and "the Arabs who are near the Ethiopians" during the reign of Jehoram (859–853 B.C.). The Chronicler also mentions several times an Arab tribe known as the Meunites (2 Chr 20:1, 26:7; Ezra 2:50 = Neh 7:52), who are also attested in Assyrian records. That same work speaks of the Philistines, the Meunites, and "the Arabs that dwelt in Gurbaal" (26:7; cf. 14:12–14) as groups attacked by King Uzziah of Judah (783–750 B.C.); such a war, if historical, probably was waged out of concern not to acquire more territory but to control lucrative trade routes through the S end of the Levant. Precisely how historical these various states are is difficult to determine, since Chronicles is a relatively late postexilic work, and references in it to Arabs may reflect, in part, contemporaneous circumstances (cf. Eph'al 1982: 65–71). The corresponding narratives in 2 Kings do not mention Arabs, and the LXX versions of the passages in 2 Chronicles often differ slightly from the Hebrew text, either omitting reference to Arabs or apparently attempting some clarification (e.g., "the Arabs and those who bordered on the Ethiopians" in 2 Chr 21:16 and "those that dwelt on the rock" in 2 Chron 26:7, the latter perhaps alluding to the Edomite stronghold at Petra or its vicinity).

In the prophetic tradition of the late 8th–early 6th centuries B.C. North Arabia continues sometimes to be alluded to as the East (e.g., Isa 11:14, Jer 49:28), and older tribal terminology occasionally appears, but the newer names of Arab groups such as Dedan, Tema, and Kedar (Qedar) are also frequent. The latter, all located in the NW corner of the Arabian peninsula, are often linked in prophetic poetry. Isa 21:11–17, which includes an oracle "concerning Arabia," uses all three names; the fact, however, that this oracle is

lacking in the LXX raises some doubt as to its date. Jer 25:23–24 (LXX 32:23–24) refers to Dedan, Tema, Buz, and the Arabs who "cut the corners of their hair [i.e., have a distinctive tonsure]; all the kings of Arabia and all the kings of the mixed tribes that dwell in the desert." Montgomery (1934: 29–30) has pointed out that this may be the earliest unquestionable OT reference to "Arabs" dating from the latter part of the 7th or the early 6th century B.C. Ezekiel's list of nations that traded with the city of Tyre names not only Dedan and Kedar but also Sheba and Ramah as well, and gives important details regarding their commerce (Ezek. 27:20–22).

Some of the wisdom literature of the OT and the intertestamental period indicates that Arabia had a reputation for fostering men of wisdom, an idea that is also found occasionally in prophetic literature (e.g., Obad 8, Jer 49:7). The conventional presupposition about Arab wisdom is found in 1 Kgs 4:29–31, where Solomon's wisdom is said to have surpassed even that of the "people of the East." Epigrams and other wise sayings were sometimes believed to have an Arab origin (1 Sam 24:13 and perhaps Prov 30:1, 31:1). The postexilic wisdom book of Job refers to its protagonist as the greatest of the people of the East (Job 1:3), and makes allusions to persons and places in North Arabia, such as the Sabaeans (Job 1:15), the oasis of Tema (Job 6:19), and the land of Uz (Job 1:3; see also Lam 4:21, where Edom and Uz were paired); it has been thought by some scholars that the book had its origins in that region (but compare Montgomery 1934: 172–73).

The scanty references to the Arabs in the postexilic historical accounts in the OT, which should probably include at least some of the passages in Chronicles, show that the Arabs continued to be a force in the Levant during the 5th–3d centuries B.C. During the rebuilding of the walls of Jerusalem around 445 B.C. Nehemiah's efforts on behalf of the Jews were opposed by a coalition of several groups, the leaders of which were Sanballat the Horonite, Tobiah the Ammonite, and Geshem the Arab (Neh. 2:19; cf. 4:1—Eng4:7, 6:1). The question of the identification of this personage is discussed in Eph'al (1982: 197, 210–14), who suggests that Geshem probably ruled a group of Arabs that lived in the desert to the south of Judah. Extrabiblical sources attest to a king of Kedar named Gashmu, who was contemporary with the biblical Geshem, if not identical with him.

Jewish concern with Arabs in the 2d–1st centuries B.C. and the early 1st century A.D. tended to focus on the bedouin of Transjordan and the Negev; those in other regions are rarely mentioned. Zabdiel the Arab, who figures briefly in 1 Macc 11:16, and the Arabs called Zabadeans, who appear in 1 Macc 12:31, may have inhabited a part of the Negev. The word "Arab" sometimes was used with its old connotation of "nomad" (e.g., 2 Macc 12:10–12, where it is asserted that 5000 Arabs with 500 horsemen attacked Judas Maccabeus and were defeated, after which they "departed to their tents"); other references, however, show that the term could be used as a virtual equivalent of "Nabatean" (1 Macc 5:25, 39, 9:35, and 2 Macc 5:8).

C. In the NT

"Arabians" (i.e., inhabitants of Arabia, not necessarily entirely synonymous with "Arabs") are mentioned only once, as such, in the NT, as one of many kinds of foreigners living in Jerusalem who participated in the outpouring of the Holy Spirit at Pentecost (Acts 2:11). Paul mentions Arabia in his brief allusion to his conversion and subsequent departure "into Arabia," followed by his return to Damascus (Gal 1:17). This Arabian sojourn, of unspecified duration, took place somewhere on the edge of the Syrian desert or in Transjordan. Paul's famous escape from Damascus (2 Cor 11:32–33) took place under the kingship of Aretas IV, during a period of domination of the city by the Nabataeans.

D. In Biblical Theology and Imagery

Arab influence on the Bible was most intensively examined during a half-century period, from around 1885 to 1935. Julius Wellhausen wrote the first extensive modern treatise on the subject with his *Reste arabischen Heidentums,* published in 1887. His pioneering work was followed by others, among which were W. Robertson Smith's *The Religion of the Semites* (1894), G. Jacob's *Altarabische Parallelen zum Alten Testament* (1897), M.-J. Lagrange's *Études sur les religions sémitiques* (1905), D. S. Margoliouth's *The Relations between Arabs and Israelites prior to the Rise of Islam* (1924), Albrecht Alt's *Der Gott der Väter* (1929), and James Montgomery's comprehensive (and still highly useful) *Arabia and the Bible* in

1934. The historical and ethnographic work that was done decades ago has shown that the impact of Arabia and the Arab culture on the Bible was far greater than the occurrences of the words "Arabs" and "Arabia" in the Bible might suggest, a fact that is being reinforced by more recent research. The Arabs constituted a significant factor in the formation of the Israelite thought, not simply as an environmental presence but as a wellspring of influential cultural and religious concepts, only a few aspects of which can be touched upon here.

The OT recognition of the closeness of Arab and Hebrew cultures is reflected in the lineages incorporated in Genesis. Although lacking in ethnographic sophistication, these priestly genealogical constructions acknowledge nomadic groups as near relatives of the Hebrews. Unfortunately the dating of information in the lists is very uncertain and interpretation is replete with difficulties (see Ephʿal 1982: 231–40). Some Arab tribes, including ones found in the Hejaz, are said to be descended from Abraham's son Ishmael by his less-favored wife, Hagar (Gen 25:12–18), while others, which were geographically closer to Palestine, such as Midian, are alleged to be Abraham's sons by his wife Keturah (Gen 25:1–6). The Joktanite tribes, whose separation from the Hebrews is ascribed to an era before Abraham (Gen 10:26–29), include some of the peoples of South Arabia who may have had ancient non-Arab origins. The descent of "those who dwell in tents and have herds" (Gen 4:20) from Jubal represents yet another genealogical tradition incorporated into Genesis, as does the lineage of the Edomites from Esau (Genesis 36).

Although the OT distinguishes between Hebrews and Arabs, numerous passages indicate that there was widespread recognition of the concept that Israel's physical and spiritual origins lay in the desert. The story of Cain and Abel in the JE epic tradition suggests a divine preference for Abel the shepherd rather than Cain the agriculturist (Gen 4:2–5; but see ABEL). Many aspects of patriarchal traditions are clarified by Arab concepts and practices, such as the welcome which Abraham gives to his angelic visitors (Gen 18:1–8) and the practice of a leader's returning to his tribe to obtain a wife for his son (Genesis 24). Arab customs that illuminate early biblical traditions are discussed in detail by Montgomery (1934) and others. (Since, however, Arab customs persisted throughout the biblical period, these affinities cannot be used as evidence for the historicity or antiquity of any particular sources or passages.) More normative yet for Hebrew theology is the account of the Hebrew exodus from Egypt, which has a subtle, multifaceted relationship to Bedouin culture, tracing Israel's fundamental encounter with God and his law to an experience in the wilderness of Sinai at a time when the Israelites were living in a manner much like that of the Arabs. The tradition has overtones of the rejection of both agricultural and urbanized life in favor of the more rigorous but purer life of the nomad. Furthermore, Moses is said to have gained knowledge about Yahweh, the Hebrew God, from his father-in-law, Jethro, a Midianite Arab.

By virtue of this communal memory of desert origins, biblical writers cherished the concept of the wilderness as the home to which Israel must return, if only figuratively, for spiritual sustenance. When the Northern Kingdom seceded from the Davidic monarchy, the poetic cry was "every man to his tents, O Israel" (2 Sam 20:1). The traditions about Elijah, and to a lesser extent Elisha, emphasize the prophets' orientation toward the wilderness. The theme appears in later prophets, among them Jer (2:2) and Hos (2:14). Arabia continued to exert a powerful influence in the thought of earliest Christianity. The Gospels emphasize the wilderness tradition when presenting Jesus as the successor to John the Baptist, an Elijah-like figure whose life and message echo the sternness and spiritual integrity of the Hebrew experience of the exodus (Mark 1:4–9 and par). When on the verge of his public ministry, Jesus goes into the wilderness, where he contemplates, and rejects, the temptations of materialism and urban culture (Mark 1:14–13 and par). The concept again reappears in the apostle Paul's withdrawal to Arabia following his conversion (Gal 1:17).

ARABIA, LANGUAGES OF (SOUTH). See LANGUAGES (INTRODUCTORY SURVEY) and (PRE-ISLAMIC SOUTH ARABIA).

ARABIA, PREHISTORY OF. Some 80 years have elapsed between Hogarth's seminal work, *The Penetration of Arabia* (1904), and the first synthesis of recent archaeological work on the peninsula by Tosi (1986). While much of the Near East and particularly the "Holy Land" had been increasingly scrutinized by archaeologists since Hogarth's work, investigation into the Arabian past lagged behind. The Danish expeditions to the Arab Gulf countries beginning in the 1950s were the first to open up the potential not only for archaeology but for biblical readers as well.

Defining "Arabia" remains a complex and difficult task. Workable definitions depend on historical perspective, geomorphology (including flora/fauna, climatology), and the definition of archaeological assemblages and political considerations. If we were to strictly apply the concept of "Arabian peninsula" as defined by the Persian Gulf and Red Sea, following the 30° lat. we would place the upper boundary of Arabia just north of the Nafud desert at Jauf. However, much of the desert/steppe north of the Nafud has historically been defined as *Arabia Deserta*, so perhaps a better criterion for defining the northern limit of Arabia would be the 250 mm isohyet. This rainfall line divides the Fertile Crescent from the steppe/desert. Using this criterion, we can briefly suggest 10 major divisions: (1) the North Arabian Desert, encompassing southern Syria, western Iraq, eastern Jordan, and northern Saudi Arabia extending to the Nafud desert, (2) the Nafud Desert and the eastern arm—the Dahna, (3) Eastern Arabia, stretching from Kuwait to the United Arab Emirates, (4) Oman including Dhofar, (5) the Najd, covering the center of the Arabian peninsula, bounded on the north and south by the Nafud and the Rub al-Khali and on the east by Eastern Arabia respectively, (6) the Hejaz, located along the northern Red Sea and including Midian, (7) the Asir/Yemen, defining the western highlands of the peninsula, (8) the Tihama, which is the Red Sea coast along the southern portion of the peninsula, (9) the Rub al-Khali sand desert, and (10) the Hadhramaut, stretching along the Arabian Sea.

The question of "prehistory" involves chronological considerations. Strictly speaking, our discussion ends when formal writing systems are developed in the peninsula. These are generally regarded as offshoots of the Proto-Sinaitic alphabet system (Gelb 1963: 122–27; Albright 1969; Millard 1986: 392–95) and do not antedate the early 1st millennium B.C. Thus, properly speaking, the prehistory of the Arabian peninsula begins with the appearance of hominids in the early Pleistocene and ends with the advent of early Iron Age oases' states ca. 1000 B.C. However, "history" as an expression of written records impinges on the Arabian experience almost from the beginning of writing. Thus, Dilmun (Eastern Arabia) seems to occur in Uruk period IV texts ca. 3000 B.C. (Nissen 1985: 229–30, 1986; Englund 1983) and continues to be mentioned along with later Magan (Oman) well through the 1st millennium B.C. (Potts 1978, 1983, fc.a, fc.b). Amorites (MAR.TU) as early pastoral nomads inhabiting the North Arabian desert are known from both the Ebla and Mesopotamian texts (ca. 2500 B.C.) (Archi 1985; *POTT*, 103). Equally early may be the Tihama of the southern Red Sea mentioned as part of Punt in the 5th Egyptian Dynasty (ca. 2400 B.C.) (*CAH* 1/2/14: 183). Finally, Midian occurs in Middle Kingdom Egyptian Execration Texts datable to ca. 1800 B.C. (Posener 1940: 88–90; *CAH* 1/2/21: 554–55).

Biblical references to the Arabian peninsula begin at a very early date and can be divided into two groups: (1) semihistorical attributions datable to a pre-Israel state period (Joseph account, Gen 37:25–28; Moses and the Exodus, Exod 2:15ff.; Gideon and the Midianites, Judg 6:11ff.) and (2) historical descriptions of Iron Age Arabia contemporary to the OT state of Israel (e.g. "Kings of Arabia" in 1 Kgs

10:15; Ophir and Tarshish in 1 Kgs 10:11ff.; Dumah in Gen 25:14, Josh 15:52; Dedan in Gen 10:7, Jer 25:23; Teima in Gen 25:15, Job 6:19; Qedar in 1 Chr 1:29, Ps 120:5 and "Arabs" in Neh 4:7, 6:1ff.). The latter also clearly help define the *terminus* for our brief introduction to Arabian prehistory and the former can be perhaps integrated in brief summaries of the relevant regions of Arabian prehistory.

Keeping in mind the strictures concerning the nature of the peninsula, we can summarize its prehistory in roughly four major blocks: (1) the Paleolithic, (2) the Neolithic, (3) the Chalcolithic/Early Bronze Age, and (4) the 2d millennium B.C. (Middle–Late Bronze Ages). The Paleolithic at this point has little relevance for Biblical studies although the evidence to date suggests that the Pliocene–Pleistocene epochs had a profound impact on the human and natural landscape of both Arabia and the Levant (Sayari and Zotl eds. 1978; Jado and Zotl eds. 1984; McClure 1984). North and West Arabia, in many respects, mirror the archaeological record generated along the Levantine coast and Syria. Already by the Oldowan period (ca. 1.5 million B.P.), sites have been recorded both in the Dead Sea rift valley (Ubeidiyah), the Negev and the Orontes River Valley, as well as the North Arabian desert in the vicinity of Jauf (Parr et al. 1978: 34; Whalen personal com.). The Acheulean is well represented in the Arabian peninsula, particularly by the sites of the Mindel-Riss interglacial (ca. 300,000 B.P.) (Zarins et al. 1980: 12–15; Zarins et al. 1981: 14–16; Whalen et al. 1981: 46–47). Work in the central Najd at such sites as Dawadmi (Whalen et al. 1983: 9–21; Whalen et al. 1984: 9–24) and at embayments along the southern Red Sea (Zarins et al. 1982: 35–36) has been particularly illuminating in reconstructing the distant human past. The Mousterian Middle Paleolithic (ca. 50,000 B.P.) can be found at virtually every Paleolithic site (see the above Acheulean references). In this regard, the evidence again parallels finds from the Levantine coast. The Upper and Epi-Paleolithic periods (40,000–10,000 B.P.) are seemingly absent from the peninsula, except along the northern fringes in the Northern Arabian desert (Copeland and Hours 1971; Garrard et al. 1986; Fujimoto 1978). In sum, the Paleolithic of the peninsula can be found along the northern and western portions of the peninsula swinging south along an arc through the Najd into the Hadhramaut. The entire Eastern Province and Oman seems devoid of this extremely long period in human development. By 10,000 B.P., most of the peninsula may have been abandoned as well. In addition, with the advent of the Holocene, the established climatological patterns of the previous epochs also disappeared, creating new hydrological, climatological, and landform expressions (Whitney 1983; Potts 1985: 677–80).

The Neolithic period saw the beginning of the "Agricultural Revolution" along the "Fertile Crescent" (Mellaart 1975; Bar-Yosef 1980; Moore 1982) and the re-establishment of people throughout the peninsula. The Neolithic experience in Arabia expressed itself in three different ways. First, the idea of pastoral nomadism began in the Northern Arabian desert (Zarins fc.a). This began around 6000 B.C. in conjunction with animal domestication in the Fertile Crescent (Zarins 1989a). Its earliest archaeological manifestation consisted of rock art, structural remains (habitation sites, kites, tumuli, pillars) and material culture (Tosi 1986: 473–74). Initial dependence was on both sheep/goats and cattle. By 5000 B.C. the phenomenon was widespread throughout the Northern Arabian Desert, the Najd, the Asir, and the Hejaz/Midian (Zarins 1979; Zarins et al. 1980: 17–20; Zarins et al. 1981: 19–23; Zarins et al. 1982: 30–32). Second, slightly after 5500 B.C. Eastern Arabia and Oman experienced the direct effects of Mesopotamian and Iranian contacts, and sedentary village life became characteristic of the region. The Ubaid Tradition of southern Mesopotamia has been found in Kuwait, Saudi Arabia, Bahrain, Qatar, and the U.A.E. (Masry 1974; Potts 1978; fc.b; 1985: 681–82; Oates 1978; 1986; Tosi 1986: 468). Subsequent developments in the region demonstrated a well-knit international network tying together the eastern part of the Arabian peninsula with the Indian subcontinent, Mesopotamia, and eastern Africa (Tosi 1986: 476). The Neolithic of Highland Yemen and the Asir took the form of a hybrid (DiMario fc.; Fedele 1985; fc.a; fc.b; Zarins et al. 1981: 21). Sedentary influences from Eastern Arabia via the Hadhramaut were integrated into a local culture influenced by the pastoral nomadism of the Najd and the Rub al-Khali "Neolithic" (Edens 1982, fc.). The third manifestation of the Neolithic period may have begun much earlier, but our recoverable record only begins with 7000 B.C. Here we are dealing with the shell middens of the Tihama, Oman, and the southern Arabian Ocean littoral. A series of site successions demonstrate

close ties with East Africa, Eastern Arabia, Irtan, and India (Biagi et al. 1984; Zarins and Zahrani 1985; Zarins and Badr 1986; Tosi 1985: 363–69; 1986: 472; personal com.).

The subsequent period, 4000–2000 B.C., we have labeled Chalcolithic/EB, following the Levantine terminology. The trends established for the previous period in the peninsula continued to develop. People continued to herd goats/sheep and cattle. Donkeys and horses were introduced, which increased the population's mobility and range. Pastoral nomadism in its early form reached a climax but began a precipitous decline by 2000 B.C. (Zarins fc.a). Sites from the period are widespread in Northern Arabia, the Najd, Hejaz, and Asir/Yemen. The sedentary settlements of the Eastern Province continued to expand with such sites as the Qalat on Bahrain (Bibby 1969; Hoejlund 1986) and Hili 8 (Cleuziou 1981; 1982; 1986) providing long-term sequences. Tumuli fields in the U.A.E./Oman (Frifelt 1975; Vogt 1985; DeCardi 1978), Bahrain (Ibrahim 1982; Mughal 1983), Qatar (Tixier et al. 1980), and Eastern Saudi Arabia (Zarins ed. 1984; Adams et al. 1977; Potts et al. 1978) also provided additional data for reconstructing past cultural manifestations (Larsen 1983; Potts 1985: 683–94; Tosi 1986: 469). The latest work in Yemen has also provided data on the stage prior to the development of South Arabic civilization (De Maigret 1981, 1982, 1983, 1984). Midden coastal sites along the Red Sea and the Indian Ocean continued to enjoy relative prosperity. (See relevant citations in Neolithic section.)

The last period under review here, 2000–1000 B.C. (MB–LB), represents enigmatic developments on all fronts in Arabia. For pastoral nomadism, the emphasis on herding sheep/goats, cattle, and equids began to change radically during this period and camel domestication became preeminent (Bulliet 1975; Zarins 1989b). Concomitantly, structural remains became more ephemeral as greater mobility was demanded. Climatic and ecological change may have been tied to altered monsoonal rain patterns. Historical development during this period saw the change from Amorites to Shosu/Arameans and later Arabs. Site remains which definitely can be attributed to this period are so far rare (Zarins et al. 1981: 28–31 and pl. 11). The settled sites of the period along Eastern Arabia also became rare (Edens 1986; Bibby 1969) and the oasis concept which began to unite with the incipient rise of the South Arabian states can be attributed to this period (Parr and Gazdar 1980). The Midianite entity (Sawyer and Clines eds. 1983; Mendenhall 1984) also arose at this time in the Hejaz/Midian, and sites when adequately surveyed (Ingraham et al. 1981: 71–75) and excavated (Rothenberg 1972) may go a long way in shedding light on the related biblical accounts of Joseph, Moses, and Gideon. The key to our understanding of the Midianites and their biblical associations may lie in the future excavations at Qurayya. Midden sites on the Red Sea coast and the Arabian Sea have also been located and show promise in linking the Red Sea with Egyptian expansion during the Middle and New Kingdoms (Zarins fc.b.).

ARAD (PERSON) [Heb *ʿarād* (עַרָד)]. One of the six sons of Beriah, according to the longer genealogy of Benjamin given by the Chronicler (1 Chr 8:15). The Greek (LXX) reads *ōrēr* and *ōdēd* instead of *ʿarād* and *ʿāder,* evidencing confusion between the Hebrew letters *reš* and *dalet.*

SIEGFRIED S. JOHNSON

ARAD (PLACE) [Heb *ʿărād* (עֲרָד)]. A town in the S Negeb of Judah, mentioned four times in the Bible, mainly in connection with the Canaanite king of Arad who defeated the Israelites when they first attempted a S entrance into Canaan (Num 21:1; 33:40). Later, the king of Arad is listed among the conquered kings of Canaan (Josh 12:14). The area was subsequently allotted to the Kenites who were descendants of Hobab, Moses' father-in-law (Judg 1:16). A fifth reference to Arad may be found in Josh 15:21, where the MT *ʿeder* may reflect a transposition of the *reš* and *dalet* (LXX^{B} reads *Ara*).

A. Identification and History of Excavations

The site of Arad ("Greater Arad"?) can be identified by a perfect preservation of the name in the Arabic form of Tell ʿArâd. The site (M.R. 162076) stands on a prominent mound in the NE section of the Beer Shevaʿ Valley, exactly where Eusebius (*Onomast.* 14.1–3) located it—4 miles from (Malaatha Tell Milḥ) and 20 miles from Hebron. The identification of the site with ancient Arad is further strengthened by the discovery of inscriptions from the site which also preserve the name (see Herzog et al. 1987: 22 [photograph]).

R. Amiran and Y. Aharoni began excavations at Arad in 1962, and because of the unique nature of each of the areas of investigation, it proved advantageous to separate the projects into two distinctive efforts. Amiran's work concentrated on the huge EB town on the lower tell. Her work has provided valuable information about 4th–3d millennium B.C. town planning, trade connections, cultic paraphernalia, and ceramic collections. Aharoni directed five seasons (1962–67) on the upper tell, mainly on the Iron Age fortress. In 1976, Z. Herzog directed an additional season which focused specifically on the E gates of the fortress and was done in conjunction with reconstruction work being carried out by J. Campbell.

After his survey of the Beer Shevaʿ basin in the late 1950s, Aharoni sought to implement a regional excavation study which began with his project at Arad. Following the work at Arad, seven seasons of study focused on BEER-SHEBA, while other expeditions studied Tell el-Milḥ (Tel Malhata) and Kh. el-Meshâsh (Tel Masos). See MALHATA, TEL, and MESHASH, KHIRBET El-. Other projects have since worked at sites such as Kh. Gharrah and Kh. Ghazzah. See IRA, TEL and UZA, HORVAT respectively. In this comprehensive effort, Aharoni had sought to apply A. Alt's (1925) territorial history model to field exploration. The goal has been to coordinate and compare the material and epigraphic remains from the field research with information obtained from biblical and other historical sources in order to arrive at a more comprehensive understanding of the political history of the E Negeb.

Among other innovative techniques, the Arad expedition initiated the practice of carefully dipping all sherds in water to expose any evidence of ink-written inscriptions. Fortunately, the dry climate helped to preserve many inscriptions that became visible in the dipping process. This has allowed over 100 Iron Age Hebrew inscriptions to be identified, as well as several dozen additional inscriptions written in Aramaic from the late Persian period. A few others were found written in Greek and Arabic.

A significant consequence of this large inscriptional repertoire is that the alphabet has now been paleographically documented through several Iron Age strata. See ARAD OSTRACA. The later strata particularly have yielded a sufficiently large corpus to provide a fairly broad base for analyzing the Hebrew script and orthography. The stratum VI archive pertaining to Eliashib (see B.2.f below) attests to the daily operation of an administrative supply center which served the needs of local patrols and probably catered in part to the trade caravans passing through the area. The language of these inscriptions is standard late biblical Hebrew exhibiting linguistic and syntactical parallels with the Bible. The few historical details that are referred to are tantalizing, but are seldom explicit enough for adequate reconstruction (see Yadin 1976; however cf. Aharoni 1981: 104 n. 2 [remark by A. Rainey]).

B. Results of Excavations

1. Early Bronze Age. The lower city, which is fortified with a stone wall and projecting towers, encloses ca. 22 acres (90 dunams) and has four strata of settlement from the EB (evidence of an earlier Chalcolithic occupation, stratum V, was also discovered). Stratum IV was an unfortified village of the late EB I. The EB II strata (III and II) were the principal fortified urban phases. For a site plan, see Fig. CIT.02. With its blocks of private residences, its cultic and public buildings, and an efficient water collection and storage system (especially important since no wadis, springs, or wells exist in the immediate vicinity), the EB town had many of the basic features of a typical urban center. The

semicircular towers of the city wall correspond to the stylized Egyptian representation of a Canaanite city (cf. the Narmer palette; *ANEP*, fig. 297). EB Arad apparently had fairly extensive trade connections with Egypt, as inferred from the presence of Egyptian ceramic pieces in every stratum (as well as other small finds), and inferred especially from the discovery of a *serekh* of Narmer of Egypt (Amiran 1974). Stratum I was a squatters' village in the late EB II, resting on the ruins of the earlier strata. The site was essentially deserted by the beginning of EB III. For further discussion of the EB city, see Amiran 1965, 1970, 1972; Amiran et al. 1978; Amiran, Goethert, and Ilan 1987; and Dever 1982.

2. Iron Age (Strata XII–VI). The excavators of the upper tell of Arad have identified seven strata spanning the Iron Age. Their hope was to use the data gathered from the excavation—the stratigraphic profile of Arad, the extensive ceramic collection (which spans the Iron Age), and the relatively large number of epigraphic finds (mostly ostraca from the upper strata)—in conjunction with information found in historical sources, and to synthesize these into a comprehensive political history of the region.

Almost from the beginning, the excavations at Arad have generated controversy (e.g., Yadin 1965), much of which centers around fundamental stratigraphic questions and their implications for chronological reconstruction. Consequently there are competing and often irreconcilable syntheses about the "history" attested by the ruins. The presentation here generally follows the major summary of the excavation team, but strives to point out along the way some of the questions and issues that have been raised by others (see especially C below).

a. The Unfortified Site (Stratum XII). The first Iron Age establishment was an unwalled village with evidence of a low wall at some points along the perimeter, and with remains of dwellings found on the W side. In the center of the settlement was a courtyard in which stood a circular brick-filled platform (ca. 6 m diameter) and a smaller rectangular stone platform (an altar?), which may indicate some priestly connections (see Fig. ARA.01). This suggestion is corroborated by the reference in Judg 1:16 which mentions that "descendants of the Kenite, Moses' father-in-law" (reads: "sons of Hobab the Kenite") settled near this area (Herzog et al. 1984: 2–6). The E Negeb was later referred to as "the Negeb of the Kenites" (1 Sam 27:10).

b. The 10th Century (Stratum). A square fortress (ca. 50 by 50 m) was built on the ruins of Stratum XII. Its fortifications used the common casemate construction, consisting of two parallel walls divided into chambers by cross walls. Large rooms lined the E wall, and the gate, which faced E, stood in the NE corner.

A temple (or shrine) stood in the NW quadrant of the fortress. This entire religious complex was aligned along an E-W axis, and consisted of an outer courtyard on the E end, and a sanctuary with a raised cubicle (ca. 1.2 by 1.2 m) in its back wall on the W end. In the W cubicle (i.e., the Holy of Holies) were found flint stelae still bearing traces of red pigment. Two small stone incense altars (made without horns), which probably originated in this stratum, were found lying on the second of three steps which led into the W cubicle (these altars still bore on their upper surfaces traces of burnt material which has been analyzed as animal fat; Aharoni 1967: 247 n. 29). In the courtyard apparently stood a sacrificial altar of which only the foundation stones remain (these became the foundation and step of the altar in the later strata; see below).

The details of the building plans of the cultic installation at Arad and the description of the Temple are remarkably similar—only the "Holy Place" is significantly different. While the Tabernacle and the Temple are both described as having a long room as the "Holy Place" (cf. Exod 26:15–25; 1 Kgs 6:2), the building at Arad instead has a broad room (its opening in one of the long walls).

The rear wall of the temple was built solidly against the inner casemate wall of stratum XI; this has contributed to the conclusion that the shrine was contemporary with the fortification wall (Aharoni 1971: 36). However, from the reports published thus far, it is unclear whether the back wall of the shrine (i.e., the Holy of Holies) was actually bonded into the casemate wall or simply abutted it (see further, C below). However, the temple seems to have remained in use through the next three strata (X–VIII). Its association with Yahweh is inferred from the discovery of letter 18, which mentions the "House of YHWH" (Heb *bêt* YHWH; Aharoni 1981: 35–38).

Stratum XI was destroyed by fire (Herzog et al. 1984: 8). It is possible that this destruction can be correlated with Shishak's 925 B.C. campaign into Israel (1 Kgs 14:25–26; 2 Chr 12:2–9) when he conquered, among other sites, two fortresses in S Israel which he recorded on the Karnak inscription (nos. 107–112): *ḥgrm ʿrd rbt ʿrd n-bt Yrḥm* (i.e., "the citadels of Greater Arad and Arad of the house of Jeruḥam"; *LBHG*, 215–16). Thus, stratum XI was a royal outpost probably founded during the United Monarchy, and its pottery may be a standard example of 10th-century Israelite wares (Herzog et al. 1984: 8–9); however, some have suggested that the fortress may have been founded in the 9th century instead (e.g., Mazar and Netzer 1986: 89–90; Mazar 1990: 439).

c. 9th Century (Stratum X). In the next stratum, the fortress wall was significantly modified (see Fig. ARA.02). The surviving casemate rooms were filled with stone and earth to form a solid wall, but a new wall was constructed on the W side. The renovation involved constructing a "sawtooth" semibuttressing pattern on the outside of the fortification walls; the purpose of this semibuttressing pattern is unclear. The NE corner, where the original gate had been, became the site of a storehouse, and the gate was relocated to the center of the E wall.

Because of the sanctity of the temple's site, the area was thoroughly cleaned and the temple repaired, with a northward extension added to the Holy Place. Aharoni (1971: 39–40) argues that the reconstructed shrine adopted a new "royal cubit" standard of measurement equivalent to 52.5 cm whereas the earlier standard for the cubit had been 45 cm.

In contrast to the expansion of the temple buildings, part of the area of the courtyard was lost with the addition of a N side chamber. A water channel to the cisterns below the temple passed through a tunnel under the solid W exterior wall. These underground cisterns may have been used during the earlier stratum, and may have been natural caves predating the construction of the fort (although the contemporaneity of this water system with stratum X has been questioned; see C below).

The sacrificial altar in the courtyard was rebuilt using as its foundation the altar remains from stratum XI. Part of the old altar became the step for the new one. The new altar measured 5 by 5 cubits and 3 cubits high—according to the description of the tabernacle altar (Exod 27:1). It was constructed of unworked field stones with a clay and mud core. The top of the altar was a slab of flint surrounded by a plaster channel to drain fluids. Since the four corners of the altar were broken off, it remains unclear whether this altar originally had horns like that at Beer-sheba.

Two small bowls (nos. 102 and 103), each inscribed with (the same) two signs, were discovered on the step of the altar. Some controversy has surrounded how the signs (esp. the "three-pronged" second sign) are to be read, as well as the implications these readings have for the dating of stratum X. The excavation team reads the signs as the two Hebrew letters *qop-kap* (abbreviation for *qōdeš kôhănîm*, "sacred to the priests"), insisting that the script—particularly the round-bottomed *kap* on bowl 103—is archaic, suggesting that the bowls may have been preserved from an even earlier period (Herzog et al. 1984: 32). Cross (1979), however, contends that the letters are Phoenician *qop-šin* (abbreviation for *qdš,* "sacred"), and that the round-bottomed "*kap*" on bowl 103 is actually a "perfectly normal" three-pronged *šin* paleographically dating to the late 7th–early 6th century B.C. (p. 75). He also notes that the "*kap*" on bowl 102 has a variant trident form also found in late 7th–early 6th century Phoenician *šins,* and that the *qop* on both bowls has the shape of "a type which flourished in the 7th century" (p. 76). In response, the Arad team focused on Cross' trident-shaped "*šin*" (bowl 102) and argued that it is actually a vertical stroke that "can only belong to a [Hebrew] *kap*" (Herzog et al. 1984: 32). There seems to be no easy resolution to this *kap-šin* dispute, and a great deal obviously hinges on the handwriting standards of the ancient inscriber as well as on contemporary judgments about whether the vertical stroke on bowl 102 is an extension of the right-hand "prong" (suggesting a *kap*) or an extension of the middle "prong" (suggesting a *šin*). If it is the former, the balance is tipped toward a 9th-century date for stratum X; if it is the latter, the balance is tipped toward a 7th-century date. Furthermore, the ceramic typology of these two bowls has been attributed by some to a date "considerably later" than the 9th century (cf. Dever 1970: 173–74 and n. 76). The excavators point out, however, that the bowls were sealed *below* floor levels of strata VIII, VII, and VI, and on one of these later floors was found smashed 7th-century pottery (Herzog et al. 1984: 12). Since

the earliest attributed stratum beneath which the bowls were sealed was VIII, one wonders if the bowls then should be associated with stratum IX instead of X. Indeed, the excavators have expressed varied opinions of the stratigraphic provenance of these bowls. Aharoni's report in 1964 states that the bowls were found "on a step in front of an earlier (stratum IX [sic!]) altar structure" (Aharoni and Amiran 1964: 282), but he later revised his conclusion and attributed them to stratum X (Aharoni 1968: 20). If the first assignment is valid, then the bowls would have to be associated with stratum VIII remains *at the earliest!*

Stratum X may have been constructed either by Asa (ca. 910–870 B.C.; 2 Chr 14:4–6; 1 Kgs 15:23), or Jehoshaphat (870–848 B.C.; 2 Chr 17:1–2, 12–13; 21:3), the two strongest kings of Judah in the 9th century. Their purpose was probably to control the route to Elath (1 Kgs 22:47–48; 2 Chr 17:10–12). As noted above, the date of the destruction of the stratum is even less certain. It may have been destroyed during the reign of Jehoram (848–841 B.C.), either when Edom revolted against Judah (2 Chr 21:8, 10) or when the Philistines and Arabs invaded Judah and sacked the palace (2 Chr 21:16–17). An alternative date could be during the reign of Joash, when Hazael invaded Judah (ca. 815 B.C.; 2 Kgs 12:18–19 [—Eng 12:17–18]; 2 Chr 24:23–24), but it is unclear if Hazael's invasion affected the S districts of Judah. Because of its similarity with the ceramic repertoire of strata IX and VIII, Y. Aharoni dated the end of stratum X to ca. 800 B.C. (see statement in Herzog et al. 1984: 12). M. Aharoni (1985) attributes the destruction to the first quarter of the 8th century, which essentially agrees with Mazar and Netzer's (1986: 89–90) and Ussishkin's (1988) 8th-century assignment of the stratum (see C below).

d. The 8th Century (Strata IX–VIII). With only minor modifications, the plan of the fortress in stratum IX remained essentially unchanged from that of stratum X. The area adjacent to and inside the S wall served as living quarters, and included seven dwelling units. The reorganized temple compound accommodated the addition of a new compartment to the E, its entrance was moved to the SE corner, and a stone-lined pit was dug next to the altar.

The stratum IX renovation probably occurred during the reign of Uzziah (ca. 767 B.C.; 2 Kgs 14:22; 2 Chr 26:2, 7–8), when he regained control over the Negeb and the caravan routes which passed from Arabia to the Mediterranean coast. It was probably destroyed during the Syro-Ephraimite war against Ahaz (734 B.C.) when the Philistines and Edomites to the W and S also conspired against Judah (2 Kgs 16:6; 2 Chr 28:17–18).

Stratum VIII represents the newly rebuilt fortress. The outer wall was reused, but the temple underwent radical changes. The main hall and the "Holy of Holies" remained essentially unchanged. However, the excavators report that a 1 m deep fill in the courtyard "completely covered" the sacrificial altar at this time (Herzog et al. 1984: 19). Presumably it was at this time that the two inscribed bowls (mentioned above) were buried at the foot of the abandoned altar (see above).

Not only was the level of the courtyard raised at this time, but also its area was diminished by the construction of a multiroom structure in the NE corner. In one of its rooms was found inscription 49 (notations written on the outside of a deep bowl), which refers to the "Sons of Korah" and the "Sons of Bezal[el]." Another room, S of the Holy of Holies, yielded inscriptions 50–52, which contain typical Levitical names. This suggests that the staff of the Arad temple either included guilds of cultic personnel similar to those in Jerusalem, or that these cultic officials were present (late 8th century B.C.) to supervise Hezekiah's reforms (which included the elimination of places of sacrifice outside of Jerusalem; cf. 2 Kgs 18:4; 2 Chr 31:1).

Two features of stratum VIII seem to imply an association with Hezekiah: the abandonment of the altar, and the ceramic repertoire (which is identical to that of Lachish stratum III). Hezekiah attempted to unite the remaining N tribes with Judah (2 Chr 30:6), and to make Jerusalem the exclusive site for worship around 715 B.C. To facilitate his plan, he eliminated the local shrines and destroyed their altars (2 Kgs 18:22; Isa 36:7; 2 Chr 31:1; 32:12). The fortification of Arad stratum VIII, however, probably was part of Hezekiah's futile defensive measures against the military threat of Assyria (2 Chr 32:27–29; also 2 Kgs 18:8). The destruction of this stratum likely occurred when Sennacherib invaded Judah in 701 B.C.

e. Late 7th Century (Stratum VII). At this time the temple itself was abandoned, and the incense altars were buried at the entrance to the Holy of Holies when the ruins of the temple were covered over.

The solid wall of stratum VIII had been badly damaged on its S side, and the initial strategy to secure the fortress involved building a new wall 2 m inside the older line; an outer wall was then built on the foundations of the older one, making a casemate system. Apparently the other three walls were rebuilt as solid walls (cf. Herzog et al. 1984: 22). One of the S rooms yielded three seals which had belonged to "Eliashib son of Oshiahu," along with several ostraca listing commodities in Egyptian hieratic symbols (Israelite scribes had earlier adopted hieratic symbols for numbers, measures, and commodities).

It is unclear when this construction occurred—Manasseh probably could not have refortified Arad until after the death of Esarhaddon, king of Assyria (648 B.C.), and after he was freed from personal exile (2 Chr 33:11–17). Perhaps Manasseh (who died ca. 642 B.C.) or his grandson, Josiah (reigned 641–609 B.C.), built Arad stratum VII. Josiah began his reforms in his 12th year (ca. 629 B.C.), shortly after Assurbanipal had stepped down from the throne of Assyria. Stratum VII was probably destroyed during one of Nebuchadnezzar's campaigns into Judah (597 B.C.; cf. 2 Kgs 24:2; Jer 13:18–19).

f. Early 6th Century (Stratum VI). Very shortly after the destruction of Arad VII, a new casemate wall was constructed over the ruins of the former solid wall. This new defensive system was fortified with projecting towers on the W corners and along the W wall, while another small tower stood along the S wall. The foundation trench of the inner wall of the casemate system penetrated into the old sanctuary buried below. The gate, a simple passage through the casemate system with no defensive towers flanking it, was moved from the E to the N side.

The interior of the fortress appears to have been a large open area. The date of this stratum is inferred from the late Iron Age pottery found *in situ* on the floors which were laid against the walls of the stratum VI buildings. The excavators contend that the comb-tooth patterns on some of the stones in this stratum (which some would attribute to the Hellenistic period; see C below) were already in secondary use and therefore originated even earlier than stratum VI (Herzog et al. 1984: 26–27).

The occupants of the site, however, appear still to have been Judeans, as inferred from the archive of ostraca found in a room on the S side. Most of these were addressed to Eliashib (see above), indicating that he had returned as a commander (or at least as custodian of supplies). The paleographic similarity with the Lachish Letters (i.e., Lachish II) imply a date at the end of the Judean monarchy. Stratum VI may have been built after Zedekiah was called to Babylon (ca. 594 B.C.) to explain his participation in earlier anti-Babylonian activities (Jer 51:59; cf. 27:2–28:17). The site probably was destroyed by the Edomites during Nebuchadnezzar's campaign against Judah in 587 B.C. (Obad 10–14; Ps 137:7). Strengthening this historical reconstruction was the discovery of inscription 24 (found in the ruins outside the fort), which ordered Eliashib to dispatch reinforcements to the nearby town of Ramoth-negeb, "lest the Edomite should come there."

3. Later Periods (Strata V–II). In the Persian period, the Arabian king of Kedar, who had helped Cambyses invade Egypt, controlled the caravan routes. He also controlled Gaza and the N Sinai coast as far as Ienysos (el-Arish?; Hdt. 3.4–5). Thus, Arad was within his area of control. Somewhat typical of the Persian period in Palestine, no architectural remains were preserved in Arad V—only ash pits, in which were discovered 85 Aramaic ostraca dating from the mid-4th century B.C. The inscriptional data indicate that Arad served as a supply station along the caravan routes; the pits were used to store goods for the animals and personnel.

During the Hellenistic period (stratum IV), a massive rectangular tower (ca. 20 by 20 m) was built in the SE corner of the mound (see Fig. ARA.02). It was founded on bedrock, which meant that in removing the earlier remains, the builders disrupted the stratigraphy of the site in that quadrant. A courtyard, in which were various rooms, joined the N and W sides of the tower. The Hellenistic installation reused portions of the earlier stratum VI fortification walls as portions of the enclosure walls for this tower complex. It is unknown who built the tower, but it is possible that John Hyrcanus, who recaptured control of Idumea (including the Negeb) in 125 B.C. (*Ant* 5.1.22 §82; cf. 13.9.1 §257–58; *JW* 1.2.6 §63), may have built it as part of his defensive line.

Probably in the latter part of the 1st century B.C., and as a means of protecting the S frontier of his kingdom, Herod authorized construction of a small rectangular fort (ca. 31 by 37 m) on the SW corner of

the Arad mound. The few small finds (including two Greek ostraca) date to the 1st century A.D. When the Romans conquered the Nabateans in A.D. 106, the frontier advanced farther S, rendering the forts in the Negeb generally obsolete. After an occupational gap of some 500 years, a caravanserai was built on the ruins of the earlier remains.

C. Controversies

While there are many questions regarding the interpretation of Arad (too many to detail in this article), the most recent work which brings much of the material together is by D. Ussishkin (1988). Among other problems, he questions the contemporaneity of the water channel and cistern with the shrine in stratum X (see Fig. ARA.02), and furthermore he insists that the shrine did not even exist earlier in stratum of the fortress. This conclusion is partially based upon the fact that the shrine lacks any evidence of fire destruction. Since the excavators attributed the destruction of stratum to fire during the campaign of Shishak (Aharoni 1968: 6; Herzog et al. 1984: 8), it seems peculiar that, if the shrine had existed in that stratum, no scars of such a conflagration would be present, even after a thorough cleaning. Furthermore, Ussishkin points out that an insufficient amount of stratum ceramic evidence was discovered with the shrine (which one might attribute to the cleaning operation) to necessitate the shrine's attribution to that stratum. The main argument then for its stratum attribution seems to be the fact that the rear wall of the Holy of Holies was built up against the inner casemate wall of stratum (but see B.2.b above).

Along with other archaeologists (e.g., Zimhoni 1985: 85–86; Mazar and Netzer 1986), Ussishkin furthermore argues that the ceramic repertoire of strata X–VIII shows such a significant degree of homogeneity that all of these strata might be compressed into the 8th century (cf. the implication of M. Aharoni 1985). He then places the founding of the shrine not in stratum XI of the fortress (10th century), but in stratum VII (i.e., either the late 8th or early 7th century; this stratigraphic reassignment of the shrine would then agree with Cross' [1979] paleographic analysis of the inscribed bowls found near the altar [although see Herzog et al. 1984: 12]).

Ussishkin, with others (e.g., Yadin 1965; Nylander 1967), challenges the overall stratigraphic assignments by suggesting that the stratum VI casemate wall should not be dated to the early 6th century B.C. but was actually contemporaneous with the stratum IV Hellenistic tower. Therefore he dates the wall to the Hellenistic/Roman period, basing this conclusion largely on the presence of characteristic tooth-combed Hellenistic style ashlars in the casemate wall, and on the stratigraphic relationship of that casemate wall to the Hellenistic tower (however, see B.2.f above).

Obviously much uncertainy exists, and the implications of these problems on the intended historical/archaeological construct (e.g., Arad's association with Asa, Jehoshaphat, Hezekiah, etc.) are great and may demand significant revision.

The chronological reassignments by Ussishkin and others of the strata at Arad, however, have difficulties when studied in conjunction with the paleographic analyses of the ostraca, which have been used to further our understanding of paleographic evolution. See ARAD OSTRACA. According to the excavators, the ostraca were found in various strata and in various areas, and given the arguments of Ussishkin and others, severe disruptions ensue if the ostraca are chronologically reassigned. At least four options exist to explain these tensions: (1) the paleographic analysis by Aharoni and company is essentially correct, and assuming the excavators attributed the ostraca to the correct strata, Ussishkin's arguments will need to be revised significantly or rejected; (2) if Ussishkin and others have provided workable stratigraphic interpretations, then the ostraca may have been mistakenly assigned to the wrong strata (cf. Zimhoni 1985: 84–85; Ussishkin 1988: 153); (3) if Ussishkin and others have provided correct analysis of the stratigraphy of the shrine, and if the ostraca are then reassigned correspondingly, the contribution that these ostraca make in comparative paleographic study will need to be reevaluated; or (4) a proper understanding of the materials has not been determined.

It remains unclear whether any of these matters can ever be resolved. Most of the site has already been excavated, providing limited opportunities for excavators to go back to the site to reinvestigate particular aspects of the stratigraphy. Hopefully, the final excavation reports will clarify these issues.

ARAD OSTRACA. Eighty-eight Hebrew, eighty-five Aramaic, five Arabic, and two Greek ostraca were discovered during excavations at Tell Arad, in the eastern Negeb, from 1962–1967 (with the exception of Hebrew ostracon 88, found in 1974). Three more Hebrew ostraca were found in 1976. As indicated by paleography and archaeological context, the Hebrew ostraca come from the 10th–6th centuries, the Aramaic from the 5th–4th centuries, the Greek from the 1st–2d centuries C.E., and the Arabic from the 7th–9th centuries C.E. Many of these texts, however, are fragmentary. Among the Hebrew ostraca, for example, only 15 are whole, and 7 of these include only 1 name. Twenty preserve only single letters. Most of the Aramaic ostraca are poorly preserved, with only a few entirely legible. The 5 Arabic sherds are also fragmentary, and the 2 Greek inscriptions are too incomplete to understand.

The Hebrew ostraca have attracted the most attention. They come from strata XI through VI, that is from the 10th to the 6th century B.C.E. The original excavators are certain about the dates of the earliest and latest Hebrew strata, on the basis of archaeological, historical, and paleographic considerations. They feel fairly confident about their dating of the intermediate strata. However, on controversies surrounding the stratigraphic dates, see ARAD (PLACE). Among preexilic Hebrew inscriptions, only the Lachish ostraca are comparable in number and significance. That so fragmentary a collection is considered so significant testifies, though, more to the relative paucity of inscriptional material from ancient Israel than to its intrinsic importance. In most disciplines such material would hardly win a nod, much less a covert glance.

A. Orthography and Syntax

The Hebrew ostraca from Arad tell us a number of things. In general they confirm our understanding of the orthography and syntax of preexilic Hebrew. The principles of Hebrew orthography developed by Cross and Freedman (1952) hold, except that the existence of internal *matres lectionis,* only suspected

previously, has now been proven (*yod* for medial *î* is regular at Arad, and *waw* for medial *û* is almost universal). Other medial long vowels are consistently unmarked. As for final vowels, Aharoni (1975; 1981), who published the first complete edition of the Arad material, believed that final *-ā* on *qtl* 2d masculine singular forms is represented by the *mater lectionis h* in *wktbth* (7.6) and *yd‹th* (40.9). While possible, this explanation is not the most probable one. Given the clues of the Masoretic text (the short form of the *qtl* 2nd masculine singular preserved in the orthography, apparently reflecting the popular speech we would also expect in the nonliterary Arad texts) and the evidence of other inscriptions, it is better to take the *h* in these cases as a *mater* for the 3rd masculine singular pronominal suffix *ō*.

The ostraca add to the evidence for a Judahite dialect which, before the exile, generally did not contract diphthongs. The consistent use of the theophoric element *yahū* (as opposed to *yaw* or *yô*) in personal names at Arad may be further evidence for such a dialect (approximately 30 of roughly 85 different personal names are formed with this element). In short, the Arad ostraca expand rather than alter our knowledge of Hebrew orthography. The same is true with regard to syntax. One small point should be noted in passing. In 3.2–3 and 16.4 Aharoni read *waw* with perfect forms as conjunctive. P. Miller has observed that "while there appear to be such forms in late preexilic prose of the Bible, one should not assume too easily that the *waw* with perfect is conjunctive. Both … may be cases of perfect consecutives" (1985: 504). These perfects are simply examples of a use of the perfect long known from Old Testament prose (see Gesenius-Kautzsch-Cowley, 106 i; Joüon, *Grammaire de l'hébrew biblique* 112f.). If one wants to give them a name, the linguistic category "performatives" should be used (the word itself accomplishes something: e.g. "I decree/order/command") and they should be designated "performative perfects." Here and elsewhere the ostraca merely follow what had already been known about preexilic prose.

B. Content

Aharoni summarized the content of these inscriptions as "epistles to commanders of Arad with military and administrative information; instructions for the supply of wine and bread to military units and other people; instructions for the sending of consignments of oil and food to various fortresses; taxes from various places; lists of people, some with the addition of numbers; lists of the apportionment of wheat and other commodities; inventory lists of the storehouses, one of them in hieratic; registration of dates; offerings and donations to the sanctuary; and various other partial lists" (1981: 141). Given the fragmentary character of these inscriptions, one suspects that far too much has been deduced from such a limited base of evidence.

Unquestionably, a certain "Eliashib" is either addressed or referred to in many of the inscriptions. It is not clear what his position was, nor is the extent of his authority evident. A number of the ostraca contain intriguing references. Ostracon 24 (found outside the fortress on the W slope and dated on basis of orthography), for example, indicates fear of an Edomite advance against Ramat-negeb. Both Aharoni (1981: 149) and Lindsay (1976: 25) have tried to sketch the historical circumstances surrounding this reference; but paleography does not yet enable us to date inscriptions as precisely as their reconstructions demand, nor is our knowledge of this time period very full. Aharoni likewise tries to elaborate the Edomite background to Ostracon 40, but here the reconstruction is even more tenuous than with 24 since the inscription is so poorly preserved.

Aharoni concludes his discussion of the historical information gathered from these ostraca by stating: "We could not have expected a more surprising confirmation to our historical hypotheses than the epistle of Jehoahaz (Inscription 88), in which he announces his crowning, insists on energetic military preparations, and mentions the king of Egypt. This is full confirmation of the destruction of Stratum VIII in the year 609 B.C.E., and an additional proof of the high position of Eliashib, who received his instructions directly from the king" (1981: 150). The text which bears such weight simply reads as follows:

(1) *›ny mlkty bk[1]* ... (1) I have come to reign in all …

(2) *›mṣzr‹w* ... (2) Take strength and …

(3) *mlk mṣryn l …* (3) King of Egypt to …

It is impossible here to catalog all that has been derived from these texts, but historical statements based on the Arad ostraca should always be compared against the actual inscriptions themselves.

ARADUS (PLACE) [Gk *Arados* (Ἀραδος)]. An island and a city 3 km off the Phoenician (modern Lebanese) coast, 3 miles N of Beirut (1 Macc 15:23). Strabo (16.2.13–17) records that the inhabitants were descendants of exiles from Sidon, which would agree with the biblical references to the corresponding Hebrew eponym ARVAD (Gen 10:18; 1 Chr 1:16). Aradus was prominent enough to receive a letter from Lucius, consul of the Romans, in 139 B.C. (1 Macc 15:23). Being a well-protected island producing warriors and seamen famous in their service to Tyre (Ezek 27:8, 11), Aradus was always commercially productive and remained independent until the time of Nebuchadnezzar, ca. 627 B.C. Although its commercial productivity declined somewhat, the prominence of Aradus rose again under the rule of the Persians and Seleucids (Rostovtzeff 1967: 846; Seyrig 1950: 17–20; Elai, 1987). Specifically through an alliance with Seleucus Callinicus of the Seleucids, Aradians exerted their influence extensively on the mainland. In general, Strabo describes the Aradians as a prudent and industrious people with respect to their maritime affairs. Along with their good fortunes (for example, Seleucus Callinicus' granting of the right of *asylia*) they prospered.

TOM F. WEI

ARAH (PERSON) [Heb *ʾārāḥ* (אָרַח)]. **1.** Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:5 = Neh 7:10 = 1 Esdr 5:10). Later in the postexilic period Tobiah, the adversary of Nehemiah, married a woman from the family of Arah (Neh 6:18). For further discussion and bibliography, see AKKUB.

2. A son of Ulla listed in the preexilic genealogy of the tribe of Asher (1 Chr 7:39). Because Ulla is not mentioned earlier in the list, some emend the name to coincide with a previous one; but Braun (1986: 118–19) argues against such emendation.

CHANEY R. BERGDALL

ARAM (PERSON) [Heb *ʾărām* (אֲרָם)]. **1.** The fifth son of Shem in the genealogical list of Genesis 10, which is known as the Table of Nations (Gen 10:22). Aram is the eponymous ancestor of the ARAMEANS, an important West Semitic people. The section of the Table of Nations in which Aram appears is usually attributed to the Priestly source of the Pentateuch. P has placed Aram in the same generation as the eponymous ancestors of Elam and Assyria (Ashur), two generations earlier than the eponymous ancestor of the Hebrews (Eber—Gen 10:24). The position of Aram as a son of Shem reflects the importance of the Aramean tribes during the 1st millennium B.C.E. Four sons of Aram are listed in v 23. These apparently represent certain Aramean tribal groups, although little is known concerning any of

the four. These sons are listed as brothers of Aram in the genealogical list of Chronicles (1:17), but this is probably due to a haplography of the phrase "The sons of Aram" from the text of Chronicles.

2. Son of Kemuel, grandson of Abraham's brother, Nahor (Gen 22:21). The genealogy of Nahor (22: 20–24) reflects a different (and probably earlier) tradition about the ancestry of the Arameans from the one found in Genesis 10 (see above). The twelve sons of Nahor, including Aram's father, Kemuel, appear to be eponymous ancestors of various Aramean tribes. Aram himself (here perhaps to be understood as the ancestor of the state of Aram-Damascus) is placed in the same generation as Jacob/Israel. This genealogical tradition stresses the idea of the close relationship between Israel and the Arameans, which pervades the book of Genesis (cf. Deut 26:5).

3. A son of Shemer in the genealogy of Asher in 1 Chr 7:34.

4. The Greek rendering of the name RAM in the genealogy of Jesus, Matt 1:3. The KJV has "Aram" here, while modern translations tend to replace it with "Ram" [cf. 1 Chr 2:9–10]. The name "Aram" also appears in the genealogy of Jesus in Luke 3:33 in the KJV. Later translations substitute the name ARNI, following the text of the most ancient manuscripts, where "Aram" was found in the Textus Receptus.

WAYNE T. PITARD

ARAM (PLACE) [Heb *ʾărām* (אֲרָם)]. The name of an important Aramean nation, located in southern Syria, which flourished between the 11th and 8th centuries B.C.E. Its capital was Damascus, currently the capital of the modern state of Syria. In many English translations, the name "Aram," when referring to this state, is translated (inaccurately) as Syria.

A. The Name
B. History of Aram
1. Early Relations with Israel
2. Mid-9th Century B.C.E.
3. The Aramean Empire
4. Radyan's Coalition and the End of Aram

———

A. The Name

The use of the name "Aram"as a political or ethnic designation is not restricted, however, to this particular state. It occurs many times in compound names of states largely populated by Arameans, who were one of the most important ethnic groups in the Near East during the late 2d and the 1st millennia B.C.E. Thus there are references to Aram-Beth-Rehob, Aram-Damascus, Aram-Maacah, Aram-Naharaim, Aram-Zobah, and Paddan-Aram. In a few cases the name "Aram"alone is used to designate Aram-Naharaim (Num 23:7; Judg 3:10; Hosea 12:13) or Aram-Zobah (2 Sam 10 = 1 Chr 19; see ARAM-NAHARAIM; ZOBAH; DAMASCUS; PADDAN-ARAM; etc.). In some other occurrences, "Aram" is used more generally to refer to the Aramean kingdoms or people as a whole (1 Kgs 10:29 = 2 Chr 1:17; Judg 10:6; Amos 9:7). From 6th-century sources which deal with the destruction of Jerusalem (2 Kgs 24:2 and Jer 35:11), the name refers to Aramean tribes that lived in Mesopotamia, and from which Nebuchadnezzar had assembled his army.

But by far the most common usage of the term "Aram"in the Bible is as the name of the state centered around Damascus. This is the virtually exclusive use of the name in the books of Kings, Chronicles, and Isaiah, where the majority of the attestations occur.

B. History of Aram

Our knowledge of the history of Aram-Damascus is unfortunately limited. No written documents directly from the kingdom itself have been discovered to date, so that the only sources of information available are writings from neighboring states (mainly Israelite [i.e., biblical] and Assyrian texts). These, quite naturally, do not give a full picture of Aram, since they deal only with their own state's relations with that kingdom. Because of this, our knowledge centers upon Aram's role in the realm of international politics, while details of its internal life and culture remain obscure.

1. Early Relations with Israel. The kingdom of Aram-Damascus makes its first appearance in historical documents in 2 Sam 8:5–6. During a decisive conflict between Israel and Zobah, the two major powers of Syria-Palestine during the late 11th and early 10th centuries B.C.E., the army of Aram-Damascus is reported to have taken to the field in support of Zobah and its king Hadadezer (Aramaic, Hadad-ʿi (dr). David, the king of Israel, defeated the army and took control of Damascus, placing garrison troops there. Aram-Damascus thus became part of the empire of David, apparently as an occupied territory rather than as a vassal state.

Nothing else is known about Aram until the time of Solomon (mid-10th century). 1 Kgs 11:23–24 states that during Solomon's reign, a certain Rezon, son of Eliada, who had been a servant of the king of Zobah whom David had defeated, gathered together a group of malcontents, seized Damascus, and there proclaimed himself king. Rezon went on to remove Damascus from Israelite control. There is no indication that Israel was able to significantly oppose this action, and 11:25 suggests that Damascus remained outside Israel's control for a substantial part of Solomon's reign.

With the division of Solomon's kingdom into two smaller states ca. 932, and the resultant collapse of Israelite hegemony in the region, a period ensued when there was no dominant political power in Syria-Palestine. But by the beginning of the 9th century, Aram, with its capital at Damascus, had become a significant influence in the region. Little is known about Aram between the time of Rezon (about the middle of the 10th century) and the reign of Bir-Hadad I (biblical Ben-Hadad), who is mentioned in 1 Kgs 15:16–22 (= 2 Chr 16:1–6) in connection with a boundary war between Baasha of Israel and Asa of Judah (early 9th century). However, Bir-Hadad's patronymic in 15:18, "Ben-Hadad, the son of Tab-Rimmon, the son of Hezion," apparently furnishes the names of Bir-Hadad's two predecessors on the throne. There is also a reference in v 19 to a treaty that had been made between Bir-Hadad's father and Asa's father, although the details of this treaty are not known. But it is clear that Aram had become a state of comparable stature to Israel and Judah during the decades following the death of Solomon.

When Bir-Hadad I became involved in this boundary dispute between Israel and Judah, he sided with Judah (after a substantial bribe was sent to him by Asa) and attacked Israel from the north while Baasha's forces were concentrated in the south against Judah. He attacked and destroyed a number of major towns in Israel's territory to the north of the Sea of Galilee (1 Kgs 15:20). Baasha was forced to withdraw his army from the border with Judah and come to terms with Bir-Hadad, although no information is given concerning what these terms were.

2. Mid-9th Century B.C.E. a. Hadad-ʿiḏr and Assyria. By the fifth decade of the 9th century B.C.E., Aram had become one of the most powerful states in Syria-Palestine, if not actually the most powerful. This coincided with the first Assyrian attempts to extend their domination into central and southern Syria. In 853, Shalmaneser III of Assyria marched into the territory of the kingdom of Hamath, where his forces were met by a coalition of Syro-Palestinian states near the town of Qarqar. The coalition is described in an inscription of Shalmaneser III (known as the Monolith Inscription; *ANET,* 278–79) as having been made up of twelve states. The leader of the coalition is named as Adad-idri of Aram (Aramaic Hadad-ʿiḏr, the namesake of the king of Zobah defeated by David; see above), and he is said to have brought with him 1200 chariots, 1200 horsemen, and 20,000 footsoldiers. This is the largest contingent of horsemen and footsoldiers and the second largest group of chariots contributed by a member of the coalition. He was joined by two other major powers in the region, Irḫulena of Hamath and Ahab of Israel, who contributed the majority of the rest of the army (the other nine members of the coalition were more modestly represented). The coalition appears to have been successful at stopping Shalmaneser's advance. Although Shalmaneser claims to have won, it is clear from the inscription that he was obliged to return immediately

to his homeland, without making further moves against any members of the coalition. Nor did he return to Syria for another four years.

The leadership of this coalition continued to rest in Hadad-ʿiḏr ’s hands for several years. Shalmaneser returned to Syria in his tenth, eleventh, and fourteenth years (849, 848, and 845 respectively), each time battling with the coalition, always headed by Hadad-ʿiḏr. At no time was Shalmaneser able to decisively defeat the coalition. Hadad-ʿiḏr’s continued leadership role in this alliance indicates the prestige which Aram enjoyed in relation to the other states of central and southern Syria and Palestine during these years.

b. “Ben-Hadad” and Ahab. There has been considerable scholarly discussion concerning the relationship between Hadad-ʿiḏr of the Assyrian inscriptions and the king of Aram called Ben-Hadad in 1 Kings 20 and 22. These two chapters describe three battles between Israel and Aram, which are said to have taken place during the final five years of the reign of Ahab of Israel. If these chapters are reliable, then the king called Ben-Hadad in 1 Kings 20 (or “Ben-Hadad II,” according to many scholars) should probably be identified with Hadad-ʿiḏr of the Assyrian inscriptions.

However, there are a number of elements in these two chapters which have led several scholars (including Jepsen 1941–45: 154–59; Miller 1966; and Pitard 1987: 115–25) to propose that the accounts of the war between Israel and Aram here do not belong originally to the period of Ahab, but rather to the time of Joash (or Joahaz, according to Miller 1966: 442–43) some fifty years later. A number of arguments have been put forward to substantiate this proposal. For example, literary analysis indicates that the accounts of the two battles in 1 Kings 20 did not originally provide the name of the king of Israel. Furthermore, the description of Israel’s political situation in this chapter is seriously at odds with what is known of the reigns of both Omri and Ahab from other biblical passages (cf. 1 Kgs 16:27; 22:39), as well as extrabiblical texts. For example, Shalmaneser’s Monolith Inscription reports that Ahab furnished 2000 chariots (the largest contingent of chariots from any member of the coalition) and 10,000 footsoldiers to the battle of Qarqar. Also, the Stela of Mesha, the king of Moab (*ANET,* 320–21), describes the domination of Moab by Omri and Ahab. Finally, archaeological evidence demonstrates that Israel was economically prosperous and able to support significant civilian and military building projects during this time. All of these suggest quite clearly that Ahab and Omri were very powerful kings (see AHAB), in contrast to the king of Israel in 1 Kings 20, who is portrayed as a weak vassal of Ben-Hadad of Aram (cf. 1 Kgs 20:1–9, esp. v 9) and his father, who is also described as having been dominated by Aram (20:34).

While such a portrayal does not fit well with the times of Omri and Ahab (i.e. ca. 886–853), it does match excellently with the reigns of Joahaz and Joash (ca. 814–782), when Israel was dominated by Hazael and his son Bir-Hadad (Heb Ben-Hadad; see 2 Kgs 13:22–25). It was during the reign of this Bir-Hadad that Joash was able to rebel successfully against Aram and defeat Bir-Hadad’s army in a decisive battle near Aphek (2 Kgs 13:17). It should be noted that the decisive battle in 1 Kings 20 is also fought at Aphek. With regard to the account of Ahab’s death in battle against Aram at Ramoth-Gilead (1 Kgs 22:1–36), scholars have suggested that this account has developed from the story of the wounding of Ahab’s son, Joram, in battle at Ramoth-Gilead during the time of Hazael (2 Kgs 9:14–15; see Miller 1966: 444–46). Thus, it appears unlikely that there was a major war between Aram and Israel during the reign of Ahab. The stories in 1 Kings 20 rather illuminate events that took place some fifty to sixty years after the death of Ahab. The king of Aram called Ben-Hadad in these stories, as well as in the stories of Elisha and the Aramaeans in 2 Kings 5–7 (insofar as they may be regarded as historical), should be identified with Bir-Hadad, the son of Hazael (often referred to as “Ben-Hadad III” by many scholars; see B.3.b below). The only exception to this is the story in 2 Kgs 8:7–15.

Major changes occurred in Aram between 845 and 842, although the exact details are not known. 2 Kgs 8:7–15 gives an account of how a usurper named Hazael assassinated the king of Aram and seized the throne. The name of the king of Aram in this passage is Ben-Hadad. It is possible that the incorporation of the Ben-Hadad stories into the account of the period of Ahab has led to the use of his name in this story as well, and that the correct name of the king assassinated by Hazael was actually Hadad-ʿiḏr. But it is also possible that Hadad-ʿiḏr died sometime between 845 and 842 and was succeeded by a Bir-Hadad, who in

turn was assassinated by Hazael. Unfortunately there is not enough evidence to determine the actual course of events.

3. The Aramean Empire. a. The Reign of Hazael. After Hazael seized the throne, ca. 842, the anti-Assyrian coalition that had been headed by Hadad-ʿiḏr collapsed and war broke out between Aram and Israel. A battle took place between Hazael's troops and the army of Joram of Israel near Ramoth-Gilead, a border town in the northern part of Israel's Transjordanian territory (2 Kgs 8:28–29; 9:14–15a). During this battle, Joram was wounded and was forced to retire from the area. It was at Ramoth-Gilead during this period of tension that Jehu began the revolution that would result in the assassination of Joram and Jehu's seizure of power in Israel (ca. 842/41, 2 Kgs 9). Relations between the two states did not improve after Jehu's rebellion, but Hazael had to turn his attention elsewhere in 841, when Shalmaneser III returned to Syria. With the coalition in shambles, most of the Syro-Palestinian states, including Hamath and Israel, submitted to the Assyrian king. But Hazael did not. Aram's army was defeated by Shalmaneser near Mt. Senir (the Mt. Hermon area), and the Assyrian army temporarily beseiged Damascus. But the city was not captured, and Shalmaneser marched on to the coast, where he received the submission of several kings, including Jehu of Israel (*ANET,* 280).

Hazael had to fight the Assyrians alone two more times (apparently Shalmaneser's 21st and 22d years, 838 and 837) as well. We know virtually nothing of the circumstances of these campaigns. But afterward, Shalmaneser's attention turned to lands in the north, and thirty years would elapse before the Assyrians would again march into southern Syria.

Once the pressure from the Assyrians subsided, Hazael returned to his policy against Israel. Jehu's bloody purge of supporters of the overthrown Omride dynasty had weakened Israel to the point that Hazael was able to annex Israel's Transjordanian territories (2 Kgs 10:32–33). By the reign of Jehu's son, Joahaz, Israel was virtually, if not actually, a vassal to Aram-Damascus. According to the Lucianic mss of the LXX (following 2 Kgs 13:22), Hazael also invaded and conquered Philistia. He then turned eastward and attacked Judah. Jehoash, the king of Judah, sent Hazael an extensive tribute, thereby presumably becoming a vassal, and Hazael then withdrew from Jerusalem (2 Kgs 12:17–18).

Thus during the reign of Hazael, Aram developed into a significant empire which covered much, if not all, of southern Syria and Palestine. Some scholars have proposed that Hazael also dominated northern Syria (Mazar 1962: 114; Jepsen 1941–45: 168), but none of the evidence adduced for this proposal is compelling. As far as can be determined from current evidence, Hazael's empire extended only as far north as Hamath's southern boundary. But even if he did not control northern Syria, Hazael had made Aram into one of the most significant states in the Levant. Hazael's reign, while beginning so poorly, appears to have become the period of Aram's greatest strength.

b. Bir-Hadad and the Collapse of the Empire. Hazael was succeeded, probably ca. 800 B.C.E., by his son Bir-Hadad (traditionally known in most scholarship as Ben-Hadad III, since Hadad-ʿiḏr was normally identified with the Ben-Hadad of 1 Kings 20 and thus designated Bir-Hadad II). Bir-Hadad is known from the Bible (2 Kgs 13:3–7, 22–25; and probably, 1 Kings 20; 2 Kgs 6:24–7:20), from a stone inscription of Zakkur (formerly vocalized as "Zakir"), king of Hamath and Luash (*ANET,* 655–56), and from Assyrian inscriptions of Adad-nirari III. All of these sources of information indicate that Bir-Hadad was unable to hold on to the political power established by his father. The Assyrian king Adad-nirari III besieged Damascus, probably in 796 B.C.E., and received a substantial tribute from the king of Aram, who is called Marʾi in the Assyrian inscriptions. Marʾi, which in Aramaic means "my lord," is almost certainly a title of Bir-Hadad. The inscription of Zakkur describes an attack on his capital city in Luash by a coalition of kings that was led by Bir-Hadad. In this campaign, Bir-Hadad was unsuccessful, being forced to lift the siege around the city before a surrender. He also suffered serious losses to Israel, which regained its independence at this time (see particularly 2 Kgs 13:22–25). As suggested above (B.2.b), it is probable that the accounts of two battles between Israel and Aram in 1 Kings 20 should be attributed to the time of Bir-Hadad, the son of Hazael, and Joash of Israel. We do not know in which chronological order all of these political reverses took place, but it is clear that by the end of Bir-Hadad's reign, Aram had lost much of its political power.

It is not known how long Bir-Hadad ruled, but it does appear that Aram's fortunes continued to decline during the first half of the 8th century. Only a few facts are known from this period, but they reveal the situation fairly well. In 773, the Assyrians, under Shalmaneser IV, once again attacked Aram, and a recently discovered (but as yet unpublished) stela describes the tribute given to Shalmaneser by the king of Aram, named Hadianu. During the same period, Israel experienced its last major revival under Jeroboam II (ca. 782–748). 2 Kgs 14:25, 28 suggest that Jeroboam was able to dominate Aram during his reign.

4. Raḏyan's Coalition and the End of Aram. Aram's last period of political influence and independence began about the middle of the 8th century with the reign of Aram's last king, called Rezin in the Bible (Aram, Radyān). Raḏyan was on the throne by 738, when his name appears on a list of vassals who brought tribute to Tiglath-Pileser III of Assyria that year. During the years 737–735, TiglathPileser was involved in a series of campaigns to the north and east of Assyria. Raḏyan at this time formed a new coalition of Syro-Palestinian states (including Tyre and Israel) which rebelled against Assyria.

The coalition included Tyre and Israel, and apparently in an attempt to force Judah to join the coalition, Raḏyan and Pekah of Israel attacked Judah and besieged Jerusalem (see 2 Kgs 15:37; 16:5–9). Their plan was to replace the young king Ahaz of Judah with an anti-Assyrian puppet ruler, named Tabeel in Isa 7:6. Ahaz, against the advice of Isaiah (cf. Isaiah 7), sent a large gift to Tiglath-Pileser, asking for help against Aram and Israel. Tiglath-Pileser marched into Syria in 734, apparently capturing Tyre and the Philistine coast that year. Over the next two years, Tiglath-Pileser turned his attention directly toward Aram and Israel. During the campaign of 732, Aram was finally and fully defeated by the Assyrians. Accounts of the fall of Aram are found both in 2 Kgs 16:9 and in the inscriptions of Tiglath-Pileser. The Assyrian king claims to have destroyed 591 towns in the sixteen districts of Aram during the course of the campaign. In the end, Damascus was captured, and Raḏyan was killed. The Assyrians annexed the land of Aram into the empire, and the land was divided up into provinces. This was the end of the independent state of Aram. (For more details of the coalition formed by Raḏyan, see SYRO-EPHRAIMITE WAR; see also *POTT* pp. 134–55.)

ARAM-MAACAH (PLACE) [Heb *ʾăram maʿăkâ* (אֲרַם מַעֲכָה)]. See MAACAH (PLACE).

ARAM-NAHARAIM (PLACE) [Heb *ʾăram nahărayim* (אֲרַם נַהֲרַיִם)]. Geographical name of an area in upper Mesopotamia, located around the great bend of the Euphrates River in N Syria. The name occurs five times in the Bible, and is often translated "Mesopotamia" in English versions, following the LXX rendering. It appears as the name of the ancestral home of Abraham's family in Gen 24:10 (the same area seems to be designated Paddan-Aram in the Priestly Pentateuchal source). It is also named as the homeland of Balaam, the son of Beor (Deut 23:5), and the country of Cushan-Rishathaim, the first of the oppressors of Israel in the book of Judges (Judg 3:8). David is said to have fought with troops from this area, during his war with Ammon and its Aramaean allies (1 Chr 19:6, cf. Ps 60, superscription [v 2 in Hebrew]). There are also two, possibly three, cases in which this area is simply designated by the term "Aram" (Judg 3:10; Hosea 12:13; and Num 23:7[?]). Various commentaries discuss the problems of the homelands of both Balaam and Cushan-Rishathaim.

A number of extrabiblical sources make reference to this land during the last half of the 2d millennium B.C.E. Several Egyptian pharaohs of the New Kingdom had dealings with or attempted to conquer this area, which they called Naharin (a). Attestations of this name are found in texts from the time of Thutmosis I (late 16th century) to the reign of Rameses III (early 12th century). The region is also known from the Amarna Letters (14th century) in the forms *na-aḫ-rí-ma* and *na-rí-ma.* Only in the Bible does the name occur prefixed with "Aram." In those instances where the term appears in connection with the patriarchs (and probably the other attestations as well), it is being used anachronistically, since the area probably was not under Aramaean control prior to the 1st millennium. From the 1st millennium B.C.E., there are no extrabiblical references to this area either as Naharaim or Aram-Naharaim.

Precise boundaries of the land of Naharaim cannot be determined from the preserved texts, but the towns said to be located in the land include Harran, Nahor, Pethor, and Tunip. These indicate that the designation covered areas on both the west and east sides of the Euphrates, as well as the Balikh River valley and perhaps part of the Habur River triangle (Finkelstein 1962: 84–86). See also ARAM (PLACE); MESOPOTAMIA; and *POTT* pp. 134–55.

ARAMAIC LANGUAGE. See LANGUAGES (ARAMAIC).

ARAMAIC LETTERS. See LETTERS (ARAMAIC).

ARAMAIC "MESSIANIC" TEXT (4QMess ar). The siglum "4QMess ar" refers to ten little fragments in Aramaic found in cave 4 at Qumran. The fragments are written on soft leather, and the maximum dimensions of the whole are 20 × 38 cm. The script dates between 30 B.C. and A.D. 20. Their first editor, Jean Starcky (1964), labeled them an "Aramaic messianic text"; indeed he believed that they constituted an astrological text about the Messiah, since the child described in the fragments is said to be the Elect of God (*baḥîr ʾelaha*). The main assertions about the child are that "in his youth he will become like a man who does not know anything, until the time when he shall become skilled in the three books. Then he will become wise and will be endowed with discretion … His calculations [will succeed] because he is the Elect of God" (Fitzmyer 1974: 142–43). In the second column, which is badly fragmented, it is stated that "waters will cease" and a Holy One and Watcher (more correctly, a Wakeful, Vigilant, Watchful, or Alert One) is mentioned.

Shortly after its first publication and the publication of the related horoscope (Allegro 1964), Fitzmyer published a radically different interpretation: the text is not a horoscope (because there are no stars or signs of the Zodiac) and is not messianic (because "Elect of God" is not always a messianic title), but is part of the physical description of the forefather Noah (1974). J. C. Greenfield (1973: xx–xxi) preferred an identification with Melchizedek, but the Noachic identification has prevailed in later studies. P. Grelot (1975) then proceeded to identify the three books mentioned in the fragments with the three books of Enoch mentioned in Jubilees 4:16–26. These three books are probably found in 1 Enoch: the Astronomical Book, the Book of Dreams, and the Book of the Wakeful. (Other books were subsequently added to these three in 1 Enoch.) In *Jub.* 7:38, Noah is said to receive the complete tradition of Enoch, his great-grandfather. The Noachic identification rests on the link between the three books mentioned in our text and Enoch the ancestor of Noah, on the phrase "waters will cease" (taken as a reference to the Deluge), on the mention of Holy One and Wakeful both here and in col. 2 of 1QapGen which deals with the birth of Noah, and on the fascination with the birth of Noah in intertestamental literature (*1 Enoch* 106–8; *Jubilees* 4–10) and in as yet unpublished Qumran fragments from caves 4 and 11.

The thorough study by Florentino García-Martínez (1981) concludes that our fragments form part of a lost book of Noah mentioned in *Jub.* 10:13 and 21:10 and in patristic references. These suggest that the book of Noah was among other things an herbalary or medical guide to healing plants that also provided

halachic prescriptions for food and blood. Parts of this lost book may have been incorporated in *1 Enoch* and *Jubilees.*

4QMess ar provides a parallel to Simeon's declaration on the destiny of the child Jesus in Luke 2:34–35. The term "elect" is used 24 times in the NT, 20 times in the plural referring to the predestined saints, and 4 times in the singular with reference to the messiah (Luke 23:35; John 1:34 variant reading; 1 Pet 2:4, 6). Thus by the time of the NT, the term "elect of God" in the singular as found in our text had taken on a messianic significance in certain circles. In the OT the term "my Chosen One" or "my Elect" is used of David (Ps 89:4), the Servant of Yahweh (Isa 42:1), and Moses (Ps 106:23). Our text helps to fill out the intertestamental picture.

B. T. VIVIANO

ARAMAIC SCRIPT. About 1100 B.C. the Aramaeans adopted the alphabetic script which was employed at that time by the Canaanites and Phoenicians. They wrote in this same script until the mid-8th century B.C. Moreover, at the beginning they may even have written in the Phoenician language as well, because by the end of the 9th century B.C. the stele of Kilamu, king of Yadi (Sam›al, where an Aramaic dialect was spoken), was inscribed in the Phoenician language. However, two later texts from Sam›al, the so-called Hadad inscription and the Panammu inscription, were written in the local Aramaic (Sam›alian) dialect. Only at the end of the 8th century B.C., Bar-Rekub, king of Sam›al, wrote his stele in the Aramaic language, which does not differ from that of Bar-Hadad king of Damascus, Zakkur king of Hamath, and the Old Aramaic inscription from Sefire.

In the scripts of all the inscriptions mentioned above and of other Aramaic monumental inscriptions, no clear Aramaic features are discernible; except for the two-bar *ḥet* in the inscription of Bar-Rekub, the scripts are generally Phoenician in character. The first distinctively Aramaic features appear in the mid-8th century B.C. cursive scripts, e.g., on the inscribed bricks from Hammat, where there is a one-bar *ḥet* (see also the inscribed lion weights from Nineveh, from the last quarter of the 8th century B.C.).

In 1979, reports of the discovery of the life-size statue of a man with a bilingual Assyrian-Aramaic inscription from Tell Fekheriye, near Gozan, aroused some doubts concerning the formerly held theory of the early development of the Aramaic script and its branching off from the Phoenician ca. 750 B.C. (which was described above). It is almost generally accepted that this statue with its inscription was erected in the 9th century B.C. However, the script of the Aramaic version of the inscription does not resemble the scripts of the contemporary Aramaic and Phoenician (or Moabite) inscriptions, but rather the 11th-century B.C. Proto-Canaanite script. If the Aramaic version on the Fekheriye statue was indeed written in the 9th century B.C., and not—as the paleographic criterion would indicate—in the 11th century B.C., then we may assume that this is a deliberate archaization, i.e., a successful imitation of a set of letters which was used 200 years earlier. Otherwise we should have to conclude that people speaking Aramaic in the region of Gozan managed to preserve for two centuries an archaic script which was not influenced by the development that took place elsewhere.

The impact of the Phoenician script on people who wrote in Aramaic was so strong that they took over the set of 22 letters employed by the Phoenicians without adding to it a single character, even though the phonetic system of the Aramaic language was much richer than that of the Phoenician. In Aramaic there

were e.g., *ḏ* and *z*; but they wrote in the Phoenician way only *z* (*zy, znh, zhb*); there were *ṯ* and *š,* but both consonants were represented only by *š* (*šlš, šql*). Only in the 5th-century B.C. Aramaic inscriptions and documents we find "gold" written *dhb* and "to weigh" written as *tql.* Even in the Tell Fekheriye inscription, only 22 letters were used; the only exception there is that *ṯ* was expressed by *s* and not by the usual *š.*

At the beginning of the 1st millennium B.C. the Aramaic script and language were employed only—or mainly—by the inhabitants of the Aramean kingdoms, but from the 8th century B.C., after the Assyrians conquered these states and realized that the Aramaic script was much more convenient than their cuneiform writing, they granted the Aramaic language and script a special status. Aramaic became an official means of communication in the western provinces of the Assyrian empire. Very soon it turned into an international language in diplomacy and trade. Not only did the ministers of Hezekiah ask Rab-shakeh to speak to them in Aramaic "for we understand it" (2 Kgs 18:26), but 100 years later, at the end of the 7th century B.C. Adon the king of a certain Philistine (or Phoenician) city wrote to Pharaoh king of Egypt an Aramaic letter in which he asked for military aid against the advancing Babylonian troops that had already conquered Aphek (*KAI* 266). The diffusion of the Aramaic language and script increased in the Babylonian and Persian kingdoms.

After 732 B.C., the year of the Assyrian conquest of Damascus (the southernmost Aramaic city-state), the Aramaic script ceased to be a national script, and people of various national or ethnic origins began writing in it. Therefore the Aramaic script, not being restricted by the conservativeness which characterizes national writing traditions, was used for purely practical purposes. This phenomenon enabled the evolution of a cursive script which did not preserve the older letter forms, and any unnecessary strokes were dropped from the letters. As early as the end of the 7th century B.C., the Aramaic script looked like shorthand in comparison with the Phoenician and, particularly, with the Hebrew script.

Aramaic script was widely used in all the provinces of the Assyrian, Babylonian, and Persian empires. In a vast area extending from Asia Minor and Afghanistan to Egypt and North Arabia, the type of Aramaic script encountered was uniform, and no regional variations evolved even in the remotest provinces. The standards were fixed by the royal scribes, who wrote in a conservative formal cursive style. Everybody who learned to write was taught to follow the standard calligraphy of the formal cursive script but practically only the scribes adhered to the scribal rules. Other educated persons allowed themselves to write faster and thus to introduce innovations in the forms of the letters. This kind of writing—i.e., the free cursive style—caused the changes which eventually led to the development of the script. Those who learned reading and writing and had only a limited use for this knowledge tried imitating the formal style, but wrote clumsily in the vulgar cursive style. Besides the cursive style (with its three sub-styles: formal, free, and vulgar) the Aramaic script also had a lapidary style, which was practiced mainly for engraving on hard material, but even on stone the cursive (mainly the formal cursive) style very often prevailed.

The scripts of the 9th- and 8th-century Aramaic monumental inscriptions, which resemble those of the contemporary Phoenician ones, can be defined as lapidary. The influence of the Aramaic cursive can be seen only in the late 8th-century lapidary writing (e.g., the two-bar *ḥet* in the Bar-Rekub inscription). However, soon the Aramaic cursive became dominant, and even on stelae and seals cursive letters were engraved. The lapidary style, of course, was known everywhere, its most famous representatives from the Persian period being the inscriptions from Asia Minor, Tema in North Arabia as well as the "Yehud" and "Mozah" jar stamps stemming from various Judaean sites. With the fall of the Persian empire, the lapidary Aramaic style fell into disuse. However, its cursive counterpart survived, and its descendants exist even today.

The Aramaic inscriptions and manuscripts from the 8th to the 3rd century B.C. were written in the uniform Aramaic script. The number of these texts is quite large, including graffiti, dedicatory inscriptions, stelae, burial inscriptions, boundary inscriptions, seals, coin legends, clay tablets, ostraca (among them dozens from Elephantine, Arad, and Beer-Sheba), and manuscripts written on parchment

and papyrus. The majority of the papyri belong to the 5th century B.C. and stem from the Jewish military colony in Elephantine in Upper Egypt, but papyri have also been found in Hermopolis, Saqqarah, and Edfu in Egypt (the Edfu papyri are generally from the 3d century B.C.), as well as in Wadi Daliyeh, E of Samaria in Palestine (from the 4th century B.C.).

The ca. 100 papyri from Elephantine include name lists, private and official letters, legal documents, and three literary texts—an Aramaic version of the Behistun inscription, the Proverbs of Ahiqar, and a fragmentary narrative text of Bar-Punesh (*CAP* 71). The Elephantine papyri and ostraca are very important for the study of the Aramaic script in the 5th century B.C.: the legal documents bear exact dates and mention the names of the scribes who were either professionals, writing in a semiformal hand, or chance scribes, writing in a free cursive hand. In addition to the possibility of examining the handwriting of the various Elephantine scribes at fixed dates, the autograph signatures display the writing of the witnesses with various degrees of penmanship. Thus in these signatures the vulgar cursive style, the writing of the unskilled writer, is also represented.

There is a clear distinction between the writing of the professional scribes from Elephantine and that of the scribes of Arsham, the Persian governor in Egypt. The latter wrote in a very formal cursive hand, whereas the former wrote in the less conservative, semiformal style, more influenced by the free cursive. However, the professional scribes of the Elephantine documents and those of the Arsham letters wrote in shaded scripts, i.e., they distinguished between the horizontal thick strokes and the thinner vertical strokes, while the chance scribes and the writers of the private letters wrote more carelessly without shading and generally in more developed handwritings. Thus in the Elephantine documents the three substyles of the cursive (free, formal, and vulgar) can be seen. This indicates that in the 5th century B.C. a large number of the inhabitants of Elephantine knew how to read and write, a fact which is evidence of a literate society, not only there but most probably in various areas in the Persian period and presumably even earlier (the Hebrew epigraphic material from the 7th-century B.C. Judah provides similar evidence).

Whereas in the Hebrew and Phoenician scripts the rightward diagonal downstrokes were shaded, in the Aramaic script the horizontal bars were thickened. This phenomenon can be followed from the 8th-century B.C. ink-written texts onward. This kind of shading is characteristic of all the scripts which evolved from the uniform Aramaic script. The modern descendants, like Jewish (square Hebrew), Arabic, and Syriac, follow this tradition. It is difficult to explain why the Aramaic script deviated from the system of shading that was employed by the Phoenicians, but possibly the reason may be found in the method of writing used by the Aramaic scribes in the Assyrian and Babylonian empires. It seems likely that most of these scribes, who were probably not of Aramaean origin, were bilingual and thus were used to writing in the cuneiform script with a stylus on soft clay. Actually there are dozens of clay tablets written in the cuneiform writing that bear Aramaic endorsements, and there are other clay tablets bearing only Aramaic texts. The way of holding the stylus for writing the cuneiform wedge-shaped marks has not been studied thoroughly, but perhaps the scribes who wrote in Aramaic were influenced by the cuneiform scribes, and this may account for the horizontal shading in the Aramaic script and its descendants.

It seems likely that the eastern neighbors of the Israelites, i.e., the Ammonites, Moabites, and Edomites, who spoke in dialects akin to Hebrew, learned the alphabet only in the 9th century B.C. Mesha, king of Moab, wrote his stele in the Moabite language but employed the Hebrew script, as it was used at that time by the inhabitants of Israel and Judah. Although no contemporary Edomite inscription is known at present, there is enough evidence to suppose that in the 9th century B.C. the Edomites also wrote in the Hebrew script. The Ammonites, however, adopted the Aramaic script from their northern neighbors Aram-Damascus (for an example of this, see the Amman Citadel Inscription). See EPIGRAPHY, TRANSJORDANIAN.

After the fall of Damascus in 732 B.C. and with the beginning of the Assyrian control of the King's Highway in Ammon, Moab, and Edom, the political and cultural influence of Israel and Judah on Moab and Edom came to an end. Because Aramaic was the official script in the western provinces of the Assyrian empire, Aramaic elements began to intrude into the scripts of Moab and Edom. Thus, while in the 7th-century B.C. inscriptions of the Moabites and Edomites there are Hebrew, Aramaic, and some

peculiar local letter forms, in the 6th century B.C. the Aramaic forms prevail, and eventually the Hebrew elements disappear altogether. In the late 6th and 5th centuries no letter forms specifically Ammonite, Moabite, or Edomite are discernible, and the inscriptions were written solely in the Aramaic script, even those written in the Canaanite dialects.

After the conquest of Alexander the Great and the fall of the Persian empire, Greek replaced Aramaic as the official language and script of the government. However, Aramaic was already so deeply implanted that it continued to be spoken and written by all the nations who had formerly been under the Persian rule. The uniform Aramaic script continued to exist almost for 100 years; only in the middle of the 3rd century B.C. the various descendants began to crystalize.

Among the Eastern offshoots of the Aramaic script the following branches are discernible:

1. *The Syriac-Palmyrene branch.* As the Syriac and Palmyrene scripts have many common characteristics, the conclusion that they had a common ancestor is almost inevitable. It seems likely that both the Syriac and the Palmyrene scripts developed from the Aramaic chancellery script which was used in the 3d and 2d centuries B.C. in the Seleucid royal court in addition to the official script. In time, Syriac became the language and script of the Christian community whose center was in Edessa, but it was also adopted by the Palestinian Christians. The Palmyrene script was used mainly by the inhabitants of Palmyra and by Palmyrene emigrants all over the Roman empire; it was also accepted in Babylonia (where magic bowls were inscribed in it), as well as by the Manichaeans, who wrote sectarian texts in an Iranian dialect.

2. *The North Mesopotamian branch* is primarily known from the inscriptions discovered in Hatra, an oasis between the Tigris and the Euphrates, where a small kingdom flourished under Parthian suzerainty. This script was also accepted in Assur and Dura-Europus and even extended to Armenia and Georgia. The Armenians and Georgians did not speak Aramaic but wrote in this script, probably using the Aramaic words as ideograms.

3. *The South Mesopotamian branch* is best known from the script which was used from antiquity until modern times by the Mandaeans, a gnostic sect in Khuzistan and in the neighboring regions in Iran and Iraq. The earliest Mandaic texts probably stem from the 4th century, but the largest number come from the 6th century A.D. The Mandaic script developed from the Aramaic offshoot which was used in Elymais, where another petty kingdom under Parthian suzerainty existed.

4. *The Iranian branch.* The Parthians, the Persians, and the Sogdians wrote in scripts that evolved from the uniform Aramaic script during the Achaemenid period. They generally used Aramaic ideograms, but in time the phonetic writing prevailed.

In the West, two scripts developed from the uniform Aramaic script:

5. *The Jewish script* is the ancestor of the medieval and modern (square) Hebrew script. F. M. Cross distinguished in its early evolutions three phases: Archaic or Proto-Jewish (ca. 250–150 B.C.), Hasmonaean (ca. 150–30 B.C.), and Herodian (ca. 30 B.C.–A.D. 70). This classification is mainly based on the variety of manuscripts found in Qumran, known as the Dead Sea Scrolls (Cross 1961: 174). The Jews, preferring this script, neglected their old Hebrew script, which was the national script of the inhabitants of Israel and Judah in the First Temple period. However, the original Palaeo-Hebrew script continued to be used in the Second Temple period by narrow circles. Its connotation was mainly nationalistic (coins) or religious (Pentateuch scrolls and the Tetragrammaton in texts written in the Jewish script), but it was also occasionally used in daily life.

Not only was the Palaeo-Hebrew script abandoned by the Jews (and preserved only by the Samaritans), but also the Jewish cursive (see the papyri from Wadi Murabba‘at and Nahal Hever) ceased to exist after the defeat of Bar-Kokhba in 135 A.D.

6. *The Nabatean script* is well known from the monumental inscriptions which have survived in Nabatean cities, and from the graffiti found in the Sinai. Some Nabatean deeds were found in Nahal Hever which have been dated to the beginning of the 2d century A.D. The (formal and free) cursive style employed in these deeds clearly shows that the Nabatean script is the ancestor of the (classical) Arabic script.

A. History of the Arameans

1. 11th to 9th Centuries B.C. a. Assyrian Sources. Tiglath-pileser I (ca. 1114–1076) campaigned from Assyria westward against an enemy named *ahlamē armāya* early in his reign, crossing the Euphrates in doing so. A badly broken Assyrian Chronicle may imply that Arameans pressed into Assyria itself later in his reign (TCS 5: 189). His son Aššur-bel-kala (ca. 1073–1056) followed his father's steps, but his inscriptions are less extensive and less explicit; they simply refer to *māt arime,* "the land of Aram." Both kings relate where they encountered these people: along the Euphrates from the Babylonian frontier at Rapiqu to Carchemish, in Mount Bishri, Tadmor (Palmyra) in Amurru, as far as the foot of the Lebanon mountains. Aššur-bel-kala met them in the mountains to the north, around the sources of the river Habur, an area where his father had fought the Mushki (often identified with the Phrygians). However, this was not the Arameans' most easterly penetration. They moved near to the heart of Assyria, settled E of the Tigris, and brought about a "dark age" from about 1050 to 930. When Assyrian royal reports resume under Aššur-dan II (ca. 934–912), the king relates his conquest of areas near the capital city of Aššur, and of Arameans who were evidently also not too distant. Adad-nirari II (ca. 911–891) continued his father's expansive policies, conquering Aramean sheikhs living in the Zagros foothills, an Aramean tribe called Teman near Nisibin, and reestablished Assyrian control over upper Mesopotamia as far W as the Habur River. Here the Assyrians faced the Aramean state of Bit-Bahyan, ruled by Abi-Salam at Guzan (biblical Gozan, now Tell Halaf), and took tribute. Campaign reports by Aššurnasirpal II and Shalmaneser III (ca. 883–859 and 858–824) disclose the presence of other Aramean states as far W as the river Euphrates, the major ones being Bit-Adini, Bit-Bahyan, Bit-Khalupe, and Bit-Zaman. References in various Assyrian inscriptions mention Aramean tribes taking control of these areas at the end of the 11th century, and the Assyrian kings plainly felt they had a right to rule there as their forebears had done in the 13th century. Other Aramean groups settled along the lower course of the Euphrates and farther E, all the way into Babylonia.

These Assyrian kings subjected the rulers they conquered, but allowed them, or chosen replacements, to continue to rule, requiring only loyalty and regular tribute. This was the case, it seems, at Guzan, where local princes ruled their people with the title "king" (*mlk*), but in their own Assyrian text they were called "governor" (*šaknu*; Abou-Assaf, Bordreuil and Millard 1982). Refusal of some to remain submissive or joining alliances with still independent states brought Assyrian troops back in punitive campaigns which occasionally led to the installation of Assyrian governors and officials in place of the local rulers. The career of Akhuni of Bit-Adini exemplifies the process. Having submitted to Assyria in 876 B.C., he was

hostile to the next Assyrian king, Shalmaneser III, who eventually disposed of him and made his major town, Til-Barsip, an Assyrian stronghold (855 B.C.).

Under the leadership of Adad-idri (Hadadezer) of Damascus, an alliance of kings opposed the Assyrians. Among them were Urhilina of Hamath (whose name is neo-Hittite) and Ahab of Israel. The battle of Qarqar in 853 was followed by Assyrian attacks in 849, 848, and 845 until the coalition broke down. Two Assyrian campaigns against Damascus (841, 838) brought home booty, including a bead from a temple in a city of Hazael, king of Damascus (*ANET,* 281), but Damascus itself was not taken. Shalmaneser fought in Cilicia as well, defeating the Aramean king of Sam›al, Khayan, in 858. Khayan, together with Arame of Aguš (Arpad), paid tribute to him in 853 B.C.

The years of unrest and relative weakness of Assyria which followed allowed some of the Syrian states to strengthen themselves. A revolt in Gozan (Tell Halaf), suppressed in 808 B.C., was perhaps the outburst of nationalism by King Kapara, whose sculptures the German excavators found (see C, below). However, since he and his father, Khayan, remain unattested in other texts, the date cannot be set, and some would place him almost a century earlier (Abou-Assaf, Bordreuil, and Millard 1982: 100–1; Sader 1987: 30–44).

b. Hebrew Sources. In the SW, Aramean expansion met another recently established people, Israel. Apart from the obscure Cushan-rishathaim of Aram-naharaim who oppressed Israel early in the settlement period (Judg 3:8–10), the first Aramean groups encountered by Israel are the states of Zobah and Beth-Rehob in the days of Saul and David (1 Sam 14:47; 2 Sam 8:3, 5; 10:6–19; 13:37–39). These lay in the Lebanon Valley with Zobah extending to the N. The king of Zobah whom David fought was Hadadezer of Beth-rehob, his name being the same as that of the 9th-century king of Damascus who faced Shalmaneser III (in Assyrian texts Hadad-idri). Hadadezer had made himself overlord of all Syria, and David's final conquest of him "when he went to restore his control along the Euphrates River," and of the forces that came to his aid, gave Israel suzerainty over the whole of that territory at one blow (2 Sam 8:3–8, an event which apparently followed the campaigns in Transjordan, 2 Sam 10–12). A later Assyrian report of Aram capturing Pethor and Mut-kinu on the Euphrates at about 1000 may refer to Hadadezer's rule (*LAR* 1.603). Hadadezer's intervention in Transjordan is the first sign of a long-continuing Syrian interest in that area (2 Samuel 10). Hadadezer did not rule in Damascus, but during Solomon's reign one Rezin set himself up as king there. At the end of the 10th century, Asa of Judah (ca. 911–870) hired "Ben-Hadad son of Tab-rimmon, the son of Hezion, king of Aram, who was ruling in Damascus" against Israel, asking him to break his pact with Baasha of Israel and institute treaty relations such as had existed between their fathers (1 Kgs 15:18, 19). Some scholars suggest the ancestor Hezion was identical with Rezin, the names being linguistically equivalent (see *POTT,* n.23). The description "king of Aram, who was ruling in Damascus" may imply that the title "king of Aram" was not yet as tightly bound to that city as it became in Israelite perspective (cf. 1 Kgs 20:1). That the Ben-Hadad of Asa's time was the same as the Ben-Hadad of Ahab's is disputed (see BEN-HADAD). The name is possibly a dynastic one, and the Ben-Hadad who fought Ahab (1 Kings 20) and whom Hazael murdered (2 Kgs 8:7–15) could be a successor, the Adad-idri of the Qarqar alliance (see a. above). There is no support for W. F. Albright's contention that the Melqart Stele (*ANET,* 501; *ANEP,* 499), found near Aleppo, was erected by Ben-Hadad, son of Tab-rimmon (Pitard 1987: 138–44; note that the reading proposed there is as speculative as all others because the surface of the stone is too abraded to permit any certain reading of line 2). Ben-Hadad enjoyed both success and failure in his attempts to dominate Israel (1 Kings 20, 22). Some coercion may have brought Ahab of Israel to his side at Qarqar (853), the battle which resulted in Ahab's death and also demonstrated that there was no deep bond between the two kings (ca. 852; 1 Kings 22), despite occasional trade agreements (1 Kgs 20:34). Hazael, whose accession is set about 843 by Assyrian texts, continued to harass Israel (2 Kgs 8–12; 13:3, 7). During its period of power, Damascus absorbed the kingdoms of Zobah, Geshur, and Maacah, and overran Israelite territory in the NE (1 Chr 2:23; Mazar 1986: 121–22).

c. Aramean Sources. No Aramean chronicles or annals survive. From the 9th century B.C. there are a very few royal inscriptions and no other Aramaic texts. Of primary importance is the statue of a ruler from Tell Fekheriyeh (ancient Sikan, next to Tell Halaf, ancient Gozan), which reveals that the local king and his father doubled as Assyrian prefects for the region about 870–825 (Abou-Assaf, Bordreuil, and

Millard 1982; a later date is canvassed by H. Sader [1987: 26, 27], but on the less than compelling grounds of artistic style). A king of Aram named Bar-Hadad dedicated a stele to Melqart (of Tyre), but the location of his realm is uncertain (see above). From the same date are two ivory plaques inscribed "for our lord Hazael" which had been taken as booty to Assyrian palaces at Arslan-Tash (ancient Hadatu) and Nimrud (ancient Kalhu); neither yield much information.

From these varied sources the following very incomplete outline of the Arameans in the 9th century emerges. Independent tribal states had grown up around various old urban centers where Arameans had overcome the local populace and replaced or dominated them. However, some towns of the earlier dynasties, survivors from the Hittite Empire, continued to maintain themselves.

2. 8th Century B.C. Combining sources gives a more coherent picture (for greater detail, see *CAH* 3/1:372–441). About the year 800 B.C. Hazael apparently still ruled a powerful Damascus, giving way ca. 797–796 to his son Ben-Hadad III, who was still able to dominate Israel. In the north of Syria, Arpad, overcome by Shalmaneser III, was now resurgent under Atar-šumki, son of Adramu. He led a group of eight princes who suffered renewed Assyrian attacks in 805 and 804, then submitted to Adad-nirari III without losing independence. All the Aramean regions to the east were now under Assyrian control, their governors in some cases still being local dignitaries (e.g., Bur-Sagale of Gozan, Millard 1972: Oded 1979), although there were rebellions from time to time (Gozan in 759–758). Adad-nirari III and his three sons who succeeded him were either content to, or not able to do more than, hold formal suzerainty over the states of west Syria, not interfering unless they acted against Assyrian interests. The apparent weakness of Assyria between 800 and 745 is partially belied by the campaigns against Aramean states on several separate occasions, and by Assyria's role in determining the boundary between two of them.

The kingdom of Hamath (modern Ḥama) separated Arpad from Damascus. In the 10th century, Hamath and Damascus had been hostile toward each other (2 Sam 8:9), but in the 9th century they joined forces against Shalmaneser III. At that time the rulers of Hamath bore "neo-Hittite" names (cf. "the kings of the Hittites" 2 Kgs 7:6), but early in the 8th century one with a West Semitic name, Zakkur, seized the throne. A usurper, perhaps from Ana on the mid-Euphrates (Millard fc.), he incurred the enmity of his neighbors. Ben-Hadad (Bar-Hadad) of Damascus led a coalition against him including kings of Arpad, Que, the Amq, Gurgum, Sam›al, and Melid (*ANET*, 655). They besieged Zakkur in Hazrak, north of Hamath, capital of the Lu'ash region, but divine intervention saved Zakkur, whose stele commemorates it. This event is plausibly associated with an Assyrian campaign "against Mansuate" in 796. Mansuate was evidently NW of Damascus, and part of its territory, so the same campaign is identified with the one in which Adad-nirari III took heavy tribute from "Mari›" king of Damascus (Mari›, Aramaic for "my lord," being a title of the king). The death of Hazael may have given the Assyrians the opportunity they needed to reassert control over S Syria and to support a pro-Assyrian king in Hamath. The Assyrian king then drew the border between Arpad and Hamath. All Syria's main states were subject to him. No Assyrian armies invaded for twenty years afterward, according to the available records.

Ben-Hadad III began his rule continuing Hazael's domination of Israel, but "the Lord provided a deliverer" (2 Kgs 13:3–5). This unidentified deliverer may be seen as the Assyrian king Adad-nirari III or his commander-in-chief, Šami-ilu, in the expedition of 796 (Millard 1973: 162). Whoever the deliverer was, Damascus became weaker, so that Jehoash of Israel defeated Ben-Hadad three times, recovering territory lost to Hazael (2 Kgs 13:25). The next king of Israel, Jeroboam II (ca. 793–753) created a realm that encompassed Damascus, reaching the border of the Hamathite kingdom, if not claiming authority over it (2 Kgs 14:25, 28). Jeroboam's ascendancy may have followed Assyrian campaigns against Damascus in 773 and Hazrak in 772. With his death that power was lost because an isolated Assyrian document mentions that Khayan ruled Damascus about 773. Whether this was the personal name of Ben-hadad III or a successor is unknown. Sometime after 750, Rezin occupied the throne of Damascus. Tiglath-pileser II names him among his tributaries from 738 B.C. onward. With Tyre and Israel, Rezin tried to force Judah to join a league against Assyria, but Ahaz secured his position by submitting to Tiglath-pileser (2 Kgs 15:5–9). Damascus fell and Rezin was executed in Assyrian campaigns of 733 and 732 and the region became an Assyrian province.

In the north, Mati‹-›el followed his father Atar-šumki on the throne of Arpad. In 754 Aššur-nirari V of Assyria imposed a vassal treaty on him (*ANET,* 532–33). Mati‹-›el also entered another pact with a suzerain called Bar-ga›yah, king of a country whose name is written *ktk,* whose identity is a riddle still awaiting a convincing solution (for an impressive attempt see Lemaire and Durand 1984). The Aramaic stelae presenting the terms of the treaty, although incomplete, are the longest specimens of Old Aramaic. This agreement may have been the cause of Ashur-nirari V's attack or, if Arpad joined with Bar-ga›yah afterward, the cause of further Assyrian campaigns against Arpad in 743–740.

Accidental preservation of a series of stone monuments at Zinjirli (ancient Sam›al) reveals the history of this small state between ca. 800 and 725. King Panammu, son of QRL (reading unknown), perhaps a son of Kilamuwa, boasts of his prosperity on a statue erected to honor the god Hadad. Family quarrels led to the death of Bar-Ṣur, probably a son of Panammu, and seventy royal sons (cf. 2 Kgs 10:1–11). Eventually the Assyrian Tiglath-pileser II set Panammu II, son of Bar-Ṣur, on the throne. His son, Bar-Rakkab, inscribed a statue in memory of his father, who died fighting with the Assyrians at Damascus, ca. 732. Bar-Rakkab's own inscriptions record his loyalty to Tiglathpileser III, who died in 727. Sometime thereafter Sam›al was annexed by the Assyrians and Esarhaddon erected a stele there (see CAH 3/1:372–441; Sader 1987: 153–84; *TSSI* 2: 60–93).

Sargon II of Assyria crushed a revolt in Hamath led by Yau-bi›di (720) and with that blow extinguished any flickering hopes of Aramean nationalism. All the former Aramean territories had already become provinces of the Assyrian empire. Arameans continued to live in them, but their identity was diluted by the Assyrian deportations (Oded 1979). The tribes in Babylonia maintained a quasi-independent status, joining Chaldeans and Elamites in anti-Assyrian uprisings, but their identity, too, became blurred during the Neo-Babylonian empire.

3. Later Times. The adjective "Aramean" continued in use as a description of individuals after all the Aramean states had disappeared. Sennacherib's counselor Ahiqar was so titled in the 5th-century B.C. papyrus copy of his story, and Jews living in Egypt were sometimes called Arameans at Elephantine at the same time (*CAP*, 15–16; Kraeling 1969: 47). The term probably came to denote one whose native language was Aramaic, and it was through their language and script that the Arameans left their mark on world history, and in the New Testament.

B. Prehistory of the Arameans

The scribes of Tiglath-pileser I qualified the Arameans as *ahlamu* (see as above). None of the various explanations proposed for *ahlamu* have proved satisfactory, and it may be a proper name (see Moscati 1959). After the texts of Tiglath-pileser I and Aššur-bel-kala, the word almost disappears from cuneiform records, except in one aspect of scribal tradition. Babylonian academics included some foreign words in the lexical texts they compiled, and among them are a few plant names which are labeled "Ahlamite," and in certain Persian and Seleucid period texts Ahlamite clearly means Aramaic or Aramean (Brinkman 1968: n. 1799). Thus this name was well rooted in Babylonian. Persons described as Ahlamite appear sporadically in documents of the latter half of the 2d millennium B.C., and as far back as the reign of Ammiṣaduqa of Babylon (ca. 1646–1626 B.C.) a tribe of Ahlamites was living near Sippar (*RGTC* 5:5; *RGTC* 3:5; van Lerberghe 1982). Although the relationship of Ahlamu to Arameans is unclear, the Assyrians saw it as very close, so a scribe of the 9th century might have termed "Aramean" the people whom his predecessor in the 13th century B.C. would have termed "Ahlamite." The situation can be understood if the Ahlamites were the section or group of the Arameans whom the Babylonians first encountered. (A similar situation led Europeans to give the name "Chinese" to all the Han peoples because the rulers of the Ch'in state controlled the regions to the west; see Bishop: 1938.)

Besides the cuneiform references to Ahlamu before 1100 B.C., various occurrences of Aram have been cited as evidence that this name was current in earlier periods to denote the Aramean people (Dupont-Sommer 1953). Further investigation has shown that none of these can be definitely linked with Aram, and all are personal or place names, never gentilics (Kupper 1957: 112–14). Exceptions to this verdict are two examples of Aram in Egyptian texts. A list of place names from the reign of Amenophis III (ca. 1390–1352) mentions "the one of Aram" (Eg *p-jrm*), and a report from an officer on the eastern frontier

of the Delta about 1210 tells of a colleague arriving from a town "in the district of Aram" (Edel 1966: 28; *ANET,* 258–59). When only the second text was available, scholars emended Aram to Amor, but the discovery of the earlier text makes that unlikely). At Ugarit a king gave away land including "fields of Arami" which might, in the light of the Egyptian evidence, be the same name. These are the earliest occurrences of Aram which could be identified with the Arameans and their territory, outside the Old Testament text.

The Patriarchal Narratives of Genesis claim the presence of Arameans in upper Mesopotamia early in the 2d millennium B.C. (for the date, see ABRAHAM). It was to Aram-naharaim that Abraham's servant went to find a wife for Isaac, and her relatives are titled "Arameans" (Gen 24:10; 25:20, cf. 28:5; 31:20, 24). Commentators usually call these references anachronistic, assuming that they are additions to old stories, or that they came naturally to writers of the late Monarchy, the exilic, or postexilic periods, who were rewriting traditional tales, or inventing the stories. If that were the case, their portrayal of a specific region "Aram" in upper Mesopotamia at a time when all independent states had been absorbed into provinces of the Assyrian, Babylonian, or Persian empires reflects knowledge of either an older position, or an ethnic or geographic rather than political terminology, otherwise unknown to us. After the mainly hostile relations between the national states of Israel, Judah, and the Arameans of Damascus during the Monarchy, it would be startling to find Israel asserting her ancestors were Arameans without any qualification, so claiming kinship with a different people, and jeopardizing their national distinctiveness. If, on the other hand, the Genesis and related references to Aram are accepted as coming from the early 2d millennium B.C. with the narratives in which they stand, they tell of Aramean people living in upper Mesopotamia at least 6 centuries before other sources mention such a people there. Before discounting this as incredible, it is necessary to ask if it is possible. Studies of ANE cultures show that it is. Documentation is sporadic even for major centers like Nineveh and Babylon; knowledge of upper Mesopotamia depends largely upon what was recorded in other places (e.g., Mari, Aššur, Nineveh, Hattušas), only a few texts have been found in that area itself. One town, Sikan, is known to have existed in the 9th century because both Assyrian texts and the inscription of a local king attest it (Abou-Assaf, Bordreuil, and Millard 1982), but it is also mentioned in a text written at the end of the 3d millennium B.C. (Salvini 1982: 18; *RGTC* 2: 164). Unless the town was known by the slightly different name *Waššukanni* in the 2d millennium B.C., there is a large gap in its history, and from the 1st millennium sources alone it might have been considered a place first built by the Arameans. (For other examples of words and types of objects "hibernating" in this way, see Millard 1984 and 1986). That the Pentateuch preserves very ancient information about the Arameans in a comparable way should not, therefore, be totally rejected; to do so is to risk deforming the evidence.

Of course, the Patriarchal Narratives reached their present form long after the events they describe; Laban the Aramean probably did not speak what is now recognized as Aramaic, any more than Abraham spoke biblical Hebrew. A picture of the Arameans originating as a tribe in Upper Mesopotamia about 2000, remaining there for several centuries, gradually growing, until increased numbers, drought, famine, and other agents forced them to spread E and W seems plausible. The eruption of the Aramean tribes into upper Mesopotamia and their expansion into Babylonia is comparable with the spread of the Amorites along the same routes a millennium earlier. Kinship of Arameans and Amorites is possible, but the attempt by M. Noth (1961) to prove the Arameans originated from the Amorites was disproved by D. O. Edzard (1964). Certainly there are a few similarities, such as names beginning with *ya* or ending with *-an*, and although when the only distinctive Aramean feature, the language, can be analyzed—and none survives from before ca. 850 B.C.—it has some markedly different characteristics (see the ARAMAIC articles), no more can be said at present than that both stem from a common NW Semitic ancestor. The declaration of Deut 26:5, "My father was a wandering Aramean," which asserts a shift to a higher status, reflects the same traditions, and can be understood well in the light of 2d millennium B.C. society (Millard 1980).

The prehistory of the Arameans remains to be elucidated through future discoveries of texts from the region which seems to have been their home, the "land between the two rivers," sometimes specified as

"Aram between the rivers" (Aram-naharaim). It is noteworthy that the earliest occurrences of the name "Naharaim," outside the Bible, are in Egyptian texts which present it in the form *nhrn* with a shift of final *m* to *n*, a feature later found in Aramaic (*NBD*, 67). The construction Aram plus qualifier recurs in the expressions Aram-Beth-Rehob, Aram-Damascus, Aram-Maacah, and Aram-Zobah in the OT, and is reminiscent of the reverse forms such as Sippar-Amnanum and Sippar-Yahrurum of the OB period (Kupper 1957: 51–52; 75–76). The former define the segment of the tribe by its settlement, the latter define the segment of the settlement by the resident tribe. For a people to be called after the region they inhabited early in their history is a normal occurrence. Aram, therefore, may have been a region in upper Mesopotamia from which the Arameans took their name.

Relationships between the people and the men named Aram in Genesis are not clear. Aram, son of Shem, Asshur, and Elam (Gen 10:22, 23) appear to be intended as national ancestors of their respective nations. The Aram son of Kemuel, son of Nahor, and Chesed son of Nahor (Gen 22:21) may be coincidental rather than ancestors of the Arameans and Chaldeans.

C. Aramean Society

The Mesopotamian cuneiform texts provide valuable information about the Arameans. There were numerous tribes or clans; the names of over forty are listed for Babylonia. The meager evidence about them shows they retained some measure of identity until the rise of the Neo-Babylonian state late in the 7th century B.C. and that they were scattered in many small villages rather than occupying large towns (Brinkman 1984: 12–15). When the Arameans set up recognizable states in N Mesopotamia and Syria, these were mostly distinguished by tribal names. Some were descriptive, like Teman, "southerner," others perhaps derived from eponymous ancestors, such as Bit-Aguš, for which an ancestor named Guš or Aguš seems to be attested. The tribes clustered around tribal centers which sometimes gave their names to the kingdoms that developed, such as Damascus. Each tribe was ruled by its own chieftains or sheikhs, whom Assyrian texts perhaps entitled *našiku* (Heb *nāsîk* Josh 13:21). Adad-nirari II of Assyria faced three different rulers of the Teman tribe (*GARI* 2: 424–30), and there were a number governing the Laqê tribes on the mid-Euphrates at the same time. According to 1 Kgs 20:1–34, when Ben-Hadad II of Damascus failed to capture Samaria with thirty-two kings in his alliance, he replaced them with governors.

During the 9th century B.C. most of the Aramean states developed into monarchies, their kings vying with one another for power and greater realms. There was probably never an Aramean empire (contra Mazar 1986), rather an ever-changing pattern of alliances dominated by the strongest king of the moment, which was often the king of Damascus (as Bar-Hadad II at the Battle of Qarqar, Bar-Hadad III against Zakkur of Hamath).

The Arameans were seminomadic pastoralists, based in villages set in the countryside near good sources of water. Some of the populace remained in the villages throughout the year, while others took the flocks to find pasture. In this they followed the style attested for the Amorites a millennium before, for Laban and his family (Genesis 29–30), and for others since. The term *kaprum,* "village," known in the Mari tablets, continued as a designation for Aramean settlements (Aram *kĕpar*). The Aramean lifestyle affected the Assyrian language, which took over their terms for steppe and hill country (*mudabiru,* cf. Heb *midbar,* and *gabʿani,* cf. Heb *gibʿâ*).

Assyrian lists of booty taken from Aramean towns include grain, cattle, and sheep, and about 700 B.C. the area around Harran was occupied by small farmers raising livestock, grain, and vines, according to the "Harran Census" (Fales 1973). Unfortunately, lacking Aramaic documents, legal deeds, and any literature, it is impossible to describe their social customs in any detail.

D. Aramean Culture and Religion

The Aramean states were centered around existing cities and absorbed the remnants of LB populations. Although many cities in the W suffered in the upheavals of the 12th century, knowledge and skills survived. Aramean tribes-men assimilated much of the material culture of their predecessors and the continuing traditions of the Hittites. Of prime importance was the adoption of the Phoenician alphabet for writing the Aramaic dialects even though the phonemes did not correspond exactly. This script spread with the Arameans all over the Near East and, with the Persians, into India. The simplicity of the alphabet

enabled it to supplant cuneiform, a process already beginning in Mesopotamia under the Assyrians (Millard 1983).

1. Art of the Arameans. Palaces of Aramean kings unearthed at Tell Halaf and Zinjirli display the plan identified by scholars as the *bīt hīlani* which Assyrian kings admired and copied as a "Hittite" (i.e. western) style. A wide portico led to a long reception or throne room with a latrine and stairwell at one end and sometimes smaller rooms behind. The stairs probably rose to an upper story containing a major room above the portico lit by a series of recessed windows.

These and other important buildings were adorned with sculptures. Usually they were carved in low relief on slabs up to three feet high. Doorways were guarded by lions, bulls, or mythical beasts, and at Tell Halaf the pillars of the portico were divine or human figures carved in basalt. (Other palaces may have had carved wooden pillars which do not survive.) These carvings follow Hittite styles and were presumably made by artists trained in a few central schools. It is almost impossible to distinguish sculptures made for neo-Hittite rulers at Malatya (ancient Melid), Carchemish, or Hamath from those made for Aramean kings at Zinjirli or Tell Halaf (*CAH* 3: Plates, 65–91). Assyrian influences do appear in some cases, however, as in the Tell Fekheriye statue of Hadda-yish‹i, king of Gozan (Abou-Assaf, Bordreuil, and Millard 1982). The Melqart Stele of an unidentified Bar-Hadad and a slab carved with a sphinx found in Damascus have Phoenician models (see *ANEP*, 494). Thus no truly Aramean sculptural style can be identified.

Aramean seals are equally without distinguishing features. Both stamp and cylinder seals carry common Phoenician, Assyrian, Babylonian, or Persian motifs; only the correlation of script and name forms allow them to be identified as Aramean (Bordreuil 1986: 75–107 shows good examples).

Carved ivory panels decorating wooden furniture found at Assyrian and Syrian sites (Nimrud, Tell Halaf, Tell Ta‹yinat, Hamath) share a somewhat heavy style which is comparable with the neo-Hittite stone carving and may indicate a school of craftsmen at home in N Syria, perhaps at Hamath. In contrast, plaques of finer, more elegant appearance, with evident Egyptian models, may stem from a workshop in Damascus (Winter 1976; 1981). Both styles are local adaptations of motifs current elsewhere.

No specifically Aramean metalwork or jewelry can be isolated, although some bronze bowls found at Nimrud show similar artistic forms to the S Syrian ivories and have been claimed as "Aramean Art" (Barnett 1967). In pottery the red burnish known in early Iron Age Palestine is widespread among Aramean settlements, but its origin is not yet known.

2. Aramean Religion. Scattered Aramean inscriptions, rare references in the OT and cuneiform texts, later recollections, and the evidence of personal names are the only sources for knowledge of Aramean religion during the time of the native kingdoms. More extensive information from the Persian and Hellenistic eras (notably from the Elephantine papyri and the Palmyrene inscriptions) may echo earlier phases, but only very careful investigation can separate the concepts of different periods.

Each city had its own pantheon and patron deity, sometimes tied to the ruling family (as Rakkab-el at Zinjirli). However, Hadad or Hadda was the most prominent deity and patron of the kings of Damascus who called themselves Bar-Hadad, "Son of Hadad." He had a temple in Damascus—probably where the Umayyad Mosque stands—where he was also known as Ramman, "the Thunderer" (Greenfield 1987). Whether he or El, the supreme god, was known as Be‹el-šamem ("lord of heaven") is unclear. Be‹el-šamem was the one who gave victory to Zakkur of Hamath, advising him through prophets and oracles, yet Zakkur erected his stele of thanksgiving to El-wer, his patron, a form of the god Hadad. In the N the moon god was prominent, Harran being his ancient seat. He was known either by his West Semitic name Šahr, or by the Aramaic form of the Babylonian moon god Sin, Si›. Other gods named include Šemeš, the sun; Rešep, god of plague; Ba‹alat; ‹Atar (earlier Athtar); and ‹Atta (earlier ‹Anat). All of these divinities were indigenous; the Arameans only adopted them and made certain culture-specific changes. Others were adopted from Assyrian and Babylonian: Nabu, Našuh (Nusku), (N)Inurta, and Nergal. In the Sefire treaty the divinities invoked include several pairs, El and ‹Elyon, Heaven and Earth, Day and Night. These pairs which are apparently sometimes hypostatizations, but not necessarily in male and female

oppositions (*ANET,* 659). Personal names often reveal the traditional or popular attitudes to the gods (see Fowler 1988).

Temples and shrines certainly existed, but so far, excavations reveal little concerning them. The small temple beside the palace at Tell Taʿyinat, although built in a neo-Hittite town, may indicate that the simple plan of entry, main hall, and shrine, inherited from the 2d millennium, was normal. There is no doubt that hilltops and springs must have been sites for pilgrimage and worship. Prayers and vows, festivals with communal meals, and celebrations of the dead are known from various Aramaic texts.

ARAN (PERSON) [Heb *ʾarān* (אֲרָן)]. A clan name associated with tribal groups living in the region of Edom and mentioned in the genealogy of Seir the Horite. These peoples, not to be confused with Hurrians, inhabited that area prior to the coming of the Esau clans, a more aggressive people who subsequently dispossessed them (Deut 2:12–22). Their designation as "cave dwellers" may be a reflection of their true condition, or it may be a disparaging remark by their conquerors. Aran is listed as the second

of the two sons of Dishan, and he is thus the grandson of Seir. The name appears in this form in both Gen 36:28 and in the matching genealogical clan list in 1 Chr 1:42. Aran may be a variant of the name OREN, a man (clan name) mentioned in the genealogy of the tribe of Judah in 1 Chr 2:25 as the son of Jerameel.
VICTOR H. MATTHEWS

ARARAT (PLACE) [Heb *ʾărārāṭ* (אֲרָרָט)]. A country located in eastern Asia Minor which flourished from the 9th to the 6th centuries B.C.E. Its center was near Lake Van and its boundaries (uncertain at times and places) extended into modern Iran, Iraq, Russia, and Turkey. A conservative estimate of its area is roughly that of the state of Kansas (ca. 82,000 sq. mi.) and the maximum estimate is about 200,000 sq. mi. It was within the "mountains of Ararat" that, according to the biblical account (Gen 8:4), Noah's ark came to rest. A specific peak is not mentioned, and the modern designation "Mt. Ararat" does not occur in Scripture. (See ARK, NOAH'S.)

Jeremiah uses the term to designate a large geographical area when he speaks of "kingdoms" being summoned by the deity: Ararat, Minni, and Ashkenaz (51:27). Similarly, the author of 2 Kgs refers to assassins fleeing to "the land of Ararat" (19:37; cf. Isa 37:38). Assyrian records often refer to the same area as a country called Urartu.

A. The History of Ararat/Urartu

The term, of Assyrian origin, seems to be geographically descriptive ("mountainous country"?) rather than ethnic, and first occurs in the records of King Shalmaneser I (early 13th century, B.C.E.). He used it to refer to a collection of eight political entities situated southeast of Lake Van, against whom he mounted a successful military campaign. His son (Tukulti-Ninurta) refers to the same area as "the lands of Nairi" and mentions forty-three local rulers whom he defeated there. For a while, the terms "Urartu" and "Nairi" are used concurrently, but finally the more comprehensive geographical term (Urartu) predominates. Natives of the area, however, prefer the designation "the land of Biainili," and only one known inscription refers to it as "Urartu."

By the late 9th century, a unified Urartian state emerged under the rule of King Sarduri I, whose dynasty was to continue for the next two centuries. Mutual defense against Assyrian incursion may have contributed to the process of unification (Zimansky 1985: chap. 4). Since the country was situated at the junction of major mountain ranges (Pontic, Zagros, and Caucasus), multiple access was available to the potential invader through valleys. At the same time, the partitions of the area, created by high ridges, insulated it from sustained foreign control.

Expansion, especially to the SW in order to control trade routes and to gain access to the Mediterranean, brought resistance from Assyria, beginning with Sarduri's predecessor, Aramu. Shalmaneser III was forced to campaign against him, and then depicted his activities on the huge bronze gates of the city Imgur-Enlil (modern Balawat), SE of Nineveh. This outstanding example of Assyrian art shows, in successive registers, not only the victorious activities of Shalmaneser's army, but also the nature of Urartian dress, weapons, and valuables which were seized.

At the zenith of their country's power, Urartian monarchs pursued a vigorous program of building which included towns, temples, massive citadels, and irrigation projects (including an aqueduct fifty mi. in length). Financial support came from the natural resources of the area (metals, salt, agricultural products, and horses). Objects of Urartian origin have been found as far afield as Greece and Italy. Manpower for the construction projects was provided by thousands of prisoners who had been captured through the conquest of surrounding territory.

The native hieroglyphic script was inadequate for the needs of a rising bureaucracy and of international diplomacy, and Assyrian cuneiform script was adopted for such purposes. Similar borrowing is evident in Urartian literary style, in the design of military equipment, and in the arts.

An Assyrian revival, under the energetic Tiglath-pileser III (744–727 B.C.E.), included the recovery of territory that had been lost to the Urartians in Syria. Sarduri II lost a major battle (743) but was not pursued into the homeland. In 735, however, the Assyrian king laid seige to the Urartian capitol, Tushpa, on Lake Van. The fortress proved impregnable, but the devastation of the surrounding territory weakened

Urartian power and led to the loss of surrounding vassal states. Only with difficulty did the next ruler, Rusa I, succeed in restoring the state, even as the Assyrians were preoccupied with internal problems.

Another Assyrian resurgence began with Sargon II (721–705 B.C.E.), who, in 714, regained territory all along the S and W border of Urartu and even invaded the SE part of the homeland. He reports that he laid waste pastures, agricultural land, and irrigation projects, as well as capturing the sacred city of Musasir and carrying off the statue of the national deity, Haldi. He lists plunder in the amount of a ton of gold, 10 tons of silver, 109 tons of bronze, and more than 300,000 other items (Piotrovsky 1969: 112). Sargon also depicted aspects of his campaign, in massive relief, on the walls of his palace at Dur-Šarrukin (Khorsabad). King Rusa of Urartu, overcome with remorse, committed suicide. Nonetheless, the Urartian state remained intact, even if severely chastened. Restoration began immediately under King Argišti II and his son Rusa II. This included (usually) friendly relations with a massive influx of nomadic tribes from across the Caucasus Range, initially the Cimmerians [Heb *gōmer*] and then the Scythians, much to the consternation of the Assyrians. (Eventually, the Cimmerians skirted Urartu to the NW and settled in central Asia Minor.)

The building of new towns and massive fortifications characterized Urartian royal activity during much of the 7th century, and in this they were so successful that the Assyrians (with troubles of their own) did not desire to renew hostilities.

The end of the Urartian state came swiftly, and from an unexpected source. The Medes, residents of what is now NW Iran, had joined with the Babylonians in bringing the Assyrian Empire to an end. They destroyed the old capital at Ashur in 614 B.C.E. and the new capital at Nineveh in 612. (It is slightly later, in 594, when Jeremiah attests to the existence of the Urartian state, as cited above.) The Medes, assisted by Scythians, then mounted a massive campaign about 585 B.C.E., sweeping over the Urartians and Cimmerians, on their way to battle the king of Lydia, in W Asia Minor. Shortly thereafter, the area was incorporated into the empire of the Persians (see Fig. ARA.03).

A population element from the SW (mentioned as early as the 7th century by King Sarduri II as "Arme") moved into the former boundaries of Urartu, mingling with the local population. Thus Darius the Persian, reporting his conquest of the area (ca. 520 B.C.E.), refers to it as "Armenia," a designation that endures to the present day. However, the older designation (Urartu/"Ararat") was retained for one of the NE subdivisions. Thus, St. Jerome (4th century, C.E.) can remark that "Ararat is a region in Armenia on the Araxis [River]." This shift in terminology has produced a modern confusion about the location of the biblical "mountains of Ararat" (Gen 8:4) and the landing place of Noah's ark.

B. "Mount Ararat" and Noah's Ark

Within the Araratic subdivision of Armenia (39°42´N; 44°18´E) is a spectacular and isolated mountain, nearly 17,000 feet in elevation, which the Armenian population called Masis. It is now known by the Turks as Büyük ("mount") Ağri Dağ. Around the 11th–12th centuries (C.E.), the tradition developed that it was the landing place of Noah's vessel, and thus modern "ark searchers" have come to call it "Mount Ararat." Claims have been made, without foundation, that remnants of the biblical craft are still to be found there. (See NOAH AND THE ARK.)

Since the ancient kingdom of "Ararat" was much more extensive than the Armenian subdivision, early Jews, Christians, and Muslims sought the ark's landing place on the southern border where the mountains first arise from the Mesopotamian plain. The area of choice was called Qardu (n), and hence the Aramaic and Syriac versions of the Bible render Gen 8:4 as "the mountains of Qardu." Greek and Latin writers refer to the area as that of the Karduchi-people or as Gordyaea (the consonants *g, k,* and *q* easily interchange in these languages). In Turkish, the specific peak is known as Cudi Dağ, and atop its peak Nestorian Christians had erected several monasteries, including one at the summit known as the Cloister of the Ark. Later, the Muslim conquerors erected a mosque at the site and claimed to have removed enough wood of the ark to construct another mosque at the base of the mountain. To them, the mountain was known as Jabal ("mount") Judi, a designation in the Quran for the landing place (11:44). Even in recent times, persons of various faiths gathered annually atop this peak to commemorate Noah's first sacrifice after leaving the Ark (Bell 1911: 38).

ARATUS (PERSON). A Stoic poet of Soli in Cilicia (315–240 B.C.E.). A portion of the opening invocation to Zeus from his astronomical poem *Phaenomena* is quoted in the speech of Paul at the Areopagus (Acts 17:28): "For we are indeed his [God's] offspring." *Phaenomena,* Aratus' only completely extant poem, was widely known and liked in the Roman world; it was translated into Latin by Cicero, Caesar Germanicus, and Avienus. The latter two of these translations survive, along with fragments of Cicero's.

HERBERT G. GRETHER

ARAUNAH (PERSON) [Heb *ʾărawnâ* (אֲרַוְנָה)] Var. ORNAN. A Jebusite (non-Israelite native of Jerusalem) who sold David a threshing floor on which the king erected an altar (2 Sam 24:16–25 = 1 Chr 21:15–27). This story established the sanctity of what would become the site of Solomon's temple (1 Chr 22:1, 2 Chr 3:1) by asserting that it was the place where the angel of pestilence had stopped to spare Jerusalem and that David's sacrifice there had averted the epidemic (2 Sam 24:16, 25). The narrative also served to legitimate the temple's location on Jebusite soil by emphasizing that David had purchased the threshing floor in proper legal form and that he had done so at the command of God's prophet, Gad. If historical information can be derived from this sanctuary legend, a possibility denied by Fuss (1962: 164), it may reflect David's tolerant assimilation of the Jebusite elements within his new capital and respect for their property rights outside the walls of the city. It might also indicate that David made some sort of provision for the temple his son would build.

Both Araunah and his threshing floor have been the focus of intense scholarly interest. His puzzling name occurs in several different variants: as Awarnah and Aranyah as well as Araunah in the MT tradition of 2 Samuel 24, as Ornan in Chronicles, and as Orna in the LXX and 4QSam[a]. The name has been explained as the Hittite word for "aristocrat" and more believably as the Hurrian term for "lord." Such suggestions indicate that Araunah was a title rather than a personal name. This observation, coupled with the apparent designation of Araunah as "king" in the MT of 2 Sam 24:23, have led to the opinion, at least as old as Luther, that Araunah was the last Jebusite king of Jerusalem. One scholar has even identified him with Uriah the Hittite (Wyatt 1985: 41–49). It has also been suggested that his "threshing floor" was already a Jebusite holy place and that David took it over for the worship of Yahweh. According to this hypothesis, elements of a pre-Israelite sanctuary legend featuring Araunah as the cult founder can be traced within the present narrative (Rupprecht 1976: 5–17). The disturbed state of the text of 2 Samuel 24 makes it difficult to assess these theories.

The version of this story in 1 Chronicles describes Araunah (Ornan) as a further witness to the angel's appearance along with four of his sons.

RICHARD D. NELSON

ARBA (PERSON) [Heb *ʿarbaʿ* (אַרְבַּע)]. Presented alternately as the greatest of the Anakim (Josh 14:15) and as the father of Anak (Josh 15:13; 21:11). It is unlikely, however, that Arba, which means four, is a personal name. The LXX treats Arba as the name of the principal city of the Anakim and not as the name of its most renowned citizen. Various suggestions for the meaning of Kiriath-arba, the ancient name of the city of Hebron, have been proposed: "city of four clans," "city of four districts," "city of four famous persons." (See Soggin *Joshua* OTL; Miller and Tucker *Joshua* CBC; Noth *Joshua* HAT.)

PAULINE A. VIVIANO

ARBATHITE [Heb *ʿarbātî* (עַרְבָתִי)]. A gentilic noun, possibly derived from the place name "Arabah" (Heb *ʿărābāh*) (2 Sam 23:31 and 1 Chr 11:32). This place name may be associated with the Arabah (Heb *ʿărābāh*), that is, the Rift (or Jordan) Valley. Applied to one Abi-albon/Abiel in the list of DAVID'S CHAMPIONS, the term "Arbathite" would designate this warrior as an inhabitant of the Arabah. Another, perhaps better, possibility is that Arbathite refers to an inhabitant of Beth-Arabah (M.R. 197139) (Heb *bêt-ʿărābāh*), a village on the border of Judah with Benjamin (cf. Josh 15:6, 61; 18:22; also, LXX Josh 18:18: *Baitharaba*).

D. G. SCHLEY

ARBATTA (PLACE) [Gk *Arbatta* (Ἀρβαττα)]. Arbatta's only historical mention is in connection with the successful attacks by Simon Maccabaeus against the heathens (1 Macc 5:23). This passage reveals only three certain identifications: Arbatta was N of Jerusalem, S of Ptolemais, and contained a Jewish constituency—perhaps a strong minority. Simon Maccabaeus, the Hasmonaean leader, assisted the "Jews of Galilee and Arbetta" in their S journey to Judea. Suggestions for Arbatta's location include: El-Bateiha, the plain N of the Sea of Galilee, the Arabah, and the toparchy of Akrabattis. The latter is an erroneous association (1 Macc 5:3) and the first two are within the boundaries of Hasmonaean Galilee—an inconsistency with the text. "From Arbatta" may likely be a scribal mistranslation of "from Narbatta." Narbatta, a Jewish enclave in Hasmonaean Caesarea, fits the context of the apocryphal account. The district was inland and on the logical route of Simon, i.e. from Ptolemais, around Mt. Carmel, through the W edge of Galilee, proceeding along the coastal route and then ascending to Jerusalem (Goldstein *1 Maccabees* AB, 300, 533).

JERRY A. PATTENGALE

ARBELA (PLACE) [Gk *Arbela* (Ἀρβελα)]. A city in Galilee captured from Judah in 160 B.C. Demetrius I Soter (Seleucid ruler 162–150 B.C.) sent Bacchides and Alcimus to Judah to battle Judas, eventuating in his death (1 Macc 9:22). The Syrian army departed from Antioch (Josephus, *Ant.* 12.11.1 §421) and came to Arbela in Galilee. 1 Macc 9:2, however, says they traveled "by the road which leads to Gilgal." Goldstein (*1 Maccabees* AB, 372) follows Josephus and reads "*galgala*" as "Galilee," instead of "Gilgal." This reading is appropriate since Greek scribes wrote "*galgala*" for "Galilee" at Josh 22:10 and "Gilgal" for "Galilee" at Josh 12:23 (Goldstein *1 Maccabees* AB, 372).

Arbela (M.R. 195246), probably the same place as Beth-Arbel in Hos 10:14, has long been identified with the unexcavated ruins at the modern village of Irbid, which sits on the SE side of the Wadi Hamam, with a row of caves on the opposite face of the ravine (Grove *SDB,* 148). Josephus says that Bacchides besieged and captured Jews who had fled (presumably from Arbela) into nearby caves (*Ant.* 12.11.1 §421). The full designation of the place of battle in 1 Macc 9:2 is "Messaloth in Arbella." The Heb word *mĕsillôṯ* refers to a raised way, often a highway (but never a city street) or stairs. It is assumed that the "*Messaloth*" of 9:2 was the name for the caves in the vicinity of Arbela. Josephus mentions the caves again as the hideout of robbers (*Ant.* 14.15.4 §415; 14.15.5 §422–28), who were extracted from the caves with hooks when Herod had his men lowered over the face of the cliffs. Josephus also reports that he fortified Arbela (*Life* 37 §188) and held a conference of Jews at the village (*Life* 60 §34).

Tedesche, S., and Zeitlin, S. 1950. *The First Book of Maccabees.* New York.

PAUL L. REDDITT

ARBITE [Heb *ʾarbî* (אַרְבִּי)]. A gentilic noun designating Paarai, one of David's champions (2 Sam 23:35). Arbite is probably derived from the place *ʾărāb,* in the hill country of Judah (Josh 15:52).

D. G. SCHLEY

ARCHAEOLOGY, SYRO-PALESTINIAN AND BIBLICAL. Syro-Palestinian, as well as "biblical" archaeology, have been periodically surveyed by several specialists, including W. F. Albright

(1938, 1951, 1969), G. E. Wright (1947, 1958, 1969a, 1969b), P. W. Lapp (1969), A. E. Glock (1985, 1986), W. G. Dever (1974, 1976, 1981, 1985, 1988, fc.b.), Toombs (1987), and P. R. S. Moorey (1981). The present essay will attempt to update the discussion by describing the current "state of the art" with special reference to: (1) the development of this branch of archaeology as a discipline; (2) the elaboration of its theoretical position since ca. 1970; and (3) the distinctive approach of the American "school." Since the purpose of this article is general orientation, the reader will more easily find the *results* of recent archaeology under other entries on specific sites, periods, and topics. Nor will we treat in much detail recent advances in archaeological field *method* (which in most discussions has meant simply excavation technique), since that has been adequately done elsewhere, and indeed a consensus has now been reached on what constitutes good field archaeology (see Dever and Lance 1978; Dever 1980b, 1985; Lance 1981; but cf. Harris 1979, Chapman fc. for still newer techniques).

A few words of explanation may be in order regarding what could seem a narrow and overly speculative approach.

1. The overriding emphasis here on theoretical trends is deliberate and programmatic. Even though it has infrequently been attempted, it is only by placing Syro-Palestinian and biblical archaeology in their changing conceptual framework that we can really appreciate what is happening today. Archaeology is not merely an antiquarian pursuit, the discovery of fascinating relics; it is an intellectual inquiry, one that seeks to penetrate and illumine human experience in the past. Thus *theory*—by which we mean not "speculation," but the basic way in which the discipline of archaeology sees itself—is clearly fundamental.

2. No apology is made, either, for emphasizing the American intellectual horizon. This is not to assert that American contributions have been pivotal (although they have), but simply to acknowledge that this article is primarily directed to an audience that is largely American. Furthermore, there really is no such thing as Syro-Palestinian or "biblical" archaeology per se. Each of the various "schools" that obviously exist, whether American, European, or Middle Eastern, is the product of a distinctive cultural and social environment, in some ways unique, each constantly changing. We shall therefore seek to explain *why* archaeology has taken the particular form that it has in recent developments in America, as well as predict where the discipline may be headed. (Hereafter we shall use the term "Syro-Palestinian archaeology" for the overall discipline, relating it, of course, to biblical studies where pertinent.)

———

A. The Maturation of the "New Archaeology"

The first trend we wish to highlight has, according to some scholars, virtually revolutionized our field. In the past decade or so, several treatments have analyzed the somewhat belated impact of the "New Archaeology" of the 1960s in Americanist circles on our branch of archaeology (see most explicitly Dever 1976, 1981, 1985, 1988; Glock 1985; Toombs 1987). Since trends in that direction are by now well established (indeed they are dominant), it will be sufficient to summarize them here. Beginning on

American digs of the late 1960s, various of the following theoretical and methodological tenets, mostly pioneered by New World archaeologists in America, had come to influence research design, fieldwork, and (to a lesser degree) analysis and publication of material. Let us look at them in turn, assessing in each case how far we have come.

1. A Multidisciplinary Approach. This grew out of the attempt to retrieve more than simply architectural and ceramic phases, which had been the conventional foci. We began to pay attention to floral and faunal remains, traces of past subsistence systems, evidence for environmental change, and indeed *all* data on material culture that by chance had been preserved in the archaeological record. That meant that alongside traditional stratigraphers and ceramic experts (and of course, biblical historians), expedition dig staffs included colleagues from many branches of both the social and the natural sciences. Typically one might find geographers, geomorphologists, climatologists, paleobotanists and paleozoologists, physical and cultural anthropologists, historians of technology, computer programmers, and still other specialists in fields formerly thought quite remote from archaeology.

The first multidisciplinary approaches at Gezer and elsewhere were, of course, purely pragmatic, rather than representing any far-reaching theoretical reformulation. The new look remained tentative and frankly experimental for many years, and demonstrably superior results are still not available in fully digested and integrated final reports. Nevertheless, the impact of the multidisciplinary approach is probably stronger than that of any other aspect of the "new archaeology," and the commitment to it greater. This is seen particularly in vastly more sophisticated research design. The proposals from Syro-Palestinian (and NE) archaeologists that come up for review in committees of the American Schools of Oriental Research, the National Endowment for the Humanities, or the National Geographic Society are now routinely multidisciplinary (and, of course, would not be funded otherwise). The best of these proposals measure up to the theoretical standards of modern archaeology anywhere. This is all the more impressive, since only 15 years ago our branch of archaeology was often dismissed by other archaeologists as hopelessly parochial, naïve, and amateurish. (One recalls Sir Mortimer Wheeler's famous comment: "Palestine, that perennial example of bad field archaeology.") It is a sign of our coming of age that we are finally able to compete successfully for both approval and financial support, even from secular circles. It is probably the adoption of a multidisciplinary approach, more than any other single change, that has helped to bring Syro-Palestinian archaeology into the mainstream.

The new field methods that the multidisciplinary approach brought into vogue were often essentially simple, but their results were revolutionary. They included principally fine-sieving, froth flotation, and palynology (the analysis of pollen grains) for the identification of plant and animal remains, and thus of ancient climate, subsistence, diet, and the like (for other tools, see A.3). Among American multidisciplinary projects of high caliber in the 1970s–1980s, we might single out, in Israel, the Central Negev Highlands Project of W. G. Dever and R. Cohen; the Shema-Meiron-Nabratein project of E. M. Meyers, C. Meyers, and J. F. Strange; the Lahav excavations of J. D. Seger; the Shiqmim excavations of T. E. Levy; and the joint project of S. Gitin (with T. Dothan) at Tel Miqne. In Jordan, we would note the Bâb edh-Dhrâ‹ excavation of R. T. Schaub and W. E. Rast; the Madeba Plains project of L. T. Geraty and others; the ‹Ain Ghazzal excavations of G. Rollefson; the Khirbet Iskander excavations of S. Richard and R. Boraas; and the Tell el-Hayyāt excavations of S. Falconer and B. Magness-Gardiner.

2. An Ecological Orientation. The employment of multidisciplinary staffs inevitably broadened the scope of Syro-Palestinian archaeology. At first, this was largely to accommodate the diverse theoretical interests of staff specialists, but gradually larger questions were asked of the archaeological enterprise itself. Many of these, and especially those that appeared most amenable to archaeological investigation, centered around the fundamental question of the site's (and therefore, the culture's) relation to the environment. Previously, individual archaeological sites had been excavated as phenomena in themselves, with little regard for their relationship either to each other or to their settings. (Some Palestinian sites might as well have been in Nebraska, the way they were dug and published.) Most excavators seemed to assume that intersite and environmental relationships were self-evident, others that they were unworthy of consideration. But the failure was probably due more to Syro-Palestinian archaeology's traditional

historical (i.e., biblical) orientation, so that explanations of cultural change had been sought in ideological, rather than in material factors. Soon, however, borrowing the "new archaeology's" dominantly anthropological and *ecological* orientation brought about the recognition that any culture's distinctive form may be largely (although, of course, not exclusively) due to economic factors, and these in turn are heavily conditioned by the natural environment. In the newer view, culture is an adaptation to such factors as geographical situation, climate, proximity to natural resources and trade routes, and the availability of raw materials. Thus, while rightly eschewing either historical or economic determinism, Syro-Palestinian archaeologists in the 1970s began to study sites in their larger setting, both cultural/historical and natural.

The major research strategies that evolved entailed more surveys and excavations carried out on a regional scale; the comparative study of changing settlement types and patterns of distribution, often using tools developed by economic geographers (such as rank-size hierarchies, Central Place Theory, or other forms of locational analysis); attempts to reconstruct ancient climate and subsistence systems, including technological adaptation; and the first serious demographic projections yet done in our field. All of these questions were not pursued with equal urgency on all projects or for all periods. But the general orientation has proven so pervasive and so salutary that one can scarcely imagine the field before its introduction. The environmental data now being accumulated, when fully processed and published, will open up vistas undreamed of a generation ago and will allow the first comprehensive grasp of many periods and problems. All of the excavation projects mentioned above in Israel and Jordan, as well as surface surveys too numerous to mention, would be examples of the newer ecological orientation in fieldwork. In interpretation, a series of articles by both Israeli and American archaeologists has dealt with demographic issues in periods from the Early Bronze Age through the Roman period.

3. Systems Theory. Closely related to both the multidisciplinary and ecological approaches is the employment of some of the basic principles and categories of several disciplines commonly grouped under the rubric of General Systems Theory. The fundamental postulate is that the "organized state" consists of a number of adaptive subsystems, the whole being greater than the sum of its parts. These subsystems are all organically interrelated in a delicate but dynamic and constantly changing equilibrium, so that a change in any part of the system will have an effect on the rest of the system. Depending upon the balance of inputs and outputs of information and energy, as well as the action of "feedback loops" and "deviation amplifying" or "reducing" mechanisms, systems may succeed in maintaining "homeostasis," evolve to higher levels of integration, or collapse altogether (cf. orientation in Dever 1989).

While originally applied to the investigation of biological phenomena, systems theory has increasingly been adapted to many aspects of humanistic studies, including economics, data management, social planning, and the like. A recent citations analysis (Schiffer 1978) has shown systems theory now to be the dominant theoretical approach in Americanist archaeology. As applied to archaeology, the systemic paradigm might operate on the following assumptions: (1) culture is a uniquely human adaptive response to the natural environment; (2) culture is specific to particular conditions in time and space, collective, patterned, cumulative, transmittable; (3) culture is thus "systemic," i.e., it is the total adaptive system, comprising the interaction of a number of subsystems, such as settlement location in relation to natural habitat, technology, economic strategies, kinship and social structure, political organization—as well as ideology (including art, philosophy, and religion). Obviously, the operations of all these subsystems do not leave equal traces in the archaeological record (thus the difficulty of reconstructing philosophy and religion in the absence of texts). Yet insofar as material remains are not mere chance, but reflect patterned human thought and action, the archaeological record contains the "material correlates of behavior." Therefore archaeologists should seek to discern the nature, effect, and interaction of *all* the various subsystems that may leave identifiable physical remains. Fortunately, the multidisciplinary and ecological approaches noted above provide us with the necessary tools to exploit the archaeological record better. In summary, if the evolution of culture (not to mention the elucidation of the cultural process) is a major goal of archaeology, and not merely the writing of a narrow sort of "political history," then archaeologists *must* be systemic in their approach.

Thus far the theory and rationale may appear to be impeccable. The implementation, however, is another matter, and one that may confront seemingly insurmountable barriers. Among the difficulties are the incomplete nature of the archaeological record as preserved in a typical Middle Eastern mound; the daunting prospect of inferring cultural patterns from "mute" artifacts; and the sheer intractability of human social systems, past or present. Nevertheless, the systemic approach has sufficient practical and heuristic advantages that it is likely here to stay. If nothing else, paying attention to the subsystems noted above is a more efficient approach, in that it allows us to organize our research better, according to more convenient categories; to collect more varied data; and to undertake analysis more systematically, so as to answer specific questions regarding society and economy. At the present stage of research, we have been most successful in recovering settlement patterns and subsistence systems for ancient Palestine, with growing potential for demographic studies. The reconstruction of social organization is still in the beginning stages, although some useful evidence is now at hand. Ideology and religion have been neglected and are admittedly the most formidable subsystems to fathom, especially for the preliterate periods. But even here progress is being made, especially in illuminating the popular cult. (On the latter, see C.3 below.) One barrier is that the *enormous* quantity of data now being generated by the multidisciplinary and systemic approaches simply cannot be managed, much less published, with existing systems. Computerization of archaeology will obviously be necessary, both in basic recording of information and in multivariate statistical analysis, yet predictions made some years ago as to a "computer revolution" in our branch of archaeology (as Dever 1976) have not yet materialized.

The remaining trends that characterized American "new archaeology" in the 1960s and 1970s were: (4) *the use of "ethnoarchaeology,"* or analogies drawn from still-surviving primitive cultures in order to explicate archaeological remains from the remote past; (5) *dependence upon evolutionary models,* drawn from parallels in biological evolution, to explain cultural change, with emphasis, however, on a multilinear trajectory, on the distinctive nature of human behavior, and on human evolution; (6) *insisting on exploiting archaeology's full potential for explaining human behavior,* as well as elucidating the (presumably) universal character of the cultural process, as discerned through comparative and cross-cultural analyses; and (7) *the preference, in some circles, for an "explicitly scientific," or "nomothetic" approach,* which attempts to apply the methods of the natural sciences (especially as seen in the philosopher of science, Carl Hempel), with the major goal presumed to be the formulation and testing of universal "laws" of the cultural process.

These latter four trends, while exerting some influence upon Syro-Palestinian archaeology, have not been nearly as determinative as the first three. Ethnoarchaeology, for instance, despite its obvious potential and its common sense application on a small scale from the very beginning, has had little sustained attraction. This may be partly explained by the lack of anthropological and ethnographic training on the part of practitioners in our field, partly by a colonialist (and later a local nationalist) disdain for "native customs" that appeared too primitive to shed light on ancient high civilizations. Or again, "evolution" in any form was anathema to most archaeologists in our field, given their frequent biblical background (although the bias was more a matter of instinct, or even ignorance, than of conscious rejection).

The behavioralist-processualist and nomothetic schools were simply too esoteric to win many followers. Many might have objected (had they paid any attention at all) that the realm of human nature, unlike the biological realm, does not easily conform to any "laws," certainly not to those subject to verification by predictability. There is also the problem of whether culture, i.e., in the sense of a universal phenomenon, can be adequately described, much less "explained." Above all, there is room for doubt as to whether the archaeological record preserves enough evidence, even when fully exploited, to enlighten us sufficiently on the past cultural process, much less the present. For many, the basic question would have been whether archaeology can aspire to true "scientific method." (The question should have been *which* scientific method; see C.2 below.) Meanwhile, the current discussion in archaeology has been deflected somewhat away from the behavioralist and nomothetic schools by the trenchant critique of Ian Hodder (1986) and his call for a "post-processualist" approach that may be more closely aligned again with historical

archaeology. Even more radical is the recent Neo-Marxist work of Shanks and Tilley (1987), arguing for a "post-modern," socially aware archaeology—a view so revolutionary that reviewers have described the impact of the work as "the loss of innocence." Thus the "new archaeology" of the 1970s–1980s is becoming *passé* before we have even caught up with it.

Underlying much of the skepticism in our own field, one suspects, was the assumption (albeit unspoken, or even unconscious) that ancient Palestine, especially Israel in the biblical period, was unique—somehow "superhistorical," not governed by the normal principles of cultural evolution. In its cruder form, this is simply religious fundamentalism, a rejection of "secular" history. But even in more sophisticated versions, it cannot escape the charge of special pleading. In any case, the real (and quite plausible) reasons for misgivings regarding these latter aspects of the "new archaeology" were ignored in favor of particularist or "historical" explanations, in an apparently unquestioned belief that the latter were sufficient.

Each of the above tenets of New World archaeology had varying influence in our field. Furthermore, they were often borrowed rather naïvely, with little appreciation for the difficulty of applying them to the mounds of the ANE, with their long history and exceedingly complex stratification. Nevertheless, there is little doubt that it was precisely the major trends of American "new archaeology" in the 1960s that provided the theoretical framework, such as it was, for Syro-Palestinian archaeology as it developed in the 1970s, and even more in the 1980s (see further Dever 1981, 1985; Glock 1985). It would be gratifying to think that the "revolution" was born of inner intellectual ferment, as our disciple matured, but that was not the case (see C.2 below).

B. Toward an Independent Discipline?

The several trends that we have just discussed suggested to some that by the early 1970s American Syro-Palestinian archaeology was moving out from under the domination of biblical studies that had characterized the Albright-Wright era, toward status as an independent discipline. It was clear that the domination of the classic "biblical archaeology" movement was threatened not only by external developments, in the form of the challenge of the "new archaeology," but also by internal weaknesses, both historical and theological. In particular, the goal of utilizing archaeology to provide historical validation for such episodes in the biblical tradition as the patriarchal and conquest eras was not met. As D. N. Freedman—one of Albright's most prominent disciples, and an eloquent advocate of "biblical archaeology"—recently admitted with admirable candor (1985: 6):

> Albright's great plan and expectation to set the Bible firmly on the foundation of archaeology buttressed by verifiable data seems to have foundered or at least floundered. After all the digging, done and being done and yet to be done, how much has been accomplished? The fierce debates and arguments about the relevance of archaeology to the Bible and vice versa indicate that many issues remain unresolved. Can anyone say anything with confidence about the patriarchs or the patriarchal age? The fact that skeptical voices now dominate the scene indicates that Albrightian synthesis has become unglued and we are further from a solution than we ever were. Archaeology has not proved decisive or even greatly helpful in answering the questions most often asked and has failed to prove the historicity of Biblical persons and events, especially in the early periods.

1. The Collapse of the "Biblical Archaeology" Movement. In retrospect, it is clear that the "archaeological revolution" envisioned by Albright and his followers simply never materialized. After a generation or so, mainstream American biblical scholarship moved away from reactionary and positivist positions such as Albright's, more in the direction of Continental scholarship—particularly of the German school, which had remained suspicious of American-style "biblical archaeology" all along. It could be argued that in America, "biblical archaeology's" demise in the 1960s coincided with the much-discussed "death of biblical theology." In any event, there were soon calls for "biblical archaeology's" replacement by a more specialized, professional secular discipline termed "Syro-Palestinian archaeology" (reviving Albright's 1938 alternate term; on the above, see Dever 1974 and many subsequent treatments, especially 1980a, 1985). There was heated opposition at first, much of it the result of semantic confusion or emotional overreaction from biblical scholars and threatened amateurs (cf. Dever 1982; Lance 1982;

Glock 1986). Nearly all archaeologists, however, especially the younger generation, but also including most former "biblical archaeologists," embraced the "new archaeology" (above) with enthusiasm. The relatively easy transition may seem surprising, but it was probably due to the fact that little intellectual or theoretical revolution was involved; the "new archaeology" was exhilarating simply because it promised freer inquiry and more exciting results (cf. Wright 1974). American Syro-Palestinian archaeology, always pragmatic, remained so, and in this lay much of its stability in a period of crisis and change.

It is beyond dispute that in the struggle of the "two archaeologies" (the term of Glock 1985) in the 1970s and 1980s, Syro-Palestinian has triumphed. The new look is evident everywhere: in typical proposals and in nearly all projects in the Middle East; in papers in the leading journals and at the national professional meetings; and particularly in the several graduate programs (see C.2), where the cutting edge of research is visible. There may be a good deal of nostalgia for the older style of "biblical archaeology" (along with legitimate concerns for preserving the biblical connection), but virtually no one in America *does* such archaeology anymore, not even fundamentalists. (In Europe and the Middle East, few ever did, so these developments may be construed largely as a chapter in *American* intellectual and religious history; cf. Dever 1985; fc.a.). What has happened can perhaps best be summarized by noting that in the past decade or so Syro-Palestinian archaeology has "come of age," although still conscious of its parentage. Emerging to dominate the field, it may be characterized as: (1) specialized, (2) professional, and (3) secular.

2. Syro-Palestinian Archaeology as a Putative Discipline. Thus the debate about "biblical archaeology" now seems over, in both biblical and archaeological circles. But can that be taken as evidence that Syro-Palestinian archaeology has become an "independent, autonomous *discipline*," as some had advocated and others now simply assume? In order to answer that question, we may suggest the following criteria by which disciplines may normally be distinguished. A field of inquiry may be said to constitute a "discipline" when it possesses: (1) a class of distinct phenomena to be investigated, and data that are pertinent to the task; (2) a coherent body of appropriate theory, from which specific methods and standards are derived; (3) a group of practitioners who have the minimum professional and academic positions needed to survive; (4) educational and training programs sufficient to replace personnel; (5) the necessary financial resources to underwrite basic, continuing research; (6) professional organizations that foster a sense of corporate identity, facilitate collaborative projects, guarantee standards, and promote the discipline's interests; (7) adequate organs for dissemination and publication of results; (8) self-conscious, well-worked-out relationships with other allied disciplines; and (9) adequate public support to enable the discipline to compete in the marketplace of ideas and institutions.

Without going into documentary detail, it may be asserted that Syro-Palestinian archaeology at its present stage of progress *does* meet all these criteria, at least in modest measure. In fact, some of these tests were met long ago, even by "biblical archaeology," and others have now been met by the earnest and deliberate efforts of the current generation to create a discipline. Thus Syro-Palestinian archaeology exists as at least a fledgling professional and academic discipline—one, however, which remains pathetically small (despite a large popular following) and one whose future is by no means secure (see C.2 below). Meanwhile, "biblical archaeology" also survives, although not as an academic discipline per se (which it never actually became). In our view, the latter is better conceived as an interdisciplinary pursuit, popular or serious, i.e., a *dialogue between* several disciplines (including, of course, Syro-Palestinian archaeology; Dever 1974, 1976, 1980a, 1981, 1985; and C.3 below). The debate over the "disciplinary" question, however, is not fully resolved. A few scholars think that Syro-Palestinian archaeology should remain a branch of biblical studies (Wright 1969a), or even specifically of "biblical archaeology" (Cross 1973). Others hold that both types of archaeology have attained or can attain full disciplinary status (Lance 1982; Toombs 1982; Glock 1986).

3. Possibilities for a Dialogue between Disciplines. The fundamental question, often overlooked in the recent debate, is not whether Syro-Palestinian archaeology is, or should be, a separate discipline (it is in any case); or whether it can still be related to its parent-disciplines, ANE and biblical studies (it must be, however that relationship is construed). Such questions reveal a serious misunderstanding of archaeology

today, and they only perpetuate sterile controversies. The misconceptions may take several forms. The most naïve is that the rationale and purpose of "biblical archaeology" (and, by extrapolation, Syro-Palestinian archaeology) is simply to elucidate the Bible, or the lands of the Bible. Scarcely more enlightened, however, is the contention of some scholars that archaeology is only the "handmaiden of history"; that archaeologists, by mastering the tools of their trade, become "mere technicians," isolated from humanistic studies; or that "professionalism" is to be decried in a discipline (that is, in other than one's own). It is worth noting that these supposedly serious objections to archaeology as a discipline come almost exclusively from biblical historians, Northwest Semitic/Hebrew epigraphers, Assyriologists, and other students of *texts,* who although highly specialized themselves, value archaeology mainly for producing literary remains (thus Cross 1973; but cf. Dever 1982, Lance 1982). These scholars seem oblivious to the equally valid historical data to be derived solely from the analysis of *material culture remains.* That is where archaeology today can make a valuable, indeed unique, contribution to humanistic studies.

Virtually all these and other objections to archaeology as a discipline may be removed simply by recalling what the original thrust of the "new archaeology" in the early 1970s was. It was not to make Syro-Palestinian archaeology "autonomous" in the sense of isolating it from other disciplines, but only to free it from its exclusive dependence upon ANE and biblical studies, so that it could develop according to its own inner dynamics, as a branch of general archaeology. From the beginning, the stress was upon the *inter*disciplinary character of all archaeology today, and thus upon the need for *dialogue* with many disciplines (see Dever 1974 and all subsequent treatments). The partners in this dialogue would still include, of course, the parent disciplines of ANE and biblical studies; but they would also include many of the other social sciences, especially anthropology, and increasingly the natural sciences. The intent was not to narrow the discipline, but to broaden it; not to cut off dialogue with biblical studies, but to promote it, this time on a new and sounder basis, with archaeology now an equal partner. Unfortunately, as we shall see, while the "declaration of independence," as well as the fresh perspective and degree of specialization that distance allowed, took place in archaeology in the past decade or so, the renewed dialogue has scarcely begun.

It may be pertinent at this point to look at the way other disciplines develop, that is, how they reshape themselves and form new alignments with allied disciplines. Here Thomas J. Kuhn's classic work *The Structure of Scientific Revolution* (rev. ed., Chicago, 1970) is most instructive. Kuhn's point of reference is, of course, the natural sciences, but his arguments are quite plausible when applied to the social sciences as well. Kuhn shows that periodic "revolutions" typically take place in a discipline not as a result of the overturning of the basic *theoretical* orientation owing either to external or internal changes, but rather as the result of largely pragmatic considerations. After a period of "normal science," during which the majority of younger practitioners happen upon a better way of doing science, there subsequently ensues a struggle between competing paradigms, in the course of which the established view is challenged but never entirely displaced. When a new majority consensus is reached, however, a new phase of "normal science" may be said to have been achieved—after which, in due time, the process will repeat itself.

On Kuhn's analogy, we may argue that the period from ca. 1970–1985 witnessed a true "revolution" in "biblical" and Syro-Palestinian archaeology. There was not then, nor has there been since, an integrated plan of action, much less the laying of a comprehensive intellectual groundwork (i.e., theory). Nor is there yet much published evidence to justify the claims often made for superior results. Finally, the "new archaeology" has not discovered for the first time the "right" way of doing archaeology, or the final truth about any archaeological interpretations. What *has* happened is precisely Kuhn's "paradigm shift," followed by a generational struggle. Elsewhere it has been argued (Dever 1988) that this development constitutes Syro-Palestinian archaeology's "fourth revolution," following the stratigraphic revolution of the 1950s–1960s. If so, then we are now entering a period of "normal science" when we can expect less controversy and more productivity as new data are generated by new research procedures. Furthermore,

since theoretical formulations usually *follow* revolutions, it is also a time for reflection and critical assessment, such as we are attempting here.

We may now return to the unresolved issue above, concerning the relationship of the "post-revolutionary" discipline of archaeology to other disciplines. The issue was often posed in this manner: Is Syro-Palestinian archaeology still to remain a branch of ANE and biblical *history,* or of *anthropology* (Cross 1973)? This, however, is a false dichotomy. Archaeology today is not a "branch" of any discipline; it is a discipline itself (above), not "ancillary" to any (i.e. subservient; cf. Lat. *ancillarius*, "relating to maidservants"). As for choosing between the two supposed alternative target disciplines, it is true that Syro-Palestinian archaeology has recently moved somewhat closer to the discipline of anthropology. This is regarded by many as salutary, since it has often been observed than on the academic scene "American archaeology is anthropology, or it is nothing." Nevertheless, archaeology today is, as we have noted, *inter*disciplinary in character, and it should draw its strength and vitality from that fact. As for the best "home" for the discipline, this has more to do with matters of academic convenience than with intellectual issues. One of Syro-Palestinian archaeology's most impressive and beneficial recent achievements is that today the discipline could be readily housed in a Near or Middle Eastern, religious studies, history, classics, or anthropology department; and certainly in one of the few archaeology departments in North America. The latter development—the establishment of nonareal, all-embracing departments of archaeology, independent of anthropology, Near Eastern, or classical departments—is perhaps the clearest indication that archaeology *is* a viable academic discipline today (see Wiseman 1980). Syro-Palestinian archaeology still draws upon ANE and biblical studies for much of its areal content, i.e., its subject matter. But increasingly it looks to the natural sciences for its analytical procedures, and to anthropology and the other social sciences for its theoretical orientation. Rather than seeking to confine archaeology within such labels as "history," "anthropology," or "science," we should celebrate its multifaceted variety (cf. also Schiffer 1988). Archaeology (like anthropology) benefits from and contributes to many other disciplines. (For the question of whether archaeology possesses a unique epistemology or methodology of its own, see C.2 below.)

C. The Shape of the Future

To use an analogy we have already implied, Syro-Palestinian archaeology is a child of venerable parents, recently "come of age." But does the young adult have a future? We may suppose so. In attempting to answer that question fully, however, we need to catalog several desiderata, all of which must be achieved in some measure if our discipline is to survive and prosper in America. Let us look first at external circumstances, i.e., the situation in the Middle East.

1. Fieldwork Abroad. It is obvious that American Syro-Palestinian archaeology—as a serious scholarly enterprise, devoted to original research and to innovative teaching—is dependent upon fieldwork possibilities in the Middle East. It is equally obvious that there are, however, many conditions that threaten our future, conditions over which we often have no control.

While American archaeologists (along with Europeans) pioneered nearly all the formative developments in archaeology in the Middle East over the past century, today they are restricted, and even excluded, in many countries. Thus there is little current American fieldwork in Turkey, Syria, Iraq, or Egypt; none in Lebanon, Saudi Arabia, the Gulf States, or Iran. Only Israel, Jordan, and Cyprus actively facilitate American excavation and research. Even in the latter three countries, however, the American role is inevitably diminishing as the national schools come to dominate the scene. These national schools enjoy formidable advantages: continual access to and choice of all the sites; the freedom to work out priorities on a national scale; logistical support of national institutions such as government departments, universities and museums, and various research facilities; a vast, largely unpublished database to which they have constant and expert recourse; hundreds of secure professional positions; and an increasingly enlightened public that at its best generates a large-scale, national consciousness of and identification with the archaeology of the region (especially in Israel) that not even "biblical archaeology" in its heyday could match. (On the Israeli school, see further Dever 1973, 1980b; Ussishkin 1982; Bar-Yosef and Mazar

1982; Stern 1987; A. Mazar 1988; and further on the Israeli and other national schools, see also Dever 1985.)

As the national schools mature rapidly, continually adopting the best of foreign methods to add to their own, they seem to lack only adequate funds and workforce. Much of the slack has been taken up, of course, by foreign and "joint projects." In Israel, for instance, most of the budget on many so-called "joint projects" is American, and nearly all the laborers are American student volunteers. But such arrangements will probably be counterproductive for us in the long run. They may provide many amateurs with the adventure of archaeology, but they are unlikely to train or help to place the necessary number of professionals needed to sustain American archaeology as an independent school. In this post-Colonial era the reduced role of foreign excavators is probably appropriate, but nevertheless it could bode ill for the future of our discipline. Some fear that we may end up spectators at a game we invented! More serious is the possibility that we shall eventually lose the capability of doing original (i.e., field) research, without which archaeology has neither control of the basic data nor the critical stance necessary for sustained scholarship. Furthermore, at the risk of sounding chauvinistic, we must insist that there are unique and legitimate *American* interests in the archaeology of the Middle East. Our intellectual and spiritual roots are there, too, and it is not unreasonable to suppose that American scholarship can serve our own interests best.

It is not primarily the growing competition with the national schools that is worrisome, however. After all, we should applaud the progress of archaeology anywhere and relish the competition. Of much greater concern are several conditions created by the fact that the Middle East is a developing area. The first is the rapid modernization and escalation of the economy throughout the area. This not only destroys thousands of archaeological sites before they are even mapped, but also makes the costs of doing both salvage and excavation work almost astronomical. The local schools can barely manage to keep up; but if archaeology has become an expensive necessity for them, it may soon be an impossible luxury for us. The second is the rising tide of nationalism and extremism in the area, often coupled with religious fanaticism, as well as violently anti-American sentiments. This obviously creates political instability, which may render local archaeology tenuous but threatens foreign archaeology with extinction. One disturbing side development of nationalism that affects archaeology, even where it is still able to plan and carry out long-term projects, is the unfortunate creation of an atmosphere where archaeology can easily be perverted to foster ethnic rivalry, or simply to serve the ends of national policy. (This trend, albeit minor, may already be perceived in a heightened interest in "pan-Islamic" archaeology in the Arab world; or in increased focus on ancient Israelite settlements in modern Israeli-occupied territories such as the West Bank, or "Judea" and "Samaria," as they are now being called.) Still more ominous is the outright opposition of some extreme elements to archaeology per se. Both the Muslim Brotherhood in several Arab countries and the ultra-Orthodox in Israel have harassed archaeologists in the field, vandalized monuments, and lobbied to outlaw excavations. If local archaeologists incur such wrath by offending traditional and religious sensitivities, we can easily imagine that foreign archaeologists may be placed in an absolutely impossible situation. Of course, one hopes that saner, more civil heads will prevail, but it is not easy to be sanguine about the Middle East today. Whatever transpires in the near future, it appears that archaeology in the Middle East will become more politicized, not less so.

The picture is not, however, entirely bleak for American archaeology in the Middle East. For one thing, we are obviously still needed and welcomed in several countries. Israel, Jordan, and Cyprus all encourage and support an astonishing number and variety of international projects, as well as many foreign archaeological institutes. The American Schools of Oriental Research, for instance, maintains flourishing and indeed expanding archaeological institutes in all three countries, as well as coordinating more than forty current American field projects. In these countries we may also take comfort in the existence of fully competent and enlightened Departments of Antiquities that are vigorously opposing all the threatening developments that we have noted above. But we must ask: what should the *American* role be in the future?

There remain a number of things that we can and should do, even if the initiative has now passed from us to the indigenous national schools. First, American archaeologists must vigilantly maintain our oft-asserted position of strict political neutrality—even at the risk of disappointing our beleaguered local friends on both side, who might welcome a warmer personal identification or emotional commitment. We must remain "disinterested scholars" in the best sense. The recent emergence of a more secular school of American archaeology should help us to avoid certain sentimental or pious motivations that have always been dangerous in archaeology, now more so. (Certainly, the typical Protestant theological mentality of many earlier archaeologists is hardly an asset in Israel today, nor is the Bible in any form in the Arab countries; cf. Dever fc.a.)

Second, the keyword should not be "competition," but "cooperation." Rather than duplicating the efforts of the national schools, we should be developing complementary projects—especially those that focus on neglected or little-known sites, periods, or problems. This will probably mean fewer large, long-term excavations of major tells, and more work with experimental methods, regional surveys, small one-period sites, and in general more of the specific "problem-solving" archaeology that is now in vogue. Not only are the expenses and logistics of such projects more manageable for foreign excavators, but the returns on the investment may be vastly superior in terms of readily published results, pertinent to the ongoing archaeological discussion. A final strategy may be to attempt fewer unilateral projects and to participate more in the cooperative or "joint" projects now being seen in Israel and Jordan. These projects pose many organizational difficulties, of course, and they sometimes offer limited opportunities for the development of the American partners, but they may be attractive, even necessary, in the future. Whatever happens, American Syro-Palestinian archaeology must remain in the field, but in the future it will need to concentrate a relatively greater proportion of its resources on *scholarship.* This will entail theoretical reformulations; creative synthesis and integration of the data; publication of past and continuing fieldwork; and above all, increasing attention to promoting the health of the discipline in America, both in terms of academic and popular support (see C.2 below).

2. The Discipline at Home. The internal factors that affect the future of American Syro-Palestinian archaeology may seem less intractable, but they are, if anything, even more formidable. Let us look initially at the practical, then the theoretical aspects (on the following, see further Dever 1982, 1985).

a. Some Practical Considerations. First and foremost, it is obvious that we must guarantee the survival of the field, which has managed rather remarkably in the past two decades or so to establish itself as a fledgling discipline. That is, *in addition* to winning over and maintaining the considerable popular support that "biblical archaeology" has always enjoyed in America, Syro-Palestinian archaeology must successfully make the final transition to professional and academic status. If it cannot do so, the entire enterprise may collapse, because archaeology has now become too complex, sophisticated, and expensive to survive solely on an amateur basis. Such support is vital (after all, "amateurs" are the truest "lovers" of all), but full-time specialists in fieldwork, research, and teaching are also essential. (Where would American archaeology be if its only clientele consisted of fascinated lay people, collectors, and a few pot hunters, i.e., it if could not support excavations, museums, and university departments of anthropology?)

Providing jobs will require retaining many essentially part-time positions in small church-related schools, in college departments of religion, or in seminaries. But it also means creating new positions, whether in university departments of Near Eastern studies, anthropology, or elsewhere, in order to supplement the few that we already have. Already relatively small but thriving graduate programs specializing in Syro-Palestinian archaeology (sic) exist at Toronto, Chicago, Harvard, Pennsylvania, Duke, and the University of Arizona. (Only the chair at Harvard is endowed, however.) At least forty Ph.D. students, of very high caliber and with considerable field experience, are in training in these programs, but it remains to be seen how (or whether) they can be placed. Clearly, the future of the discipline depends largely upon the fortunes of this up-coming generation, who embody all the ideals of the "revolution" we have sketched above, but whose careers are in jeopardy.

In addition to employment, it is clear that we also need funds for fieldwork and publications, our basic forms of research. To its credit, the "newer archaeology" has recently won substantial grants from secular

sources such as the National Endowment for the Humanities, as well as several other public and private foundations. It is absolutely essential to retain and increase such funding as archaeology becomes less directly related to religious and theological concerns, and at the same time enormously more expensive.

Related to funding, but also to other basic problems, is the necessity for publishing prompt preliminary field reports: full-scale, integrative final reports; synthetic overviews of various periods and problems; and especially interpretive treatments relating recent discoveries to biblical studies, ANE studies, general archaeology and anthropology, and other disciplines. Here we have been so negligent and undisciplined that specialists in other fields can scarcely be faulted for not keeping up with progress in our branch of archaeology or making use of the data that we regard as crucial (unpublished "data" cannot be said to be "given," or made public, in any significant sense; see further below). The complexity and expense of modern archaeology have, of course, made publication immeasurably more difficult (cf. Dever 1982, 1985), but more urgent than ever, especially if Syro-Palestinian archaeology aspires to be a truly scholarly discipline.

A final desideratum may be fundamental to all our needs, the strengthening of learned societies and professional organizations. In our case, this is primarily the American Schools of Oriental Research (ASOR), which since 1900 has effectively served the interests of both lay people and academicians in the fields of ANE languages, history, and archaeology, as well as many aspects of biblical studies (King 1983). ASOR's in-country institutes and many field projects in the Middle East have already been mentioned. Here we should emphasize that ASOR, despite its traditional character and the formidable obstacles to the full development of archaeology, has been able not only to accommodate the thrust of the newer archaeology but to facilitate it. Indeed, ASOR today has become the principal institutional spokesman for the emerging discipline of Syro-Palestinian archaeology, while still retaining its venerable biblical connection (a considerable achievement). It sponsors the majority of American field projects in the Middle East, and its annual meetings and many publications serve as the main forum for presenting the results. Furthermore, ASOR's overseas institutes have long been not only significant research centers but also stepping stones in the careers of young archaeologists who were long-time directors (Albright, Glueck, Lapp, and others). Yet ASOR has not been as successful in another area that has now become crucial, i.e., the education of the American public and the promotion of archaeology on a broader scale. ASOR has only recently begun to reach beyond biblical circles for its audience, or to lobby effectively for federal support of Syro-Palestinian archaeology (although the short-term progress is impressive). And ASOR has yet even to face the challenge of creating new professional and academic positions, which in America can probably be done only with widespread public sympathy and support. We need *urgently* to "mainstream" Syro-Palestinian archaeology and "biblical archaeology" if we are to survive in the melée of ideas and institutions in a democratic society. Our motto should be: "Out of the cloister, into the academy, and even the marketplace."

b. Theoretical Considerations. Here again we would argue that theory, while it is not necessarily prior in the sense of initially provoking changes in a discipline, is nevertheless of primary importance in sustaining ferment and growth once begun. Biblical and Syro-Palestinian archaeology, however, have always been deficient in awareness of the importance of theory and method, being practically inclined instead. Thus there is virtually no bibliography on theory and method in our field before the 1970s, and little critical discussion even now—in surprising contrast to the voluminous and lively literature in Americanist archaeology (see Schiffer 1978, esp. 1988). This lack may be explained by the rather parochial and backward nature of our discipline until recently, as well as the fact that the impetus for change has been largely derived from other branches of archaeology. The characteristic pragmatism is best seen in the fact that when "method" finally began to be treated in the literature, the discussion was largely confined to field technique, i.e., "how to dig." Thus various stratigraphic and recording methods were hotly debated in the 1970s (see Wright 1969b; Dever 1973, 1980b; Lance 1981; cf. Chapman 1986). Yet we would argue that the fundamental *intellectual* issues in archaeology, i.e., theory, have never been seriously addressed by our branch. (But see programmatic essays by Dever 1981, 1985, fc.a; Strange

1982; Glock 1985, 1986; and even as early as Wright 1974; cf. Chapman fc. for a reactionary critique, from a British perspective.)

It was apparently overlooked that method *is* theory—in the sense that the questions selected for investigation inevitably shape the manner of inquiry. Thus our indictment is not that "biblical archaeology" lacked a theoretical framework, but rather that its assumptions were: (1) drawn from issues in biblical history and theology, not archaeology; and (2) rarely made explicit, much less critically evaluated. As an example, the desire to comment upon the "historicity of the Patriarchs" may be a fruitful inquiry in *biblical* scholarship, but it hardly constitutes appropriate archaeological theory, much less a research strategy (as was assumed by a former generation). Ironically, some of the same "biblical archaeologists" who became deeply involved in developing theological hermeneutics, such as G. E. Wright, never sought to formulate an *archaeological* hermeneutic. Albright came closest, in some of his mature synthetic treatments (like *FSAC*), and especially in several candid essays late in life on various philosophies of history (sic, *not* archaeology) and their impact on his thinking (see Dever 1981; contra Chapman fc.).

We are not suggesting that interpretive issues were avoided. On the contrary, the interpretation of nearly every discovery of "biblical" and Syro-Palestinian archaeology has been endlessly discussed, in lively and often polemical disputes that have come to characterize these disciplines in the minds of many. That most controversies were never resolved, however, is due largely to the fact that the discipline never developed a truly archaeological epistemology, that is, there existed no consensus on basic interpretive method. Even as "historical" archaeology, this approach was deficient. Evidence was gathered selectively, conclusions were drawn and debated, and interpretations advanced—all on the basis of an appeal to "history" (usually some school of biblical history). But what history *was,* and how a modern historiography was possible using archaeological data, were questions scarcely raised. Rarely was it specified what was meant by "history" (except as *Heilsgeschichte,* or "salvation history"), and "archaeology" was seldom given even minimal definition. (A definition of "culture" was rarer still.)

By epistemology we mean, of course, theory and method at their most fundamental level—a theory of knowledge—without which the word "discipline" is a tragic misnomer for a field of inquiry. A properly archaeological epistemology would confront such "obvious" questions as these, among others. What is the nature of the site-formation process, both natural and cultural (i.e., what is a tell?)? How does context affect the interpretation of an archaeological find (i.e., what is a locus?)? What constitutes an archaeological datum? What is the role of analogy in archaeological reasoning? Is there a uniquely archaeological logic? How may we extrapolate behavior from artifacts? What determines culture and culture change? The list could be expanded, but the point is clear: until we have wrestled long and earnestly with such basic questions of knowledge, archaeology is likely to remain little more than treasure hunting—a collection of chance finds, miscellaneous objects, and random "facts," without reference to an intellectual framework in which they might become meaningful. (For virtually the only explicit pleas for theory, see Dever 1981, 1985; Strange 1982; Glock 1985.)

Epistemology, however, operates at a level even *more* fundamental than the interpretive: it effectively determines the quality of the data we gather. In most research, but particularly in archaeology, what we "discover" is usually not by chance but is rather the direct outcome of what we think we know, what more we are trying to find out, and how we propose to go about the inquiry. To put it another way, there are few "facts" in archaeology. There are *artifacts* which can *become* "data," but only when they are properly excavated in context, interpreted in relation to a pertinent question, and published (i.e., "given") in full. The notion that the archaeologist is an "objective" scientist, who approaches a site with a mind that is a tabula rasa, is incredibly naïve—and dangerous. We see in the dirt only what we are sensitized to see; and unfortunately, we unwittingly destroy the rest of the evidence in getting it out of the ground. Field archaeology is, after all, an unrepeatable experiment. For example, an earlier generation routinely discarded animal bones, because (as it would have been said) "we already know what people ate in antiquity." Thus unique opportunities to study subsistence were irrevocably lost, since the necessary data were not collected. The present generation, therefore, which would like to ask new questions of the data,

often cannot even formulate an adequate hypothesis until it gathers a better set of data. Archaeology can progress as a branch of learning, humanistic or scientific, only by such rigorous, systematic, cumulative theory building and theory testing. That is what we mean by epistemology.

The point may be driven home by an example or two. An earlier article on the Middle Bronze Age in Palestine, by the eminent Israeli historian and archaeologist Benyamin Mazar (1968), is now regarded, and rightly so, as a classic. It was a brilliant synthesis of what was known at the time, given the orientation of nearly all Syro-Palestinian archaeologists to what we have termed above "political history." The major data surveyed, in masterly fashion, bear upon the stratigraphy of the sites, fortifications, epigraphic remains, international relations in the Levant, and ethnic movements. The focus is on the great ideas, individuals, and institutions of the time, i.e., *public* events, or "political history." As a historical survey, much of this is still valid, and indeed a fundamental starting point for further research. But in this article there is virtually no reference to concerns that we would consider essential today: settlement patterns, technology, social and economic history, and demography. Even aesthetics and religion are neglected. Such terms as "culture" never appear. The treatment of the Middle Bronze Age in the illustrious CAH^3 by Kenyon (1973) is not much different in emphasis.

Now Mazar and Kenyon may be forgiven for not addressing these issues in the 1960s, because the data were not then available. But the data were unavailable *because* archaeologists and historians had been asking the wrong questions, or more accurately, questions that were simply inadequate in terms of stimulating explicit research designs that could focus on the *whole* range of data that were potentially available. The almost exclusive orientation of most Syro-Palestinian archaeologists toward "political history" was, of course, never explicitly stated, but it can be extrapolated from the typical methods employed and the results obtained. The twin foci were: (1) stratigraphy, or learning how to dig correctly, so as to separate major architectural phases; and (2) ceramic chronology, fixing absolute dates for the strata, mostly of destruction layers, in order to correlate them with biblical and other texts that described major episodes in political history. Field projects concentrated on large tells, especially ones that could be identified with biblical sites; and there the objective was mostly the clearance of fortifications, i.e., major architectural remains that could be expected to produce datable pottery and objects. Exposures were often narrow, with a preference for deep sondages that sampled all strata.

It needs to be stressed again that the chief goals of this kind of archaeology, although rarely acknowledged, were: (1) an outline of the political history of the major sites; and (2) a correctly dated local ceramic sequence. On sites being dug, there was relatively little exposure of domestic areas, i.e., of private dwellings, of storage and industrial installations, or of terraces, courtyards, and other open areas. There was virtually no interest in off-tell features (except for cemeteries) that might have revealed the use of water, land, and other natural resources. Smaller satellite villages, encampments, and the rural hinterland remained totally unknown, since there was little interest in environmental setting, and almost no regional survey work was undertaken.

It is true that the earlier generation of Syro-Palestinian and "biblical archaeologists" (the "third revolution," ca. 1930–1960) did hone the tools of comparative stratigraphy and ceramic chronology to a fine edge, perhaps unmatched anywhere else in the Middle East. But even here, the limited objectives are clear in retrospect. Stratigraphy in the Wheeler-Kenyon (or better, "baulk/debris-layer"; cf. Dever 1973) method focused somewhat mechanically on observing and recording soil layers empirically, so as to separate "loci" cleanly. But there was inadequate awareness of what we would now call "site formation processes," or the cultural and natural activities that *formed* these depositional features in the first place, and thus were capable of explaining their function in a larger context (Schiffer 1987). Or again, the common pottery of Palestine was exhaustively analyzed and catalogued (mostly on the basis of shape and decoration) so as to chart its typological development, which resulted in a relatively precise ceramic chronology. But with very few exceptions, pottery was not studied with a view to what it might contribute to our knowledge of the history of technology, to aesthetics, or to international relations and trade, i.e., to *culture* and *cultural change.* Above all, it is the models of cultural change themselves that were deficient. Most were reductionist and diffusionist. The term "culture" usually meant little more than a ceramic

assemblage; and a new "pottery culture" meant a "new people," probably a new ideology. Major ethnic movements and foreign invasions (i.e., "historical" events) were invoked to explain nearly every transition in ancient Palestine. There was little emphasis on indigenous socioeconomic factors, technological innovation, or the overall evolution of local culture in any sense. In all these characteristic emphases of the former generation we see clearly the paradigm at work: the objective was "political history," *not* socioeconomic, technological, or true cultural history (in contrast to the typical *Kulturgeschichte*, for which the earlier approach is now faulted).

Syro-Palestinian archaeology will progress not so much by further mastery of stratigraphy and ceramic chronology, or by perfecting field technique (although progress in these areas was and is a necessary goal), but rather by becoming more sophisticated in its epistemology. That will necessitate our beginning to see "theory" not negatively, as we have done ("speculation" or "unsubstantiated claims"), but rather positively, as simply a body of heuristic principles that are capable of governing and advancing archaeological research (Schiffer 1988). Such theory should be comprehensive, systematic, clearly focused, and as empirically verifiable as possible. That is really what we mean by speaking, as we do so often today, of "research design."

An alternate model to "political history" in the future might be derived from the *annales* school of social and economic history, which utilizes massive archival documentation to look behind ideology, beyond the great episodic public events, to the daily life and environment of countless individuals, over vast sweeps of time. Thus Fernand Braudel's well-known *The Mediterranean and the Mediterranean World in the Age of Phillip II* (1970) sets forth a three-tier system. The upper level is a "history of events," a history that moves rapidly but is superficial. Beneath that, a second level comprises the "history of social groupings and their interactions," which moves much more slowly. Deeper still is an "undercurrent" of smaller groups and individuals in the setting of the natural environment, in which all the higher levels of history are rooted, whose movement unfolds gradually and can only be measured in millennia, *la longue durée.* Another instructive work of this school is E. Le Roy Ladurie's *The Peasants of Languedoc* (1974).

Archaeology does not, of course, possess the extensive written documentation that can be sifted through by historians of the *annales* school, nor can it perhaps ever write really fine-grained individual history. But archaeology today is ecological and focuses on setting; it turns up masses of obscure artifactual data that reflect the daily life of ordinary individuals; and it is unique among all disciplines in its sensitivity to cultural change over very long periods of time. Thus there is good reason to believe that Syro-Palestinian archaeology has scarcely begun to fulfill its potential for writing social and economic history on a much broader scale than formerly thought possible. (See further Dever 1988 on the "fourth revolution.") The tools are at hand, because the very multidisciplinary, ecological, and systemic approaches noted above already point promisingly in the right direction.

Insofar as we may succeed in broadening the scope of Syro-Palestinian archaeology's focus, we may achieve yet another goal that many find desirable today, that of integrating the discipline into the general field of archaeology and anthropology. (At the same time, we may still conceive our discipline as "historical archaeology," provided that the history writing is not one-dimensional.) That this goal has not been achieved, or even seriously attempted, is painfully obvious. Ancient Palestine has several attractions: a pivotal geopolitical situation in the Fertile Crescent, the great cradle of civilization; a long history of archaeological investigation that is more intensive relative to land area than that of any other country in the Middle East, with a rapidly growing database; and enormous popular appeal as the Land of the Bible. Yet anthropologists and social historians seeking cross-cultural comparisons typically ignore Palestine as a case study, especially in contrast to Egypt and Mesopotamia, and even poorly known Syria. Why is this?

Part of the neglect may be due simply to a secularist, antibiblical bias among many anthropologists (who, after all, can be parochial too). Some of it may also be due to suspicions, unfortunately well founded, about the quality of our data, much of it indeed poorly excavated in the past, as well as to others' ignorance of better work done recently. But it must be admitted that the isolation of Syro-Palestinian archaeology is largely our own fault. Until recently we had conceived the field as a branch of biblical

studies, remaining aloof from the ongoing history of American archaeology and anthropology as an intellectual and disciplinary enterprise (see the illuminating history of American archaeology in Willey and Sabloff 1980). Indeed, we had prided ourselves on our "amateur" status and had often resisted professionalization. This meant that most archaeologists in our field were simply not asking the same questions as archaeologists generally. They did not read or publish in mainstream journals; they did not participate in professional societies or annual meetings of other archaeological and anthropological organizations; above all, they did not teach in or share programs with university departments of anthropology, where most of New World and European archaeology, as well as Near Eastern prehistorical archaeology, was being done.

Among recent and current issues in world archaeology would be the following, for example: (1) the rise and collapse of complex society; (2) the balance of idealist and materialist paradigms in the reconstruction of cultural change; (3) the social history of archaeology/anthropology; (4) space-time systematics, artifact variability, cultural patterning, and the material correlates of behavior; (5) site-formation processes and the nature of the archaeological record; and (6) archaeological identification of ethnicity. In addition, the several theoretical thrusts of the "new archaeology" noted above all reflect a number of specific questions about settlement types, subsistence, social structure, population growth, and the like. A dispassionate survey of the way Syro-Palestinian archaeology is taught, or a comparative citations analysis of the literature in our field and in the field of archaeology in general, would reveal that we have contributed very little to the discussion of these key issues, and we have only begun even to be aware of them. (If American Syro-Palestinian archaeology lags behind, the national schools in the Middle East, with the exception of Levantine prehistory, are even further behind—although their isolation is perhaps more understandable.) Younger specialists may be committed to the task of "mainstreaming" Syro-Palestinian archaeology, but it will likely take a generation for the new orientation to produce tangible results. (The best measure may be to keep up with journals like *American Antiquity*; or especially the ongoing volumes edited by M. B. Schiffer, *Advances in Archaeological Theory and Method,* London, 1978 and following.) Not until then will the "revolution" be complete.

3. Toward a New "Biblical Archaeology" as "Dialogue." The developments we have sketched above, as well as those predicted for the future, may be regarded as legitimate, even inevitable. But they nonetheless raise a prospect that many may find rather daunting: the possibility that the newer, "secular" Syro-Palestinian archaeology may no longer offer much to the elucidation of the Bible. In conclusion, we shall try to show that precisely the opposite is true, that indeed a *new style* of "biblical archaeology" is emerging. It emphasizes the possibility of a renewed and more fruitful dialogue *between* the two disciplines, now that they are attaining maturity (much as had been [perhaps overly-optimistically] predicted in Dever 1974 and several subsequent works, especially 1981, 1985).

There are, of course, formidable obstacles in the way of such a dialogue. Many observers believe that the two disciplines continue to move farther apart, and there is indeed some evidence of that. But we do not consider that primarily the fault of archaeologists, because we have supposedly become, as some critics put it, "overspecialized," "narrowly professional," "technicians rather than humanistic scholars." The simple fact is that, on the one hand, the practitioners of "biblical archaeology" failed to carry out their program of validating biblical history and faith through archaeology, and then gave up. On the other hand, biblical scholarship has increasingly moved away from its original historical-critical concerns to increasingly *literary* concerns, or to structural linguistics and the "metahistorical" understanding of language, finally to canonical criticism and the like. In all such cases, archaeology's attempt to recover the original context and events of the biblical texts—"the history behind the history"—tends to be regarded as simply irrelevant. History has become merely hermeneutics. Yet we would contend, exactly as Albright and Wright did (especially 1969, 1969a), that without the corrective of archaeology, its provision of "external" data, its unique ability to penetrate *behind* the tradition in the literature, to a more objective "secular" history, biblical studies is in constant danger of degenerating into subjective speculation, carrying neither historical nor theological conviction. (For the necessity of holding the two disciplines together, see, in addition to Dever as cited above, Albright 1969; Wright 1969a; Lapp 1969;

Lance 1982; Sauer 1982; Meyers 1984; Glock 1986.) Whether the biblical texts are truly "historical" or merely possess an essential "historicality," it really *does* matter what actually happened in the past, not just how the religious community came to interpret the supposed events for its own needs in its own time and circumstance.

The time is now ripe for a renewed dialogue between the "new archaeology" and contemporary biblical studies. Such a dialogue is timely precisely because both disciplines have now moved away from the positivist Albrightian synthesis toward what appears to be an emerging consensus, though still largely inarticulate and even unselfconscious. Ironically, the new "secular" archaeology is better equipped to contribute to the coming dialogue than the old archaeology was, because it is more competent professionally, more open and flexible in its presuppositions, and at the same time less mired in tendentious theological views that have little to do with proper archaeological investigation. We may be coming, at last, to the point of Morton Smith's remarks over twenty years ago in his presidential address before the Society of Biblical Literature: "For a correct history of the Israelites we must have the archaeological facts determined quite objectively and independently by competent archaeologists, and the Biblical texts likewise by competent philologians, and then we can begin to compare them" (1969: 34).

But what can *archaeology* contribute specifically to the dialogue? Or to use a phrase turned by two of "biblical archaeology's" most eminent exponents, in their final treatments (Wright 1971; de Vaux 1970), "What is it that archaeology can and cannot do?" Implied, of course, is the fundamental question of the relation of artifacts to texts, of material culture to culture, of archaeology to history—all of which will have to be rethought in this post-Albrightian, "post-positivist" era.

a. Textual Remains and Their Contribution. While the task of literary interpretation is best left to specialists, the archaeologist is entitled to remind us that texts, too, are limited as a source of history, because of the fundamental problem of interpretation, both ancient and modern. Thus the Hebrew Bible must be regarded by the historian as a largely late, composite document; highly selective and incomplete in the materials it includes; basically establishment-oriented and therefore "elitist" in outlook. The Bible is theocratic history, sometimes blatantly propagandistic, not history but *Heilsgeschichte.* (The Bible usually does not pretend to be otherwise; it is we who are often naïve, not the biblical writers.) It is obvious that in the Hebrew Bible there is little or no "objective history" to be found, perhaps for the premonarchical period little material that is even useful to the historian. Nor is the problem confined to the Hebrew Bible Old Testament (although virtually all "biblical archaeology" concerned itself with that part of the Bible; but cf. Strange 1982). Archaeology can no more aid directly in the task of "rediscovering the historical Jesus" than it can in recovering the "patriarchal" or "conquest" eras at ancient Israel. As historians we are limited ultimately by the fact that the Bible asks not so much "What happened?" as "What did it *mean?"* Systematic theology goes further, of course, to ask "What *does* it mean?" To put it in another fashion, archaeology may aid in small but significant ways in getting at the "history behind the history," i.e., in the task of writing a history of Israel, or even a history of the religion of Israel, but scarcely at all in the task of formulating an Old Testament theology.

Furthermore, in considering the problem of interpretation, the common notion that "texts are eloquent but artifacts are mute" must be laid to rest. How effectively *either* class of data mediates past realities to us is dependent upon how skillfully and sensitively the data are interpreted. A text, biblical or otherwise, simply by virtue of exhibiting written signs, rather than other symbolic expressions of human thought and behavior, may be no more "objective" in the witness it bears than any other object, no more comprehensive than an archaeological sample, no more transparent in significance than an artifact. With both types of evidence, we must try to "decode" the meaning (or various meanings) in another time and place and circumstance (that will always remain elusive), then try to translate this for our own situation.

The analogy between the role of interpretation in understanding texts and artifacts may be carried even further. The Bible itself, at least in human terms, is an artifact from the past, one that reflects the lives and thoughts of those who shaped it. Yet there is one unique feature. The Bible as we have it is clearly both what it *was* in its original context and usage, plus what it has *become* over the centuries as Scripture, constantly reinterpreted by Synagogue and Church. For the secular historian (sic), the primary difference

between the Bible as a literary *corpus* and other texts that have been brought to light by archaeology is simply that the former was never discarded or lost, but rather was continually preserved and revised by a still-living community. Thus the Bible, in *archaeological* terms, is what we may call a "curated artifact." The problems of interpretation are similar—but just as difficult.

b. Artifactual Remains and Their Contribution. Most of the data from ancient Palestine that happen to be preserved are artifactual, not textual (the Bible being, as we have observed, a notable exception). Such data are often poorly preserved and in any case constitute an atypical representation of what must once have been present in the archaeological record. The context necessary to supply meaning may be missing, or misunderstood owing to faulty excavation. From these tantalizing physical remains—bits and pieces of the past—what can we learn, if anything, of history and culture that will *complement* and supplement the study of texts?

We have attempted above to show how much *more* illuminating the "new archaeology" can be than the old. To summarize briefly here, first, archaeology may contribute a knowledge of the larger context in which the Bible emerged, both physical and cultural, without which it cannot be fully understood. Archaeology alone is capable of bringing to life again the ANE setting, the neighboring lands and people and cultures. This provides the background against which the Bible can be portrayed so as to give it a credibility—an immediate, vivid, flesh-and-blood reality—that it cannot possibly have when read solely as Scripture, or as a long-lost literature isolated from its origins.

Second, archaeology, while it may not be able to give an ultimate explanation of events, historical or theological, can provide at least what we may call the "ecology of change." At any given period it can document the local conditions in Palestine that may have given rise to a situation that made changes possible, as well as putting these changes into the context of the natural environment and long settlement history of Palestine. Thus archaeology need not ignore, much less contradict, the historical and primarily religious affirmations of the ancient biblical writers. But it can, and should, supplement these partial explanations with an understanding of *other* factors that we moderns find helpful in assessing change—environmental, cultural, technological, socioeconomic, and other. Concerning these powerful agents of change, the Bible tells us next to nothing. This parallel and complementary "natural history," or "secular history," of ancient Palestine is recoverable only through archaeology (including, of course, additional extrabiblical texts that may be brought to light), and indeed only beginning now with the new tools at our disposal. Thus the book of Joshua and the works of the Deuteronomistic historians (Joshua-Kings) portray the emergence of Israel in Canaan as the result of a sudden, unified military conquest of the Twelve-Tribe League under the leadership of Joshua—a miraculous gift of Yahweh. Archaeological evidence, however, shows beyond doubt that most Late Bronze Age Canaanite sites in Palestine were not destroyed ca. 1200 B.C., and that nearly all the identifiable early Israelite settlements were established peacefully on virgin soil (Finkelstein *AIS*). Therefore, from the point of the secular historian, the ascendancy of Israel was part of a gradual, exceedingly complex process of socioeconomic change on the Late Bronze–Iron I horizon, not a "miracle" at all. See also ISRAEL, HISTORY OF (ARCHAEOLOGY AND THE ISRAELITE "CONQUEST") and SETTLEMENT OF CANAAN.

Finally, archaeology can look at the "other side of the coin," that is, at popular culture, at folk religion, possibly even at individual history in some cases (such as the *annales* school attempts). For instance, normative Israelite religion as reflected in the Hebrew Bible was supposedly Yahwistic. Archaeology, however, reveals that folk religion was highly syncretistic, that the popular cults of ancient Israel were strongly influenced by the Canaanite fertility religions.

D. Conclusion

In this essay we have tried to look briefly at Syro-Palestinian and "biblical" archaeology—at their history, their changing relationships, and especially their future prospects. The latter perspective is necessary, but risky, for archaeology by definition is full of surprises. Archaeology is also one of the fastest-moving of all the social science disciplines today, both in theoretical reformulations and in the astonishing type and array of new data that it is turning up. The "archaeological revolution" predicted by Albright is not over, as many seem to believe, but scarcely begun (even if it is not happening in the way

he expected). And among Syro-Palestinian archaeology's many future accomplishments will certainly be the writing of a more comprehensive and satisfying history of ancient Palestine in both the Old and New Testament periods.

What archaeology cannot do, however, even at its best, is to "prove" the Bible in any sense—either by demonstrating that the events claimed by the biblical writers as central to the "salvation history" actually happened, much less by validating the theological inferences that are drawn from these events, whether ancient or modern. The notion that historical proofs can confirm, or even enhance, religious *faith* is a contradiction in terms.

WILLIAM G. DEVER

ARCHELAUS (PERSON) [Gk *Archelaos* (Ἀρχέλαος)]. The eldest son and successor of Herod the Great (cf. Matt 2:22), who ruled over Judea and Samaria from 4 B.C. until A.D. 6. Most of what we know about Archelaus comes from the Jewish historian Josephus. He reports that Archelaus and his brother Antipas, Herod's two sons by Malthace, a Samaritan, were raised in Rome.

In Judea, Antipater accused Archelaus (who was in Rome) not only of denouncing Herod for the murder of his half-brothers Aristobulus and Alexander, but also of claiming that Antipater would soon be another of Herod's victims (Jos. *Ant* 17.80), accusations which caused Herod to hate Archelaus (Jos. *Ant* 17.146). But shortly before his own death, Herod discovered that he had been duped by the scheming Antipater, and drafted the final version of his will naming Archelaus as principal heir to his kingdom (Jos. *Ant* 17.188–89).

Archelaus arranged Herod's funeral, and, we are told, he refrained punctiliously from accepting the royal title "king" until it had been confirmed by Augustus (Jos. *Ant* 17.202). He promised to rule more mildly than Herod, and was immediately showered with demands for the reduction and abolition of taxes, the release of prisoners, retribution against Herod's favorites, and replacement of the high priest appointed by Herod. Although Archelaus took a conciliatory stance, serious unrest developed, especially under the influence of those who supported the memory of Judas and Matthias, traditionalist Jews who had opposed Herod (Jos. *Ant* 17.149–67). This unrest reached such a point that Archelaus ordered his cavalry to put a stop to it; they killed some 3000 Jews in the Temple precinct during Passover (Jos. *Ant* 17.218).

Archelaus sailed for Rome to press his case with Augustus, taking with him Nicolas of Damascus, who had been Herod's great orator, and Herod's sister, Salome (who intended, we are told, to undermine Archelaus by drawing Augustus' attention to the disorder and carnage associated with Archelaus' brief rule). At the same time, Antipas also made his way to Rome to lay claim to Herod's throne. We are told that in Rome he gained the support of Herod's relatives, all of whom hated Archelaus. Meanwhile, Sabinus, imperial procurator of Syria, wrote to Augustus leveling accusations against Archelaus, who had thwarted his attempts to seize Herod's wealth (cf. Jos. *Ant* 17.221).

During Archelaus' absence in Rome, unrest had grown to large-scale rebellion. Varus, Roman governor of Syria, restored order. He also gave permission for a Jewish delegation to sail for Rome to request annexation and direct Roman rule over Judea (Jos. *Ant* 17.299–314). Augustus finally decided upon a compromise: Archelaus was awarded a large part of his father's kingdom (Judea proper, Samaria, and Idumaea, together with the cities of Strato's Tower-Caesarea, Sebaste, Joppa, and Jerusalem). From these territories Archelaus received an annual income of 600 talents. But Archelaus was not made "king" of these territories; instead, he was given the title of "ethnarch," probably to reconcile the Jewish delegation which had requested the abolition of the monarchy (Braund 1984: 142). However, Augustus is also said to have promised Archelaus that he would be awarded the royal title if and when he had proved himself a

capable ruler (Jos. *Ant* 17.317). The coins of Archelaus (which bear no image) indicate that he was known as "Herod, ethnarch" (*HJP²* 354 n.4). Josephus, however, calls him "king," which, although technically inaccurate, might also constitute "oblique evidence on the scope of the office of ethnarch" (Sullivan *ANRW* 2/8: 309).

Archelaus remained in office until A.D. 6, and few details of his brief rule are known. He founded a town, which he named Archelais; he rebuilt the royal palace at Jericho in lavish style; and near Jericho he irrigated a plain and planted it with palm trees. Josephus indicates that he was not a popular ruler: he reports that leading Jews and Samaritans "finding his savagery and tyranny intolerable" brought accusations against him before Augustus (Jos. *Ant* 17.342); and that Archelaus, "remembering past differences, behaved savagely not only towards the Jews but also towards the Samaritans" (*JW* 2.111). Augustus summoned Archelaus through a man (also called Archelaus) who was responsible for the ethnarch's affairs at Rome; the manner of summons was a calculated insult. After a brief hearing, Augustus confiscated Archelaus' property and exiled him to Vienne in Gaul. Archelaus probably lived out his days in Vienne, although his tomb was later pointed out to those who visited Bethlehem (Jos. *Ant* 17.342–44; *HJP²* 356 n.13).

Many of Archelaus' troubles were inherited from Herod, although he himself had offended Jewish tradition in a number of ways. First, he had deposed the high priest Joazar (because he had supported Jewish malcontents) and he had appointed Eleazar, Joazar's brother, to take his place (cf. Jos. *Ant* 18.93 on priestly vestments). Second, he had married Glaphyra, daughter of Archelaus I of Cappadocia, a union which offended Jewish tradition because Glaphyra had already borne a son to Archelaus' brother, Alexander, her first husband. In fact, Archelaus was Glaphyra's third husband, since she had married King Juba II of Mauretania after Alexander's death (Jos. *Ant* 17.339; Sullivan *ANRW* 2/8: 296–394).

ARCHER. See MILITARY ORGANIZATION IN MESOPOTAMIA.

ARCHIPPUS (PERSON) [Gk *Archippos* (Ἀρχιππος)]. A Christian greeted in the salutation of the letter to Philemon, identified as a "fellow soldier" of Paul (Philemon 2), and as one urged to fulfill the "ministry" (*diakonia*) he had received in the Lord (Col 4:17). Since Archippus is mentioned immediately after PHILEMON and APPHIA in Philemon 2, he is usually taken to have been a member of Philemon's household, perhaps a close relative of Philemon and Apphia, such as a son or a brother.

The evidence, however, may also be read plausibly to identify Archippus as the head of the household and, as such, the owner of the slave Onesimus (Knox *Philemon IB,* 49–51). It has been argued, first, based on the grammatical rule that a pronoun agrees with its nearest antecedent, that the singular pronoun "you" in the phrase "the church in your (Gk *sou*) house" (Philemon 2) could refer to Archippus. Second, the "ministry" that Archippus is asked to fulfill in Col 4:17, not further specified in that context, could be a reference to the veiled request in Philemon 13–14 to free Onesimus. Finally, Philemon 1 presupposes that Paul's "beloved fellow worker," Philemon, is to read the letter to the house church. If Philemon were the slaveowner, nothing would stop him from destroying the letter and punishing Onesimus. But if Archippus is the household head, then Paul would be effectively applying pressure on him to free Onesimus by having the letter read in his own house church and a decision thus made in the context of his Christian community (Cope 1985: 47). Nevertheless, against this identification of Archippus is the fact that the letter is addressed first of all to Philemon; for this reason he is usually taken to be its primary addressee and the owner of Onesimus.

The greeting in Philemon 2 also identifies Archippus as Paul's "fellow soldier" (Gk *sustratiōtēs*), i.e., his "fellow worker" (cf. Philippians 2:25, which indicates the two epithets are synonymous). The circumstances under which Paul came to know Archippus, however, are unknown. The military metaphor may indicate that Archippus, like Paul or perhaps at some time along with him, experienced conflict in his service of the church, probably in a position of leadership.

In Col 4:17, Archippus, who by implication is not presumed to be in Colossae, is said to have received a "ministry" in the Lord, although the nature of his role is not further specified. J. B. Lightfoot (1879: 244) has argued that the solemnity of the warning to fulfill that ministry "points to a continuous service, rather than an immediate service." Just prior to this warning in Col 4:16 is a reference to the neighboring church of Laodicea, which suggests that Archippus served that church, perhaps as its leader. But had he been neglectful or timid or somehow in need of an admonition to do his work? Or was his service of such difficulty that it required the courage of a soldier? Given Paul's respectful salutation to this Christian in the opening words of Philemon, the latter is more likely.

JOHN GILLMAN

ARCHITE [Heb ›*arkî* (אַרְכִּי)]. A gentilic formation referring to a clan located SW of Bethel which became a part of Benjamin (Josh 16:2). Five of the six occurrences of the word refer to Hushai, the most celebrated member of the clan, famous for his distinguished service as David's counselor (2 Sam 15:32; 16:16; 17:5, 14; 1 Chr 27:33). The term in Joshua 16:2 has to do with the marking of the S boundary of the tribe of Joseph at "ATAROTH the territory of the Archites." This has caused confusion because of another Ataroth mentioned in v 7 as being on Ephraim's N border. The S Ataroth marks the border of the Archite clan and is called "Ataroth-addar" in Joshua 16:5 and 18:13, which may mean "Greater Ataroth" (Boling and Wright *Joshua* 397–9).

ARCHONS, HYPOSTASIS OF. See HYPOSTASIS OF THE ARCHONS (NHC II,*4*).

ARD (PERSON) [Heb ›*ārd* (אָרְדָּ)]. Var. ADDAR. ARDITES. One of Benjamin's ten sons, according to the Benjaminite genealogy of Gen 46:21, and head of the Ardites (Num 26:40). The variant form of the name, i.e., "Addar," is easily explained as a transposition of the Hebrew consonants *reš* and *dalet.* The LXX of Num 26:30 reads *adar.* Several variants for the name as it appears in 1 Chr 8:3 exist in the Gk, where the MT also transposes the consonants to read ›*addār.* Ard's relationship to Benjamin also varies. In Gen 46:21 he is numbered among ten sons of Benjamin, whereas in Num 26:40 and 1 Chr 8:3 he is a son of Bela and, thus, a grandson of Benjamin. Gen 46:21 also considers two other sons of Bela (Naaman and Gera) to be sons of Benjamin. This variance in family relationship raises the question of how to interpret the expression "sons of," whether it refers to direct family relationships or to clan affiliation (Williamson *1 and 2 Chronicles* NCBC, 83). Williamson finds the name "Ard" in yet another Benjaminite genealogy (1 Chr 7:12). He suggests that the name "Aher" in that verse is a slip for "Addar" or "Ard" (*1 and 2 Chronicles* NCBC, 78). However, most scholars still follow the suggestion of Klostermann in reading the word ›*eḥād,* "one," an emendation supposing yet another confusion of *reš* and *dalet* (*RE* 4:94).

SIEGFRIED S. JOHNSON

ARDAT (PLACE) [Lat *Ardath*]. The name of the field to which Ezra was directed (2 Esdr 9:26), by whose bounty he was nourished, and upon whose slopes he received a vision. As with most of 2 Esdras, there is no surviving Gk form of this place name. The Syriac form is ›*rpd* and the Aramaic ›*rbd* (perhaps meaning a grain measure). The Latin versions also vary: Ardat (Codex Sangermanesis), Ardad (Codex Ambianesis), Ardas (Codex Complutensis), and Ardaf (Codex Mazarinaeus). Jacob Meyers suggests that Ardat is the name of a small locality near Babylon (*1–2 Esdras* AB, 270). Supporting this suggestion, Abel offered the ruins of Orthosia (Ard) on the site of Ullaza, which is not far from Sumer as a possibility (*GP* 1: 4). He identified this site as the Egyptian ›*rt*, which occurs in the description of the fifth campaign

of Thutmose III as a destroyed city (*ANET*, 239). Another possibility mentioned by both Meyers and Abel is the village of Ardat mentioned a number of times in the Amarna letters near Tripoli or Byblos. There has been no conclusive site identification.
SUSAN E. MCGARRY

ARDON (PERSON) [Heb *ʾardôn* (אַרְדּוֹן)]. One of the sons of Caleb (1 Chr 2:18). In the LXX, the name *Orna*, which is otherwise unknown, appears in the place of Ardon. Thus it is not certain whether Orna is a variant of Ardon or whether it refers to a different person.
H. C. LO

AREINI, TELL EL- (M.R. 129113). Tell esh-Sheikh Aḥmed el-ʿAreini (Arabic "Mound of Sheikh Aḥmed al-ʿAreini") is a mound of some 70 acres (exact limits undefined) on the N outskirts of the modern development town of Gat, just at the junction of the Coastal Plain and the Shephelah, on the S bank of the Wâdi Lachish. It was initially renamed "Tel Gath" by the Israel Geographic Names Committee, following the early identification with "Gath of the Philistines" proposed by Albright, Alt, and others, but the failure of more recent excavations to produce any pertinent Iron I material has resulted in the site's being renamed "Tel ʿErani.[w] Alternate identifications might be Eglon or Mamshat (S. Yeivin), or possibly Libnah (Condor, B. Mazar). Limited soundings were carried out by S. Yeivin in 1956–1961, but only scant preliminary notices of the extensive material have been published (Yeivin, *EAEHL* 1:89–97 and references there; and cf. Weinstein 1984).

The lower city, comprising the bulk of the site, has a lower terrace (area D) and a higher terrace, the former of which has produced the greatest variety and quantity of Egyptian Predynastic and Early Dynastic material of any site in Palestine. The stratification of area D was poorly observed, however, and is much debated, so only a tentative outline of its phases can be given. Strata XII–VII are equivalent to the Egyptian Gerzean/Predynastic period (ca. 3500–3200 B.C.); stratum VI corresponds to the Late Predynastic and may have had a city wall (ca. 3200–3100); stratum V, in which Narmer's *serekh* was found, corresponds to the 1st Dynasty (ca. 3100–2800); strata IV–II correspond to the late 1st into 2d Dynasty (ca. 2800–2650); and stratum I has no clear Egyptian material (ca. 2650–?).

The major question regarding area D concerns Yeivin's sometime claim (never clearly articulated) that stratum VI ends in a major destruction, which should be attributed to Pharoah Narmer of the 1st Dynasty, whose *serekh* (signature) was found on a stratum V sherd (cf. Weinstein 1984 for the evidence and an opposing view). In any case, the succeeding city, which contains the bulk of the Egyptian material, was one of the sites in Palestine most closely connected with Early Dynastic Egypt, whether by trade contacts or otherwise. After the beginning of Dynasty III and the Old Kingdom period (at the latest), the lower city was abandoned, and it lay unoccupied throughout the remainder of the Early Bronze, Middle Bronze, Late Bronze, and Iron I Ages.

The Iron II and later upper city (principally areas A/G) of the NE corner rises some 45–55 ft. above the lower city, but it is only about 15 acres in extent. There were few impressive remains. The phases would appear to be roughly dated as follows:

STRATUM	CENTURY (B.C.)
IX	8th
VIII	late 8th
VII	8th/7th
VI	early 7th
V	mid-late 7th
IV	early 6th
III–II	Persian
I	Hellenistic

Byzantine and modern Arab burials lie on and around the mound. On the highest point is the *wêli* (tomb) of the sheikh after whom the mound is named; and nearby are the ruins of the abandoned modern village of ʿIraq el-Manshiyeh.

WILLIAM G. DEVER

ARELI (PERSON) [Heb *ʾarʾēlî* (אַרְאֵלִי)]. ARELITE. A son of Gad, grandson of Zilpah and Jacob, and ancestral head of the Arelites. His name is entered last among the seven sons of Gad mentioned in the list of the descendants of Israel that went to Egypt (Gen 46:16; *Jub.* 44:20 places him second to last). In the census reported in Numbers 26, he is again the last mentioned of the seven descendants of Gad whose names were adopted as clan names (Num 26:17—LXX 26:26). The LXX readings in Gen 46:16 (*ariēlis*) and Num 26:26 (*ariēl*—MT 26:17) suggest the Hebrew spelling *ʾarîʾel*, but the Samaritan Pentateuch reads *ʾrwly*, and the Syriac reads "Adil."

RICHARD W. NYSSE

AREOPAGUS (PLACE) [Gk *ho Areios pagos* (ὁ Ἄρειος παγος)]. The Areopagus, or Mars' Hill, was one of the more prominent topographical features of ancient Athens. It reaches a height of 377 ft. and appears to have received its name from an association with Ares, the Greek god of war, though some moderns have derived the name from *Arai* ("Curses"), interpreted as a term designating the Furies, whose cave was located on the NE slope of the hill. It was on the Areopagus that St. Paul stood in A.D. 51 when he delivered his sermon on the unknown god (Acts 17:19–22; Gärtner 1955: 45–65). The Acropolis, some 140 ft. higher, stands a short distance to the SE; and the agora, where Paul talked with passersby and disputed with Stoic and Epicurean philosophers before being taken to the Areopagus (Acts 17:16–18), spreads out below it almost directly to the north. On his ascent from the agora, Paul probably would have rounded the precipitous NE brow of the hill, the Cave of the Furies above him and to his right, and would have climbed toward the summit from the extreme SE by the stairway cut into the rock that is still in use today. (For a map, see ATHENS.) As they had since classical times, the slopes of the Areopagus constituted a residential area when Paul was in Athens.

Paul's conversion of Dionysius the Areopagite (Acts 17:34), whose surname signifies that he was a member of the Council of the Areopagus, gave the hill Christian associations that have persisted into modern times. Dionysius himself became the patron saint of Athens as well as, by tradition, her first bishop and a Christian martyr. The ruins of the Church of St. Dionysius, constructed in the 16th century, are presently visible on the high terrace just below the NE brow of the Areopagus (Travlos and Frantz 1965). At the E end of the church are the remains of the well, supposedly near the home of the Areopagite, where according to local tradition St. Paul was hidden from his persecutors.

A. The Council of the Areopagus

The ancient references to the Council, or Boule, of the Areopagus are usually imprecise, and its history can for the most part be written only in general terms. Named after the hill where it met, and descended from a Homeric-style council of elders that advised the king (see, e.g., *Iliad* 2.53 ff., 10.194 ff.), the council was long composed exclusively of aristocrats, and in the transition from monarchy to aristocracy it gradually assumed many previously regal powers and functions. In the first half of the 7th century B.C., still at the height of its authority, the Council of the Areopagus was the main governing body of Athens, with far-reaching and undefined religious, judicial, censorial, and political power, including a general control over the annual selection of the nine archons, the city's chief magistrates who "went up to the Areopagus" after their term of office, where they then sat for life (see Fig. ARE.01).

The story of the slow and comparatively gentle democratization of Athens—which was over 150 years in the making and began imperceptibly about 620 B.C. when Draco codified the laws, thereby defining,

and so limiting, the powers of the magistrates and the Council—is also the story of the gradual demise of the Council's authority. Solon confirmed that authority when he rewrote the laws in 594 B.C., but simultaneously laid the foundation for its deterioration, by allowing appeal from the judicial decisions of magistrates to his new people's court, and by opening the archonships, which would provide all future Areopagites, to men of wealth who were not aristocrats. It appeared to emerge without further damage from the constitutional reforms of Cleisthenes at the end of the 6th century B.C., but here again his institution of a council attached to the popular assembly could not but reduce the influence of the Council of the Areopagus and encourage the assumption of its functions by the new body.

A substantial loss of Areopagitic prestige was indirectly assured in 487 B.C. by the expansion of the role of sortition in the selection of archons. But the renewal of the Council's prestige and authority that resulted from its patriotic conduct during Xerxes' invasion (480–479 B.C.) was not undergirded by any constitutional change that would give it permanency. The *coup de grace* was seemingly delivered in 462 B.C. by Ephialtes, who made the only direct attack on the Council's integrity that is recorded and, with perhaps some assistance from Pericles, persuaded the assembly to transfer to itself, its own council, and the popular courts the bulk of the Areopagites' responsibilities. The largely honorific body that remained nevertheless continued to survive, though it took on an increasingly popular appearance itself during the years after 460 B.C., with first the reduction and then the effectual removal of property qualifications for appointment to the nine archonships that constituted the single source of Areopagites.

The reason for this survival is not far to seek. The Council of the Areopagus was a body hallowed by its antique origins, and as such it exercised certain functions so deeply rooted in religious tradition as to be virtually sacrosanct. It was never deprived of these, preeminently the jurisdiction in specific types of homicide cases. In the mythological version of its origins presented in Aeschylus' *Eumenides* (11.397–753), Athena herself founds the Council as a homicide court for the initial purpose of trying Orestes for the murder of his mother Clytemnestra; and Pausanias (I.28.5–6), writing a century after Paul's visit to Athens, indicates that when the Council convened on its hill to judge homicide cases, the accused still stood on the Rock of Insolence and the accuser on the Rock of No-Mercy (Frazer 1913: 362–66). It was this residue of sacred responsibility that preserved the Council in the wake of Ephialtes' assault, and which served as the basis for its eventual resurgence into an important political institution.

We find signs of its revival in the late 5th and the 4th century B.C., when it assumed special public duties in times of crisis, for example after the Athenian defeats by the Spartans at Aegospotami (405 B.C.) and by Philip of Macedon at Chaeronea (338 B.C.). The process of resurgence continued into the Roman period, with the result that by the middle of the 1st century B.C. the Council had reverted to its early status and become the chief governing body of Athens, its membership no doubt again limited to men of wealth and oligarchic sentiment with whom the Romans preferred to deal. Yet there were differences: Roman dignitaries were now sometimes numbered among the Areopagites, and gone forever was the old freedom of judgment and action. It was a Council of the Areopagus so reconstituted that directed the public life of Athens when Paul was there, and would apparently continue to do so until the end of classical antiquity.

B. Paul at the Areopagus

The Acts 17 references to the Areopagus have generated a considerable outpouring of scholarly ink over the past 250 years. The interpretive problem hinges on the exact meaning of "the Areopagus" (*ho Areios pagos*), and the solutions essayed may be divided into two basic groups. One view, supported by a tradition prevalent among the Church Fathers, holds that the term in question is an abbreviated designation for "the Council of the Areopagus," and that Paul was subjected to a formal judicial process, regardless of whether this was a trial or some sort of hearing, and regardless of whether the Council was meeting on the hill that gave it its name or at the Stoa Basileios in the agora (where its sessions had commonly been held since the 4th century B.C.). The other view, which seems preferable, regards *ho Areios pagos* as simply a reference to Mars' Hill, and contends that Acts provides no evidence of judicial proceedings, only an indication that Paul preached on the Hill in response to the request of those with whom he had conversed in the agora.

ARETALOGY. The recitation of the *aretai* (Gk "virtues," "mighty deeds") of a god, hero, or charismatic figure.

A. The Greco-Roman World

The term "aretalogy" includes a variety of forms of a common practice of hellenistic religion and politics. Many laudatory inscriptions, carefully phrased encomiums, and eulogistic biographies are still extant. Scholars have investigated the popular appeal and propagandistic value of a wide variety of such "aretalogical" accounts and have demonstrated that the differences among these texts and recitations of praise are at least as interesting as their commonality.

The term "aretalogy" was used rarely in antiquity and possessed no specific literary or oral form (see Sir 36:13 [14] and Strab. *Geographus* 17.1.17). On the other hand, Isis inscriptions from Delos speak of an "aretalogist" who was a dream interpreter, perhaps recounting the miraculous cures which Isis performed in dreams (see *IG* 11.4.1263). In turn, those who recited fabulous wonders were scorned by Roman authors as entertaining liars (Juv. *Egyptian Satire,* 15: Suet. *Aug.* 74). Modern scholars of the history of religions have thus identified "aretalogy" with the recitations of the "aretalogists," paying particular attention to its value as a mode of religious proclamation or propaganda. The chief example remained the appeal which Oriental and Egyptian traditions made to a broader public on the basis of the recitations of the mighty deeds and virtues of a god or cult figure.

Such cultic recitation took on a distinctive form in the "self-praises of Isis." Several inscriptions display a well-wrought form in which Isis declares "I am …," announcing herself as the ruler of heaven and earth, mistress of fate and weather, legislator of helpful human ordinances, dispenser of wealth and source of wisdom. Such catalogs of her "virtues" could also be recited by others in third-person declarations, "She who …" These lists of glorious attributes and mighty acts may also be compared with the inscriptions of the healings which were placarded at Epidaurus in praise of Asclepius. Those lists for the healing cult were another form of "aretalogy" in the religious marketplace of the Greco-Roman world.

Laudatory biographies and letters of recommendation of charismatic prophets, healers, and itinerant philosophers have also been identified as "aretalogical" by modern scholars. Such cycles of stories and claims produced a peculiar literature which the satirists such as Lucian of Samosata could mock. In the effort to promote a particular figure as inspired or divine or as a "divine man" (Gk *theios anėr*), authors adopted various catalogs of virtues or mighty acts (*aretai*). Philosophers, rulers, and wonder workers could all be credited with divine or semidivine status although the specific criteria for such deifications were distinct. The praise of the wisdom of Socrates or the self-sufficiency of Diogenes may even be formally similar to the glorification of Alexander's courage or the recitation of the miraculous power of Asclepius' cures.

All of these distinct "aretalogical" traditions provide a window on the religious marketplace of the Greco-Roman world. Egyptian cults were striving for recognition and support for adherents in the west, exporting Isis to Rome along with the grain of the Nile and seeking recognition and support for Egypt's spiritual heritage and institutions were as legitimate as any in the dominant culture.

Popular philosophers competed for converts and healing shrines for adherents. The virtues of the philosophers could be catalogued in direct praise of their oral example or as cynic displays of disdain for conventional standards. Miraculous cures and mighty acts of shamans and rulers were listed as documentation of divine authority or agency. At the end of the 2d century C.E., Philostratus' *Life of Apollonius of Tyana* presented a synthesized portrait of the wonder-working Pythagorean philosopher. Earlier sources telling of Apollonius' marvelous acts of magic and supernatural power may still be

identified within Philostratus' "life" of the philosopher, but Philostratus had produced a new example of a more complex "aretalogical" literature.

B. Jewish Wisdom and Mission

Many forms of contemporary Jewish tradition clearly participated in this Greco-Roman religious marketplace, and a variety of texts may be called "aretalogical" in close comparison with the traditions discussed above. The cleanest parallels can be drawn with Hellenistic Jewish texts of Egyptian provenance, but the competition among religious and philosophical traditions for adherents and converts is much more extensive.

The praise of Wisdom in both Proverbs 8 and Wis 9:18–10:21 recalls conventions of the praises of Isis. Whether Wisdom recites her own praises or is praised in third-person declaration, her "aretalogy" rivals that of Isis both in form and in the mythic creative and saving roles which she plays. Like Isis, Wisdom has become the consort of God whom the king desires as his bride (Wis 8:2–9). Still, her tasks are explicitly identified with Jewish scriptural traditions, and no accommodation is offered to those outside of "a holy people and blameless race" (Wis 10:15). Thus the audience for this "aretalogy" does not appear to be a broad public in the Greco-Roman world. Wisdom was being praised for the benefit of Jews who were intimidated by the power of Isis and the Egyptian royal theology which she represented.

The glorification of Moses by Artapanus was another kind of aretalogy, imitating the novelistic glorification of Egyptian and other nationalistic heroes. The biblical Moses is still central, but this worker of plagues and liberator of Israel is also praised as the founder of the nomes of Egypt, the inventor of ships, and a godlike Hermes who gives the Egyptians their sacred letters and interprets them. The folklore of national heroes is not as theologically particular as wisdom traditions nor so discriminating of moral virtue as the lives of the philosophers. But Artapanus' glorious portrait of Moses placed him in the proud company of such rulers and champions as Semiramis the Babylonian and Sesostris the Egyptian. Once again, the audience for such extravagant stories of Moses was probably only Egyptian Jews who were eager to be assured of the importance of their heritage within the dominant culture.

Philo's *Life of Moses* raised the aretalogy of Moses to a new level of the glorification of the "sage" and "divine man" who is at once the ideal king, lawgiver, high priest, and prophet (I.334; II.2–7, 187, 292). Whether written for Hellenistic Jews or non-Jews, Philo's account adapted the biblical account freely, dressing Moses in the philosopher's cloak and the robe of the statesman. Even the biblical miracles were heavily rationalized, ignored or turned into verifications of Moses' possession of the virtue of piety (*Vita Mos* II. 284). The recitation of miracles was not primary in this aretalogy. The hellenistic ideal of kingship is much more the controlling standard.

Josephus also indulged in effusive praise of Moses as the "most excellent general, the wisest adviser and the most conscientious of all guardians." Next to him such lawgivers as Lycurgus, Solon, and Zaleucus were only born yesterday (*AgAp* 2.154–58). Josephus was explicitly responding to the charges of others that Moses was an evil leper who organized the outcast Jews with the advice to attack the Egyptian population, showing goodwill to no one (*AgAp* 1.237–50, 304–8, 2.121–22). Writing in a time when the Roman order had driven the Jews into fighting for their right to live, Josephus' aretalogy is transparent in its defense of Moses' virtue, wisdom, and power.

C. New Testament Aretalogies and Mission

Early Christian proclamations of Jesus quickly adopted and adapted many forms of praise and testified to Jesus as Messiah, Savior, Son of God, Lord, and Son of Man. All such recitations of Jesus' words, works, life, death, and resurrection could be broadly called aretalogical. After all, the Christian mission also had to make its way in the Greco-Roman religious marketplace. But more specific comparisons have proved helpful in a few areas.

The "superlative apostles" of 2 Corinthians (12:11–12) may reflect a kind of Jewish Christian missionizing in which a particular kind of inspired exegesis, signs, wonders and mighty works were standard credentials. Perhaps Paul is contending with a kind of "divine man" tradition in which these star performers have their letters of recommendation and their loyal adherents. Then Paul's "foolish"

recitation of his weakness and suffering is a counter-aretalogy, intended to discredit the self-praises of these "false apostles."

If the probability of pre-Gospel collections of miracle stories is high, then were these sources a kind of aretalogy? John probably used a Signs Source, and Mark may have drawn upon a cycle of miracle stories but subsumed them in a cross-resurrection narrative structure. Perhaps the Gospel genre is a kind of critique of the aretalogical traditions of the Greco-Roman religious marketplace.

On the other hand, perhaps the Gospels themselves should be viewed as aretalogies too. Luke-Acts in particular appears to appropriate the miracle traditions and glorify the Lord and the apostles without any sharp caution about the misuse of the Jesus traditions (apart from the clear perversion by Simon Magus and the Sons of Sceva in Acts 8 and 19). Some interpreters also regard the Fourth Gospel as using the Signs quite uncritically in a straightforward effort to glorify Jesus as the Son of God "striding over the earth."

The discussion is important since it requires the interpreter of the New Testament to view the mission of the early church within the competitive religious context of the 1st century. Paul and the evangelists have been described by some scholars as confounding the aretalogies of contemporary religious propaganda with the kerygma of Christ crucified. Other interpreters have argued that even the Gospels and Paul's recitations of his "foolishness" are distinctive aretalogies but not formally unique. Since the term is not technically specific, the discussion of "aretalogies" will continue to provide fruitful occasions for the comparison and contrast of the Gospels and early Christian proclamation with a wide range of religious and political recitations of praise of saviors, lords, cult figures, and gods.

DAVID L. TIEDE

ARETAS. Dynastic name of at least four kings of the royal house of Nabatea located at Petra. The earliest Nabatean Aramaic inscription from Elusa on the Petra-Gaza road in the Negev mentions an "Aretas, King of the Nabateans." Proposals for a date of the inscription vary from the beginning to the end of the 2d century B.C. (see Wenning 1987: 141). The Aramaic spelling of the name, *ḥrtt,* occurs rarely and is of disputed etymology, but it does appear as a personal name occasionally in Safaitic (Harding 1971: 282). It has been associated with the common Arabic name of *ḥariṯa,* "ploughman" (al-Khraysheh 1986: 93) and it is interesting that the name "*ḥāriṯat,* king of Hagar" appears in Aramaic on coins of the mid-2d century B.C. found at Susa (Robin 1974: 110). Hagar has been connected with the *Agraioi* of Greek sources, a people who controlled the E sector of the caravan route leading from Babylon through Dumat al-Jandal (Jauf) to Petra and the Mediterranean port at Gaza (Eratosthenes apud Strabo 16.4.2). The proposal that the original homeland of the Nabateans was located in this same region of the Persian Gulf (Milik 1982) offers some support to these connections and may help explain other features of Nabatean culture, e.g., the use of Aramaic and the name of "Hagiru" for the queens and princesses of the Nabatean royal house (as known from coins; see Meshorer 1975: 79).

1. *Aretas I (ca. 170–160 B.C. fl.).* The first known dynast of the Nabateans is a contemporary of the early Hasmonean rulers. In 168, the Jewish high priest Jason sought refuge with an "Aretas, tyrant of the Arabs," before whom he was tried and/or imprisoned (2 Macc 5:8; cf. Goldstein *2 Maccabees* AB, 256).

This Aretas is most likely the same king of the Nabateans referred to in the Elusa inscription as "tyrant," a word frequently used as a synonym for "king." The Nabateans under his rule appear to have been friends with the Maccabean rulers Judas (1 Macc 5:24–28; cf. Jos *Ant* 12.8.3 §335) and Jonathan (15.22). A perplexing reference to Arab nomads who skirmished with Judas (2 Macc 12:10–12) probably refers to Arabs existing outside the Nabatean circle (Bowersock 1983: 19–20), perhaps the Itureans (Kasher 1988: 30; see also ITURAEA).

2. *Aretas II (ca. 100 B.C. fl.).* Under hiq reign, the Nabateans first came into conflict with the Hasmonean kingdom. In 100 B.C., Alexander Jannaeus beseiged the important commercial port of Gaza. Aretas had pledged to protect the town, but he failed to send military assistance in time to defend it from the attack by the Hasmonean ruler (Jos. *Ant* 13.13.3 §358–64). Justinus' Latin epitome of Pompeius Trogus' *Historiae Philippicae* (39.5.5–6) mentions an Arab king named Herotimus who led campaigns into Syria and Egypt. Herotimus probably is to be identified with Aretas II. These conflicts have been interpreted as a struggle for control of the lucrative trade routes of Palestine during the decline of the Hellenistic powers of Syria and Egypt. This Aretas is also alluded to in the oldest Nabatean inscription known from Petra, where he appears as the father of Obodas I, his successor as king of the Nabateans (ca. 93–85 B.C.). This has led to the suggestion that he is the "founder of the Nabatean dynasty" (*HJP²* 1: 577), but this ignores the evidence for the earlier monarchs (Starcky *DBSup* 7: 905). Some archaic Nabatean coins known from Gaza and Petra have also been associated with his reign (Meshorer 1975: 10–11), the earliest issues by any of the Nabatean kings.

3. *Aretas III (ca. 85–62 B.C.).* The early years of his reign represent a period of Nabatean expansion. As a young prince, he founded the settlement of Aurara (modern Hymayma) between Petra and Aqaba, evidently to promote the trade along this important route that connected the Nabatean capital with the Red Sea (Uranius' *Arabicus* apud F. Jacoby *FGrH* 675 F1b; Eadie 1984). In 85, after the death of the Seleucid ruler Antiochus XII, Aretas acquired Coele-Syria and Damascus as part of his realm (Jos. *Ant* 13.5.2 §392). In coins struck at Damascus between 84–72 B.C., Aretas is entitled in the Greek legend the "Philhellene" (Meshorer 1975: 12–16), indicating the adoption of the Hellenistic tradition of the region. In 82, he launched a campaign into Judea where he defeated Alexander Jannaeus in a battle at Adida. After the setback, however, the Hasmonean ruler led a counterattack that saw the loss of Nabatean territories in Moab and Gilead (*Ant* 13.5.3–4 §393–97). In 72–71 B.C., the invasion of Tigranes of Armenia into Syria also forced Aretas to withdraw from Damascus (13.16.4 §419). After the death of Alexander Jannaeus in 76 B.C., his widow, Queen Alexandra, assumed ule until her death in 67 B.C. Afterward, a dynastic quarrel broke out between her sons, Hyrcanus and Aristobulus. The Idumean ruler Antipater, who supported Hyrcanus, had established friendly relations with the Nabateans, as a result of his marriage to a prominent Nabatean woman named Cypros, the mother of Herod the Great (*Ant* 14.7.3 §121; *JW* 1.181). As a result, he advised Hyrcanus to flee for refuge to "Aretas of Arabia" and enlist his support. Forming an alliance with the Nabatean ruler, Antipas and Hyrcanus then led a campaign against the opposition party of Aristobulus at Jerusalem. In response, the Roman general Pompey sent his envoy Scaurus to help defend Aristobulus. Under threat of being declared an enemy of Rome, Aretas withdrew from Jerusalem, but 6000 of his forces were slain by Aristobulus at Papyron, near Jericho, during their retreat (*Ant* 14.1.1–2.3 §1–33). Afterward, Scaurus beseiged Petra, but withdrew after the king paid him 3000 talents (*Ant* 14.5.1 §80–81; *JW* 1.124–30). During his aedileship in 58 B.C., Scaurus issued coins at Rome depicting a long-haired Aretas kneeling beside his camel in submission to himself (Crawford 1974: 446, no. 422). Henceforth, Nabatea came under Roman sway as a client kingdom.

4. *Aretas IV (9–8 B.C.–A.D. 40–41).* The zenith of Nabatean political and economic fortunes took place during the almost half-century of his lengthy reign. After the death of Obodas III in 9 B.C., Syllaeus, "the brother of the king" and chief administrator of the kingdom, assumed control of the state and even issued coinage depicting him as the monarch (Meshorer 1975: 36–40). Augustus recognized him as the official ruler, but an Aeneas assumed control of the throne at Petra under the name of Aretas (IV) and sent an embassy to Rome to plead his case and condemn Syllaeus. Although not a direct descendant of Obodas III, Aeneas appears to have been from a collateral line of the royal house, related to Malichus I (58–30

B.C.). However, the Roman emperor dismissed Aretas' claims, sending his envoys and their gifts back to Nabatea, as he had failed to request the emperor's permission before assuming rule. In spite of his initial rejection of Aretas' petition, Augustus found other complaints about Syllaeus more persuasive. These were issued by Herod the Great through his agent Nicolaus of Damascus. As a result, Syllaeus was condemned and later executed by Augustus, who reluctantly recognized Aretas as the legitimate ruler of Nabatea (Jos. *Ant* 16.9.1–4 §271–99 and 10.8–9 §335–55).

The lengthy reign of Aretas is the best documented of any Nabatean monarch. The coinage issued in his reign is immense, representing an estimated 80 percent of all Nabatean coinage. It has been found at scattered sites throughout the Levant (including Cyrus, Dura-Europos, and Susa) and even in Europe (Aventicum, Switzerland). It is also important for the portraiture of the monarch, who is depicted with a mustache after A.D. 18. A gap in the issues and inscriptions of his reign between 4–1 B.C. and a cryptic comment by Strabo (16.4.21) has led to the suggestion that the Nabatean kingdom had been annexed briefly, then transformed again to the status of a client state (Bowersock 1983: 54–55). The motive may be associated with Herod's death in 4 B.C., when Aretas provided auxiliaries to assist the Syrian legate Varus in quelling political unrest in Judea (*Ant* 17.10.9 §287; *JW* 2.68). Their disobedience of the Roman commander's orders during the affair prompted their dismissal and perhaps Roman intervention in Nabatea (*Ant* 17.10.10 §296). Nevertheless, other chronological gaps in the coinage and inscriptions of Aretas' reign exist, rendering this interpretation inconclusive. Moreover, the standard epithet "lover of his people" (*raḥem ʿanmeh*) that appears on Aretas' coinage has been interpreted as an implicit rejection of such titles as *philoromaios* and *philokaisar* used by other Roman client kings and a protest against any suggestion of servility (*HJP²* 1: 582). The epithet appears on his coins and inscriptions from the beginning to the end of his reign.

Under Aretas, the formative stage of Nabatean material culture took place. Their distinctive art, architecture, pottery, and peculiar Aramaic script all developed their classical style during his reign. Many of the monumental structures at Petra have been assigned to his time, such as the construction of the theater and Qaṣr al-Bint; the famous Khazneh at the terminus of the Siq has also been proposed as the great king's final resting place. The development of the Negev cities at the time—Oboda, Mampsis, Nessana, Elusa, and Sobata—further reflects the economic prosperity of the period. In addition, Madāʾin ṣaliḥ (ancient Hegra) appears to have been founded early in his reign, serving as an important emporium for the caravan trade in aromatics from South Arabia. Nabatean merchants in A.D. 3–6 even erected a sanctuary at the port of Puteoli in Italy (CIS II 158). The administrative and military organization of Aretas' realm reflect these foreign contacts; his officers bear titles adopted from the Hellenistic and Roman overlords: strategoi, hipparchoi, chiliarchoi, and even a centurion appear in inscriptions during his reign. In many respects, the cultural achievements of Aretas IV represent a fitting parallel to those of his contemporary in Judea, Herod the Great.

Aretas had at least two wives during his lengthy reign: Huldu (from 9 B.C.–A.D. 16) and Shuqailat (from A.D. 18). They are not designated his "sisters" (*ʾḥt*) on coins during his reign, in contrast to the wives of his royal successors Malichus II (A.D. 40–70) and Rabbel II (A.D. 71–106), but inscriptions indicate that both Huldu (CIS II 158) and Shuqailat (CIS II 354; Khairy 1981) were entitled his "sister." The "title" has been taken literally, but it many only represent an important rank in the hierarchy of the royal court of Nabatea (Meshorer 1975: 61). Syllaeus was also called the "brother of the king [i.e., Obodas II]," although he was the son of Teimu, not Obodas II. The members of the royal family of Aretas IV late in his reign are listed in a recent inscription found at Wadi Musa (Khairy 1981). It names four sons (Malichus II, Obodas, Rabbel, and Phasael) and four daughters (Shaʿdat, Shaqilat II, Gamilat, and Hageru); the latter princess was also the mother of a child named Aretas, the grandson of Aretas IV. Intermarriages between the royal families of the various monarchies were common in the East and existed in the relations of the Petraean royal house with the Herodian dynasty: one of Aretas' daughters—perhaps Shaʿudat (Starcky *DBSup* 7: 914)—was married to the tetrarch Herod Antipas before he divorced her to marry Herodias, the wife of his half-brother Herod Philip. John the Baptist condemned the action and was imprisoned and finally executed by Antipas around A.D. 29 (Matt 14:3–12 and par.). Aretas' anger found

revenge only later, in A.D. 36, when he attacked and defeated the army of Antipas. Tiberius sent Vitellius the governor of Syria to punish Aretas for his action, but the Roman emperor's death in A.D. 36–37 canceled the expedition (*Ant* 18.5.1–3 §109–25).

The only specific biblical reference to Aretas IV appears in Paul's letter of 2 Corinthians in which he refers to his escape in a basket lowered from a window in the city wall that was guarded by the "governor [*ethnarch*] under king Aretas" (11:32–33). The circumstances remain obscure, but the Jewish and Nabatean Arab community appear to have acted in concert against Paul (cf. Acts 9:24). The ethnarch of Aretas has been taken to be a royal official charged with oversight of the Nabatean commercial colony established at Damascus (*DBSup* 7: 915; Rey-Coquais 1978: 50; Knauf 1983), rather than an indication the city constituted part of the Nabatean realm. A parallel has been found in an official with the title of "ethnarch" who was responsible for the Jewish community at Alexandria (Jos. *Ant* 14.17). But others feel that Paul's description of the incident seems to place the Syrian city clearly under Nabatean control, however briefly (Bowersock 1983: 68). Since the episode appears to have occurred in the reign of the emperor Caligula (A.D. 37–41), it has been associated with his general policy of extending the territories of the client kings in the East (Jewett 1979: 30–33, 99). No coinage from Damascus appears to have been struck during his reign or that of Claudius. Paul's prior contacts with Nabatea (Gal 1:17) may also account for the animosity of Aretas' official in Damascus, but the sources are silent about his Arabian sojourn. The odd inclusion of the incident in his list of hardships (see Fitzgerald 1988: 18–19) has been explained as an inversion of Roman military imagery, emphasizing the apostle's humiliation in retreating over a wall, in contrast to the distinguished award (*corona muralis*) given to the first courageous Roman soldier to scale the wall of the enemy (Judge 1968: 47; cf. Furnish *2 Corinthians* AB, 542). As such, it illustrates again the "weakness" of Paul.

DAVID F. GRAF

ARGOB (PLACE) [Heb *ʾargōb* (אַרְגֹּב)]. A district E of the Jordan valley of uncertain location. The name Argob occurs three times in the chapter of Deuteronomy recounting the capture of the Amorite kingdom of BASHAN that was ruled by OG (Deut 3:4, 13, 14) and once in the account of Solomon's administrative districts (1 Kgs 4:14). The name consistently appears in the construction *ḥebel ʾargōb,* and its proper interpretation presents several problems. The Hebrew noun *ḥebel* can denote a measured tract or area (note *schoinismos* [1 Kgs 4:13]), and thus would seem to imply a clearly delineated section of Bashan. The etymology of the name "Argob" suggests a possible identification of the area, though difficulties remain. The toponym *ʾargōb* is probably related to the rare noun *regeb* "clod (of earth)"

(found only in Job 21:33; 38:38), perhaps referring to a tract of arable land. The name is replaced in *Tg. Yer.* with the word *tarkona,* which may be a transliteration of Gk *trachōn,* a substantive meaning "rugged, stony region" and also the name of the large basalt formation about 20 mi. S of Damascus (called in Arabic *el-Leja* "the Refuge"; see TRACHONITIS). The location of this formation well E of the Jordan stands in the way of its identification with Argob, because Deut 3:14 implies that the region of Argob extended W "as far as the border of the Geshurites and Maacathites"; that border is generally placed at the Nahr er-Raqqad, the westernmost N-S tributary of the river Yarmuk.

Other locations have been proposed for Argob, though none can claim consensus. The region known as Batanea to the W and S of Trachonitis is one possibility (*GB,* 215). Its rich soil has been farmed by the Druze in more recent times. Simons (*GTTOT,* 8–9, 13) extends the region of Argob W to Nahr er-Raqqad and N to Mt. Hermon (although *GTTOT* Map V twice shows Argob lying along the Wadi al-Harir [also called Hreir or Ehrer], considerably E of Raqqad). Mazar (1961: 24) located Argob along the banks of the Wadi el-ʾAllan (another Yarmuk tributary situated between Raqqad and Harir). Avi-Yonah (*EncJud* 1) placed Argob between the wadis Raqqad and ʾAllan.

Bergman (1936: 239) suggested Jebel Druz as the location of Argob, though he doubted that the Israelite conquest included territory N of the Yarmuk. Ottosson (1969: 111–12) places Argob in N Gilead, *south* of the Yarmuk and S of Bashan (although he appears to extend Bashan S of the Yarmuk).

The location and extent of the region of Argob is further complicated by the biblical statement (Deut 3:13) that it is conterminous with the kingdom of Og and apparently also with the region called HAVVOTH-JAIR (Deut 3:14). The latter cities are said to be in Bashan (Josh 13:30) but also in Gilead (Num 32:40–41; Judg 10:4). The sixth Solomonic administrative district comprised Havvoth-jair in Gilead and the region of Argob in Bashan (1 Kgs 4:13), clearly distinguishing the locations of the two regions.

Another biblical reference to Argob (2 Kgs 15:25) is textually problematic. The phrase *ʾet-ʾargōb wĕʾet-hāʾaryê* may be misplaced from v 29, a list of places captured by the Assyrian king Tiglath-pileser. The second member of the pair may be a corrupt reading of *yāʾîr* from the place name Havvoth-jair. If this reasoning is correct, then Argob is distinguished from Havvoth-jair in this instance as well.

HENRY O. THOMPSON

ARGOB AND ARIEH (PERSONS) [Heb *ʾargōb* (אַרְגֹּב) and *ʾaryēh* (אַרְיֵה)]. Possibly two

coconspirators with Pekah or victims along with the king, Pekahiah, of Pekah's conspiracy (2 Kgs 15:25), but more likely place names. The MT includes these two names in a grammatically difficult sentence, but they are omitted in many English translations (RSV, NAB, NEB). Various solutions to the problems posed by these two names have been suggested. Klostermann emends the text to read "with his four hundred warriors" suggesting that Pekah was able to eradicate the entire royal guard. Geller proposes that the text should be translated "near eagle and lion" indicating the place where Pekahiah was murdered. Geller argues that as Sennacherib was murdered between statues of protective deities set up at the gates of the royal palace, so Pekahiah was murdered between guardian statues of his palace. Most modern translators accept Stade's solution that Argob and Arieh are place names and should be omitted. It is possible that a scribe's eyes wandered from the Gilead of v 29 to the Gilead of 25, where he then inserted place names that should actually be in v 29. Argob is the name of a district of Bashan (Deut 3:4, 13, 14; 1 Kgs 4:13). Arieh, similar in spelling to Havvoth-jair which is elsewhere associated with Argob (Deut 3:14), refers to a group of settlements in the area. (See Gray *Kings* OTL; Jones Vol. 2 of *Kings* NCBC.)

ARIARATHES (PERSON) [Gk *Ariarathēs* (Ἀριαραθης)]. Ariarathes V Eusebes Philopater, king of Cappadocia (ca. 163–130 B.C.), [1 Macc 15:22]. He appears in a list of recipients of the letter sent by the consul Lucius endorsing the leadership of Simon, the High Priest. The letter stresses the renewal of friendship and alliance between Rome and Judea, forbids war against Judea by Roman allies, and allows for the extradition of prisoners. The placement of Ariarathes V after Attalus II reflects accurately both their submission to Rome and the strong ties between the two men. Attalus II married Ariarathes' sister, Stratonice. He also came to Ariarathes' aid when the latter's half-brother, Orophernes, had seized the throne of Cappadocia. Later they together attacked the city of Priene in an attempt to regain funds stolen by Orophernes, but they withdrew after Rome ordered them to cease. Ariarathes V died during the battle of Leucae while fighting with the Romans against Aristonicus, who attempted to seize the throne of Pergamum after the death of Attalus III.

ARIEH. See ARGOB AND ARIEH.

ARIEL (PERSON) [Heb *ʾărîʾēl* (אֲרִיאֵל)]. Var. IDUEL. Even though the Hebrew terms that stand behind the transliteration "ariel" occur rarely in the Bible, "ariel" seems to carry a wide range of meanings: (1) a poetic name for Jerusalem (Isa 29:1–2, 7); (2) a common noun for "heroes" or "champions" (2 Sam 23:20; 1 Chr 11:22; cf. Isa 33:7); (3) a common noun for "altar hearth" (Ezek 43:15–16; cf. Mesha Inscription, line 12); and (4) a personal name, a proper noun (Ezra 8:16). This rapid overview actually reduces a complicated discussion to its simplest form, and the balance of this entry pursues the use of this word as a personal name. At the outset it should be recognized that there is much dispute over the etymology of "ariel" (lion of God?) and how the word was used in the ways listed above (Segert 1961: 241; *KAI* 2: 175; Andersen 1966: 90; *TSSI* 1: 80).

In Ezra 8:16, the personal name "Ariel" occurs in a list of "leading men" who helped Ezra solve a problem. In the parallel text in 1 Esdr 8:43, he is called Iduel (Gk Idouēlos). During the reign of Artaxerxes, Ezra received permission to lead a party of exiled Judeans from Babylonia back to Jerusalem. When he had gathered this group of men at "the river that runs to Ahava," whose exact location is

unknown, Ezra took note of the fact that there were no "sons of Levi" among the large number. (A similar scarcity of Levites is noted in Ezra 2:40.) Accordingly, he summoned some of the leading men of the day, including Ariel, and apprised them of the situation. They were dispatched to a place called Casiphia, also unidentified, to speak to a leader named Iddo; he and his "brethren" were the temple servants (Hebrew *nětînîm*) at Casiphia. Apparently, the appeal of men like Ariel was successful, since "ministers for the house of God" were found to accompany Ezra and his party of émigrés (Ezra 8:15–20).

An intriguing use of the word "ariel" occurs in 2 Sam 23:20 (paralleled in 1 Chr 11:22). These verses mention the valor of Benaiah, the son of Jehoiada, one of David's mighty men. To illustrate his courage, the last part of the sentence reports that Benaiah "smote *two ariels of Moab*" (RSV), while the KJV renders this line "he slew *two lionlike men of Moab.*" A marginal note in the RSV informs the reader that the meaning of the term "ariel" is not known, and the KJV translators informed their readers that "ariel(s)" should be translated literally "lions of God." The KJV has chosen to follow the MT and translate "two ariels" into English as "two lionlike men" (i.e., "heroes" or "champions," which is probably a correct rendering). Likewise, the RSV follows the MT's wording, "two ariels," but leaves ariels untranslated. On the other hand, the LXX reconstructs the phrase to say *"The two sons of Ariel of Moab,"* thereby making Ariel a proper noun, the name of a Moabite father whose sons were slain by Banaiah. This use of "ariel" as a Moabite name can be compared with one of the proposed translations of a phrase in line 12 of the Mesha Inscription, *ʾrʾl dwdh* "Arel its commander" or "Arel its chief." Though the use of *ʾrʾl* as a man's name still finds support in scholarly circles, most seem to prefer "altar hearth" in this expression, as in Ezek 43:15–16 (Kaiser *Isaiah* OTL, 266–67).

GERALD L. MATTINGLY

ARIEL (PLACE) [Heb *ʾarîʾēl* (אֲרִיאֵל)]. When used to refer to a place, Ariel is a descriptive term applied to the city of Jerusalem: "Ho Ariel, Ariel, the city where David encamped"; "Yet I will distress Ariel …"; "And the multitudes of all the nations that fight against Ariel …" (Isa 29:1, 2, 7). The suggestion that the term is a compound of *ʾari* and *ʾel* to mean "lion[ness] of God" is inferred by some from references to Judah (whose capital was Jerusalem) as "a lion's whelp" (Gen 49:9) and to the leader of Judah, Jesus Christ, "the Lion of the tribe of Judah, the Root of David" (Rev 5:5). References in 2 Sam 23:20 to one of David's men as a valiant man who killed men of Moab and a lion, and in Isa 33:7 (where some postulate *ʾerʾellam* to be derived from *ʾarîʾel;* cf. *BDB,* 72) to the brave men of Judah during Sennacherib's onslaught are cited in support of this view. It is noted that in 2 Sam 23:20 the LXX reads, "the two sons of Ariel of Moab," while the MT has "the two ariel(s) of Moab." In Ezek 43:15 there is a curious MT reading, *harʾēl,* "mountain of God," in the context of a description of the altar; some versions here have *ʾarîʾēl* ("lioness of God") and *ʾarīʾêl* ("altar hearth, hearth of God"; the *Qere* has *ʾarīʾêl*). This latter interpretation, "altar hearth, hearth of God," is supported by some scholars because it fits the meaning of Ezek 43:15 where an altar for Jerusalem is described, an altar with four "horns," or projections, one at each of the four corners, and they see a parallel in the *ʾarʾel (?) dwd* which the Moabite Stone (line 12) says Mesha king of Moab dragged before the god Chemosh (*ANET,* 320). On this view the concept of altar hearth comes for *ʾarah,* "burn," similar to the Arabic *ʾira tun,* feminine "hearth." If this is the root, the *lamed* at the end of the word *ʾariʾel* is considered a formative. Thus, Isa 29:1, 2, 7 speaks of Jerusalem in solemn terms as the city on which God will bring his wrath, and Jerusalem will be like a burning altar hearth.

W. HAROLD MARE

ARIMATHEA (PLACE) [Gk *Arimathaia* (Ἀριμαθαια)]. Var. ARIMATHAEA; HARMATHAIM; RAMATHEM; RAMATHA; RAMAH; RAMA; ER-RAM. Each of the Gospels mentions this town only once, and always in association with JOSEPH OF ARIMATHEA—who placed Christ's body in his own tomb (Matt 27:57; Mark 15:43; Luke 23:50; John 19:38). This Jewish town (Luke 23:50) was in the

Shephelah hills area, approximately 20 mi. E of modern Jaffa, and it most likely is identical with either modern Ramathain (Jos. *Ant* 13.4.9) or Rathamein—Samaritan toparchies. In 145 B.C., the Syrian king Demetrius II Nicator delivered three Samaritan toparchies, including Arimathea, to the Jewish leader Jonathan (1 Macc 11:34).

Both Eusebius and Jerome identify Arimathea with the birthplace of Samuel, i.e., Ramah or Ramathaim-zophim, "the two Ramahs" or "twin heights" within Ephraim (1 Sam 1:19). The *Onomasticon* identifies it with this site (Aramathem-Sophim) near Thamna and Lydda (Euseb. *Onomast.* 144.28; 1 Sam 1:1). In the 4th century Jerome reported that the Holy Paula visited this location. Strong traditions from the Middle Ages buttress this claim, celebrating this town as the prophet's original home. And even a monastery of Joseph of Arimathea was erected there. Conflicting traditions urge Arimathea's location at modern Rentis, 15 mi. E of Jaffa. Other suggestions for Arimathea include er-Ram and el-Birah-Ramallah, 5 and 8 mi. N of Jerusalem, respectively. The mosaic Madeba Map also warrants attention, listing Armathem and Arimathe.

All of the above suggestions coincide with the Heb *hārāmāta,* Ramathaim (1 Sam 1:1). The directive *he-*, "toward Rama," geographically accommodates the above selections. *Hārāmāta* becomes *Armathaim* in the LXX.

JERRY A. PATTENGALE

ARIMATHEA, JOSEPH OF. See JOSEPH OF ARIMATHEA.

ARIOCH (PERSON) [Heb *ʾaryôk* (אַרְיוֹךְ)]. **1.** King of Ellasar and one of the allies of Chedorlaomer (Gen 14:1, 9). The identities of both Arioch and his kingdom have been controversial since ancient times (see ELLASAR on its identifications in ancient versions). After the decipherment of cuneiform and the emergence of the first fragmentary data on Babylonian history, E. Schrader (1883: 135) identified Ellasar with Larsa in S Babylonia, and Arioch, with one of its kings, (W)arad-Sin, via the hypothetical variant spelling of his name as ^{m}*Èri-*^{d}*A-ku* (both signifying "servant of the Moon-god"). A little later, the same scholar identified Amraphel with Hammurapi. When it was ascertained that the reign of Warad-Sin was not contemporaneous with that of Hammurapi, Dhorme (1908: 209; 1931: 262) replaced Warad-Sin as the prototype of Arioch with his brother and successor Rim-Sin. But the onomastic side of the equation was so convoluted and contrary to Akkadian phonetics and writing that Dhorme himself later abandoned it. Böhl (1930: 23) identified Ellasar with Telassar and explained *ʾaryôk* as Iranian **aryaka* "the Aryan." When the Mari texts disclosed the existence of a "son" (i.e., a vassal) of King Zimri-Lim named *Ar-ri-wu-uk*, Böhl (1945: 66; 1946: 17) transferred to him the identification with Arioch, though—as stated by Noth (1951)—without substantiation. Moreover, Dossin (1934: 118–19) pointed out that a kingdom listed in Genesis 14 along with Elam, Babylonia, and Hatti (see TIDAL), must have also been a major power. He explained Ellasar as a transcription of one of the cuneiform writings of *Aššur.* Böhl (1953: 46) and Dhorme (1956: 42) reached the same conclusion independently. (On Lipiński's connection of the name "Arioch" with that of a satrap of Armenia Minor in the 3d century B.C., written *Ariukēs* in Greek and *hry [w] kʾ* in Aramaic, see ELLASAR.)

It has been noted since the publication of the "Chedorlaomer texts" (see CHEDORLAOMER) that the patronymic of one of their four royal characters, written ^{m}ÌR-É-*ku-a* and ^{m}ÌR-^{d}É-*a-ku*, resembles the name "Arioch." The name of the king himself is written ideographically. After the initial efforts of transliterating it by various scholars, Astour (1966: 83) ascertained that its actual writing is ^{m}BÀD.MAḫ-^{d}MAŠ, to be read ^{m}*Tukulti-*^{d}*Ninurta*. The "Chedorlaomer texts" recount how the king in question plundered and flooded Babylon, killed its people, sat on the throne of Babylon as its lord, carried away its gods among the booty, and was murdered by his own son. This fits the Assyrian and Babylonian evidence about Tukulti-Ninurta I, king of Assyria (1243–1207 B.C.). His pseudo-patronymic in the "Chedorlaomer texts," preceded by the unusual relative-determinative pronoun *šá,* is actually a descriptive epithet (with a play of homophones, often used in these texts): " (he) who sacked *É-ku-a*," the central cella of the temple Esagila in Babylon, from which the historical Tukulti-Ninurta I carried away to Assur the revered statue

of Babylon's patron god Marduk. The other occurrence of the pseudo-patronymic in these texts reverses the final two signs as *É-a-ku.* It is apparently the latter form that underlies Arioch in Genesis 14, where he is correctly ascribed the kingship of Assur, albeit in the cryptic transcription "Ellasar."

2. The captain of Nebuchadnezzar's guard (Dan 2:14, 15, 24, 25).

3. King of the Elymeans (Elamites), Jdt 1:6. The name of the latter two characters has evidently been borrowed from Genesis 14.

PETER BEDFORD

ARISTARCHUS (PERSON) [Gk *Aristarchos* (Ἀρισταρχος)]. A Jewish Christian from Thessalonica in Macedonia, one of Paul's travel companions (Acts 19:29), fellow workers (Col 4:11; Phlm 24), and fellow prisoners (Col 4:10). Present with Paul when Colossians and Philemon were written, Aristarchus sends his greetings to the recipients of both letters. The identification of Aristarchus in Col 4:10 as Paul's "fellow prisoner" (Gk *sunaichmalōtos,* lit. "prisoner of war") is probably to be taken in the strict sense referring to a time and place when Aristarchus was imprisoned with Paul (Ephesus, Caesarea, or Rome). However, it is not known when or where Aristarchus was actually imprisoned. For this reason the term has sometimes been interpreted in a metaphorical sense, meaning that Aristarchus, like Paul, was held "captive" by Christ.

Col 4:11 also names Aristarchus, Mark, and Jesus, called Justus, as the only "men of the circumcision" among Paul's "fellow workers for the kingdom of God" who were with him during his imprisonment. The presence of these Jewish Christian missionaries is comforting to Paul (Col 4:11). This would be particularly the case in light of the earlier crisis at Antioch (Gal 2:11–21), and its aftereffects (cf. Gal; Phil 3) when Paul was opposed by many Jewish Christian missionaries (see Ollrog 1979: 45–46).

In Acts, Aristarchus is identified as a Macedonian in 19:29, as being from Thessalonica in 20:4, and as both in 27:2. In the first text, he is linked with GAIUS, another Macedonian. These two travel companions of Paul were present with him at the riot led by the silversmiths in Ephesus. In that confusion, Aristarchus and Gaius were seized and dragged into the immense Ephesian theater, probably to be questioned about Paul's activities. Apparently they were freed shortly after the town clerk had diffused the fracas. Since Acts refers to Aristarchus twice within "we-passages" (20:4; 27:2), it has been speculated that Aristarchus knew Luke and that the notably vivid scene of the riot in 19:29, not a "we-

passage," may nonetheless be attributed to an eyewitness account that Aristarchus provided for Luke (Bruce 1977: 289).

When the rioting ceased, Paul, presumably with Aristarchus and Gaius, departed for Macedonia and then for Greece. Later, Aristarchus, Secundus (also a Thessalonian), and others accompanied Paul on his return from Greece (Corinth) to Macedonia; from there they went ahead of him to Troas (20:5). A few years later, Aristarchus also traveled with Paul from Caesarea to Rome (27:2), where he may have shared in his imprisonment, possibly voluntarily (cf. Col 4:10). In Rome, Aristarchus may have come into contact with Epaphras, another fellow prisoner of Paul (Phlm 23).

One other possible reference to Aristarchus occurs in 2 Cor 8:18–19, where Paul, commending Titus to the Corinthians, mentions sending also "the brother who is famous among all the churches for his preaching of the gospel," a person who "has been appointed by the churches to travel with us." The strongest literary evidence for identifying Aristarchus as this brother is the parallel use of the term "travel companion" (*sunekdēmos*) found in the NT only here in 2 Cor 8:19 and in Acts 19:29 where Aristarchus is so described (Redlich 1913: 217–18). An identification of this unnamed brother with Aristarchus, however, remains hypothetical.

JOHN GILLMAN

ARISTEAS THE EXEGETE. A Jewish author who flourished prior to the mid-1st century B.C.E. whose work *On the Jews* treated, at the very least, the biblical figure Job. To what extent he treated other matters is not known. He is generally designated "exegete" or "historian" because of his interest in the biblical text, especially its historical and genealogical features. This designation also serves to distinguish him from the author of the Letter of Aristeas to Philocrates, which relates the story of the translation of the Hebrew Bible into Greek (see ARISTEAS, LETTER OF).

The primary testimony for Aristeas is Eusebius *Praep. Evang.* 9.25.1–4, a section of some thirty lines taken from the pagan author Alexander Polyhistor, who, instead of giving a direct quotation, merely summarizes Aristeas' account of Job.

There is also a possible allusion to Aristeas in *Let. Aris.* 6, which mentions a previous communication in which the author "related the facts about the Jewish race." This may be a reference to another work, however, or it may even be a literary fiction. It has also been suggested that the author of the *Letter of Aristeas* borrowed his name from Aristeas the Exegete. Given the ambiguity of the evidence, these two pieces of testimony are perhaps best left unrelated. *Let. Aris.* 6 does become an important consideration, however, in the question of dating.

Similar to other noncanonical traditions (e.g. *T. Job* 1:1; 2:1–2; 3:1), Aristeas identifies Job with Jobab, one of the Edomite kings mentioned in Gen 36:31–39. In fact, Job is said to be the son of Esau and Bassara. Since the biblical account identifies Jobab as the great-grandson of Esau (Gen 36:33), the text of Eusebius may be corrupt at this point. In any case, Aristeas places Job within the lineage of Esau in the patriarchal period, as is the case in other traditions (*Ps-Philo* 8:8; *Tg. Ps.-J.* on Gen 36:11). He also locates Job in the land of Ausitis (LXX Job 1:1; MT "Uz"), which he further identifies as being near Idumaea and Arabia.

The overall portrait that emerges in Aristeas' account of the biblical story is Job the Patient; the image of Job the Questioner is completely absent (Doran, *OTP* 2: 855).

In spite of the brevity of Polyhistor's summary, it is clear that Aristeas is dependent on the LXX. This is seen in the proper names he employs, such as Jobab (Gen 36:33–34), Bassara (Gen 36:33), Ausitis (Job 1:1), Zophar, king of the Minnaites (Job 2:11), as well as in the close correspondence between his description of Job's possessions and that in LXX Job 1:3, the similarity of language used to describe his afflictions, and his designation of the three friends as "kings" (LXX Job 2:11; the titles are absent in MT).

One of the chief critical problems is how Aristeas relates to the LXX epilogue to Job (*Add. Job* 42:17b–e). The similarity of material suggests either that one depended on the other, or that both drew on a common tradition.

Since Aristeas was preserved by Alexander Polyhistor (ca. 105–30 B.C.E.), it is certain that he flourished prior to the mid-1st century B.C.E. Since he used a Greek translation of Genesis and Job, he appears to have flourished after the mid-3d century B.C.E., when these Hebrew texts began to become available in Greek. If there is a definitive connection between *Let. Aris.* 6 and Aristeas the Exegete's work, it must antedate the *Letter of Aristeas,* which may be as early as the 3d century B.C.E. But as noted earlier, this connection is very tenuous. Accordingly, scholars have generally dated him from the 2d century to the mid-1st century B.C.E.

Because of his apparently exclusive dependence on the LXX, scholars have tended to locate him in a Greek-speaking setting such as Egypt. Given the brevity of the fragment, however, the provenance must remain an open question.

CARL R. HOLLADAY

ARISTEAS, LETTER OF. The Letter of Aristeas addressed by Aristeas to a certain Philocrates describes the translation of the Pentateuch into Greek. As such, it is one of the principal sources of information about the origins of the SEPTUAGINT (LXX).

A. Summary

The contents of the Letter (*Let. Aris.*) can be summarized as follows: Aristeas relates how Ptolemy II King of Egypt (285–247 B.C.) requested Demetrius his librarian to make a complete worldwide collection of books for his library at Alexandria (vv 1–8). He soon collected over 200,000 books and told the king that his target was 500,000. There were also the laws of the Jews which needed translation and to be put into the library. So the king ordered a letter to be sent to the Jewish high priest about this matter (vv 9–11). Aristeas took this opportunity of raising with the king the question of the Jewish prisoners, about 100,000 in number, held in Egypt. Their release was successfully negotiated, and the king also paid compensation, 20 drachmas per prisoner, and decreed accordingly (vv 12–27). After this the king required Demetrius to report to him on the Jewish Scriptures. His report quoted in full emphasized the need for a version of them in the library, and suggested asking the high priest at Jerusalem to send 72 delegates, 6 from each of the 12 tribes (vv 28–32). The king agreed, and wrote accordingly, sending gifts and news of the release of the prisoners (vv 33–34). His letter and Eleazar's reply are given in full (vv 35–51); also a description of the gifts (vv 51–82).

A description of the temple at Jerusalem follows (vv 83–104). This "digression" (v 112) ends with a description of the countryside (vv 112–20). Eleazar dispatched the envoys, and there is a lengthy apology for the Jewish Law, especially its monotheism, in contrast with the polytheism of its neighbors and their worship of sacred animals and idols (vv 121–71). When the embassy arrived in Alexandria, a royal banquet lasting 7 days was held in welcome, during which the king questioned the guests in turn about their religion, the nature and its relevance to the exercise of royalty. Each question is answered (vv 173–294). The banquet ends and Aristeas apologizes to Philocrates for the length of this account, but insists on its accuracy (vv 295–300).

After the banquet, the work of translation soon began. Drafts were made, compared, and a final Greek version was completed in just 72 days, whereupon it was read to the Jewish community and approved (vv 301–11). Demetrius was ordered to guard the books carefully, and finally gifts were exchanged and the translators returned home (vv 312–21).

B. Authorship and Date

Aristeas wrote the *Let. Aris.* to his brother Philocrates. He was one of the envoys but no further details are given about him. We can conjecture that he was a Jew living in Alexandria (Pelletier 1962: 56). His familiarity with Jewish worship and way of life is apparent, but his interests were not limited within that area.

In one passage (v 16) he seems to associate himself with those who also call God the Creator "Zeus," i.e., Greeks or Hellenists, but this somewhat inconclusive statement is outweighed by his special knowledge of Jerusalem and the temple worship (vv 83–118). This would indicate that Aristeas was probably a Jew. It is tempting to conclude from the setting of *Let. Aris.* that its author likewise came from Alexandria, but this is conjectural.

The reference to the Egyptian King Ptolemy Philadelphus (285–247 B.C.) and the use by Josephus (A.D. 37–?110) of *Let. Aris.* as a source (*Jewish Antiquities* 12.2.118) provide broad indications of the date. Within these limits the suggested dates, as summarized by Jellicoe (1968: 48–50) fall into three groups: early, ca. 150–100 B.C., and 1st century B.C. It is less probably a contemporary document—and therefore early—because the Pentateuch seems to be assumed by the author to be a well-established version, the origin of which he describes.

C. Translation

The consideration of the translation involves identifying the original which was translated, together with the method and procedure adopted in the undertaking. In respect of the first, *Let. Aris.* (v 30) states "the books of the law of the Jews, with some others, are wanting [i.e., not in the Library at Alexandria], for these works are written [Gk *legomena* lit. "spoken"] in Hebrew letters and language, but they have been transcribed [Gk *sesēmantai*] somewhat carelessly and not as they should be." It is not clear whether *Let. Aris.* is referring to Hebrew copies of the Law, or to existing Greek versions in the Library at Alexandria: in both cases they are criticized as somewhat inadequate. Moreover the crucial words (v 30) are ambiguous, as Pelletier (1962: 118–20) clearly indicated. There is difficulty too with *sesēmantai,* which is variously thought to have meant "written," "interpreted," and "rendered" (Shutt *OTP* 2: 25–29). If the view is taken that earlier Greek versions of the Law were consulted by the Seventy, it is possible to try and identify them. Jellicoe (1968: 50) thinks that *Let. Aris.* was written to defend a rival Greek version emanating from Leontopolis.

The amount of space given to the actual work of translation is short (vv 301–11). In addition to the difficulty mentioned above, *Let. Aris.* (v 302 and Pelletier [1962: 230 n. 2]), says simply that the translators "harmonized" their drafts, by comparing and agreeing on a final version. There must have been some guidelines for such harmonization. The ease and speed with which agreement was reached raise further suspicions, and all these considerations confirm the view that *Let. Aris.* in its account of the actual work of translation is inadequate and unreliable.

D. Purpose

The foregoing raises the difficult question of the purpose of *Let. Aris.* Clearly part of its purpose was to describe the translation of the Jewish Law into Greek. But equally clearly, that explanation is insufficient to account for the brevity of that passage, which is covered by vv 301–11 out of vv 322. The preceding sections are longer and more detailed, as the Summary indicates. There is a lengthy description of Palestine and Jerusalem, and at the banquet each one of the Seventy is questioned and gives his answer. If then, as seems likely, the actual translation is not the only focus of *Let. Aris.* can we identify the wider purpose? The content of the questions and answers at the banquet may provide a clue. They are concerned with Judaism and the Law, and the desire to present an apology for both in an environment which does not pay much attention to such things, and knows little or nothing about Palestine. *Let. Aris.* seeks to redress that balance, and this wider purpose would be more understandable if, as seems likely, the work emanated from Alexandria and even from the Jewish community which was established there.

In the Christian era the LXX version was highly esteemed (Swete 1902: 29), and the Hebrew version was neglected until Origen (ca. A.D. 185–254) revived interest in the Hebrew by comparing it with the Greek version. Similarities and differences were established in the texts, and the Greek version was defended against the Hebrew. *Let. Aris.* was used in that defense, and was considered to be verbally

inspired (Pelletier 1962: 81–86). In spite of its limitations, it cannot be ignored in the study of the Septuagint.

R. JAMES H. SHUTT

ARISTIDES (PERSON). According to Eusebius, both Quadratus and Aristides presented Christian apologies to the Emperor Hadrian at Athens, probably in 124 C.E. Aristides was unknown to scholars for many years, though his work survived in at least two 4th-century papyri (*POxy.* 15: 1778). The Mechitarists of Venice published an Armenian fragment in 1878, and in 1889 J. R. Harris discovered the whole apology in a 7th-century Syriac manuscript at St. Catherine's on Sinai. J. A. Robinson immediately found that the Greek apology had been used for a lengthy section of the Greek novel *Barlaam and Josaphat,* ascribed to John of Damascus. The text can be reconstructed from the last two witnesses and confirmed by the fragmentary papyri.

Arguments have continued about the recipient's identity, for the Syriac version is addressed by "Marcianus Aristides the Athenian philosopher" to Antoninus Pius, while the Armenian agrees with Eusebius that he addressed Hadrian. Conceivably the original version is reflected in the Greek text, which was later revised and expanded for his successor Antoninus. In any event the apology is quite early, antedating the more ambitious work of Justin.

The arrangement is simple: The work begins with a semiphilosophical description of God and then shows how the gods of various nations fall short. These are the Chaldaeans, who worship the elements/planets; the Greeks, who worship human beings, vulnerable and erratic; and the Egyptians, who worship animals. The Jews are better than any of these people but worship angels and observe the ritual law. Christians are best, for they trace their genealogy back to Jesus the Christ and practice pure love and benevolence. The Syriac version emphasizes their dislike of homosexuality, perhaps more appropriately mentioned to Antoninus than to Hadrian. Christians are slandered by the Greeks but they are just and holy.

Presumably Aristides belongs to the sequence of important Christians at Athens in the 1st and 2d centuries, beginning with Paul's address there and the historical Dionysius the Areopagite, and continuing through Aristides and perhaps Quadratus to the Athenian correspondents of Dionysius of Corinth and to another philosopher-apologist, Athenagoras.

The 4th-century papyri show that Aristides was still read even though later Greek Christians fail to mention Aristides or quote from the apology. Its simplicity must have seemed unfortunate in a period of increasing literary sophistication, when even Diognetus was forgotten. Later Christians liked to see quotations from Scripture, but Aristides supplied none.

ROBERT M. GRANT

ARISTOBULUS (PERSON) [Gk *Aristoboulos* (Ἀριστοβουλος)]. Several significant people in ancient and sacred history. It is a common Greek name meaning "best counselor." See also ARISTOBULUS (OT PSEUDEPIGRAPHA).

1. Greek historian who accompanied Alexander the Great on his campaigns. At 85 years of age he wrote a work on Alexander which was highly regarded in the ancient world for its trustworthiness. Only fragments of the work are extant.

2. Jewish priest referred to in 2 Macc 1:10, who lived in Egypt during the reign of Ptolemy VII. In a letter written by Judas Maccabaeus in 165 B.C.E., Aristobulus is addressed as a representative of the Egyptian Jews and teacher or counselor of Ptolemy VII.

3. Eldest of five sons of John Hyrcanus, who was named Jehuda or Judas but is better known by his Greek name "Aristobulus." In 110 B.C.E., with his brother Antigonus, he laid siege to Samaria (Josephus *Ant* 13.10.2–3; and *War* 1.2.7). When Hyrcanus died in 107 B.C.E., he decreed that his widow should succeed him and that Aristobulus should serve as high priest (Josephus *Ant* 13.11.1). Aristobulus usurped the reign in 104 B.C.E. and may have been the first Hasmonean to arrogate to himself the title of "king" (Josephus *Ant* 13.11.1; compare, however, Strabo). He also apparently allowed himself to be called "Philhellene" because of the favor he showed to the Greeks (Josephus *Ant* 13.11.3; and *War* 1.3). Aristobulus subdued the Ituraeans and compelled them to convert to Judaism. To secure his power, he imprisoned and starved to death his mother and three of his brothers. Aristobulus' favorite brother, Antigonus, later came under false accusations made by a number of jealous enemies including Aristobulus' wife, Salome Alexandra. Antigonus was also murdered but Aristobulus himself died within the same year (104 B.C.E.) with a conscience stricken with self-remorse (Josephus *Ant* 13.11.1–3; and *War* 1.3.1–6).

4. Younger son of Alexander Jannaeus by Alexandra (Josephus *Ant* 13.16.1; and *War* 1.5.1). During Alexandra's 9-year reign, he opposed the Pharisees, whose influence his mother had sought. When Alexandra died in 70 B.C.E., she was succeeded by her eldest son, Hyrcanus, whom Aristobulus engaged in war, forcing Hyrcanus to resign his crown and high priesthood (Josephus *Ant* 13.16; 14.1.2; *War* 1.5; 6.1). Hyrcanus was given refuge by Aretas, King of Arabia Petraea. In 65 B.C.E., Aretas invaded Judea, defeated Aristobulus' forces, and laid seige to Jerusalem (Josephus *Ant* 14.1.3–4; and idem., *War* 1.6.2). In this connection, Josephus refers to a certain Onias, whom he describes as "a righteous man and dear to God," and whose prayers for rain in a time of drought were miraculously answered. The followers of Hyrcanus tried unsuccessfully to force Onias to place a curse on Aristobulus. Instead Onias prayed that neither side would succeed, and as a result, the infuriated mob stoned him to death (Josephus *Ant* 14.2.1). Some scholars associate Onias with the Teacher of Righteousness mentioned in the Dead Sea Scrolls and either Hyrcanus II or Aristobulus II as the Wicked Priest. In 65 B.C.E., Rome interceded in the Judean affairs, initially supporting Aristobulus, but the following year Pompey decided to support Hyrcanus II, and Aristobulus and his two daughters were taken to Rome. In 56 Aristobulus escaped from Rome and appeared in Palestine, again claiming the throne. He was severely wounded in battle, captured, and sent as a prisoner to Rome with his son Antigonus. In 49 Julius Caesar freed Aristobulus, and supplied him with two legions in an attempt to recover Judea and weaken Pompey's political position. Quintus Metellus Scipio, Governor of Syria, had Aristobulus poisoned on his way to Palestine.

5. The grandson of number four, the son of Alexander and the brother of Herod the Great's wife, Mariamne. His mother, Alexandra, attempted to obtain the high priesthood for her son by persuading Cleopatra to influence Antony. Consequently Herod deposed Ananelus and bestowed the office to Aristobulus. Alexandra renewed complaints against Herod to Cleopatra and, under increasing suspicion, attempted to escape with her son to the protection of the Egyptian court. In 35 B.C.E., Herod had Aristobulus drowned at Jericho (Josephus *Ant* 15.2.3; and *War* 1.22.2).

6. One of the sons of Herod the Great by Mariamne, who was sent with his brother Alexander to Rome, where they were educated in the house of Pollio (Josephus *Ant* 15.10.1). Upon their return to Judea, their brother Antipater excited the suspicions of Herod against them, which were exasperated by the indignation the brothers showed at the murder of their mother. Aristobulus and Alexander were accused by Herod before Augustus at Aquilea in 11 B.C.E. but were temporarily reconciled with their father through the mediation of the Roman Emperor. In 6 B.C.E. the brothers were again charged with plotting against Herod but were reconciled through the efforts of Archelaus, King of Cappadocia, the father-in-law

of Alexander. After being accused for a third time in 6 B.C.E., Augustus permitted Herod to arraign the two before a council which convened at Berytus. The brothers were condemned and strangled soon after at Sebaste (Josephus *Ant* 16.1–4; 8; 10; 11; and *War* 1.23–27; see also Strabo 16.756).

7. Son of Aristobulus, discussed above in number 6, and Berenice, surnamed "the younger" (Josephus *Ant* 21.2), the grandson of Herod the Great. He was educated in Rome with his two brothers together with the future Emperor Claudius (Josephus *Ant* 18.5.4; 6.1; and 20.1.2). Aristobulus lived at enmity with his brother Agrippa I. He accused Agrippa I of taking a bribe from the Damascenes, ultimately placing Agrippa at variance with Flaccus, the Roman Proconsul of Syria (Josephus *Ant* 18.6.3). Aristobulus joined the protest in Jerusalem against Caligula when the emperor attempted to erect statues in the Temple (Josephus *Ant* 18.8; *War* 2.10; and Tacitus *Hist* 5.9). Aristobulus was married to Jotapa, a princess from Emessa, by whom he had a daughter with the same name (Josephus *Ant* 18.5.4; and *War* 2.11.6). Aristobulus survived his brother Agrippa I, who died in 44 C.E. (Josephus *Ant* 20.1.2.; and *War* 2.11.6).

8. Son of Herod, King of Chalcis, great-grandson of Herod the Great, and grandson of Aristobulus. Aristobulus obtained his father's kingdom of Chalcis from the Romans sometime after 52 C.E. when it was taken from his cousin Agrippa II (Josephus *War* 7.7.11). Nero made Aristobulus King of Armenia Minor in 55 C.E. and added to his dominions a portion of Greater Armenia (Josephus *Ant* 20.8.4; and Tacitus *Ann* 13.7; 14.25). In 73 C.E., Aristobulus joined forces with Cassenius Paetus, the Roman Consul of Syria, to fight against Antiochus, King of Commagene. Aristobulus was married to the daughter of Herodias, Salome, by whom he had three sons (Josephus *Ant* 18.5.4).

9. A Roman named by Paul in Rom 16:10. According to tradition, Aristobulus was the brother of Barnabas, one of the 70 disciples, ordained a bishop, and was eventually a missionary to Britain.

SCOTT T. CARROLL

ARISTOBULUS (OT PSEUDEPIGRAPHA). Jewish philosopher-exegete who flourished in Alexandria in the 2d century B.C.E. He wrote a work in Greek, possibly multivolumed and entitled *Explanations of the Book of Moses,* of which only several short fragments survive. The exegetically focused exposition employed a form of allegorical interpretation and had an explicit philosophical orientation. In both respects, Aristobulus anticipates Philo of Alexandria, although there are important qualitative differences in their approach and outlook. Common to both, however, is a concerted effort to address issues of biblical interpretation in light of current Greek philosophical positions and modes of interpretation, and in doing so, show that the best of Hellenistic thought and culture had already been embodied in the Mosaic law.

Five fragments from Aristobulus' work have survived. The first fragment, preserved in Eusebius *Hist. Eccl.* 7.32.16–18, is from an earlier treatise on the Passover by Anatolius, bishop of Laodicea (d. ca. 282 C.E.). Here Aristobulus asserts that the feast of Passover occurs during simultaneous solar and lunar equinoxes, thus when the sun and moon are at polar opposites in their orbiting positions.

The remaining four fragments, which are preserved in Eusebius' *Praeparatio Evangelica,* are direct quotations. Portions of these fragments are quoted earlier in Clement of Alexandria *Strom.* 6.3.32.5–33.1 and 6.3.32.3–4 (Frg. 2); 1.22.150.1–3 and 1.22.148.1 (Frg. 3); 5.14.99.3 and 5.14.101.4 (Frg. 4); 6.16.137.4–138.4; 6.16.141.7b–142.1; 6.16.138.4b; 6.16.142.4b–144.3; and 5.14.107.1–4 [+108.1] (Frg. 5). Portions of Frg. 4 are also contained in Clement *Protr.* 7.73.2.

Frg. 2 (*Praep. Evang.* 8.9.38–10.17) defends the biblical use of anthropomorphisms, based on interpretation "according to the laws of nature" (*phusikos*), as opposed to a "mythical and human way of thinking about God" used by those "devoted to the letter alone." Using a primitive, relatively undeveloped form of allegorical interpretation, Aristobulus explains biblical references to God's hand (power), standing (universal supremacy), and descent (the manifestation of God's universal majesty).

Frg. 3 (*Praep. Evang.* 13.12.1–2) asserts that Plato and Pythagoras borrowed much of their teaching from an early Greek translation of the Mosaic law. This fragment represents an explicit, well-developed example of the tradition, which circulated in a variety of forms, that Greek philosophy is traceable to Hebrew origins.

Frg. 4 (*Praep. Evang.* 13.12.3–8) explains the anthropomorphic expression "God spoke" and further expands the argument for Greek dependence on Moses by providing a lengthy quotation attributed to Orpheus which contains faint echoes of the biblical text. It also contains a quotation from the *Phaenomena* of Aratus (ca. 315–240 B.C.E.), altered to show that this Greek author was actually speaking unwittingly of the God of the Jews.

Frg. 5 (*Praep. Evang.* 13.12.9–16), which focuses on the sabbath, provides an allegorical interpretation of certain biblical statements, e.g., God rested on the seventh day. Through the use of number speculation drawn from various philosophical traditions, Aristobulus also interprets the sabbath as expressing the primal significance of the number seven as the ordering principle of the universe. He further posits Greek dependence on the Mosaic law by citing references attributed to Hesiod, Homer, and the mythical figure Linus attesting the special significance of the seventh day.

There is strong evidence for dating Aristobulus during the reign of Ptolemy VI Philometor (181–145 B.C.E.). "Ptolemy the King" to whom the work is dedicated and addressed is identified by Clement (*Strom.* 1.22.150.1) and derivatively by Eusebius (*Praep. Evang.* 9.6.6) as Philometor. This fits with Aristobulus' own reference to Ptolemy II Philadelphus (283–247 B.C.E.) as the addressee's "ancestor" (*Praep. Evang.* 13.12.2). Roughly the same period is envisioned when Clement (*Strom.* 5.14.97.7) and Eusebius (*Praep. Evang.* 8.9.38) identify him as the Aristobulus of 2 Macc 1:10, the leading addressee of the letter sent by Judas Maccabeus and the Judean Jews to the Jewish community in Egypt. This latter piece of evidence is controversial, however, since it may have influenced Clement (and therefore Eusebius) in their historical reconstruction (Walter 1964: 13–16).

Conflicting, but less compelling, evidence for an earlier date during the reign of Philadelphus occurs in Anatolius, who identifies Aristobulus as one of the 70 who translated the Hebrew Bible into Greek (Eusebius *Hist. Eccl.* 7.32.16; similarly, one textual tradition of Clement *Strom.* 5.14.97.7).

Aristobulus is clearly Jewish since he speaks of "our Law" (*Praep. Evang.* 8.10.1, 8; 13.12.8; also cf. 13.12.1, 13) and calls Solomon "one of our ancestors" (13.12.11) and Moses "our lawgiver" (8.10.3). What is clear from his writings is made explicit in the tradition: he is a self-styled philosopher. Clement (*Strom.* 1.15.72.4) and Eusebius (*Praep. Evang.* 9.6.6; 13.11.3–12.1 [title]) identify him as a Peripatetic, familiar "with Aristotelian philosophy" (*Praep. Evang.* 8.9.38). The term, however, should not be taken as a technical description of a particular philosophical school since it had a wider connotation during the Hellenistic period. Aristobulus' philosophical position is more appropriately described as eclectic, showing traces of Pythagorean, Platonic, Aristotelian, and Stoic influence. 2 Macc 1:10, while problematic, suggests that he was of a priestly family and served as "teacher of Ptolemy the king." The latter may mean that, in keeping with the tradition of the sage who instructs the king, he tutored the young Philometor and addressed a didactic work to him commending Jewish wisdom as the true philosophy (Hengel 1973, 1: 164). But whether he exercised such influence in the Ptolemaic court at that time is disputed (Collins, *OTP* 2: 833).

His role as exegete is reflected in Anatolius' characterization of his work as "exegetical books on the law of Moses" (Eusebius *Hist. Eccl.* 7.32.16) and also echoed by Eusebius' own description (*Praep. Evang.* 7.13.7) of his work as "interpretation of the sacred laws."

An Alexandrian provenance is suggested by the close association, both within the fragments themselves and in the later tradition, of Aristobulus with Ptolemaic Egypt. This is reinforced even more if 2 Macc 1:10 is reliable testimony to Aristobulus, since it specifically includes him with the "Jews in Egypt." Besides these numerous explicit connections, the philosophical tenor of the exposition, the allegorical mode of interpretation, and the broad familiarity with a wide range of classical Greek texts and philosophical positions fit well an Alexandrian setting. It has even been suggested that he was a member of the Alexandrian Museum (*HJP²* 3/1: 579).

Earlier scholars seriously doubted the authenticity of the fragments, arguing that the presence of forged quotations within them and signs of dependence on Philo of Alexandria require them to be dated in the Christian era. More recent scholarship, especially Walter (1964: 35–123), has defended their genuineness

by noting, for example, that the style of language and relatively undeveloped form of allegorical interpretation fit the Hellenistic period.

CARL R. HOLLADAY

ARIUS, ARIANISM. Arius (256–336 C.E.), a presbyter of the Baucalis region of Alexandria (Boulerand 1964: 175), began a controversy ca. 318 (Schneemelcher 1954: 394) with Bishop Alexander of Alexandria over the nature of Christ's relation to the Father (Gregg and Groh 1977: 263). This controversy led ultimately to Arius' condemnation by the Council of Nicaea (325 C.E.), to the exclusion of his ideas from orthodoxy in the Creed and Anathemas of Nicaea, and to the movement known as Arianism.

Nothing is known about Arius' biography other than a probable birth in Libya sometime in the 3d century and an ordination to the office of deacon by Peter of Alexandria and to the office of presbyter by Achillas (Williams 1987: 29–32, 40). Reports of Arius' death in 336 may be reliable, though the circumstances were embellishments of his enemies (Williams 1987: 80–81). Current scholars are divided on the extent of Arius' personal impact on the movement, between those who see Arius as an essentially isolated figure and those who see him as an influential member of the circle of early Arians (Groh 1986).

Orthodox opposition to the emergence of a new wave of Arian theologians in the 350s, called in the scholarly literature Neo-Arians, led to the formation of the classic doctrine of the Trinity associated with the so-called Creed of the Council of Constantinople (381), which Christians recite today as the "Nicene" Creed (Kelly 1972: 296).

Kopecek has shown that the thought and liturgical emphases of these Neo-Arians should not be confused with those of Arius, especially, and the other early Arians (1979: 20–21, 25; Kannengiesser 1982b: 54–57; Gregg 1985: 174–75; Gregg and Groh 1981: ix, 8 and n. 38).

It is the *early* Arians (ca. 318–ca. 341 C.E.) who are most important in regard to biblical exegesis within the "Antiochene" tradition of Lucian (Bardy 1936). In addition to Arius, especially important are Asterius the Sophist (d. ca. 341; also called the "Sacrificer" because of his lapse in a persecution) and Eusebius of Nicomedia (d. ca. 342), bishop successively of Berytus, Nicomedia, and Constantinople. Although Eusebius' literary legacy amounts to only a single letter (Opitz 1935b: 15–17), his prominence as the acknowledged leader of the Arian movement after Nicaea and his favor with the imperial court were probably due to the fact that he was a patrician and a relative of the future emperor Julian (361–363 C.E.) (Barnes 1981: 70 and n. 79).

A. Sources

The sources collected and edited by Optiz (1935a–b) need to be supplemented for Arius by quotations and commentary in the writings of Bishop Athanasius of Alexandria (328–73 C.E.) and by the sources collected by Bardy (1936: 221–95; 1930: 266). Recently, an original text of Athanasius' *Ar.*, one of the most important sources for Arianism, has been established as contained in the first two extant *Ar.* (Kannengiesser 1983 and *tableau récapitulatif*). Kannengiesser rules out Athanasian authorship for *Ar.* 3 (1983: 310–68, 409), but his thesis that *Ar.* 3 was composed by Apollinaris of Laodicea (1982a: 994–95) or his school (1983: 414–16) is problematic. *Ar.* 3 should be considered to be most probably an anti-Arian writing by Athanasius from an as yet unspecified redaction or treatise.

A major debate is also under way (Kannengiesser 1982b: 12–17; Williams, Hall, Kannengiesser in Gregg 1985: 1–78; Stead 1978) over the best text and the exact original wording of Arius' *Thalia* in the three systematic citations of it reported by Athanasius (*Ar.* 1.5–6; *ep. Aeg. Lib.*12; *syn.* 15); and attempts to uncover the metric scheme (Stead 1978: 40–52) have not succeeded in guiding us to a normative text of

Arius' systematic thinking (Kannengiesser, Gregg 1985: 61). Doctrinal disagreements among the versions seem, however, overdrawn; and an attempt to attribute a Neo-Arian redaction to *syn.* 15, thus lowering its value as a source for Arius' own thought, has been advanced and disproved in the same volume (in Kannengiesser 1982b: 54–57). Firm judgments about Athanasius' general trustworthiness as a reporter of opponents' opinions must await a better understanding of his methods (Stead 1976: 129–35) and a sifting of the mass of recent scholarly literature on Athanasius (Kannengiesser 1985).

The fragments of Asterius' *Syntagma* (Bardy 1936: 341–57) have recently been discriminated according to their two preserving sources by Wiles, who has shown that their content does not necessarily conflict with each other (Gregg 1985: 120). Asterius' *Homilies on the Psalms* (Richard 1956) Wiles has also shown to reflect differing, but not necessarily conflicting, emphases than the fragments (Gregg 1985: 135). To the homilies adjudged Asterian by Richard (1956), Wiles has further authenticated homilies 1, 10, 14, 24.4–15 (Gregg 1985: 140–44).

B. Christological Emphases

Scholarship of the last hundred years had tended to stress uncompromising monotheism, either Jewish or philosophical (Ricken 1969; Boulerand 1972: 101–74), as the central Arian motivation in subordinating Christ to God. More recent scholars (as chronicled in Norderval 1985) have ruled out such concerns and focused attention on the centrality of the Arians' distinctive Christology (Lorenz 1979: 223–24; Gregg and Groh 1981: 1–42, 77–129). Against the insistence of their orthodox opponents that Christ was the eternal essence, Word, Wisdom of the Father, Arians stressed Christ's creaturely dependence on God's will, emphasizing the Son's limited knowledge of the Father (Gregg and Groh 1977: 266). For Arius and Asterius, these affirmations of Christ's creaturehood safe-guarded a true incarnation, in which the redeemer could suffer and save (Gregg and Groh 1981: 4; considerably extended, qualified, and refined by Wiles and Hanson in Gregg 1985: 135–37, 181–83). Thus our earliest (ca. 324 C.E.) systematic orthodox source against the Arians (Alex. Al. *Ep. Alex.*, Optiz 1935b: 25) criticizes them for emphasizing all the Gospel and Epistle passages, including Phil 2:5–11, which mention Christ's passion and humiliation and for ignoring all those texts which, to the orthodox, stress Christ's common nature or essence with the Father.

Thus, in opposition to the orthodox, Arians accented the creaturely commonality of Christ with those he was to redeem and, hence, Christ's importance as representative creature and model (Gregg and Groh 1981). In other contexts they emphasized the special role that Christ played in the work of creation and salvation (Casey 1935: 10; Tetz 1952–53), as Wiles has recently suggested on the basis of the Asterian homilies (in Gregg 1985: 135). Thus they seem to have made a slightly different (but not necessarily contradictory) aim or appeal depending on the context: on the one hand, Christ is special, and even sole agent by which creation and salvation are accomplished; on the other hand, Christ is the model of the perfect (= perfected) creature.

This double aim or appeal informs their use of the Christological title "only-begotten" (*monogenes*) (John 1:14; 3:16; 1 John 4:9). It can mean the only creature brought into being directly by God, or *firstborn* (that is, first in a series), or even *identical image;* but the term always carried with it notions of "first Son" or "favored Son," rather than "absolutely unique Son of God," as in orthodox texts (Gregg and Groh 1984: 315–16; expanded on and corrected in Gregg and Groh 1978: 276–78).

C. Uses of Scripture

In their use of Scripture, the Arians excelled as rhetors and tended toward literal and typological exegesis. In dogmatic contexts, they used the Scriptures to provide terminological distinctions and definitions (Gregg and Groh 1981: 7–8, 21, 89–90, 166–68). In homiletical contexts, they, often rhetorically, pursued the moral meaning and application of texts and exhortation of the hearers (Casey 1935: 10), as Wiles has observed (in Gregg 1985: 124–25).

Traces of the allegorizing of scriptural texts as practiced by the Alexandrian school are absent in Arian exegesis. This absence makes claims that the Arian crisis was a conflict of Alexandrian hermeneutics (Kannengiesser 1982b: 1–4) problematic, though Wiles (Gregg 1985: 125) has shown that Asterius stressed the titles of the Psalms in his homilies, as did Origen and some of his disciples.

The long-term importance of Arius and his circle for scriptural exegesis and interpretation seems to reside in their forcing Alexandrian orthodoxy to develop clearly its hermeneutic of Scripture (*Ar.* 3.26; Alex. Al. *Ep. Alex.* 35, Opitz 1935b: 25); and if Athanasius' later account of the discussions at Nicaea is to be believed (*decr.* 19–20, Opitz 1935a: 17), Arian exegetical strategy can be credited with forcing the insertion of a nonscriptural term "of the same essence" (*homoousios*) into a key article of the Creed for the first time in Christian history.

A. Designations

There are two Hebrew words translated as "ark" (Lat. *arca* "box, chest") in the English: (1) *ʾărôn,* ancient Israel's most sacred cultic object which was probably originally a box of some sort, and (2) *tēbāh,* the boat which Noah built. In addition to the sacred ark, *ʾărôn* also refers to a collection box in the temple (2 Kgs 12:10, 11—Eng12:9, 10; 2 Chr 24:8, 10, 11) and the sarcophagus of Joseph (Gen 50:26). References to the ark appear in different formulations 195 times. Only 53 examples (a little over a quarter of the total number) refer to the ark without any qualification, and very few of these occur without an antecedent referent with a fuller name for the ark. It appears, therefore, that the qualifications are important for one's understanding of the significance of the ark in the various traditions (Maier 1965: 82–83).

1. Ark of God/YHWH. The ark is most often (82 times) associated with some divine name: "ark of God," "ark of YHWH," "ark of the God of Israel," "ark of the lord of all the earth," or the like. Most of these occur in the Deuteronomistic History; the rest are in Chronicles. In the Ark Narrative of 1 Samuel 4–6, we learn that the ark was associated with the divine name "YHWH of Hosts who sits enthroned upon the cherubim" (1 Sam 4:4; cf. 2 Sam 6:2; 1 Chr 13:6). This is usually regarded as the fullest and most ancient liturgical name of the ark. Some scholars have argued for the priority of the "ark of God" designations (von Rad, *PHOE,* 115–16), suggesting that it was only at Shiloh that the name of the ark was changed from "ark of God" to the more specific "ark of YHWH." But this is extremely difficult to demonstrate, as is the claim that the two sets of names represent two different strata in the ark stories. Indeed, the occasional juxtaposition of the two divine names (e.g., Deut 10:8; 31:9; Josh 3:3; 1 Kgs 2:26) and sometimes the translation of the names in the versions (e.g., LXX 1 Sam 4:3, 22; 5:2) suggest that the designations "ark of God" an "ark of YHWH" are probably to be treated for the most part as interchangeable names. The variations are usually stylistic rather than ideological. An exception is the name "ark of the god of Israel," all 7 occurrences of which are put in the mouth of the Philistines in connection with the ark's sojourn in Philistine territory (1 Sam 5:7, 8 [3x], 10, 11; 6:3). In the same literary context, the ark is most often called the "ark of YHWH" by the narrator (1 Sam 5:3, 4; 6:1, 2, 11, 15, 18, 19; 7:1). If any significance is to be attached to the specific designations in the narrative about the ark's sojourn, it is surely that the ark represents the power of Israel's God, the "hand" of YHWH (see D.1 below).

2. Ark of the Covenant. This designation appears 40 times, 30 times with various forms of the divine name. Thus, one finds "ark of the covenant of YHWH," "ark of the covenant of God," "ark of the covenant of the lord of all the earth," and so forth. In all cases, the term "covenant" appears to define the ark. The association of the ark with the covenant is typical of the Deuteronomists; it is their special designation of the ark. The statistic that stands out in this category, however, is not so much the places where the name does occur, but where it does not. It does not occur at all in the P work (Seow 1985: 186–87). Instead of "ark of the covenant," P uses a substitute name for the ark, even though the covenant is a key theological concept for P.

3. Ark of the "Testimony." This designation occurs, with one possible exception (Josh 4:16, which is generally taken to be a Priestly gloss), only in the Priestly material in the Tetrateuch. It is P's distinctive term for the ark; no one else uses it. The word that is usually translated as "testimony" (*ʿēdût*) is actually a

synonym for "covenant" (Seow 1985: 192–93). We know this from cognates in Egyptian, Akkadian, and Old Aramaic. In Hebrew poetry *ʿēdût* is found in parallelism with *bĕrît*, the normal word for covenant in the Hebrew Bible (e.g., Ps 25:10; 132:12). In certain contexts, the Priestly writer uses *ʿēdût* where another writer would have used *bĕrît*. Thus, whereas Deuteronomy calls the tablets given at Sinai "tablets of the *bĕrît"* (Deut 9:9, 15), P calls them "tablets of the *ʿēdût*" (Exod 27:8; 31:18). It follows, then, that "ark of the *ʿēdût"* is P's equivalent of the Deuteronomistic "ark of the *bĕrît."* Since P knows the word *bĕrît*, the difference between the designations of the Deuteronomist(s) and P should be explored (see D.3 below).

4. Allusions to the Ark. Outside the Pentateuch and the historical writings, the ark is mentioned by name only once in the Psalter (Ps 132:8) and once in the Prophets (Jer 3:16). This has led some to conclude that the ark was no longer in existence throughout most of the monarchical period (Haran 1963: 46–58). It should be noted, however, that in poetic texts and cultic contexts the ark, which represented the real presence of the deity, may be known simply by the divine name or some theological term. In similar manner, divine images of Mesopotamia were not always called statues, they were regularly referred to as "gods." Alternatively, the name of the god or goddess may be mentioned where the image of the deity is meant. Thus, the reference to YHWH dwelling in a tent (2 Sam 7:6) is clearly to be equated with the ark being in the tent (2 Sam 7:2). So, too, the expression "before YHWH" or "before God" may frequently be synonymous with "before the ark" (e.g., Lev 16:1–2; 2 Sam 6:4–5, 14, 16, 17, 21; 1 Sam 10:25; 2 Kgs 16:14; 1 Kgs 8:59, 62–65; 9:25; Josh 6:8; 1 Chr 1:6; 13:10 [cf. 2 Sam 6:7]; Judg 20:26–27). Related to this, the mention of YHWH's presence (*pānîm*) may also be an allusion to the ark (e.g., Num 10:35; Ps 105:4).

It is probable that Ps 47:6 [—Eng 47:5] refers to a procession of the ark, even though the ark is not mentioned by name (cf. the vocabulary of 2 Sam 6:15). The opening verse of Psalm 68 is similar to the incipit of the ancient Song of the Ark in Num 10:35 and is, perhaps, part of a liturgical text used in connection with the procession of the ark in the early monarchy. In Ps 78:61, there is an allusion to the ark's capture by the Philistines (1 Sam 4:10–11), but the ark is not mentioned by name. Rather, the ark is called simply "his might" and "his glory." This verse echoes the designation "the ark of your might" in Ps 132:8. Some scholars argue, therefore, that the exhortation to "seek YHWH and his strength" (Ps 105:4) contains an allusion to the ark. Indeed, this very portion of the Psalm is cited by the Chronicler (1 Chr 16:11) as part of a liturgy used with the procession of the ark, albeit he places the procession in the time of Solomon's inauguration of the temple. In the same liturgy, the Chronicler quotes from Psalm 96, which states that YHWH's "might and glory" (the same pair of words as in Ps 78:61) are in the temple (Ps 96:6; cf. 1 Chr 16:27). It should be noted that "glory" (*kābôd*) denotes the ark in 1 Sam 4:21–22, where the capture of the ark is lamented as the departure of glory from Israel.

It is commonly acknowledged that Psalm 24 contains an "entrance liturgy" used during the procession of the ark. The psalm celebrates YHWH's cultic return as mighty warrior and glorious king (Cross, *CMHE*, 91–99). This return of YHWH was, no doubt, represented by the procession of the ark. The psalm was perhaps sung antiphonally, with those who led the procession and the "gatekeepers of the ark" (cf. 1 Chr 15:23–24) singing different portions of the liturgical text. Just outside the gates of the city, or the doors of the temple, the celebrants heralded the arrival of the ark:

Lift up your heads, O Gates;
Be lifted up, O Ancient Doors
That the King of Glory may come in!
  Who is this "King of Glory?"
YHWH strong and mighty,
YHWH the mighty warrior.
Lift up your heads, O Gates;
Lift up, O Ancient Doors
That the King of Glory may enter.
  Who is the "king of Glory"?
YHWH of Hosts, He is the King of Glory!

(Ps 24:7–10)

B. Parallels

In order to shed light on the antiquity of the ark and its function, scholars this century have tried to relate the ark to various cult objects in the ANE. Accordingly, the ark has been compared with the Egyptian procession barques on which statues of the gods were placed (Gressman 1926), the sarcophagus of Osiris or the Tammuz chest of the Babylonians (Hartmann 1917–18: 209–14), the step shrine of Petra which was known also among the Hittites (Reimpell 1916: 326–331), and ceramic miniature temples at Megiddo (May 1935–36), among others. Two parallels merit attention here.

1. Tent Shrine. Early in its history, the ark was closely associated with divine presence. In fact, it was so closely associated with the presence of YHWH that it was thought to be an extension of YHWH's personality. YHWH was thought to be present whenever the ark was present. The ark led the people in their wanderings "to search for them a resting place" (Num 10:33). Whenever the ark proceeded, YHWH would be addressed directly:

> Arise, O YHWH,
> Let your enemies be scattered
> Let your foes flee from your presence.

(Num 10:35)

By the same token, the homeward march of the ark was initiated by the call to YHWH to return (Num 10:36). The martial language in these fragments of an ancient liturgy recalls the use of the ark as a war palladium (Num 14:44; 1 Sam 4:2–9). The ark was the place where the leaders of the tribes of Israel sought oracles for holy war (Judg 20:26–27; 2 Sam 5:19, 23).

Such portrayals of the ark in relatively early sources has prompted comparison of the ark with the *qubbāh,* a pre-Islamic tent shrine of the Arab bedouin (Morgenstern 1945; Cross 1961). The *qubbāh* (cf. Num 25:8) was carried from place to place by the nomads; it led the tribes in their search for water and campsites, was used for divination, and functioned as a war palladium. It was made of red leather (cf. Exod 26:14) and contained two sacred stones (betyls). A bas-relief from a temple of Bel at Palmyra (ca. 1st century B.C.E.) shows a camel in procession, carrying a tent whose red color is still faintly visible. Several Palmyrene texts indeed mention the *qubbāh* (Zobel *TDOT* 1 367). Variations of this cult object survived in the *ʿuṭfāh* (also called *markab*) and *maḥmal* of later Muslim bedouin. Some of these receptacles carried the Quran.

According to Diodorus Siculus, the Carthaginians also had a "holy tent" *(hiera skēnē)* which they carried with them to battle (Diod. 20.65). An altar was located near this tent shrine. Philo Byblius, quoting Sanchuniathon's "Phoenician history" (ca. 7th century), speaks of an ox-drawn shrine among the Phoenicians (*Praep. Evang.* 10.12; cf. 1 Sam 6:7, 11; 2 Sam 6:3).

There is a strong tradition in the Bible linking the ark with a tent. Referring to the capture of the ark by the Philistines (1 Sam 4:1–7:2), one text speaks of YHWH's forsaking "the tabernacle of Shiloh, the tent where he dwelled" (Ps 78:60–61; cf. 1 Sam 2:22), although the sanctuary at Shiloh is called *hêkāl* (temple/palace) in 1 Sam 1:9; 3:3. (A common view is that there was, in fact, no temple at Shiloh and that the allusions to a temple are anachronistic retrojections from the later Jerusalem temple (Cross, *CMHE,* 73; Haran 1962: 14–24). But it has been pointed out that both notions of the divine abode were already associated with the Canaanite high god, El [Seow 1989: 33–41].) In this connection, it is possible to argue that the tent shrine housing the ark was somehow *in* the temple (cf. the priestly gloss in Josh 18:1 about the establishing of the tent of meeting at Shiloh). According to one source, it was David who built a tent in which the ark was enshrined (2 Sam 6:17; 1 Chr 15:1, 3). Nathan's oracle is explicit that YHWH (i.e., the ark) had not remained (*yāšab*) in a temple but had been moving about "in a tent *and* in a tabernacle" (2 Sam 7:6). According to 1 Kgs 8:4 (cf. 2 Chr 5:5), Solomon brought the ark in procession with the "tent of meeting" and other cultic appurtenances—as if the tent which sheltered the ark was brought into the sanctuary along with the ark.

There is no text more emphatic about the ark being enshrined in a portable tent than P, although the precise relationship of the "tent" and "tabernacle" in P is difficult to sort out. In P, the ark is hidden by the

pārōket veil which was "over the ark"—even as the *kappōret* was "over the ark" (Exod 30:6; 40:3)—and covering it (Exod 40:3; 21; cf. Num 4:5 and *b. Sukk.* 7b; *b. Soṭa* 37a). The verb "cover" in this context is the same as the verb for the cherubim's overshadowing of the ark. It is interesting, therefore, to note that Josephus describes the wings of the cherubim covering the ark "as under a tent or dome" (*Ant* 7.103–104). Josephus also reports that the ark and tent were both brought into the temple together (*Ant* 8.101). Jewish traditions suggest that the tent and the ark were removed from the temple during the destruction of Jerusalem (2 Macc 2:4–8; cf. *b. Yoma* 53b). Finally, the tradition of the tent shrine housing the ark is known in Heb 9:4 where the ark is said to be located "behind the second curtain," *in a tent.*

2. Throne Footstool. The ark at the Shiloh sanctuary is associated with the divine name "YHWH of Hosts who sits enthroned upon the cherubim" (1 Sam 4:4). This divine epithet combines the notions of YHWH as warrior and king. Moreover, the sanctuary is called a *hêkāl,* "temple" or "palace" (1 Sam 1:9; 3:3). The royal background of the cult at Shiloh has prompted some to argue that the origin of the ark is to be located not in the desert, but in the urban centers of Canaan. The nomads of the desert, it is presumed, would not have used the analogy of kingship prior to the establishment of the monarchy. This is fallacious, however. The idea of YHWH's kingship is presumed in several archaic, premonarchical poems (see Exod 15:18; Num 23:21; Deut 33:5). Moreover, the idea of a tent dwelling for God does not rule out the concept of YHWH's kingship. The chief god of the Canaanite pantheon, El, is regularly depicted in iconography and in the Ugaritic texts as a divine king. Yet El's domicile is explicitly stated to be a tent (*CTA* 4.4.20–26; *ANET*, 133).

In the Solomonic temple, the ark is placed in the innermost sanctum (*dĕbîr*), beneath the outspread wings of the cherubim (1 Kgs 8:6–7). Another passage says the cherubim were each 10 cubits high with the span of their outstretched wings 10 cubits wide (1 Kgs 6:23–28). The two cherubim together appear to have formed some sort of a throne for the invisible God (Mettinger 1982: 19–24). Cherubim thrones are well attested in Syria-Palestine. A beautiful ivory plaque has been excavated from the LB level Megiddo showing a king on a throne seat supported by winged sphinxes, with a procession of people paying homage to him. From the same site and period comes a tiny ivory model of an empty throne, again with winged creatures. The bas-relief from the sarcophagus of Ahiram, king of Byblos (ca. 10th century B.C.E.) likewise depicts a human or divine king sitting on a cherubim throne. A Punic stela from Sousse (Hadrumetum) and a scarab from Sardinia both show the god El as king on a throne.

Scholars from early in this century have proposed that the ark was such a throne and that the cherubim were carved on the side of the ark. But this is problematic. According to the dimensions of the cherubim and the account of the emplacement of the ark, it appears that the ark was not the cherubim-throne. Rather, the ark was probably regarded as the footstool of the invisibly enthroned deity. As such, it is closely associated with the notion of YHWH's enthronement, but it is not the throne *per se.* It should be noted that footstools regularly came with the throne in the ANE. The cherubim thrones of the sarcophagus of Ahiram and the ivory plaque of Megiddo both show boxlike footstools at the base of the throne. The god El, the enthroned deity par excellence among the West Semitic deities, also has a stool (*hdm,* as in Hebrew) on which he places his feet (*CTA* 4.4.29–30; *ANET*; 133).

It has been argued that when a treaty was sealed in the ANE, the treaty document was sometimes placed in a container which served as the footstool of a deity (de Vaux 1967). Thus, for example, a copy of the treaty between Rameses II (an Egyptian) and Ḫattusilis III (a Hittite) was placed at the feet of the images of Re and Teshub respectively. It is interesting in this connection to note that footstools from the Hittite kingdom were frequently box-like. Tutankhamen's footstool was also boxlike, as was Ahiram's. Footstools from Urartu were made of wood (ebony or acacia), and were sometimes ornately decorated and gold-plated.

The ark is called the footstool explicitly in 1 Chr 28:2 in the words of David: "I had it in my heart to build a house of rest for the ark of the covenant of YHWH, for the footstool of our God." In Psalm 99, YHWH is said to be enthroned on the cherubim as a mighty king, and people are summoned to worship "at his footstool" (Ps 99:5). In a psalm that concerns the procession of the ark, a similar exhortation is issued: "Let us enter his dwelling, let us worship at his footstool" (Ps 132:7).

C. History

1. Premonarchical Period. The precise provenance of the ark is obscure. The biblical traditions point to an early premonarchical origin, and there is nothing to preclude that possibility. The ark is associated with Moses not only in the late sources, but also in the earliest texts. The Song of the Ark (Num 10:35–36) is placed in the context of the wilderness wandering under the leadership of Moses. A defeat of the Israelites in this same period is attributed to the lack of divine support: "neither the covenant-ark of YHWH nor Moses departed from the camp" (Num 14:44).

The ark was from the start a cultic and political symbol; its presence signified the presence of YHWH. According to the book of Joshua, the ark led the people in a conquest ritual (Josh 3:1–5:1; 6:1–25). The text is not written as a historical narrative about the conquest. Rather the interest appears to be in the ritual legitimation of Joshua and Israel.

When the ark entered the Jordan, the waters were held back and stood in a heap (cf. Psalm 114). Its crossing, therefore, was equated with the crossing of YHWH: "Lo! The ark of the Covenant, the Lord of all the earth is crossing over before you in the Jordan!" (Josh 3:11). The political significance of the ritual is never in doubt: that Israel might know that YHWH was with Joshua (Josh 3:7), and that all the nations might know that YHWH was with Israel (Josh 4:10, 24; 5:1).

Upon crossing the Jordan, a sanctuary was established at Gilgal (Josh 4:19). Sometime after the establishing of the Gilgal sanctuary, the ark was moved. The mention in Judg 2:1 that "the angel of YHWH" went up from Gilgal to Bochim is generally taken to be an allusion to the transfer of the ark. The site of Bochim is not known, but it is probably in the vicinity of Bethel (cf. LXX here assumes Hebrew "to Bochim and to Bethel"). The verb used of the angel's going to Bochim is commonly used in conjunction with processions (see Ps 47:6—Eng 47:5; 2 Sam 6:1, 15; 1 Kgs 8:1; etc.) At all events, the ark ended up in Bethel where an oracle was sought by the leaders of the tribal confederacy, in preparation for holy war against the tribe of Benjamin (Judg 20:18, 26–27). Both Gilgal and Bethel were situated within the territory of Ephraim, as was Shiloh, where the ark was located prior to its transfer to Jerusalem. All evidence suggests that the ark was originally the emblem of the northern (Ephraimite) confederacy, and Gilgal, Bethel, and Shiloh each served as its central sanctuary at some time. This shifting of sanctuaries is recalled in Nathan's oracle: "I (YHWH) have been moving about in a tent and a tabernacle" (2 Sam 7:6). According to a Priestly gloss, it was at Shiloh that "tent of meeting" was established (Josh 18:1).

At Shiloh the ark was kept in the sanctuary, where an annual festival was celebrated (Judg 21:19; 1 Sam 1:3, 21; 2:19). In the time of Samuel the ark was in the custody of Eli and his family, who traced their roots to Moses himself. It was at Shiloh that the ark was first called by the name of "YHWH of Hosts who sits enthroned upon the cherubim."

The ark continued to be used as a war palladium. According to the Ark Narrative of 1 Samuel 4–6, the ark was brought into battle with the Philistines near Shiloh. It was a desperate measure to avert defeat. However, the ark was captured by the Philistines, and when the news of its capture was reported to Eli, he fell backward, broke his neck, and died. The loss of the ark was mourned as the departure of YHWH's glory. According to the narrator, the ark was in Philistine possession for 7 months. Finally it was returned because it was causing the Philistines much trouble: a bubonic plague broke out in the Philistine cities.

2. Early Monarchical Period. The ark was moved from Philistine territory to Kiriath-jearim, where it remained in the custody of Abinadab the son of Eleazar for 20 years (1 Sam 6:21–7:2). It fell into oblivion during the days of Saul. The Chronicler says that it was neglected (1 Chr 13:3) and Ps 132:6 assumes that it was lost. Saul may be vindicated by 1 Sam 14:18, but "ark" in that text is usually taken to be a mistake for "ephod" (as some Gk mss suggest). So it may be true, after all, that Saul was not interested in the ark.

Given its obvious importance for the unity of the N confederacy, it is surprising that the ark did not play a more prominent role in the politics of Saul. In the light of the league's punitive war against the Benjaminites (Judg 19–21)—a war that was waged after an oracle was sought before the ark at Bethel (Judg 20:8, 26–27)—it is possible that Saul, a Benjaminite, may have been at odds with the leadership at

Shiloh, the new center of the league (cf. Josh 22:12). Saul's break with Samuel and the priests of Nob may be evidence of this conflict.

In any case, the ark remained in Kiriath-jearim until David "found" it there "in the Highland of Jaar" (Ps 132:6). The political significance of David's action is commonly recognized. In contrast to Saul, David sought to ally himself with the Shilonite confederacy. The ark that was transferred to Jerusalem bore the very name of "YHWH of Hosts who sits enthroned upon the cherubim" (2 Sam 6:2; 1 Chr 13:6). That was precisely the name of the ark at Shiloh (1 Sam 4:4). David brought the ark in cultic procession into "the City of David" and set it in its place, in the tent. In his time, the ark continued to function as a war palladium from time to time (cf. 2 Sam 11:11; 1 Sam 15:24–29).

By all accounts, David did not build a temple to house the ark. Rather, it fell upon Solomon to do so. Upon the completion of the temple, Solomon brought the ark in procession into the innermost sanctum (1 Kgs 8:1–12). Although 1 Kings 8 is composite, with considerable exilic material embedded therein, it is still possible to discern a historical kernel. The gist of the account of the transmission of the ark is certainly pre-Deuteronomistic, as is a poetic fragment possibly from the Book of Jashar but now put in the mouth of Solomon:

> YHWH [LXX adds: "has established the sun in the heavens"]
> He said he would dwell in a storm cloud.
> I have indeed built for you a royal house
> the dais of your throne forever (vv 12–13).

Although the temple was completed in the month of Bul (1 Kgs 6:38), the procession was not held until the month of Ethanim, almost a year later (1 Kgs 8:1–2). The inauguration was deferred probably to coincide with the autumn New Year, a season for the celebration of divine kingship. That was a time for inauguration and renewal of temples in the ANE. The procession also coincided with the Feast of Sukkoth (1 Kgs 8:2, 65; cf. Josephus, *Ant* 8.100), which is called "the yearly feast of YHWH at Shiloh" (Judg 21:19; cf. 1 Sam 1:3, 21; 2:19).

Beyond the processions under David and Solomon, it is difficult to speak with certainty about cultic processions of the ark in the monarchical period. The ark is said to have had poles enabling it to be carried in cultic processions. In Solomon's temple, the poles were so long that their ends were seen "from the holy place before the inner sanctuary" (1 Kgs 8:7). Psalm 132 alludes to David's transfer of the ark and may, in an earlier version, have been used in conjunction with that procession or with the one under the auspices of Solomon. Psalms 24, 47, and 68 should probably be dated to the early monarchy, and may have been used in ritual processions of the ark (Fretheim 1967).

3. Disappearance. It is not certain precisely when and how the ark was lost; the Bible is silent on this matter. Some have conjectured that it was destroyed or removed in the monarchical period as a result of Shishak's raid in the 10th century (1 Kgs 14:25–28), or when Jehoash king of Israel plundered the temple in the wake of Judah's defeat (2 Kgs 14:8–14), or during Manasseh's syncretistic renovation of the temple (2 Kgs 21:4–6). The problem is compounded by the fact that the ark is not listed among the spoils from the temple that Nebuchadrezzar took to Babylon when Jerusalem was sacked (2 Kgs 25:13–17; Jer 52:17–23). This does not, of course, preclude a different date for the capture of the ark (say, 597 B.C.E.) or a different fate for it (i.e., destruction).

Several traditions place the disappearance of the ark to a date around the end of the 7th century and the beginning of the 6th. According to the Chronicler, along with his other reforms, Josiah ordered that the "holy ark" be placed in the temple because "you need not carry it upon your shoulders" (2 Chr 35:3). This text is problematic; its veracity is difficult to authenticate. The Chronicler believed that the ark was still in existence in the time of Josiah, but it was in transition—as it had been at one time. Perhaps he was making the point that Josiah reinstated the ark which had been removed from the adytum (possibly in the time of Manasseh) and had been in temporary shelters. In any case, Jeremiah spoke—*vaticinium ex eventu*?—against overconfidence in "the ark of the covenant." The ark's presence in the temple gave people a false sense of security about YHWH's permanent presence in their midst. Jeremiah declared that

people would no longer say "the ark of the covenant of YHWH" (Jer 3:16). They would no longer remember the ark, visit it, or make it again.

According to some Jewish traditions, the Babylonians removed the vessels of gold, silver, and bronze, but Jeremiah removed the ark and the sacred tablets and hid them from the Babylonians. This tradition may be traced at least to the historian Eupolemus (see Eusebius, *Praep. Evang.* 9.39). A similar account is related by Alexander Polyhistor of Miletus in the 1st century B.C.E., but he was probably dependent on Eupolemus for this story. In a variant of this account, Jeremiah hid the tent, the ark, and the altar of incense in a cave on the mountain from which Moses saw the Promised Land (2 Macc 2:4–8). Another source has it that Josiah hid the ark under a rock "in its place" (*b. Yoma* 53b–54a; *m. Šeqal.* 6:1–2). According to a legend, an angel descended from heaven during the destruction of Jerusalem and removed the sacred vessels from the temple (*2 Bar.* 6:7). These accounts are obviously ways of coping with the unthinkable destruction of the ark of divine presence at the hands of Gentile invaders. More credible is the lament over the desecration of the temple and plundering of the ark during the destruction of the First Temple (2 Esdr 10:20–23). In any case, all traditions point to the exilic period for the disappearance of the ark.

It appears that the ark was not rebuilt for the Second Temple. Jeremiah declared that it was not to be made again (Jer 3:16). There is no mention of the ark anywhere in Ezekiel's blueprint for the new temple (Ezekiel 40–48). In the spot where the ark would have stood, there was, instead, a "stone of foundation" three fingers high (see *m. Yoma* 5:2). Otherwise, the adytum appears to have been empty. Josephus reports that such was the case (*JW* 5.5), and the Roman historian Tacitus concurs with this report (*Hist.* V.9). According to Josephus, when Pompey forced his way into the temple in 64 B.C.E., the Romans saw the sacred objects, which Josephus then enumerates without mentioning the ark (*Ant* 14.71–72; *JW* 1.152–53).

D. Theology

1. The Ark Narrative. The narrative in 1 Samuel 4–6 recounts the capture of the ark by the Philistines. Scholars have demonstrated that the ark functions here as Israel's equivalent of the divine statue in Mesopotamia (Delcor 1964; Miller and Roberts 1977). The ark represents the presence of YHWH.

In their battle against the Philistines, the elders of Israel called for the ark to be brought. The narrator reports that even the Philistines recognized the theological significance of the ark. They cried, "Woe to us! Who can deliver us from the *hand* (Heb "hand" = "power") of these gods?" (1 Sam 4:8). This was the significance of the ark in the narrative: it manifested the power of YHWH (see Miller and Roberts 1977). Indeed, in this ark story as elsewhere, the ark's presence demonstrated the power of YHWH. Likewise the purpose of the procession of the ark in Joshua is stated thus: "that all the peoples of the earth may know that the *hand* of YHWH is mighty" (Josh 4:24).

In desperation, the Israelites brought the ark. The presence of the ark was supposed to assure victory against the enemies. But the ark was captured instead, and the Israelites fled (1 Sam 4:10, 17). Things were not supposed to happen that way with the ark. When the ark, representing the presence of God, came into battle, the enemies were supposed to flee (Num 10:35; Pss 68:2—Eng 68:1; 114:3, 5). In the Ugaritic myth, when the divine warrior Baal-Hadad gave forth his voice, the enemies fled to the forests (*CTA* 4.7.29–37; *ANET*, 135). But in the Ark Narrative of 1 Samuel, it is YHWH's army that flees, and the enemies capture the ark.

For the narrator, the ark's capture provided an opportunity to argue again for YHWH's power. The ark was deposited in the temple of the Philistine god, Dagon, in Ashdod. The next day, "Dagon had fallen face to the ground before the ark of YHWH" (1 Sam 5:3). The wording recalls Joshua's gesture of penitence: "he fell face to the ground before the ark of YHWH" (Josh 7:6). The Philistines raised the statue of Dagon again. But the next day, "Dagon had fallen face to the ground before the ark of YHWH" (1 Sam 5:4). This time, Dagon's head and both his hands are cut off. Thus the hand of YHWH was demonstrated against the god of the Philistines; the hands of Dagon were cut off. According to the narrator, the hand of YHWH was heavy upon the people of Ashdod (1 Sam 5:6) and they were smitten

with tumors. The people of Ashdod concluded: "The ark of the god of Israel must not remain with us, for his hand is heavy upon us and upon Dagon our god" (1 Sam 5:7).

The ark was sent to Gath and the hand of YHWH was against that city (1 Sam 5:9). When the ark came to Ekron, the people there concluded that it was brought there to slay them. Again, "the hand of God was heavy" in Ekron because the ark was there (1 Sam 5:11). Indeed, the presence of the ark in Philistine territory showed that the hand of YHWH was against them (2 Sam 5:3). And so the ark was returned "to its place" in Israel.

2. Transfer of the Ark. The ark that David transferred to Jerusalem is called the ark of "YHWH of Hosts who sits enthroned upon the cherubim" (2 Sam 6:2). The epithet brings to mind the image of YHWH as victorious warrior. Indeed, it appears that the procession appropriately follows YHWH's triumph over the Philistines at Baal-perazim. Having received an oracle from YHWH (we presume before the ark, cf. Judg 20:8, 27), David defeated the Philistines. Thereupon, he likened the victory to the divine warrior's cosmogonic defeat of chaotic waters: "YHWH has broken my enemies like the breaking of Waters" (2 Sam 5:20; cf. 6:8). After a second oracle and victory of the divine warrior, David brought the ark from Baale-judah (= Kiriath-jearim) to Jerusalem. The ark was marched into the city with cultic dancing, dramatizing the victorious return of the Warrior (Seow 1989). Finally the ark was placed in the newly won place. With this dramatic procession, many of Judah's theological traditions may be associated. Some of the traditions may even have grown from that significant event—traditions concerning YHWH's eternal choice of both David and Zion and traditions about Zion's inviolability in the face of enemy encroachments. Certainly many of these themes may be located in Psalm 132, some form of which may have been used in connection with David's procession of the ark.

3. The Ark in Deuteronomy. In contradistinction to earlier tendencies, Deuteronomy appears to downplay the importance of the ark. Accordingly, the ark does not appear anywhere in Deuteronomy in connection with the enthronement of YHWH. It is neither a war palladium, nor is it associated with the presence of God. The ark does not have that mysterious power that strikes people dead (1 Sam 6:19; 2 Sam 6:6–8; Lev 16:1). Rather, the ark in Deuteronomy is, as von Rad says, a demythologized ark (*PHOE*, 103–24). It is viewed merely as a receptacle for the tablets of the covenant (Fretheim 1968). It appears always to be mentioned incidentally. The narrator's interest in every case is on the covenant and the tablets that represent the covenant. So when the second set of tablets were commissioned at Sinai, the ark was also ordered—as if for the sake of the tablets alone. The author wastes no time in specifying the nature of the ark: it is a wooden *ʾărôn*, "box" (Deut 10:1), an ark of acacia wood (Deut 10:3). After YHWH had written on the tablets, they were placed in the ark (Deut 10:5). Likewise, when the "book of the Law" was completed, Moses commanded the Levites to put it by the side of the ark of the covenant "that it be there as a witness against you" (Deut 31:26). The Deuteronomic ark has no significance by itself; it is merely a receptacle in which and beside which the covenant documents are placed. Nothing is mentioned in D about the cherubim, or anything else that may suggest the throne. Nothing is said about the acacia wood being gold-plated. The ark in Deuteronomy seems to be, simply, an *ʾărôn,* "box, chest."

4. The Ark in P. By far the most detailed and meticulous description of the ark is found in P. Exod 25:10–22 purports to be part of a heavenly blueprint which Moses received for the construction of the tabernacle and its appurtenances. The ark was then constructed by a certain Bezalel (Exod 37:1–15). According to the plan from on high, the ark was to be a chest of acacia wood, 2.5 cubits long, and 1.5 cubits wide and high (i.e., 4 feet 2 inches by 30 inches by 30 inches). The wood was to be overlaid with gold on every side, with a molding of gold "upon it" all around—probably upon all four sides of the ark. In addition, there were four "feet" on each of which the builder was to then add a golden ring to hold two carrying poles. These poles were also to be made of acacia wood and plated with gold. The poles were always to be left in the rings, ready to be carried. The tablets (called "the stones of *ʿēdût*" or, simply, *ʿēdût* in P) were to be deposited in the ark. On top of the ark there was to be a *kappōret* (covering) made of pure gold. It was to be as long and wide as the ark, but nothing is said of its thickness. This was for P a covering for the ark as well as a symbol of the propitiation of sins epitomized by the ritual before the ark on *yom kippūr,* "the day of atonement" (Lev 16:2ff.). Two cherubim were to be crafted "from the

kappōret" (i.e., all of one piece), one cherub at each end of the *kappōret.* The cherubim were to face one another and have outstretched wings overshadowing the *kappōret.*

There is no chance in the description of P for the ark to be mistaken for a throne, or the footstool of a throne. It is emphatically a box in which the tablets were kept. To that extent, P's description is like that in Deuteronomy. The cherubim are not part of a throne. They are small ornate handiwork on the covering of the ark, unlike the huge cherubim described in 1 Kgs 6:23–28; 8:6–7 which are separated from the ark. Moreover, in contrast to the creatures on cherubim thrones, P has the cherubim facing each other: "their faces one to another, toward the *kappōret* were their faces" (Exod 25:20). Their outspread wings cover the ark. Thus, P leaves no room for the interpretation of the ark as a throne or the footstool of a throne. The ark was a *rendezvous* where God would meet the people, but it was not the locus of a throning presence. Such is the nature of divine presence, according to P: it is not confined to one place; rather, it is manifested from time to time as the deity wills (Lev 16:2). According to P, in the time of Moses YHWH chose to speak from between the cherubim on the *kappōret* of the ark (Num 7:89). That was a chosen place; it was theologically significant. While P admits that the ark may be one meeting point for God and the congregation, he takes pain to dissociate God from the ark (Seow 1985). The ark is associated with some form of the divine name 112 times in the Bible; but it never once occurs with the divine name in P. It appears that P was reacting to a misconception of divine immanence. Confidence in YHWH's presence had apparently become overly dependent on the ark's presence, so that the disappearance of the ark was causing an undue crisis of faith. For P the ark was not in any way to be associated with God's kingship; it was also not the indispensable mark of God's presence.

Related to the issue of God's abiding presence is the question of the covenant's validity. Whereas the ark is called "the ark of the covenant" (*ʾărôn habbĕrît*), "the ark of YHWH's covenant" (*ʾărôn bĕrît yhwh*), or the like in 40 cases throughout the Bible, the ark is not associated with the *bĕrît* in the Priestly work. Instead of *bĕrît,* P uses the synonym *ʿēdût* (incorrectly translated as "testimony" in many English translations) and speaks of the "ark of the *ʿēdût"* (Exod 25:22; 26:33, 34; 30:6; etc.). But P knows the word *bĕrît.* The *bĕrît* for P is eternal and never to be destroyed (Gen 9:8–17; 17:1–27). The eternal validity of that covenant is indicated by signs, like the rainbow, that cannot ever be eradicated or removed. The *ʿēdût* is never used of the covenant per se, only for the covenant tablets. Hence the instruction: "you shall put the *ʿēdût* into the ark" (Exod 25:16, 21). In this way, then, P was able to speak of the eternal validity of God's covenant with Israel, even in the face of the disappearance of the ark. The tablets may be shattered, but the covenant is eternal.

5. The Ark in Chronicles. Many of the Chronicler's references to the ark are parallel to and essentially derived from the accounts embedded in the Deuteronomistic History concerning the transmission of the ark under the aegis of David and Solomon. There are distinctive elements in Chronicles, however. It is reiterated time and again that the sacred ark was to be handled only by the priests and Levites (1 Chr 15:2, 12; 16:4), "gatekeepers of the ark" (1 Chr 16:23–24) and certain ministers of music (1 Chr 6:31–32; 16:37). By all accounts, the ark came into prominence under the patronage of David. The Chronicler states that the ark was indeed neglected in the days of Saul, and it was David who restored it to its rightful place (1 Chr 13:3–4). The contrast here between the negligent Saul and the pious David reminds one of the propagandistic claims in the royal inscriptions of Mesopotamia that portray the legitimate king as the "restorer of the forgotten cult" (Seow 1989). This view is certainly consonant with the ritual behind Psalm 132, which the Chronicler quotes (2 Chr 6:41). Faithful David swore that he would not rest until the rightful place of YHWH be restored and the ark was "rediscovered" (Ps 132:1–5). The procession of the ark by Solomon receives considerably more attention than in 1 Kings 8, but no significance may be discerned in most of the Chronicler's embellishments.

E. NT References

The Greek word *kibōtos* (the equivalent for Heb *ʾărôn*) occurs 6 times in the NT. Only 2 of these (Heb 9:3–5; Rev 11:19) refer to the cult object; the rest concern Noah's ark.

The account of the ark in Hebrews 9 purports to be a description of the ark under the "first covenant" which is superceded by the new covenant. The description is in substantial agreement with the account of

P, although the name of the cult object here is "the ark of the covenant," which never occurs in P. The ark was enshrined in a tent behind the second curtain, together with the golden altar. It was gold-plated, and the cherubim were perched atop the covering (Propitiatory), overshadowing it (vv 3–5). The Gk word *hilastērion* used here to translate the Heb *kappōret* is found also in Rom 3:25, but it is impossible to know if the author here was thinking of the *kappōret* or the expiatory function of it. The writer of Hebrews lists the ark's content: a golden jar of manna, Aaron's rod that blossomed, and the tablets of the covenant. The jar of manna and rod of Aaron are both mentioned in P, but there the items are placed "before the *ʿēdût*" (Exod 16:32–34; Num 17:8–10)—that is, before the ark (cf. Exod 27:21; 30:36; Lev 16:13; 24:3).

In Rev 11:19 the ark is called " (God's) ark of the covenant" (*hē kibōtos tēs diathēkēs autou*), which represents a Greek adaptation of the Deuteronomistic name. In the vision of the eschatological temple, the disciple sees the ark in God's temple in heaven, with all the signs that in the Hebrew Bible normally accompany the theophany of the storm god, the divine warrior. So the ark is once again associated with the presence of God.

ARK, NOAH'S. See the NOAH AND THE ARK articles.

ARKITE (PERSON) [Heb *ʿarqî* (עַרְקִי)]. One of the offspring of Canaan (Gen 10:17). The *-î* suffix suggests that this is a gentilic, reflecting the inhabitants of the coastal Phoenician town of Irqata. The name of this town appears in Egyptian (*ʿ€ qty/ʿ€ qtm*), Hittite (*ir-qà-ta*), and Akkadian sources, including the 2d millenium B.C. Amarna letters (*ir-qat, ir-qàt, ir-qa-ta, ir-qà-ta;* cf. Hess 1984: 495) and 1st millenium B.C. Neo-Assyrian texts (*ar-qa-a, ir-qa-na-ta-a-a;* cf. Parpola 1970: 31, 176; for the second spelling as a mistake, cf. Tadmor 1961: 245 n. 49). The name of this town also appears in later Classical sources (Honigmann *RLA* 1: 153–54; Hawkins *RLA* 5:165–66). Irqata has been identified with Roman Caesarea of Liban, modern Tell Arqa (M.R. 250436), 12 mi. NE of Tripoli, where excavations have revealed occupation throughout the Bronze and Iron ages (Dussaud 1927: 80–91; Thalman 1978; Wenham *Gen 1–15* WB, 226). Just as Gen 10:16–18 associates the Arkites with Heth, the Amorites, Arvad, the Zemarites, and Hamath; so also does a Hittite prayer mention Irqata in association with Amurru, and the Neo-Assyrian sources associate Arqa/Irqa (na)ta with Arwada, Ṣimirra, and Ḫamat.

RICHARD S. HESS

ARMAGEDDON (PLACE) [Gk *Armagedōn* (Ἀρμαγεδων)]. The location of the final battle of earth's history as described in the book of Revelation. The word appears only once in the Bible and is Hebrew in origin (Rev 16:16). (See REVELATION, BOOK OF.) The most natural understanding of the Greek found in most manuscripts is "mountain (from the Hebrew *har*) of MEGIDDO." While the Greek spelling differs considerably from the Hebrew word "Megiddo," it is identical to the Septuagint transliteration in Josh 12:21 (ms A *mageddōn*), Judg 1:27 (ms A), and 2 Chr 35:22. Another transliteration of Megiddo in the LXX parallels the manuscript variant *mageddōn* (4 Kgdms 9:27—Eng 2 Kgs 9:27). Thus Nestle (*HDB* 2: 305) considered an allusion to Megiddo the most probable explanation of the term "Armageddon." It is interesting, however, that the only place in the OT where the Hebrew adds a final "n" to Megiddo, Zech 12:11, the LXX does not transliterate, instead it translates "Valley of Megiddo" as " (the pomegranate grove) cut down in the plain" (*ekkoptomenou*).

The region of Megiddo was an ancient battleground. There the armies of Israel under DEBORAH and BARAK defeated SISERA and his Canaanite army (Judg 5:19 and context). Later, it was the scene of the fatal struggle between JOSIAH and Pharaoh NECO (2 Kgs 23:29, 30; 2 Chr 35:22). This was such a memorable event in Israel's history that the mourning for Josiah was recalled a hundred years later (Zech 12:11). Thus, if the writer of Revelation was alluding to this ancient battleground, its significance for ancient Israel made it an appropriate background to his description of the final battle between the forces of good and evil.

Bousset (*Revelation* MeyerK, 399), however, pointed out that the phrase "Mountain of Megiddo" is problematic. While the OT knows of a city of Megiddo (Josh 17:11; Judg 1:27; 1 Kgs 4:12; 9:15; 2 Kgs 9:27; 23:29, 30), a king of Megiddo (Josh 12:21), a valley of Megiddo (2 Chr 35:22; Zech 12:11), and

waters of Megiddo (Judg 5:19), it knows of no "Mountain of Megiddo." A number of solutions to this problem have been offered over the centuries and continue to be offered.

Early Church Fathers, such as Hippolytus and Jerome, sought to locate Armageddon in Palestine, offering suggestions such as the Valley of Jehoshaphat (cf. Joel 3:2, 12) or Mount Tabor (cf. Judg 4:6, 12). The first proposal to gain wide currency was advanced by the earliest commentators on the book of Revelation, Oecumenius (early 6th cent.—see Hoskier 1928: 179–80) and Andreas of Caesarea (ca. 600 A.D.—see Schmid 1955: 1/175). Perhaps taking their cue from the LXX translators of Zech 12:11, who apparently understood *mĕgiddôn* to be derived from the Hebrew root *gdd* which means "to cut" or "to gash," they argued that the kings of the earth are gathered in Rev 16 to the "Mountain of Slaughter" to be exterminated. Supported by LaRondelle (1985: 23, 1989: 71–73), this view has never been refuted, yet does not attract wide support among scholars.

F. Junius (1599) associated Armageddon with "the mountain places of Megiddo." In marginal notes to the *Geneva Bible* he suggested that the battle of Armageddon is God's reversal of the reproach His people suffered with the defeat of Josiah. Several 19th-century scholars (see Bousset *Revelation* MeyerK, 399) sought to overcome the absence of a "mountain of Megiddo" in the OT by linking the battles at Megiddo with Ezekiel's description of Gog being defeated on the "mountains of Israel" (see Ezekiel 38 and 39, a passage alluded to in Rev 20:8–10).

Lohmeyer (*Revelation* HNT, 133–34) added a new twist to the "mountain of Megiddo" interpretation by associating Armageddon with Mount Carmel, an allusion to Elijah's confuting of the prophets of Baal. He appealed for support to *Ginza*, a much-later Mandean work, where demonic powers gather on Mount Carmel to plan their final assault on the forces of God. Shea (1980: 160–62) carries the argument a step further by seeing a multitude of allusions throughout Revelation to Elijah's experience on Mount Carmel, with dragon, beast, and false prophet being the latter-day counterparts of Ahab, Jezebel, and the prophets of Baal. As in the original instance, the issue is settled in Revelation by fire and by sword (Rev 19:20, 21).

While the first two explanations are based on how the translators of the LXX understood the Hebrew Bible, a number of attempts at emendation have also come into play. Many 19th-century scholars (see Nestle *HDB* 2:304–5 and Bousset *Revelation* MeyerK) noted that the difference between *har* and *ar* in Greek is a simple breathing mark, and such markings are generally omitted in the earliest manuscripts. Thus *armagedon* could be the equivalent of the Hebrew "city of Megiddo" (*ʿîr-mĕgiddô*), an allusion to the fortress city which guarded ancient Israel's most critical mountain pass.

Other scholars, beginning with an unsigned article in *ZAW* (1887: 170–71), gave attention to emendations of *magedōn.* In unpointed Hebrew *mĕgiddô* is identical in form to *migdô* which means "fruitful" or "his fruitfulness," "his choicest gifts." Thus, Bowman (*IDB* 1: 227) feels that Armageddon means "his fruitful mountain," a reference to eschatological Jerusalem (Joel 4:16–18—Eng 3:16–18, cf. Zechariah 14). This would associate the final battle scene with Jerusalem, as is also the case in Rev 14:14–20 and 20:7–10. Charles (*Revelation* ICC, 2: 50) combines both emendations; Armageddon means "fruitful city," which recalls John's title for the heavenly city in 20:9 (Gk *tēn polin tēn ēgapēmenēn,* "the beloved city").

One of the most popular emendations of *magedōn* was proposed by Hommel (1890). He suggested that the Greek *gamma* in *magedōn* is a transliteration, not of the Hebrew *gimel* but of the Hebrew *ʿayin.* Thus *har-magedōn* would be a corruption of the Hebrew *har-môʿēd,* or "mountain of assembly." Torrey (1938: 244–48) argues that Armageddon is a reference to Isa 14:13 where the "mountain of assembly" is the heavenly court in which God's throne is located. In Isaiah 14 the King of Babylon is called the "Day Star," a term applied to Christ in Revelation. Thus, *har-môʿēd* recalls Hebrew mythology, where Mount Zion is the earthly counterpart of the heavenly throne room (Ps 48:3—Eng 48:2). Armageddon, then, is Babylon's final attempt to usurp the throne of God in its attack on end-time Jerusalem.

Gunkel (1895: 263–66) understood Armageddon to be a name with mythic origins, probably based on *1 Enoch* 6 where the evil angels gather on Mount Hermon to prepare for their assault on the daughters of men. Bousset follows Gunkel in suggesting that behind this reference lies an ancient myth, preserved in

Mandean works, which described the assault on the holy mountain of the gods by an army of demons that is gathered by evil spirits, then destroyed by the gods of light.

The abundance of solutions and the great creativity with which they have been developed suggests that it is unwise to be dogmatic about the etymology of Armageddon. Nevertheless, current scholarship generally settles on a link with Megiddo or *har-mô‹ēd* as the best explanation of *harmagedōn.*

The major difficulty with the *har-mô‹ēd* interpretation is the great linguistic distance between *mô‹ēd* and *magedōn.* While it is true that *gamma* is the only Greek letter that could correspond to the Hebrew *‹ayin,* there is no external evidence that *mô‹ēd* was ever transliterated as *magedōn* or even *mogēd,* whereas LXX evidence exists for transliterations of *mĕgiddô* and *mĕgiddôn.* Furthermore, the strength of Torrey's argument is largely diluted if one doesn't accept his theory that the Apocalypse is the translation of a Hebrew original.

It is probably safest, then, to avoid emendation and to either follow the Church Fathers or Lohmeyer and Shea, or to consider the problem unresolved. Many arguments have been raised against the "Mountain of Megiddo" interpretations, particularly by Jeremias (1932) and Torrey (1938): (1) there is no Mount Megiddo in pre-NT literature; (2) the earliest exegetes never interpreted it in this way; (3) the mythical world mountain was never associated with Megiddo in apocalyptic; (4) in Hebrew eschatology the final struggle is fought around Jerusalem (Zechariah 12 and 14; Joel 4—Eng 3; cf. Revelation 14; 20:7–10). These are, however, basically arguments from silence. They do not preclude the possibility that the author of Revelation saw elements of the ideological battle on Mount Carmel as decisive in the final battle between good and evil.

In fact, as Shea (1980: 158–60) points out, Megiddo is often used to speak of something else in the geographical area. The phrase "waters of Megiddo" (Jdg 5:19) is a reference to the Kishon River. And while Megiddo was not a mountain, it wasn't a valley either—it was located on an elevation overlooking the Plain of Jezreel or Esdraelon. Since the city was located at the foot of the Carmel range, "mountain of Megiddo" could easily be a reference to Mount Carmel (1 Kgs 18:19, 20; 2 Kgs 2:25; 4:25). It was on Mount Carmel that fire was called down from heaven to prove that Yahweh was the true God (cf. Rev 13:13, 14). It was there that the false prophets were defeated (cf. Rev 16:13–16). If John was alluding to Elijah's experience on Mount Carmel, he understood the battle of Armageddon to be a spiritual conflict over worship (cf. Rev 13:4, 8, 12, 15; 14:7, 9, 11; cf. 16:15; 17:14) in which all would be brought to a fateful decision with permanent results.

As part of the sixth bowl plague (16:12–16), the battle of Armageddon comes at a pivotal point in the book of Revelation. It parallels the sixth trumpet plague (9:13–21), where military imagery is combined with descriptions of demonic beings. The gathering effected by the three unclean spirits (16:13) is the demonic counterpart to the gathering call of the three angels of Rev 14:6–11. The reference to the demonic trinity connects this passage also with chaps. 13 and 19, where the same characters are at work. And finally, the battle is described in other but parallel terms in 17:12–17. The sixth bowl plague is not the battle of Armageddon itself; it is the gathering of forces for the battle. The battle itself accomplishes the fall of Babylon, which is outlined in the seventh bowl plague (16:17–21), in 17:16 and in chap. 18. For further discussion see *ISBE* 1:294–95, *EncBib* 1:310–11, *TDNT* 1:468, and *EWNT,* 366–67.

ARMENIA (PLACE). A country constituting a series of plateaus joining Asia Minor to Iran. Great variation in altitude, terrain, climate, and plant life lead to strong regional disparities. Some mountains rear up to 17,000 feet, as does Ararat; they and their flanks impede travel. The prevailing E-W direction of the mountain ranges especially hampers N-S movement. The Euphrates River rises in Armenia, leading S; two other large rivers flow to the Caspian Sea.

The *Armenioi* were known to Greeks from at least the 6th century B.C. Armenia is listed on the Behistun inscription of Darius, and received Persian governors. The Orontids, a line of Persian descent, ruled there from about 400 B.C., and assumed the title of "King" after Alexander's day. Upon the defeat of the Seleucid Antiochus the Great by Romans and their allies in 190/189 B.C., the Armenian descendants of Artaxias formed a royal house which lasted until the time of Christ. A branch of the Armenian royal family also ruled in Commagene.

Armenia's greatest impact on the world of the Bible occurred in the reign of the Artaxiad King Tigranes. He had grown to maturity as a hostage at the Parthian court, but was released about 95 B.C. in return for "seventy valleys in Armenia" (Strabo 11.14.15.532). Tigranes married the daughter of Mithradates Eupator of Pontus and set out to aid that monarch in his long contest with Rome. He jointly raided Cappadocia, and conquered adjacent Sophene, thus extending Armenia's territory to a point across the Euphrates from Cappadocia. Tigranes eventually took to carrying off Cappadocians to populate his new fortress, Tigranocerta, near the upper Tigris.

Tigranes linked himself to Parthia, sending a daughter for marriage to Mithradates II. He also proved willing to contend with Parthians for territory. The Armenian holdings rapidly expanded, as Tigranes recovered the seventy valleys and seized territories which were nominally Parthian. He overcame Atropatene, Gordyene, Osrhoene, Adiabene, most of Mesopotamia, and Greater Media. In Eastern fashion, he left kings in place, often married to his own daughters. Thus on his coinage appeared the proud title "King of Kings" after Mithradates II died in 88/87 B.C.

The Parthian monarchs Orodes I and Sinatruces could not prevent the rapid expansion of Armenia at this time. Nor could the last Seleucids. Tigranes crossed the Euphrates about 87 B.C., assuming the hegemony of Commagene and Syria (Justin 40.1).

Tigranes took Antioch, effectively terminating the Seleucid Empire after more than two centuries. As a "successor" (*diadochus*) to the Seleucids, he continued their coinage and dynastic era. For fourteen or more years he ruled in Antioch, calmly adding to his territories and moving toward Judea. It escaped domination through timely negotiation and gifts, first by Alexander Janneus and then by his widow, Alexandra Salome (Sullivan 1970, chap. 5, §11 with n. 8–10 and chap. 3, §9.iii).

In 69 B.C., Tigranes had to face a challenge at home, necessitating withdrawal from Syria. Near Tigranocerta, he fought the Roman Lucullus but lost. For the rest of his reign (down to ca. 55 B.C.), he remained in control of his ancestral kingdom, but no longer of Syria. The last Seleucids sought to resume rule there, but Pompey pointed out that Tigranes had conquered them and Rome had conquered Tigranes.

In 67 B.C., Tigranes again took the field in Cappadocia, but an invasion of Armenia by his renegade son, supported by Phraates III of Parthia, drew him home. Tigranes gradually withdrew his support for Mithradates Eupator, thus dooming him to eventual Roman conquest.

The reputation of Tigranes for inflicting discomfort on his neighbors masks his service to Armenia. During a long reign (95–55 B.C.), he brought it safely through the Seleucid collapse, the rise and fall of Eupator in Pontus, the advent of Rome in the East, and threats from Parthia. His family continued to rule there for over half a century more.

King Artavasdes II (55–34 B.C.), son of Tigranes, continued his father's policy of marriage ties with Parthia. Nevertheless, he offered to support Crassus in 53 B.C. during an invasion of Parthian territory; Crassus declined and met disaster at Carrhae.

Armenia could not be counted a Roman ally in the aftermath. Cicero in 51 B.C. camped near Cybistra "so that Artavasdes, the Armenian King, whatever his policy might be, would know that an army of the Roman people was not far from his territory." He heard that "the Armenian King was about to make an attack on Cappadocia" (Cic. *Fam.* 15.2.2; 15.3.1). Perhaps as a consequence of Carrhae, Artavasdes assumed his father's title, "King of Kings," on his coinage.

Increased Roman activity against Parthia involved Artavasdes when Mark Antony proceeded against Parthia in 36 B.C. Among his allies stood "the greatest of all, Artavasdes of Armenia" with a large force. Antony allowed him to guide the expedition, and found himself detouring by way of Media Atropatene, where Artavasdes had scores to settle. When Artavasdes abruptly withdrew, Antony had to face winter and a Parthian army; he extricated only a portion of his men.

Antony seized Artavasdes in 34 and deported him to Egypt, where he died probably by Cleopatra's hand in 30 B.C. This proved a blunder, bringing no gain to Rome despite Antony's claim of an Armenian conquest. Armenians denied Antony access to their treasuries, one of his motives. The affair left a legacy of bitterness still discernible fifty years later (Tac. *Ann.* 2.3.2).

Artaxias II, son of Artavasdes, succeeded without interval, supported by the nobility. With Parthian assistance, he maintained himself (34–20 B.C.) and even carried out a massacre of Roman residents in the kingdom. He appears to have fallen to a family conspiracy (Dio 49.39 f.; Joseph. *Ant* 15.104f.; Tac. *Ann.* 2.3).

The death of Artaxias in 20 B.C. opened a century of intensified maneuvering to gain control of Armenia. A series of Artaxiad descendants of Tigranes the Great carried out brief reigns with Roman recognition. After their eclipse about A.D. 1, two kings of Atropatene also ruled Armenia briefly, but the Parthian Vonones I replaced them about A.D. 7. From A.D. 18 to 34, a successful Roman nominee, Zeno-Artaxias, proceeded from the dynasty of Pontus to the Armenian throne. Two Judaeans, descended from Archelaus of Cappadocia, tried to rule Armenia with the blessings of Rome. The first of these, Tigranes V, died in A.D. 36; the second, Tigranes VI, ruled Armenia in A.D. 60–62. Two Roman nominees from Asiatic Iberia also tried Armenia. Interspersed with these were rulers drawn from the Parthian royal house. (See *ANRW* 2/8: 300, 938; and Sullivan 1970, Chaps. 2 and 5.)

The "Armenian Question" in Roman-Parthian relations persisted. Long Roman supply lines precluded an effective military policy in Armenia. For instance, Corbulo's forces in A.D. 62 had to carry provisions by camel, and at times suffered real privation (Tac. *Ann.* 13.39; 14.24; 15.12). Romans also had difficulty delivering sufficient troops and had to rely on allies in Commagene and elsewhere. Armenians, both commoners and nobility, exhibited hostility to Rome (Tac. *Ann.* 15.27).

A compromise in A.D. 66 allowed Nero to invest the Arsacid Tiridates as king of Armenia at a ceremony in Rome (Dio 63.1–7). This arrangement held for half a century with Arsacids ruling Armenia and recognized by Rome.

Trajan tried to convert Armenia into a province in 114, but by 116/7 the Parthians again furnished a king for it. A long series of Arsacid kings appeared there in the 2d and early 3d centuries. Sometimes they bore Arsacid names reflecting in addition a grant of Roman citizenship, such as Aurelius Pacorus, "Great King of Armenia," known from an inscription in Rome (*OGIS* 382; see too *ANRW* 2/8, Parthian stemma after p. 938 and Magie 1950; 1528f. n. 2).

Armenia suffered occasionally from other invasions, as when the Alans raided it sometime before A.D. 137 (Dio 69.15). Parthians attacked it early in the reign of Marcus Aurelius, but in A.D. 163 the counterinvasion by Lucius Verus resulted in a Roman appointee as king, Sohaemus, whose name suggests descent from the royal house of Emesa, from which another Sohaemus had been chosen by Nero to rule nearby Sophene (Tac. *Ann.* 13.7). An invasion by the troops of Caracalla failed in ca. A.D. 215.

The Sassanid Persian overthrow of the Arsacids about A.D. 227 led to a change in Armenia as well, with greater receptivity to a Roman alliance, since the Arsacid dynasty sought to rule on in Armenia. Between 251 and 253, King Shapur invaded Armenia (Magie 1950: 1568 n. 29). In A.D. 297, Romans obtained by negotiation with Persia important satrapies along the Tigris in the vicinity of Armenia, but eventually returned several of these (Jones 1971: 224).

From late in the 3d century until well into the 4th, a locally acceptable king ruled Armenia with Roman support, and a peace between Rome and the Iranians led to a much-needed period of peace. A portion of Armenia itself was obtained by Rome in A.D. 387.

In early Byzantine times, further satrapies were detached, and the territory termed "Inner Armenia." The administration continued to be through local rulers. The legal system remained the "old law" of Armenia.

In Armenia, little essentially changed from the time of Tigranes to that of Justinian 600 years later. In those centuries, Armenia maintained its integrity and preserved the traditions which produced a long line of native kings in the middle ages, despite continued pressure from the outside. Eventually, emperors of Armenian extraction ascended the Byzantine throne.

The claim has been made that Armenia became the first state to recognize Christianity officially, early in the 4th century. This religion slowly replaced the variegated pantheon of syncretistic Iranian divinities previously worshiped there, and it became a vigorous institution, like Armenia itself.

ARMLET. See JEWELRY.

ARMONI (PERSON) [Heb *ʾarmōnî* (אַרְמֹנִי)]. A son of Saul, probably the eldest son borne by Saul's concubine Rizpah, the daughter of Aiath (2 Sam 21:8). The name means "my citadel." Armoni was publicly executed (Polzin 1969) during a religious barley harvest festival along with 6 other Saulides in the early years of David's accession to the Israelite throne after Eshbaal's murder (2 Sam 21: 1–14). The present report provides two explanations for the execution: (1) bloodguilt on Saul and his house for Saul's killing of the Gibeonites (v 1) (Prado 1954: 51), and (2) Saul's breaking of a treaty that was established between Israel and the Gibeonites by Joshua, by seeking to slay the Gibeonites "in his zeal for Israel and Judah" (v 2; Malamat 1955). Both reasons are presented as having led to a 3-year famine during David's reign.

After oracular consultation to determine the cause of the famine, David is said to have called the remaining Gibeonites to him to determine how expiation could be made for Saul's action. They are said to have demanded that 7 Saulides be turned over to them so that they could execute them at GIBEON on the mountain of Yahweh, following the LXX reading (*bgbʿwn bhr yhwh*). The MT locates the place of execution "at Gibeah/the hill of Saul, the chosen one of Yahweh" (*bgbʿt šʾwl bḥyr yhwh*). The MT reading reflects a substitution of Gibeah of Saul for Gibeon, and the further attempt to disguise the reference to Gibeon as the mountain of Yahweh by changing "mountain" into the passive participle "chosen one," substituting *ḥet* for *he.* The existence of a famous *bāmâ* sanctuary at Gibeon with Yahwistic connections (1 Kgs 3:5; 2 Chr 1:3–13 with much fictional embellishment) favors the LXX reading as genuine. In addition, while the adjective "chosen" is used to describe Saul's legitimate choice by Yahweh to be king in 1 Sam 10:24, it is similarly used in connection with David's relationship to

Yahweh and appointment of king-elect after Saul's rejection by Yahweh in 2 Sam 6:21. The expression is by no means unique to Saul or distinguishes him from David in the context. It is hard to understand why the author would want to stress Saul's legitimate royal associations in connection with the site of execution, unless perhaps he wanted to highlight Saul's fall from grace by reminding the reader that the family of the former chosen one was now being punished by the new chosen one. The MT phrasing is awkward, reflects the anti-Gibeonite bias that permeates the Deuteronomistic writings (Kearney 1973), and may have arisen from a pious scribe who was influenced by this bias and altered the original wording to harmonize with 1 Sam 10:24 and 11:4 (for another explanation, see McCarter *2 Samuel* AB, 438).

The bodies of the 7 were left exposed until rain fell, from mid-April until October or November, and their bones were subsequently buried together with the exhumed remains of Saul and Jonathan in the family tomb in Benjaminite Zela. It has been suggested that the execution was done as part of a fertility rite, in which the bodies of the dead would have been dismembered and scattered in the fields to bring fertility to the land (i.e. Cazelles 1955: 167–69; Kapelrud 1955:120).

ARMY, ROMAN. See ROMAN ARMY.

ARNA (PERSON) [Lat *Arna*]. An ancestor of Ezra, the father of Meraioth and the son of Uzzi according to the genealogy of Ezra in 2 Esdr 1:1–3. Slightly different pedigrees of Ezra are found in Ezra 7:1–5 and 1 Esdr 8:1–2 (cf. 1 Chr 5:27–40—Eng6:1–14). Though the name Arna does not appear in the Ezra text, the order of the names suggests that Arna is in parallel to Zerahiah in Ezra 7:4 (see also 1 Chr 5:32—Eng6:6). The genealogy in 1 Esdr 8:1–2 leaves out Arna (Zerahiah) along with the two generations after him.

JIN HEE HAN

ARNAN (PERSON) [Heb *ʾarnān* (אַרְנָן)]. The fourth son of Hananiah the son of ZERUBBABEL and brother of Obadiah and Rephaiah, in 1 Chr 3:21, the genealogy which records the postexilic descent of the line of David. The RSV follows the Gk and Vg. The Heb, however, makes Arnan the son of Obadiah and father of Rephaiah.

RUSSELL FULLER

ARNI (PERSON) [Gk *Arni* (Ἀρνι)]. An ancestor of Jesus, according to a textually confused part of the Lukan genealogy (3:33a). The reading of this name is adopted by the *UBSGNT* as part of a series of 3 names which are "the least satisfactory form of the text, a reading that was current in the Alexandrian church at an early period" (Metzger 1971: 136). It is also in the text of Nestle–Aland *Nov TG*. The name is not found, however, in many ancient Gk manuscripts of the NT, nor is it contained in the OT genealogies of 1 Chronicles 2 or Ruth 4.

HERBERT G. GRETHER

ARNON (PLACE) [Heb *ʾarnôn* (אַרְנוֹן)]. A perennial stream whose tributaries drain much of the Moabite plateau on both sides of the Arnon gorge (modern Wadi Mojib). The Arnon's source is near Lejjun, ca. 10 miles NE of Kerak. From its meager beginning, the stream flows NNW for ca. 15 miles, and then it courses an equal distance to the W, finally emptying into the Dead Sea. The Arnon's mouth is just north of the halfway point on the Dead Sea's eastern shore, at Ras el-Ghor; its perennial flow makes the Arnon the most important river on the sea's E side. The outflow of the Arnon itself is greatly increased by the water of Wadi Heidan, which merges (from the N) with the Arnon 2 miles from the latter's mouth (cf. Mattingly 1983).

The Arnon is named in the Bible 25 times, but it is most famous because its small, rapidly descending stream has created, through the millennia, a huge canyon along its E–W route. The section of Wadi Mojib whose N rim is less than 2 miles south of Dhiban is almost 3 miles across, from rim to rim. Its depth varies from 1,300 feet to 2,300 feet. Naturally, the wadi's length and depth made N–S travel in this area difficult—and certainly more time-consuming. Such streams, which cut across Transjordan's tableland, partially explain why the King's Highway was situated so far to the E. Because it bypassed the W edge of the escarpment and the deep gorges that run E–W, the so-called Desert Highway became an important N–S thoroughfare. A major confluence of the Arnon is located ca. 2 miles E of where the modern highway (perhaps following the route of the ancient King's Highway) crosses the riverbed. This point is just south of Aroer, a site which the Bible frequently identifies as sitting on the edge of the Arnon. The biblical designation "valleys of the Arnon" (Num 21:14) is quite appropriate for the convergence of canyons at this spot.

All of Transjordan is subdivided into 5 smaller regions by 4 wadi systems that run from E to W, draining the water from the plateau into the Jordan Rift: from the N these are (1) Yarmuk, (2) Jabbok, (3) Arnon, and (4) Zered. The Arnon itself divided Moab into 2 parts. While the S boundary of Moabite territory was fixed by the Zered (modern Wadi el-Hesa), Moab's N border fluctuated. In times of strength, the Moabites controlled the land between the Zered and the vicinity of Heshbon ca. 22 miles N of the Arnon. After he reclaimed northern Moab from the Israelites, King Mesha repaired the highway that crossed the Arnon at Aroer (Mesha Inscription, line 26), an event illustrating the unification of both parts of Moab. When Moabite power waned, their domain was reduced to the undisputed heartland of Moab, the territory between the Zered and the Arnon. Thus, the Arnon served as a natural boundary when political and military factors assigned it that purpose, but it was not enough of a barrier to create cultural differences on its two sides.

As noted above, the Arnon sometimes served as a boundary between the Moabites, Amorites (Num 21:13, 24, 26; and 22:36), and the Israelites (Deut 2:24, 36; 3:8, 16; Josh 13:16; 2 Kgs 10:33; cf. 2 Sam 24:5). References to the Arnon in the oracles of Isaiah (16:2) and Jeremiah (48:20) allude to its status as an important point in the N–S route through Moab.

GERALD L. MATTINGLY

ARODI (PERSON) [Heb *ʾarôdî* (אַרוֹדִי)]. Var. AROD. ARODITES. The 6th of 7 sons of Gad named in the genealogy relating Joseph to Jacob (Gen 46:16). In a parallel genealogy which identifies the clans that constituted the 40,500 Gadites in the wilderness census (Num 26:17—LXX 26:26), the personal name is Arod (Heb *ʾarôd*) and the clan name is Arodites (Heb *ʾarôdî*). Several factors favor the long spelling: (1) the names of 5 of Gad's sons have the *î* ending, in both lists (Gen 46:16 = Num 26:15–17—LXX 26:24–27); (2) the LXX, Syr, and Samaritan Pentateuch texts read the *î* ending in Num 26:17; (3) in this sequence of names with the same ending, the *î* could easily have dropped out. Regardless of the original spelling, there is no doubt that the two genealogies list the same person.

JOEL C. SLAYTON

AROER (PLACE) [Heb *ʿarōʿēr* (עַרְעֵר)]. AROERITE. Since it is likely that the name means "crest of a mountain" or "juniper," such frequent use of this place-name is not unusual.

1. The overwhelming number of references to a place named Aroer are made in connection with the so-called "Aroer on the Arnon." This settlement, more properly viewed as a fortress throughout most of its history, was situated on the N rim of Wadi el-Mujib, the biblical River Arnon. In fact, many of the biblical verses that mention this particular Aroer refer specifically to its location on the edge of the spectacular canyon that the Mujib has formed (e.g., Deut 2:36; 4:48; Josh 12:2; 13:16). Aroer's strategic location made it a natural checkpoint on a territorial border, as in the day of the Amorite kingdom of Sihon (Deut 4:48; Josh 12:2; cf. Judg 11:22) and during the Hebrew conquest and settlement in Transjordan (Deut 2:36; Josh 13:9). In both of these cases, the Arnon and, consequently, the fortress of Aroer marked the frontier with Moabite territory, to the S of the Arnon.

According to Num 32:34, Aroer was refortified by the Israelite tribe of Gad, though it was originally assigned to the Reubenites (Josh 13:16). At the time of David's census, Aroer was a logical starting point for the numbering of Hebrews who lived E of the Jordan. Aroer's strategic significance on the rim of the Arnon is highlighted again in the 2d half of the 9th century B.C., when Aroer is named as the S limit of the Syrian king Hazael's control of Transjordan (2 Kings 10:33). Very important is the reference to Aroer in line 26 of the Mesha Inscription (ca. 830 B.C.), where the Moabite king Mesha was credited with refortifying the site after his victory over Israel. Aroer was under Moabite control when it is mentioned for the last time in the Bible, in Jer 48:19.

Ancient Aroer is linked with certainty to the site of a small Arab village—and its imposing tell—named ʿAraʿir, which is located ca. 3 miles SE of Dhiban (biblical Dibon) and 21/2 miles E of the so-called King's Highway (M.R. 228097). Excavations were conducted in 3 seasons of fieldwork, from 1964 to 1966, by a Spanish team which was under the direction of Emilio Olávarri (*EAEHL* 1: 98–100). ʿAraʿir yielded pottery and other artifacts that dated from ca. 2250 B.C. until the 3d century A.D., though the site was not occupied continuously over this long period. There was, for example, an occupational gap during the Middle Bronze Age, but evidence from the Late Bronze Age and Iron Age was recovered. The most important excavated structure is a fortress that measures ca. 50 yards on each side and was built of large blocks of stone laid in header-stretcher style. Olávarri attributes the construction of this fortress to Mesha.

2. Located in Transjordan and mentioned in Josh 13:25 and Judg 11:33. According to the former, this Aroer was "E of ["opposite" or "before"] Rabbah" (M.R. 238151) (modern Amman) and formed part of the boundary between the Israelite tribe of Gad's territory and Ammonite country. This description has been used to place this Aroer in the vicinity of es-Sweiwina, which is located south of Amman, but no excavations have been made that allow scholars to identify the location of this second Transjordanian Aroer with any certainty.

3. Place located E of the Jordan Rift has become known because of its appearance in the Heb text—and in the King James Version—in Isa 17:2a ["the cities of Aroer are deserted"]. If this reading is followed, it would seem to indicate that there was another Aroer in the neighborhood of Damascus. While this is possible, many translations, including the RSV, omit any reference to an Aroer by following the LXX and rendering 17:2a as "her cities will be deserted for ever."

4. Place located in the Bible to the W of the Jordan (1 Sam. 30:28). In this verse, the Hebrew historian says that David distributed loot to the elders of Aroer, after he recovered his wives from the Amalekites who had raided Ziklag. It is assumed that this was the home of Hotham the Aroerite, father of two of David's "mighty men" (1 Chron 11:44). Since the time of Edward Robinson's 1838 travels through Palestine, this Aroer has been linked with the Negev site of ʿAraʿarah, which is located ca. 12 miles SE of BEER-SHEBA (M.R. 148062).

ʿAraʿarah was excavated between 1975 and 1981 by A. Biran and R. Cohen. They concluded that this 5-acre site was first settled in the 7th century B.C. and was occupied, intermittently, until ca. A.D. 70. Though it is possible that further excavations might uncover remains from the 11th or 10th centuries B.C., it does not appear that ʿAraʿarah was occupied in the time of David. Biran has suggested that Davidic

Aroer can be identified with Tel Esdar, which is located ca. 11/2 miles N of ʿArʿarah, and that the name Aroer was transferred to the latter site when it was founded in the 7th century B.C. Excavations at Tel Esdar did recover remains from the 11th–10th centuries B.C., but there is no other assurance that Biran's suggestion is correct.

The name Adadah (Josh 15:22) may be a corruption of ʿArʿara, another form for Aroer; the LXX reads Aruel for this place-name. It has also been identified with Khirbet ʿArʿarah, though this, too, is uncertain.

GERALD L. MATTINGLY

AROM (PERSON) [Gk *Arom* (Ἀρομ)]. Ancestor of a family returned from exile in Babylon with Zerubbabel (1 Esdr 5:16). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:17; Neh 7:23). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and persons described in 1 Esdras have cast doubt on the historicity of the text. Fritsch (*IDB* 1: 231) indicates that Arom may be a variant of HASHUM found in Ezra 2:19 and Neh 7:22. Although this is possible, the location of Hashum differs in the sequence of names found in Ezra 2 and Nehemiah 7, and Hashum (Gk *Asom*) itself occurs in 1 Esdr 9:33.

MICHAEL DAVID MCGEHEE

AROMATIC CANE. See PERFUMES AND SPICES.

ARPACHSHAD (PERSON) [Heb *ʾarpaḫšad* (אַרְפַּכְשַׁד)]. **1.** A son of Shem and the father of Shelah in the MT (Gen 10:22, 24). In the LXX and in the NT (Luke 3:36; cf. also Jubilees 8:1), Cainan is inserted in the genealogy between Arpachshad and Shelah. In the MT, the lifespan of Arpachshad is given as 438 years, with thirty-five as the age at which he fathered Shelah. Analyses of the personal name have included: the 1st part of the name as the geographic name *Arrapḫa,* probably situated at modern Kirkuk; and the 2d part of the name as *kaśdîm,* the gentilic, Chaldeans. This analysis of the first name would seemingly locate the name in the geographic context of Arpachshad's brothers (Gen 10:22) and assign it a Hurrian etymology (Albright 1924: 388–89; Cazelles *POTT* 22). Cf. also the suggestion of Gordon (*IDB* 1: 231) to identify the 1st 3 letters with the putative Hurrian element *arip.* This understanding of the 2d element might explain the absence of Babylon in the Table of Nations (Simons 1959: 9–10). However, these interpretations fail to explain the entire name. The *patah-šĕwā* pattern, repeated 3 times, may suggest an artificiality in the pronunciation, reflecting an early loss of the original understanding of the six-consonant, non-Semitic (?) name. Two problems arise related to the mention of Arpachshad in Gen 11:10. First, the verse describes Shem as begetting Arpachshad 2 years after the flood when he was 100 years old. If Noah fathered Shem at 500 (Gen 5:32) and the Flood occurred in his 600th year (Gen 7:6, 11), then a discrepancy of 2 years appears. A temporal interpretation of the waw-consecutives in Gen 5:32 (Cryer 1985: 247–248), combined with Shem's position as 2d born (Cassuto *Genesis,* pp. 260–61), allows for a period of 2 years. Then Shem would have been born in Noah's 502d year and Arpachshad in Noah's 602d year (Cryer 1985: 247–48). A second problem arises when it is observed that the genealogies designate the eldest son of the new generation by listing him first or alone. This occurs in Gen 11:10–11 with Arpachshad. However, in Gen 10:22 Arpachshad appears 3d among the offspring of Shem. Unlike Genesis 11, which relates Abram's ancestry to Shem, Genesis 10 describes the geographical distribution of peoples in the known world. The "brothers" of Arpachshad are all gentilic or geographic names, and the order of the names in the text has nothing to do with order of birth.

2. The leader of the Medes who was defeated by Nebuchadrezzar (Jdt 1: 1). This figure is otherwise unknown in ancient sources. Attempts to identify Arpachshad with a Scythian king and to argue for an Iranian etymology are speculative (Brandenstein 1954: 60, 62).

RICHARD S. HESS

ARPAD (PLACE) [Heb *ʾarpād* (אַרְפָּד)]. City in N Syria identified with modern Tell Rifaat (36° 28′ N; 37° 06′ E). Biblical references (2 Kgs 18:34 = Isa 36:19; 2 Kgs 19:13 = Isa 37:13; Isa 10:9; and Jer 49:23) to its conquest by Assyria reflect Arpad's importance in the 9th and 8th centuries B.C.E. when it served as capital of the land of Bit-Agusi. A series of archaeological excavations at Arpad in the 1950s and 1960s by M. V. Seton-Williams and of the surrounding region in the 1970s by J. Matthers (1981) have uncovered architectural, ceramic, osteological, and other types of remains which span from the Chalcolithic in the 5th millennium B.C.E. to the Islamic era.

The main sources for the history of Arpad in the 9th and 8th centuries B.C.E. are Assyrian historical texts. The records of Adad-nirari III (810–783) mark the first known reference to the place as Arpad, but more common names include Yakhan and Bit-Agusi. Despite intermittent independence, Arpad paid tribute to Assurnasirpal (885–860), and suffered significant attacks from Shalmaneser III in 849 and Adad-nirari III in 805. Perhaps describing events in 796, Zakkur of Hamath reports in his Aram inscription (*KAI*, #202) that he was delivered, possibly with the help of Adad-nirari III, from an attacking coalition headed by Bargush (= Atar-shumki?) of Arpad. Mati'-ilu of Arpad concluded a treaty with Ashur-nirari V (754–746) in 754, and later, as recorded in the Sefire inscriptions (*KAI*, #222), another with a still obscure Bar-ga'yah of *ktk*. Mati'-ilu's apparent revolt led to the conquest and reduction of Arpad to an Assyrian province by Tiglath-pileser III in 740. After 740 Arpad never regained its former power, although it did participate in an uprising suppressed by Sargon in 720.

Precise reconstruction of the royal line of Arpad in the 9th and 8th centuries B.C.E. remains a difficult problem. W. Pitard's (1988) recent identification of a certain Attar-hamek in the much discussed Melqart Stele may suggest the existence of previously unrecognized kings of Arpad. However, the numerous uncertainties associated with the stele, ascribed to the kingdom of Damascus by many scholars, leaves the following relative chronology as the most certain: Agusi (1st half of 9th century); Arame (ca. 858–ca. 834); Atar-shumki (ca. 805–ca. 796?); and Mati'-ilu (ca. 754?–740).

HECTOR AVALOS

ARPHAXAD (PERSON) [Gk *Arphaxad* (Ἀρφαξαδ)]. 1. Ruler over the Medes (Jdt 1:1). He rebuilt the wall of Ecbatana, and was defeated by Nebuchadnezzar in the mountains of Rages.

However, according to our historical sources, no Persian or Median king by the name of Arphaxad ever existed. Therefore, the character is usually considered fictitious, although Ball suggests that the name may be a corruption of "Arbaces," the name of the first Median king. The name is probably taken from the book of Genesis, where it is given as Arpachshad (Heb *ʾarpakšad*). He is the 3d son of Shem, born after the flood, who became the grandfather of Eber, the ancestor of Abraham. The name Arpachshad may be geographic in origin, indicating an area of Mesopotamia.

2. Ancestor of Jesus (Luke 3:36). See ARPACHSHAD.

ARRAY, BATTLE. See WEAPONS AND IMPLEMENTS OF WAR.

ARSACES (PERSON) [Gk *Arsakēs* (Ἀρσακης)]. Name or title of Parthian kings, including the one who captured Demetrius II (1 Macc 14:2–3). The name may have been simply a title used by Parthian kings who claimed descent from Artaxerxes II, whose name was Arsaces before he took the Persian throne.

Appian (*Syrian Wars* 67) identifies the Arsaces who captured Demetrius II with Phraates (176–171 B.C.E.). However, his dates are 30 years too early. It must have been his younger brother, Mithradates I (171–138).

This Arsaces influenced Jewish history in 165, when Antiochus IV marched E, perhaps because of Parthian threats. On his return to Syria after a defeat by Mithradates I, Antiochus died at Gabae. Mithradates was then able to conquer Media and Mesopotamia.

Jewish history mentions him explicitly because in 142 Demetrius II mustered an international army to invade Mesopotamia. The purpose was to secure Mesopotamia for the Seleucids and to raise a force strong enough to defeat Trypho, a pretender to the Seleucid throne. After some initial successes, Arsaces Mithradates defeated Demetrius' army and captured Demetrius (1 Macc 14:2–3). Mithradates treated Demetrius very well and even gave the prisoner his own daughter, Rhodogune, in marriage. Mithradates died in 138. Demetrius remained a Parthian prisoner until 130, when Arsaces Phraates II set him free during an unsuccessful invasion by Demetrius' brother, Antiochus VII.

ART AND ARCHITECTURE. Seven articles are included under this general heading. The first two, respectively, provide broad historical surveys of ANE art and of ANE architecture, excluding Egypt. The third article focuses more closely upon the art and architecture specifically of Mesopotamia, while the fourth provides an overview specifically of Egyptian art and architecture. The fifth article treats Persian art of the Achaemenid period, while the final two cover, respectively, early Jewish art and architecture and early Christian art.

ANCIENT NEAR EASTERN ART

Ancient Near Eastern art customarily includes the sculpture, pottery, painting, and glyptic produced in W Asia from their earliest appearances until the fall of the Achaemenid Persian Empire in 331 B.C. At the end of that period, the systematic introduction of Greek forms and styles in architecture and the visual arts throughout western and central Asia created new fusions of indigenous and Eastern Mediterranean forms in addition to Near Eastern traditions. In the mid-7th century of our era, the Islamic conquest of W Asia brought about significant changes in the forms and institutions of Near Eastern art and architecture. Yet established trends in a variety of media continued to flourish, and a neat division between pre-Islamic and Islamic Near Eastern art is difficult to establish (Ettinghausen 1962; Grabar 1973).

A. Scope

Unlike "Egyptian" or "Greek" art, the term "ancient Near Eastern art" does not embrace a coherent body of works of art linked by an obvious unity of style, purpose, or means of expression. Moreover, it includes works made by artisans of a variety of ethnic identities. No histories of art survive from the

ANE; typological, aesthetic, and historical categories and trends have been established only in modern times. Because the modern distinction between art and craft is difficult to apply to the ANE, scholars generally admit a wide range of objects to the realm of art.

Although often treated as a geographical and cultural entity, the ANE encompassed a long history and a diverse set of physical environments. In artistic developments, as in other forms of cultural expression, such as languages, component regions in large measure followed independent avenues. It is customary to subdivide the Near East into several principal geographical regions—Mesopotamia, Iran, the Levant, and Anatolia—and to trace developments in art and architecture accordingly. Those divisions are generally agreed to correspond in significant ways to regionally characteristic and long-lived patterns of artistic and architectural expression, although it is also true that at most periods in antiquity each region was open to outside influence through movements of works of art, of patrons and artisans, and of conquerors and prophets. Because Mesopotamia alone provides a continuous sequence of excavated building remains and works of art accompanied by written records beginning about 3200 B.C., it continues to serve as a framework for ANE art as a whole. Yet all regions of the Near East displayed independent artistic traditions, and Mesopotamia, at various periods in its history, was in turn the recipient of forms, styles, and techniques of manufacture that had originated elsewhere.

That diversity of environment and culture helped to shape regional differences in the development of materials, technologies, and traditions employed for works of art or architecture. In Mesopotamia, in the major river valleys of the Tigris and Euphrates, natural resources for materials used in building or in fashioning works of art were limited primarily to plentiful quantities of clay and reeds. Gypsum and alabaster, stones suitable for building or for carving sculptures, existed in N Mesopotamia. Sources of ores, including gold, silver, copper, and iron, as well as certain varieties of stone, were available in the mountainous regions of Anatolia and W Iran. Works of art also employed prized materials imported to the Near East by sea or by land, often from considerable distances. The hard stone diorite, for example, used in Mesopotamia at certain periods for large-scale sculptures, was probably imported from islands in the Persian Gulf or from coastal ports along the shores of the Indian Ocean (Heimpel 1987). Lapis lazuli, a semiprecious stone favored for jewelry and also used together with other materials for decorative inlays, was very likely transported to the Near East via overland routes from present-day Afghanistan (Herrmann 1968). Ivory, another luxury material employed for furniture, inlays, and cosmetic items, came from elephant and hippopotamus hunted in Egypt and W Asia (Lucas 1962: 32–33; Barnett 1982: 3–15).

The periods under consideration also witnessed the development of critical technologies that shaped artistic energies as well as economies and societies. The domestication of animals and cultivation of plants, and the development of metallurgy in copper, gold, silver, and iron, took place in the ANE. Those technologies created materials for works of art as well as ways of fashioning or decorating them. Metal tools for carving stone, the use of plants or mineral pigments for coloring dyes or paint, and wool for textiles, in turn allowed new opportunities for artistic expression (Moorey 1985; Lucas 1962; Singer, Holmyard, and Hall 1954). Pyrotechnologies that made possible the production of good-quality ceramic objects fired at high temperatures, together with the materials faience (the common term for glazed sintered quartz) and glass, were all invented in the ANE (Moorey 1985). The invention of writing, a dramatic step in communications technology, took place in Mesopotamia about 3200 B.C. Among its many profound effects on Near Eastern history and society was the development of means of communication among artisans and architects (Cooper 1988; Kilmer 1990; Michalowski 1990).

A history of art depends on determining the sequence of forms and styles, as well as the relationships between works of art produced in different areas of a region. Works of ANE art are located within a relative chronological framework based on stratigraphic sequences discovered during excavations. In relative chronologies, works of art can be assigned a place in a series established through stratigraphic evidence. Many of them can also be dated in years, that is, in relation to our time, through such scientific means as radiocarbon dating of organic materials, or thermoluminescence of fired clay (Brothwell and Higgs 1970: 35–108). After the invention of writing in Mesopotamia, about 3200 B.C., written sources can be added to the evidence of archaeological context to assist in dating a monument. Inscriptions preserved

on works of art, or names of individuals known from written documents, often make it possible to link a building or work of art with a dynasty or ruler known from cuneiform sources, which can in turn be dated via Mesopotamian, N Syrian, and Egyptian absolute chronologies (*CAH* 1/2: 173–93, 193–239).

Historians of ANE art investigate the forms, styles, subjects, and function of examples of painting, sculpture, and glyptic, seeking to compile a descriptive history of those categories of material and their sequence of development. They also investigate the social, political, and cultural contexts of works of art, their makers, patrons, and owners. When available, written sources—literary texts, correspondence, administrative records, annals, or inscriptions—are used to help reconstruct those contexts. Works of ANE art are usually classified and studied with close attention to the social and political circumstances in which they were made and used. Such evidence serves not only to help establish a probable date and place of manufacture for an object, but also contributes significantly toward understanding the circumstances of its creation, function, and meaning. Through study of their forms, subjects, and development, works of art and architecture can furnish information about the rituals, aesthetic sensibilities, or cultural traditions that engendered them. In turn, therefore, they help to supplement information available in ancient texts by providing an independent, rich, and complex set of sources documenting aspects of religion, politics, economics, and society. Works of art play a significant role in reconstructing the broader cultural history of the ANE.

A history of ANE art has been compiled principally by studying remains of buildings and artifacts recovered from excavations carried out during the 19th and 20th centuries. In addition, many objects purportedly of ANE origin have entered museums or private collections via the art market; for such material, authenticity or provenance must be established through technical criteria or by visual comparisons with works of known date and place of manufacture. Finally, ANE texts often describe or mention works of art or techniques of manufacture poorly represented in the archaeological record, thereby helping to reconstruct a more accurate and complete picture of the scope, purpose, and historical significance of artistic production in the ANE.

B. Western Discovery of ANE Art

Prior to archaeological confirmation of their civilizations, many ANE peoples and places were already known through the Bible and through classical accounts, those texts that had long formed the core of the Western tradition. European knowledge was based on biblical sources preserving names of ancient Mesopotamian cities, and on descriptions by classical authors, including Herodotus, Xenophon, Arrian, and Strabo, mentioning cities and monuments of Asia Minor, Babylonia, and Persia.

The historical interest of the Near East as the "Holy Land," in addition to its commercial and political importance, first prompted Western curiosity about its past. Many ancient monuments, in particular those dating to late antiquity, remained visible; consequently, they were the first sets of ruins that attracted the attention of European merchants or diplomats. Architectural remains and rock reliefs of Achaemenid and Sassanian Persia, for example, were described in Western travelers' accounts of the 16th and 17th centuries. The 18th and 19th centuries brought additional opportunities for Europeans to visit the ancient monuments of Mesopotamia; sites identified included the visible ruins of ancient cities named in biblical accounts, such as Babylon and Nineveh. European travelers to the Near East initiated modern awareness of its antiquities, and published illustrated narratives of their journeys that disseminated information to a wide and fascinated public.

As British and European interest in Near Eastern antiquities grew, travelers with sketchbooks were often succeeded by explorers with pick and shovel. Systematic, large-scale investigation of ruins began during the 1840s at sites in N Mesopotamia identified as Assyrian cities mentioned in the Bible. In 1843, Paul Emile Botta, then French consul at Mosul, uncovered the palace and sculptures of the Neo-Assyrian king Sargon at the site of Khorsabad. In 1845, the Englishman Austen Henry Layard (1817–1894) began digging at the site of Nimrud in N Mesopotamia, uncovering monumental architecture and sculpture, clay tablets and stones inscribed in the cuneiform script, and other finds (Lloyd 1980; Silberman 1982). The initial focus on places named in the Bible granted the monuments—and the cultures that had produced them—a status as part of the Western tradition, and imperial rivalries fed the demand for antiquities at

home. As a result of British, French, and later German efforts, vast quantities of objects were transported to national museums in London, Paris, and Berlin. The presence of those monuments, in turn, helped to inspire scholarly attempts to integrate ANE monuments into the histories of other ancient arts, especially those of Egypt, Greece, and Rome (Bohrer 1989).

The decipherment of cuneiform, achieved during the 1840s and 1850s, served to open a new vista on the whole of Mesopotamian civilization as well as to enhance interest in Mesopotamian antiquities. Study of the texts revealed that Babylonia, as well as Assyria, had been home to important civilizations, and the later 19th century saw the investigation of S Mesopotamia and the discovery of civilizations predating the Neo-Assyrian Empire. European and American campaigns devoted to the recovery of early Mesopotamian monuments began in the late 19th century, at the Sumerian cities of Nippur and Telloh. A new, earlier era of Mesopotamian civilization was revealed through German excavations at Warka, ancient Uruk (biblical Erech), which began in 1912 and continued after the World Wars. In the 1920s and 1930s, then commencing again after World War II, archaeological investigations grew significantly in number and began to explore systematically the regions beyond the Tigris and Euphrates valleys. Excavation of increasingly earlier occupation became a priority of field research (Lloyd 1980). Those investigations revealed that the beginnings of art in the ANE were to be found at least as early as the Neolithic era.

Classical, and later biblical, references also supplied the initial impetus for European exploration of ruins in Anatolia. Travelers in search of monuments described by classical authors also came upon ruins which were, by the mid-19th century, recognized as those of earlier, pre-Greek cultures. Monuments with "hieroglyphic" inscriptions found in parts of present-day SE Turkey and N Syria were identified as the work of the Hittites, a people known from references in the Bible and in Egyptian and Assyrian records. In 1906, a German team began excavations at the modern site of Boğazköy, in north central Turkey, identified as ancient Hattusha, the capital of the Hittite Empire (Bittel 1970: 3–23). Since the 1930s, archaeological investigations carried out over a wide region of Turkey have also revealed extensive evidence for developed artistic styles and iconographies dating as early as the 7th millennium B.C.

Ruins dating to the Seleucid, Parthian, and Sassanian eras, many of them comparatively well preserved, early on attracted the attention of Western travelers. Scholarly interest in the art or architecture of those eras generally came later, however, and was directed principally toward sites in Syria and Mesopotamia (including Aššur, Dura Europus, Seleucia-on-Tigris, and Hatra). Excavation and analysis of the material was initially undertaken primarily as a branch of Hellenistic, Roman, or Islamic studies, and has only in recent decades been systematically investigated as an independent field of ANE art (Colledge 1977; Downey 1988; Herrmann 1977; see also EARLY CHRISTIAN ART, EARLY JEWISH ART AND ARCHITECTURE, below).

C. The Production of Art in the ANE

Only an incomplete account of ANE art can be reconstructed from available archaeological and textual sources. The initial concentration on S Mesopotamia in excavations and research of the 19th and early 20th centuries has shifted since the 1930s in favor of a more balanced interest in the art produced in all regions of the ANE. Yet not all regions played an equally significant role in the history of art, and there were in any given period centers of artistic production that exercised influence beyond their political boundaries. The creation and development of forms and styles in architecture, sculpture, seals, vessels, and jewelry are known in their main outlines from Mesopotamia, Anatolia, and the Levant. A comparably extensive series of sites with stratified occupation sequences and well-dated monuments is at present lacking for Iran.

Historians of ANE art must also contend with the uneven recovery and preservation of relevant categories of evidence. Organic materials, such as woven textiles, and fragile media, such as wall painting, are preserved only under exceptional circumstances; the scope of their production and their place in the history of ANE art is therefore extremely difficult to judge. Metalwork, a principal medium of ANE art, survives in only a small proportion to its original abundance. Ancient written sources, such as

texts describing the manufacture or commercial exchange of those materials, or inscriptions preserved on statue bases, help to indicate the kinds and quantities of works of art once produced in the ANE.

For the vast eras of prehistory, the circumstances of artistic production can only be surmised. The shift from food-collecting to food-producing economies, or the "Neolithic revolution," is generally considered to have made possible the support of full-time artisans. Already in Neolithic times, there was a long-distance exchange of valued materials, such as obsidian, for tools and other artifacts (Cann, Dixon, and Renfrew 1970). Craftsmen may have specialized not only in the full-time manufacture of objects for utilitarian or ornamental use, but also in the design and shaping of specific raw materials.

Although no detailed records describing the organization of artistic production survive from historical periods, references preserved in the cuneiform literature of several cultures can be used to reconstruct aspects of the social and economic circumstances in which works of art were made. Philologists and historians have retrieved from administrative records, correspondence and inscriptions information on the artisan, his social role, and the conditions of his employment. In most cases, artisans were organized in palace or temple workshops, where they held lifetime positions. In those institutions, specialized personnel were given temporary or long-term assignments, either within the capital or in peripheral locations administered by the palace or temple. Most abundant among the documents concerning craftsmen employed by such institutions are the MB Age archives from the palace at Mari. At Mari, the category "artisan" (Akk *mār ummênim*) included physicians, scribes, barbers, cooks, and masons, all of whom were part of the palace bureaucracy (Zaccagnini 1983: 247–49; Sasson 1990).

Artisans were also employed by assignment from one court to another, usually at a foreign ruler's express request. Thus, specialized craftsmen—including physicians and diviners as well as sculptors—were sent to and from Egypt, Babylonia, and Hatti during the LB Age. During the 1st millennium B.C., it seems that there was a higher number of slaves among those engaged in specialized crafts during this period. At the same time, there are examples of groups of artisans in Neo-Babylonian Eanna who bargained with their employers over aspects of their professional responsibilities and working conditions (Zaccagnini 1983: 250–64).

Since archaeological investigations in the Near East have devoted most time and effort to the exposure of palace and temple complexes, including the archives of those institutions, we are best informed on the production of art for political and religious purposes. In a number of cultures, art helped to define the relationship between the ruler and society, both human and divine. To that end, works of art were often used to create and circulate an image of a ruler that conformed to social expectations, or that sought to introduce a new order or set of relationships. In addition, kings were directly involved with rituals in the construction of temples and palaces, and sometimes also participated in the design and decoration of buildings or works of art (Root 1979: 16–23).

Artistic interaction between different regions of the ANE came about through a variety of mechanisms, involving the movement of artisans as well as works of art. Trade, diplomacy, imperial expansion, and voluntary or forced population movements were among those mechanisms. Key sculptural monuments displayed in Mesopotamian sanctuaries were moved to the site of Susa, in SW Iran, through a series of raids on Mesopotamian cities by kings of Elam in the 12th century B.C. (*CAH* 2/2: 486). Cult images, endowed with powers of healing, were transported over long distances, usually in response to the express wish of an individual ruler (*CAH* 2/1: 346).

Relatively little is known of the production of art for private, nonroyal settings, at least before the Roman era. Personal possessions recovered from tombs, for example, help to determine the kinds of objects individuals of non-royal status would have owned and treasured. The abundant category of cylinder seals and their impressions, many inscribed with the names of their owners, furnishes an exceptional opportunity to investigate works of art belonging to individuals of different social levels, the personal selection of subjects or styles, and the function, meaning, and reuse of those works of art (Gibson and Biggs 1977; Collon 1987).

D. Artistic Developments before 4000 B.C.

With the development of agriculture and animal husbandry in the Near East around 9000 B.C., permanently inhabited settlements provided a new and hospitable environment for artistic energies. Sources for reconstructing the beginnings of art are sculptures, vessels, or ornaments, made of clay or stone, found in settlements or graves over a wide region of W Asia (Mellink and Filip 1974; Mellaart 1975). Works of art seem to have been created for purposes of cult and magic, as far as we can reliably reconstruct their meanings and function. At Neolithic Çatal Hüyük, in south central Turkey, wall paintings and plastered relief sculptures document an elaborate cultic iconography involving bulls, felines, and human female figures. Plastered human skulls from Neolithic Jericho suggest that art functioned in a cult of ancestors. Common to Neolithic sites over a wide area of the Near East are figurines made of clay or stone in the shape of humans, most often females, or of animals.

Less practical ambitions must also have fed the urge to fashion clay, stone, or perishable materials into an image or pattern, or to decorate a surface. The medium of pottery developed early in the Near East, initially for the manufacture of simple containers; the earliest known examples, from the sites of Mureybit in N Syria, and Ganj Dareh Tepe, in W Iran, date to about 8000 B.C. By the 5th millennium B.C., potters at a number of sites in the Near East were producing ceramic vessels of high technical quality, and had adopted the medium as an important vehicle of artistic expression. A material that permits unlimited variations and ways of shaping, clay can also be transformed through firing; in addition, it provides a wealth of opportunities for decoration through incision, relief ornament, and the addition of a colored slip or paint. Excavations in northern and central Mesopotamia have yielded the painted pottery styles known as Samarra and Halaf. In Anatolia, a painted pottery style best known from the site of Hacilar also appeared during the late 6th millennium B.C. (Mellink and Filip 1974).

Architectural remains dating to this period are usually made of perishable or readily weathered building materials, including sun-dried mudbrick or reeds. Most buildings seem to have been ordinary dwellings, with adjacent space used for keeping animals. Several Neolithic sites have also yielded examples of substantial stone architecture, or of functionally specialized structures, such as fortifications or storerooms. A series of temples unearthed at sites of the Ubaid culture in Mesopotamia, dating to the 5th millennium B.C., bears witness to the standardization of ritual in the form of building plan, interior furnishings, and exterior decoration (see ANCIENT NEAR EASTERN ARCHITECTURE below).

E. Arts of the Early Urban Communities (to ca. 2350 B.C.)

With the invention of writing in Mesopotamia around 3200 B.C., new sources became available for understanding the purpose and meaning of architecture and works of art. In addition, writing appeared increasingly on works of art, in association with images. This close link between art and writing in Mesopotamia, forged early, continued throughout its history (Cooper 1988). Another key artistic development of the period was the invention of the cylinder seal in Mesopotamia. Engraved with patterned or figured designs, the seals were rolled across wet clay tablets or lumps of clay used to seal vessels, consignments of goods, and door latches of storerooms (Collon 1987). Seals and seal impressions have been recovered from every period of Mesopotamian history, furnishing the largest and richest source for tracing the variety and development of artistic styles and iconography. The appearance of this characteristic object elsewhere in the Near East also documents Mesopotamian commercial or cultural influence (Collon 1987; Gibson and Biggs 1977).

The art and architecture of the early urban settlements has been most thoroughly investigated at the site of Uruk, in S Mesopotamia (see also ANCIENT NEAR EASTERN ARCHITECTURE; MESOPOTAMIAN ART AND ARCHITECTURE below). The construction of monumental temple complexes built of molded, sun-dried mudbrick, following a standard plan and decoration, continued the developments in religious architecture of the Ubaid period. Along with standardized, monumental constructions for religious practices came the use of statuary in temple complexes. Preserved examples display a wide range of forms and styles, including life-sized, composite sculptures made of stone and other materials. Uruk has also yielded the first appearance of the *stele,* a block of stone carved in low relief on one or both sides, which remained a characteristic form of commemorative art throughout Mesopotamian history.

The first fully literate period in Mesopotamia, known as the Early Dynastic period (ca. 3000–2350 B.C.), allows us to chart developments in art and architecture in the city-states of Sumer. Excavations at several sites offer a stratification of building remains and also of associated finds, such as sculptures and cylinder seals. Temple complexes continued as the principal form of monumental architecture in the city-states of Early Dynastic Sumer. Along with inherited notions of building design and decoration, votive statuary placed in temples suggests a continuity of religious rituals and their artistic expression. Small sculptures in the form of stylized human worshippers were made of stone or metal; stone plaques carved in relief depicted worshippers in ceremonies, such as banqueting or the construction of temples.

The Early Dynastic period coincided with the rapid development of metallurgy in gold, silver, and copper alloy. Throughout the Near East, metal became the pre-eminent prestige material for vessels, weapons, jewelry, and other portable objects. Testifying to the technical and aesthetic achievements of early metalsmiths as well as to an elite taste in works of art are the remarkable objects recovered from the Royal Cemetery at the site of Ur. Grave goods included weapons, jewelry, vessels, and musical instruments, made of a wide variety of materials (shell, mother-of-pearl, lapis lazuli, wood, gold, silver, copper), often in combination with each other (Moorey 1982: 51–103). These objects, many carefully placed in royal graves, attest to a demand at the highest social levels for these imported precious materials, skillfully worked by local artisans. Secular energies in Early Dynastic Sumer were also manifested in works of art depicting military victories of the ruler, which became more frequent toward the end of the period (e.g., the stele of Eannatum: Orthmann 1975: pls. 90–91).

Independent artistic traditions in ceramics and metal-work flourished in central Anatolia during the 3d millennium B.C. At the site of Alaca Hüyük, in north central Turkey, a cemetery of shaft graves contained rich treasures made of copper alloy, gold, and silver, including vessels, jewelry, and sculptures in the form of human figures or of animals. These sculptures often combine different metals on a single object, producing a distinctive surface pattern or emphasizing parts of figures with gold or silver (Bittel 1976: 30–50). The decoration of pottery with black or copper-red slipped, polished surfaces also reflects the influence of metalwork. The "treasures" from the citadel at Troy, dating from the end of the 3d millennium, attest to another sophisticated metalworking center in NW Anatolia.

F. The First Empires (ca. 2350–1200 B.C.)

The rise of the Akkadian dynasty ca. 2350 B.C. brought an end to the political organization of Sumer in independent city-states. With the new concept of world empire, works of art could also serve to transmit imperial messages; this purpose of art would be increasingly exploited throughout antiquity. Although the capital of the dynasty, Agade, has not been discovered, art produced during the period of Akkadian domination has been recovered from several sites in Mesopotamia and N Syria. In addition, examples of Akkadian royal sculpture have come to light at the site of Susa, in SW Iran, where they were taken during raids by Elamite kings in the 12th century B.C. and rediscovered in the 20th century by a French team of excavators. One of the masterpieces recovered from Susa was the stele of Naram-Sin (Orthmann 1975: pl. 104).

After the Akkadian domination of Mesopotamia was brought to an end around 2200 B.C., a revival of Sumerian art and architecture ensued in the old city-states of S Mesopotamia. Traditional forms of religious architecture and of commemorative art were promoted energetically by the rulers of the Third Dynasty of Ur (ca. 2112–2000 B.C.). A series of statues of Gudea, ruler of Lagash (reigned ca. 2130 B.C.) also illustrates the intentional revival of Sumerian artistic traditions. The statues, many of them carved from blocks of diorite, depict the ruler in the traditional roles of pious worshipper and builder of temples (Orthmann 1975: pls. 53–57). Babylonia was also a powerful center under the First Dynasty of Babylon (ca. 2000–1600 B.C.), but almost nothing is known of its monumental art. The stele of Hammurabi, recovered from Susa, continues the tradition of earlier Mesopotamian stelae (Orthmann 1975: pl. 181). More eloquent testimony to the artistic achievements of this period are the palace, wall paintings, and sculptures preserved and excavated at the site of Mari, on the Euphrates River in N Syria (Parrot 1974). Mari, founded in Early Dynastic times, now rose to a new prominence as the capital of a kingdom ruled

by a powerful local dynasty. Its MB Age remains and archives help to supplement the almost complete lack of material from Hammurabi's Babylon.

During the first half of the 2d millennium B.C., monumental art and architecture of individual style and consequence were developing on the Anatolian plateau under the auspices of the Hittites, an Indo-European-speaking people who probably moved into the area of present-day central Turkey around 2000 B.C. The official art of the Hittite Empire, preserved in rock reliefs, architectural sculptures, and seals, frequently depicted the king engaged in worship or religious ceremonies (Bittel 1976: 166–219). Hittite architecture has been most extensively revealed at the site of Boğazköy, ancient Hattusha, capital of the Old Hittite Kingdom and Empire (ca. 1650–1200 B.C.). Cuneiform archives recovered from several complexes at the site have permitted identification of some of the structures. The Hittite royal palace was a complex of adjacent, individual structures connected by large open courtyards. Built of massive stone foundations with mud-brick and timber superstructures, the palace buildings included large halls filled with wooden columns. Excavations at the capital have also furnished extensive evidence for Hittite temples, which followed a precise plan of axial entrance, central courtyard, and rear room containing the cult image (Bittel 1976: 105–35; Orthmann 1975: 399–419).

In the late 2d millennium B.C., a lively artistic exchange linked the Near East with Egypt and the Aegean world. Correspondence preserved at the city of Tell el-Amarna in Egypt, dating from ca. 1380–1362 B.C., bears eloquent witness to that internationalism, cultivated by the most powerful rulers of the Near East. The kings of Mitanni, of Kassite Babylonia, of Ugarit in Phoenicia, and of the Hittites, as well as the rulers of the 18th Dynasty in Egypt, exchanged artisans as well as works of art (Smith 1965).

G. The Neo-Assyrian and Achaemenid Persian Empires (ca. 1200–330 B.C.)

A series of destructions on the coasts of the Aegean and the E Mediterranean, dated to ca. 1200 B.C., brought an end to a number of important cities. Following those destructions, Mesopotamia regained political ascendance in W Asia under the Assyrians. Dramatic testimony to Assyrian military and imperial ambitions are the remains of their capitals, located in the "Assyrian triangle" of N Mesopotamia. The interior walls of the palaces at Nimrud, Khorsabad, and Nineveh were decorated with carved, painted reliefs depicting detailed narratives of military campaigns and ritual scenes. Fragmentary wall paintings survive from the palace of Sargon at Khorsabad, and from the governor's palace at Til Barsip in N Syria.

Important centers of ivory-carving flourished in N Syria and Phoenicia in the early 1st millennium B.C., in part under Assyrian royal patronage. Assyria was also involved in artistic exchanges with its neighbors in Phrygia, Urartu, and W Iran. The 9th through 7th centuries B.C. also saw the export of Near Eastern metalwork, ivories, and textiles to the Aegean world and to Etruria, stimulating the local production of "Orientalizing" styles.

The end of Assyrian rule in 612 B.C. was followed by the rise of the Achaemenid Persian dynasty to the status of world empire in W Asia. Under the leadership of Cyrus (reigned ca. 560–539 B.C.) and his successors, the Achaemenid Persians came to rule over western and central Asia, parts of SE Europe, and Egypt. With the shift of Near Eastern power to the dynasty's homeland in Iran, Iranian traditions played an increasingly central role in the creation of art and architecture for royal and elite patrons. Achaemenid Persian art also drew on the traditions of Assyria, Egypt, and Anatolia (see PERSIAN ART below). The monumental art and architecture of Achaemenid Persia are best known from the site of Persepolis, located in SW Iran. Built on an artificial platform with limited access, buildings consisted of individual rectangular structures, made of locally quarried limestone, with frequent use of stone columned interiors. On the exterior walls of several of the buildings, sculptures in low relief depicted processions of Medes and Persians, processions of tribute bearers from throughout the empire, and scenes of the Persian king enthroned or engaged in ritual combat (Root 1979). Achaemenid Persian imperial art was also created and circulated throughout the empire in the form of seals, coins, and official gifts, often vessels, made of precious metal. Other centers of artistic production in the empire have been investigated primarily in Anatolia, where art flourished under the patronage of local dynasts; artisans trained in Greek, Persian, and Anatolian traditions were employed to design and execute seals, coins, palaces, sanctuaries, and tombs (*CAH* 4: 211–33).

H. Hellenism and Near Eastern Traditions (ca. 330 B.C.–A.D. 250)

The Asian conquests of Alexander the Great in the 330s B.C. brought the Achaemenid Persian Empire to an end. The Seleucids, the successors of Alexander's general Seleucus, ruled over Mesopotamia and Syria from ca. 312–130 B.C. Under the Seleucids, cities with substantial Greek populations were founded over a wide region of western and central Asia. These foundations introduced into the Near Eastern repertoire on a large and systematic scale Hellenistic forms and styles in architecture, sculpture, metalwork, and painting (Colledge 1987).

In 246 B.C., the Parthians, an Iranian-speaking tribe originally from NE Iran, defeated the Seleucid armies and established rule over Mesopotamia and Iran. Their official art is known only from coins and from a few rock reliefs; but in the areas under their control flourished developments in art and architecture that drew on a vast range of traditions extending from the E Mediterranean to Han China. Art produced in the Parthian empire has been most extensively studied at sanctuary complexes in Syria, Iraq, Iran, and the Soviet Union, revealing a great variety in concurrent styles and techniques employed for architecture and sculpture (Colledge 1977; Downey 1988). Among the architectural forms developed in this era was the *iwan,* a barrel-vaulted three-sided hall, that became a principal element in Sasanian Persian and Islamic architecture.

I. Arts of Late Antiquity (ca. A.D. 250–650)

Following their victory over the Parthians in A.D. 246, the Sasanian Persian dynasty revived Iranian traditions in art and architecture while maintaining artistic exchanges with the Roman, and later Byzantine, empires. In addition, the Sasanian Persians pursued commercial and cultural relations with central Asia and China.

Monuments of the Sasanian era have been most extensively preserved and investigated in Mesopotamia and W Iran (*CHI* 3: 1055–1112). Architectural remains, mainly of palaces, have been investigated at Kish, Bishapur, Sarvistan, and Qasr-i Shirin; they demonstrate a continuity of Hellenistic and Roman forms and styles along with Near Eastern developments, including the *iwan.* A characteristic form of royal Sasanian art was the commemorative rock relief, carved on the natural cliff face, in the dynasty's homeland of SW Iran; most depict the investiture of the king or the king engaged in a ritual hunt. The royal hunt was also a principal theme of the decorated silver plates that were manufactured during the Sasanian era (Harper and Meyers 1981). Sasanian glass was exported over a wide area of western, central, and East Asia; patterned silks became highly prized in W Asia and Europe. The legacy of Sasanian Persian art and architecture included the transmission of ANE traditions to the West via the art of the Roman and Byzantine empires.

ANCIENT NEAR EASTERN ARCHITECTURE

If architecture is defined as building conditioned by aesthetic considerations, the Near East may reasonably claim the longest architectural history of any region on earth. Yet it is by no means easy to isolate and delineate a single dominant tradition in the area—comparable, for example, to Egyptian, Roman, or Gothic architecture—since the rubric "ancient Near East" covers many millennia and much cultural diversity in which recognizable, enduring monuments that would foster adherence to a uniform canon are lacking. Any general treatment of the subject, therefore, inevitably involves a rather artificial process of grouping and selection. The distinction between Mesopotamia, Anatolia, and the Levant employed here is no exception. Each of these subregions was subject to the others' influences and boundaries between them were never static, while, on the other hand, there is often evidence of independent local development within each area. Nevertheless, there are certain unities that prevail over the entire Near East and the convention of devoting a chapter to the ANE in general surveys of the history of architecture is not entirely without justification.

———

A. General Comments

One unifying feature of crucial significance is the prevailing use of mud brick as the primary building material. In many cases, particularly in S Mesopotamia, this is virtually all that remains for the archaeological study of architecture since such supplemental materials as stone, timber, and even baked bricks were valued and consequently removed from ruined buildings for reuse. Elsewhere in the Near East substantial stone foundations often remain as evidence of ground plans, but even under these circumstances, most of the above-ground walls of buildings were made of unbaked mud brick.

A consequence of reliance on this water-soluble building material is that ANE architecture did not last long. Under the best of circumstances, with annual replasterings and continuous maintenance, a mud-brick building has a life expectancy of less than a century. An abandoned edifice loses its architectural definition in a few years. Even the most monumental and massive structures in the area, city walls and the solid ziggurats of Mesopotamia, had to be shored up periodically in antiquity and survive today only as eroded and barely recognizable shadows of their former grandeur. The study of ANE architecture, therefore, is largely the study of building plans, not existing structures; and elevations must be reconstructed on basis of limited secondary sources such as pictorial representations and literary descriptions.

Mud brick has also done much to shape the character of Near Eastern archaeology; structures composed of it tend to be relatively massive, and their rapid decay leads to the buildup of cultural debris in artificial hills, or tells. It is not surprising that archaeological research has tended to focus on these, since they are obvious repositories of cultural information in stratified contexts. The excavation of tells is a labor-intensive process which has been conducted with varying degrees of skill over the last century. Every tell is made up of mud brick in various states of decay, and it is not always easy to judge what is or is not in a relevant position for architectural reconstruction. No economical system of preserving original mud brick exists, and since buildings are superimposed excavation implies destruction. Usually nothing remains at the end but notes, photographs, and plans, and there is often much uncertainty if not skepticism about specific aspects of any given building. The broad horizontal exposures that were typical of early 20th-century archaeology in the Near East involved hundreds of workmen moving tons of earth and are no longer economically feasible. Modern excavators have tended to select smaller sites, and specific edifices, rather than attempting to expose neighborhoods or entire city plans. All of these factors lend an unusual measure of uncertainty to our understanding of the history of architecture in the Near East.

B. Preurban Developments

The earliest buildings appear in the Levant before the introduction of agriculture and the domestication of animals. What remains of the earliest open-air structures are circular pits, 2 to 7 m in diameter, sunk to a depth of roughly 0.5 m. Field stones were often used for flooring and a portion of the above-ground walls. Although the superstructural detail of these is unknown, occasional traces of postmolds suggest that they were made of perishable materials. The earliest example, found associated with Kebaran lithics at ʿEn Gev in the Golan, is isolated, but groups of such structures dating to the range of 10,000 to 8000 B.C. were found at such sites as Muryebat on the Euphrates and ʿAin Mallaha near Lake Huleh. This appears to be the only type of edifice constructed by human beings at that time (Wright 1985, 1: 24).

This architectural uniformity, however, disintegrates quite early in the Neolithic and never returns. Perhaps the most celebrated example of early Neolithic sophistication is Jericho, where around 8000 B.C. there is ample evidence of collective, organized building activity in the form of a substantial wall along the perimeter of the site and an abutting stone tower 8 m high containing a staircase. Although the original interpretation of these as defensive structures has been challenged as anachronistic (Bar-Yosef 1986: 157–62), there can be no doubt that they represent landmarks of architectural sophistication.

Elsewhere there is equally dramatic evidence of early experimentation with building forms and materials. The range of functional differentiation in architecture can be illustrated merely by looking at three sites: 7th-millennium aceramic Çayönü in S Turkey, Beidha in Jordan, and 6th-millennium Umm Dabaghiyah in Iraq's N Jezira. At Çayönü the variety of building styles varies over time, beginning with simple pit houses followed by those with grill plans, broad pavements, cell plans, and finally large rooms. Most interesting are the broad pavement plans which have, as the name implies, pavements of flagstones or, in one case, pink terrazzo with white stripes. These buildings frequently have freestanding stones preserved within them and have therefore been interpreted as having some religious function. On the other hand, each cell of the cell-plan structures held different goods—an indication that these buildings were used for manufacturing or storage. At Beidha a similar pattern can be seen. After a developmental sequence from round to rectilinear structures was completed, three contemporary building types have been found. There, too, special purpose structures with stone pavements and standing stones have been interpreted as serving a religious purpose. Single-room, freestanding houses constructed of handmade mud bricks with a heavy, sometimes painted, plaster floor were clearly residential, and plans of this type remained popular in the Levant until the 3d millennium (Wright 1985, 1: 284). Associated with these at Beidha were "passageway houses," which may be conceived as a single long room divided into six alcoves by internal buttresses (see Fig. ART.01). From the objects found in each bay, these have been interpreted as manufacturing areas by the excavator. At the slightly later site of Umm Dabaghiyah and at other sites with Hassunan pottery, residential structures consisting of two or three rooms are clustered around a series of very long buildings consisting of as many as 50 small rooms. The excavator has argued that these were used for centralized storage.

These examples present a picture of Neolithic architectural diversity which is repeated at many other sites in the Near East. One may also speak of a broad trend, with many exceptions, of round house forms being supplanted by rectilinear ones, semisubterranean structures replaced by those laid out on the surface, and *tauf* superseded first by handmade mud brick and then by molded mud brick.

Some sites, of which the most dramatic is 6th-millennium Çatal Hüyük, located in Turkey's Konya Plain, exhibit architectural traditions all their own. Although only a portion of its settled area has been excavated, the exposures suffice to reveal a densely settled neighborhood of adjoining houses built of rectangular, mold-made mud bricks (see Fig. ART.02). There appears to be a standard house plan, consisting of one square "living" room with sleeping platforms and a cooking area, and two subsidiary rooms, an air shaft and, sometimes a shared courtyard. Houses at Çatal Hüyük shared common walls, stepping up the mound to provide light, and access was by ladders through the roof. Çatal Hüyük's uniqueness lies in the many houses which were distinguished by elaborate painted and molded decorative elements, associated with especially rich grave goods accompanying the dead who were, as at many Neolithic sites, buried beneath the floors. These features have led the excavator to single such houses out as "shrines," but since one house in three is apparently so favored the socioreligious implications are perhaps less straightforward than this term would suggest.

C. Mesopotamia

1. General Remarks. It is customary to subdivide discussions of the Mesopotamian archaeological record between Assyria in the N and Babylonia, or Sumer and Akkad, in the S. There are, in fact, major differences in the architectural traditions of the two areas, but for historical periods the primacy of the S, particularly with regard to public buildings, is indisputable. The most obvious factor discriminating the two regions is the relative poverty of the S in terms of building materials; the only local resources available to the creators of the first urban civilization were mud, straw, reeds, date palms, and water.

There was no stone of any kind in the immediate vicinity and wood suitable for roof beams and doors also had to be imported. Nor was there a readily available supply of fuel for firing bricks, so the favored building material, at least insofar as it appears in the archaeological record, was unfired mud brick. In most cases this was either laid directly on the ground or put in recessed foundation trenches; there was no tradition of using stone foundations as damp courses in S Mesopotamia as there was in other parts of the ANE, although in some cases baked bricks served this purpose. Reed matting was used both in roofs and on floors, where traces of it were frequently preserved. There was doubtless also much building in reeds alone, with bundles tied together and bent into arches over which mats were thrown to form a kind of vault. Such structures, attested on cylinder seal designs and still seen in modern villages in marsh areas, are more or less archaeologically invisible. They may actually have been a fairly common house type that is underrepresented in an archaeological record based primarily on the investigation of tells. In Assyria both stone and timber were more readily available from the foothills of the nearby Taurus and Zagros flanks, but mud brick was the basic building material there as well.

2. Domestic Architecture and Town Plans. For most of the post-Neolithic Mesopotamian sequence, the basic house consists of mud-brick walls delineating rectilinear rooms around an internal courtyard. In the early periods some other plans are to be found, especially in the N. These include round houses, a distinctive T-shaped plan at the Samarran site of Tell es-Sawwan, and the ʿUbaid tripartite house with a long central room and a row of subordinate rooms on each of the long sides. It has been argued that the latter was the origin of what was to be a basic temple form (Roaf 1984).

The ideal Mesopotamian courtyard house, as seen in house plans drawn on clay tablets and in rare examples found archaeologically, consisted of a central court with rooms arranged on all four sides. Functional distinctions between entrance chambers, kitchens, bathrooms, storage and living rooms can often be made. In reality this ideal plan was usually distorted by the location of surrounding structures, the needs of the particular family, and the need to accommodate various nonresidential functions. Such distortion was facilitated by the malleability of mud brick—in which doorways can be opened and closed at will—and by the tradition of using party walls that characterizes Mesopotamian cities. Thus houses with rooms on only two or three sides of a court, those with multiple courts, and those with trapezoidal or even triangular rooms and courts are common, and over time the transformation of one type of organization into another is very common.

Despite nearly a century of excavation, evidence for the actual layout of cities in Mesopotamia is disappointingly meager, although this is an area in which recent research is making significant contributions. Significant residential districts have been uncovered at 3d-millennium Tell Taya, Abu Salabikh, and Khafajah, and at the 2d-millennium sites of Ur, Sippar, and Nippur. Nearly all show the pattern of narrow winding streets with houses tightly clustered together which is typical of the organic growth of residential districts in the absence of centralized planning. Within these areas, small chapels and possible shops have been identified, but by and large the areas are overwhelmingly domestic in nature (see Fig. ART.03).

All such areas so far uncovered have exhibited an intermingling of large and small houses. This suggests that such neighborhoods were not segregated by wealth and class, an impression which is confirmed by the available cuneiform documentation. Thus the older idea that each Mesopotamian city was divided into specialized quarters is unsupported by current research. It is suggested instead that the city itself grew around several different focal points, where an initial larger building would be surrounded by the houses of its clients, kinsmen, or dependents. One of the clearest examples of this is seen at Khafajah, where the Temple Oval has a walled residential quarter occupied by temple dependents built up against it.

There were, of course, parts of the city marked off for the major institutions, and in most cities the ziggurat was part of a complex of temples and related structures that were physically separated from the residential areas by their own enclosures. Sacred buildings, however, were not confined to a single part of the city, and each Mesopotamian city-state was served by a number of temples.

3. Sacred Architecture. The term "temple" has two different, but not mutually exclusive nuances: (1) a residence of the god or his cult, and (2) a place of worship. It is clear that Mesopotamian temples also had important economic functions, since their role in storage, rationing, trade, and landholding is well established by texts. In both Assyria and Babylonia the core element of sacred architecture was an elongated room, the cella, in which the image of the god was placed in a niche or on a raised podium at one end. The configuration of rooms around this room, and the place from which one gained access to this key room varied, and the emphasis once given in scholarly writings to the cultic significance of bent-axis as opposed to straight-axis approaches to the altar has been blurred by recent discoveries.

Two sites provide the basic paradigms for the development of sacred architecture through the 5th and 4th millennia: Eridu in the S and Tepe Gawra in the N. Excavations at the former have revealed a sequence of superimposed cultic structures beneath a later ziggurat, the earliest of which is little more than a single square room with internal buttresses. Over time later shrines were built over older ones, the cella became increasingly elongated, subsidiary rooms were added, and the whole was increasingly embellished until in the late ʿUbaid period (early 4th millennium) the temple stood on a platform, had a clearly developed tripartite form with smaller rooms flanking the cella, was oriented with its corners to the cardinal points of the compass, and was decorated with a niched brick facade. All of these features are characteristic of sacred architecture in the succeeding period of urban development.

At Tepe Gawra there is more variety in temple plans. Round structures are present in the earliest levels and a seventeen-room circular building approximately 19 m in diameter reiterates the form found in the early Uruk period (level 11A). In between, there are some tripartite temples which bear a resemblance to the later ʿUbaid temples of Eridu, and in the later Uruk period a new temple form with a direct axis through a porch to a long cella is found.

It is in the Uruk and Jemdet Nasr periods that the increase in scale and complexity of sacred architecture so typical of S Mesopotamian cities is first found. The largest exposures from this period are found at Uruk, where the 50 × 80 m dimensions of Temple D, in the Eanna district, make it some four times the size of the latest ʿUbaid temple at Eridu, yet still recognizable as a building of the same form. The celebrated "White Temple," the last of a series in the area of the Anu ziggurat, may be taken to exemplify the practice of raising some temples onto platforms in a process that is felt to culminate in the emergence of the ziggurat in the 3d millennium (Lenzen 1941). In addition to the increase in building size, this period saw, more than any other, experimentation with the embellishment of temples. Colored baked clay and occasionally stone cones were driven into the plaster of the walls to make patterns of diamonds and chevrons, and at one site, Tell Uqair, the complex painted designs that decorated the interior were recovered.

Temples formed administrative centers of the emerging Mesopotamian cities and one of their primary functions was storage. The earliest complex recording devices that have yet been discovered—clay bullae, cylinder seal impressions, and archaic cuneiform tablets—are all associated with these buildings.

In the 3d millennium the temple type established earlier persisted, accompanied by increasing elaborative embellishments, especially of the associated courtyard and outbuildings. Perhaps the best example of long-term development from the late 4th through the first half of the 3d millennium is seen in the Sin Temple at Khafajah (Delougaz and Lloyd 1942). One dramatic new development, which proved to be short-lived, was a temple precinct surrounded by an oval enclosure wall. Temple ovals were some of the largest religious structures in their day, and examples have been found at Khafajah, ʿUbaid, al-Hibba, and Bahrain. The oval at Khafajah, the best known example, is a double enclosure that separates a temple platform off from the rest of the community, and contains a residence, generally felt to be that of the head priest of the temple, between the inner and outer oval. Although this specific form is confined to the Early Dynastic period, the idea of separating off the sacred area continued, and may be seen with particular clarity in the sacred precinct around the ziggurat at Ur in the Ur III period.

The emergence of the ziggurat, that most memorable of Mesopotamian sacred architectural forms, is probably to be related to the elevated temple platforms that can be seen in this period. The early history of ziggurats, however, is obscured by later rebuilding (Lenzen 1941). Most of the major ones that survive

today date to the massive building projects of the Third Dynasty of Ur, when economic conditions apparently made it possible to fire prodigious numbers of bricks to be used as outer sheeting. The best preserved of these in S Iraq is at Ur (see Fig. ART.04), where the lower stages and arrangement of approaching staircases were still clearly visible before reconstruction. Nowhere is the uppermost stage or summit temple preserved, and Herodotus' description of seven stages has perhaps been overused in reconstructing earlier ziggurats.

4. Secular Structures. a. Palaces. Buildings defined as palaces appear later in the Mesopotamian sequence than temples. There is a rather enigmatic building at the site of Jemdet Nasr itself, but the best preserved early palace is the "A palace" at Kish, dating to the second quarter of the 3d millennium. This is an elaborate residence, with separate areas grouped around different courtyards and connected to each other by narrow passageways. The whole is separated off from the community at large by a wall, through which there was only one point of access. The conglomerate character of palaces is best illustrated by the Old Babylonian palace at Mari which was destroyed in the 18th century B.C. (see Fig. ART.05). Here the function of various areas—reception, residential, storage, manufacturing, recording, etc.—can tentatively be identified on the basis of textual and artifactual evidence. Palaces such as these, in which there were subunits grouped around different courtyards within the larger compound, were almost certainly the norm in Mesopotamia.

A thoroughly regular planned administrative structure can be seen in the rectangular palace at Tell Brak, in NE Syria (see Fig. ART.06), which was built of mud bricks, some of which were stamped with the inscription of the Akkadian king Naram-Sin. This building, of which only the foundations survive, is undoubtedly the artifact of an imperial administration in an outlying region of the Akkadian Empire. No similar buildings are found in the more central territories of that empire but similarly planned structures with more specialized functions dating to the following Ur III period have been excavated near the ziggurat at Ur. One other building that has been called a palace, the Northern Palace at Tell Asmar, is also atypical in plan. But this structure, with its complex drainage system, has more recently been interpreted as a manufacturing center, probably used for tanning leather or fulling cloth (Delougaz, Hill, and Lloyd 1967: 196–98). It would appear that special-purpose buildings, many of which may indeed have been under royal aegis, had a variety of plans and should not be included under the rubric of "palace" because they lacked the residential function that is crucial in the definition of Mesopotamian palaces.

Assyrian palaces show the same general principle as Babylonian palaces—being organized into suites of rooms surrounding courts—but they have a much more standardized form. In essence there are two major courtyards, one which is the center of public functions and the other which belongs to the ruler's private residence. A group of rooms constituted the interface between these, among which was the long, narrow throne room, with side entrances and a dais at one end where the king held court (Turner 1972).

b. Fortifications and Defenses. Although some early sites, such as Tell es-Sawwan and Chogha Mami, had walls or other means of delimiting the perimeter of the community, the first really massive city walls date to the beginning of the 3d millennium B.C. While at places like Uruk it is relatively easy to trace the perimeter of the 3d-millennium city walls, the state of preservation of the mud brick is nowhere good enough to offer information on the technique of construction, or the details of their gateways.

The best-preserved walls and gateways that we have from the area come from the 1st millennium, particularly from Assyrian sites. At the late-8th-century Assyrian capital of Khorsabad the walls bore stone crenelation of a type that also appears to have been standard in Urartu. Each gateway was flanked by two towers, and attached sculptures, in this case winged bulls (*lamassu*), stood on either side of each entrance. Assyrian reliefs also provide some information on what fortifications of the time must have looked like.

D. Anatolia

1. General Remarks. The architectural traditions of Anatolia are distinctly different from those of Mesopotamia despite cultural contact that manifests itself in religion, literary tradition, and other forms of art. Urbanism was not as pervasive in Bronze Age Asia Minor as in Mesopotamia, although there were interludes during which settlement mounds of 20 or more hectares were not uncommon, such as in the

MB Age when Assyrian merchants brought literacy to the Anatolian Plateau for the first time. However, the creators of Anatolia's greatest civilization, the Hittites, lavished their efforts on one particular site, the imperial capital at Hattusha (modern Boğazköy), at the expense of other cities and even this, as recent excavations have shown, was more a city of temples than a dense concentration of inhabitants.

Anatolia is geographically quite diverse and relatively rich in natural resources and building materials by Near Eastern standards. Parts of it were heavily forested and suitable building stone was readily available in all areas. Although it is difficult to generalize about so extensive an area, which includes coastal regions, mountains, deserts, and a central plateau, precipitation is generally abundant and the extreme differences in temperatures between the hot, dry summers and the cold, damp, winters led to more rapid weathering of mud brick here than was the case S of the Taurus. Tectonic instability is felt to have been a major consideration in the development of a characteristic timber-reinforced stone and mud-brick wall building technique. Stone foundations are more or less the rule for walls in this area.

2. Domestic Architecture. Anatolia's character as a bridge between Europe and Asia and a mosaic of regionalism is manifest in the diversity of its domestic architecture. In W Anatolia, for example, an elongated rectilinear building plan with an antechamber and primary room at the rear aligned along a single axis is the most noteworthy and distinctive building plan of the 3d millennium. This "megaron" form was first identified in the earliest levels of Troy (see Fig. ART.07), but is well documented at other W Anatolian sites such as Beycesultan, and appears also on the S coast of Asia Minor.

Another fundamentally Anatolian house type is more characteristic of, but by no means limited to, the Central Plateau and the period of Hittite domination in the 2d millennium. Its basic component is a unit of two rectangular rooms side by side, both of which face onto a courtyard that is delineated by a wall. There was generally a second story over the two rooms which was reached by a staircase from the court that led up to a balcony. Ground floors were apparently used for business activities and the second floor served for the basic living and sleeping areas. Complexes of these basic units, closely packed together and often with some modifications, can be seen at such sites as Kültepe and Boğazköy (Naumann 1971: 368–376).

Diversity rather than conformity to clearly defined types is most characteristic of Anatolian domestic architecture, however. Most houses seem to have reached their final configuration through agglutination of groups of rectangular or trapezoidal rooms. Although the use of interior courtyards is not unknown in Anatolia—in fact they are essential components in temples and palaces—they are rare in domestic architecture. Courtyards are more apt to lie beside or in front of freestanding houses, and in some cases there are rooms on two sides of a court. The idea of a house which enclosed open space with rooms on three or four sides, so fundamental in Mesopotamia, seems to have been foreign to the lands north of the Taurus (Naumann 1971: 381).

3. Sacred Architecture. The number of Hittite temples known has been dramatically increased through recent excavations on the upper city at Boğazköy. Until a decade ago the number stood at five, but it now exceeds thirty. While these vary somewhat in plan, they are all composed of the same basic elements: a gate; a staircase, probably to the roof rather than a second story; a large, nearly square courtyard; a porch opening on the courtyard and through which one had to pass to reach, albeit indirectly, the cella; one or more cellae in which there was a podium for the cult image; and a suite of rooms that could only be reached through the cella (Naumann 1971: 451–58). The largest of these temples and the only one extant in the lower city, the "Great Temple" at the foot of Büyükkale is surrounded by a massive complex of narrow storerooms, within several of which were found the temple archives (see Fig. ART.08). Many of the features of these temples are also seen in the imperial buildings that limited access to the nearby open-air rock sanctuary of Yazilikaya. Unlike Hittite sculptural style and hieroglyphic writing which survived in modified form south of the Taurus in the Iron Age, the Hittite temple plan disappears with the collapse of the empire.

One other noteworthy Anatolian form is the Urartian *susi*, or tower temple. It had a regular ground plan with thick walls in the form of a square enclosing a single square room. The corners were strongly reinforced and the doorway was emphasized by niching that recalls similarly recessed cult sites that the Urartians carved on rock faces and used as places of worship. These give some idea of the towerlike

dimensions of the *susi* and invalidate earlier attempts to reconstruct a much lower elevation for these buildings based on an Assyrian relief.

4. Secular Structures. a. Palaces. There is no definable "Anatolian" style of palace plan; virtually every building so identified is unique, and it is not always possible to be entirely confident in assigning functions to buildings, particularly in those cases where documentary evidence is lacking. For example, the group of *megara* that forms the core of the Troy II citadel is distinguished from ordinary houses by monumentality, but is this due to cultic or secular significance? Major buildings composed of suites of rectilinear rooms built around courtyards in an additive process at such sites as Beycesultan, Acemhüyük, and Kültepe are more confidently deemed to have served as residences of rulers and administrative centers. One would expect to find the grandest Anatolian palace on Büyükkale, the royal acropolis of the Hittite capital (see Fig. ART.09), and what appears there is a unique complex of individual structures grouped around an ascending series of four courtyards rather than a single edifice (Bittel 1970: 63–90). The general arrangement of these was dictated by the topography of the eminence on which they were built, which was a natural fortress further isolated from the rest of the site by a fortification wall through which there were three gates. Like the courtyards of the temples, those of the palace complex were bordered by open pillared halls. Of the residential and administrative buildings coming off of these, one particularly noteworthy structure has foundations that appear to have supported a grid of 25 pillars to roof a 25 × 25 m audience hall. If this reconstruction is correct, it provides a clear antecedent for the pillared audience halls of Urartu and Achaemenid Persia.

That the palace/administrative architecture of Büyükkale is typical of the Hittite Empire is demonstrated by other sites on the Plateau. At Massat Hüyük the organizing feature is a again large courtyard bordered by pillars. At Alaca Hüyük a monumental gateway decorated with sculpted orthostats gives access to a small square out of which another, smaller gateway opens into a long, narrow court with porticoes on either side and a group of public buildings. Hittite texts make it clear that there were many such palaces in the Empire.

b. Fortifications and Defenses. Walled and fortified sites were characteristic of Anatolia from the Chalcolithic period on, to judge by the evidence of such sites at Hacilar and Mersin. Even at such modest villages as EB Age Demircihüyük there were clear arrangements made for defense, in this case a circular arrangement of houses facing inward with a stone and mud-brick wall forming the outer perimeter.

The 2d millennium saw the emergence of much stronger fortifications. Those of Troy VI, in which a substantial wall of drafted stones is buttressed and battered, are particularly noteworthy. The most elaborate fortifications, however, are to be seen at Hattusha, particularly in the great wall of the upper city. This enclosure is composed of a massive rampart, on top of which a casemate wall was constructed of cyclopean masonry. It was marked at regular intervals by towers and a smaller defensive wall ran in front of it to provide additional protection. The arched gateways, each flanked by relief sculpture, had two internal buttresses and towers on either side. Beneath the sphinx gate, the southernmost of the city, there was a 70-m-long underground passageway of cyclopean stonework to provide a more clandestine means of leaving the city.

The art of fortress building in Anatolia attained its highest level in the kingdom of Urartu, which from the 9th through the 7th centuries B.C. dominated the territory of what is now E Turkey, NW Iran, and the Armenian Soviet Republic. Urartian architecture is almost exclusively fortress architecture, and although some settlement areas have been excavated, these are almost all areas of elite housing associated with major citadels. Zernaki Tepe, a site at the NE end of Lake Van where there is evidence of a planned settlement of rectilinear houses laid out on a grid plan, remains something of an anomaly in the area. Although frequently cited as an example of Urartian building, it has produced little evidence of actual occupation and thus cannot be dated to the Urartian period with any confidence.

The favored sites for fortress construction in Urartu were on rock spurs overlooking plains in which intensive irrigation was practiced. Foundations for fortress walls were grounded on bedrock, with stone steps carved in the living rock to secure a solid footing. There is evidence that the Hittites pioneered this technique at Büyükkale and the hilltop structure at Gavurkale, but the Urartians used it much more

regularly and extensively. The stone course of walls could be up to two meters high, but generally was more on the order of one meter, above which the walls were built in large, standardized mud brick. These walls stepped up and down sharply graded inclines and often rose to several stories in height, to judge by their thickness (in some cases five or six meters) and from contemporary drawings of fortresses on Urartian bronze belts, as well as a bronze model of a fortress facade found in excavations at Toprakkale.

5. Mortuary Architecture. Burial customs in Anatolia hardly merit treatment in a discussion of architecture before the Iron Age, although the imperial Hittite shrine of Yazilikaya should be mentioned in this context. In the 1st millennium, massive burial mounds are found associated with the three major kingdoms that dominated inland Asia Minor prior to its inclusion in the Persian Empire: Lydia, Phrygia, and Urartu. In the latter case these mounds appear to be an early form of elite burial that was later replaced by large burial chambers carved out of solid rock, the best preserved examples of which have been found in the cliff on which the citadel rock of Van is constructed. The Lydian and Phrygian mounds are much more numerous and prominent, and in each case they are grouped around the capital of the kingdom. None of the Lydian tombs has been found intact, although an ashlar burial chamber has been found in one of them, the "Tomb of Gyges." The tombs at Gordion, on the other hand, have been excavated with spectacular results. The largest of these, the so-called Midas tomb, contained a royal burial rich in grave-goods such as bronze cauldrons, numerous fibulae, and wooden furniture. The tomb itself was comprised of a conical mound of earth heaped up over a burial chamber that consisted of a log cabin protected by an additional outer log wall. In later burials, such as those at Midas City to the W, the Phrygians also carved out burial chambers with decorated facades in living rock.

E. Syria and Palestine

1. General Remarks. Although subject to the influence of Egypt, Anatolia, and Mesopotamia, the Levant developed a cultural tradition of its own, with distinctive architectural forms that are not paralleled in any of the surrounding areas. It is precisely these that have been of particular interest to biblical scholarship.

The climate of the Levant is more moderate than Anatolia, with its temperature extremes, or Mesopotamia, with its aridity. Building materials are more abundant than in Mesopotamia, but less so than in Anatolia. The basic material used for walls was again mud brick—usually, but not invariably, with stone socles. The Amanus and Lebanon ranges were celebrated for their timber in antiquity, but this resource does not seem to have been a major factor in the architectural record of the Levant.

2. Domestic Architecture. There appears to have been a certain amount of continuity in domestic architecture in the transition to urban life, at least insofar as the individual, broad-roomed house remained the most common form. See also CITIES (LEVANT). This form loses its predominance at the end of the EB Age, and in the second major urban period, the MB Age, private houses tend to be of a more elaborate, multiroomed type. There appears to be a great deal of diversity in the region, however, with numerous examples of both Mesopotamian courtyard houses and houses, perhaps of Egyptian inspiration, in which crosswalls divide the building into sections that are then subdivided into square rooms. A residential district at MB Halawa, on the Euphrates, displays nearly a score of houses of similar plan coming off of narrow streets and alleys laid out in a not quite perpendicular grid. In each case the single entrance from the street enters a courtyard, off of which there are two or three rooms. At Tell el-Ajjul, near Gaza, one sees neighborhoods in which much less planning is in evidence and wealthy houses are scattered among those that appear to be considerably smaller and more impoverished.

In the early part of the Iron Age, a distinctive building known as the "four room" house emerged, and because of the temporal coincidence, has been termed the "Israelite" house. See also HOUSE, ISRAELITE. The basic elements are a rectangular ground plan entered on one of the short sides, the division of the front part of the building into three sections by walls or columns running parallel to the long walls, and a broad room at the back of the building. This type of building is an autonomous development in the S Levant with antecedents in the Bronze Age. The designation "Israelite" is accurate only insofar as many Israelites lived in them—the same form is also found in Philistine settlements.

3. Sacred Architecture. The most famous building of the ANE, Solomon's temple in Jerusalem, is known only through literary testimony (1 Kings 5–6; 2 Chronicles 2–3; Ezekiel 41). It is described as a long building with two columns at its entrance, a vestibule (*ʾûlām*), a cella (*hêkāl*) in the rear of which was another division, the *dĕbîr*—the holiest part of the sanctuary. Around three sides of the building was a three-story annex (*yāṣûaʿ*) containing storerooms. Busink's (1970) admirable and thorough study of both the philological evidence and archaeological comparanda for the reconstruction of this building has, however, failed to produce a consensus on many of its key features. See also TEMPLE, JERUSALEM.

One of the reasons for this uncertainty is that there are so many paradigms of sacred architecture in the Levant to chose from. Here, as elsewhere, temples originally seem to have developed out of domestic architecture, not surprisingly since they were conceived as residences for deities. In the Chalcolithic, for example, there is a celebrated example at Ein Gedi, where the basic form of the main structure is simply a large broad-roomed house with a platform against its rear wall. That this was a very special building, however, is made clear from its dominant position in a precinct that is walled off from the rest of the site and can be entered only through a monumental gateway. Even in the 3d millennium, however, there are other temple forms in existence, such as the twin porch temples of Megiddo and the Acropolis temple of Ai, with its annex and row of columns running along the long axis of the central room. In the 2d millennium, even more diversity is evident in the major urban sites. Ugarit has two major temples, the ground plans of both showing two more or less square adjoining units, the smaller being the entrance-way and the latter the cella. At Shechem, Kamid el-Loz, and Megiddo one sees tower temples, where heavy reinforcement on either side of the entrance to the single-room cella must have created an impressive entranceway. There are square temples, such as the one excavated at the Amman Airport; temples based on the four-room house plan, e.g., at Tell el Far'ah; and the Fosse Temples of Lachish, in which the main room is distinguished by four columns in a square arrangement. In LB Hazor at least three different temple types appear to have been functioning at the same time.

One particular type of N Syrian temple form does show a coherent strain of stylistic evolution for over a millennium, beginning in the MB Age. The earliest known example is at Ebla, but it also appears at Alalakh, Hama, and, most spectacularly, ʿAin Dara. It is essentially a long, freestanding building of tripartite form, which has its entrance through an open porch, often between two columns, on one of the short sides. There is an intervening court, and then a main chamber, at the rear of which is a raised area. In some cases, a raised ambulatory runs along one, two, or three of the sides of the building.

Despite the diversity of Levantine sacred buildings, however, one would not be likely to confuse any of them with Anatolian or Mesopotamian temples, and one may hazard a few generalizations about their character. By and large, Syro-Palestinian temples are smaller than others in the Near East and they are more apt to be freestanding buildings with a direct-axis approach to the altar. They are more apt to be designed to create an impression from the outside, rather than emphasize interior space and obstruct their appearance confused by annexed rooms and storehouses.

4. Secular Structures. a. Palaces. The most clearly defined early palaces in the Levant are found in Syria—at Ebla, Alalakh, and Ugarit. The S Levant, where textual evidence is meager and palaces are normally defined as residential structures distinguished by larger-than-normal size, has nothing to match those sites in the 3d and 2d millennia. Palace G at Ebla, in which the royal archives were discovered, is only partially preserved around two sides of a large, unroofed courtyard (see Fig. ART.10). At the N end of this there is a podium and, in the corner nearby, a staircase and guard chamber. On the E a ceremonial staircase of a quite different order ascends from the courtyard and not far from it, an unprepossessing annex of thin mud-brick walls projected from the same facade. Around its interior were the shelves on which the tablets of the archive were stored. Behind the massive walls that ringed the courtyard were other administrative rooms of the palace. Unfortunately, it is difficult to make much sense of this partial plan. The excavators have argued that it was not an internal courtyard, but rather an external one, but if so, it is unique. A second major palace at Ebla, dating to the MB Age and as yet incompletely published, included an almost "industrial" workshop where rows of grinding stones indicate that production was

highly organized. A group of princely tombs were hollowed out beneath the floors of this palace, in keeping with a general Near Eastern tradition of royal burials in palaces, best known in Mesopotamia.

The palace at Ugarit is also a major monument of Levantine royal architecture, and displays many of the same characteristics that we have noted in palaces elsewhere: it is a composite structure of more than 90 rooms built around a multiplicity of courtyards, put together in a way suggestive of frequent additions, modifications, and expansions made to the original edifice. Unlike the palace at Mari, there was more than one entrance to this complex, but only the one on the W side had any monumentality and, to judge by tablet finds in the vicinity, it was through this that the public and administrative business of the palace passed.

A characteristic N Syrian architectural form that also has a relationship to palaces is the so-called *bīt hilani,* although the archaeological referent of this Assyrian term is not securely established. The edifice generally associated with this term in archaeological parlance is a broad room with an opening to a portico which was often flanked by subordinate rooms. The best preserved examples are found in 1st-millennium sites S of the Taurus, such as Zincirli, Carchemish, and Tell Halaf, although the 15th-century palace at Alalakh also contains this element and it has been argued that the *bīt hilani* was originally an Hittite innovation.

b. Fortifications, Gateways, and Defenses. As in other parts of the Near East, the first consistent tradition of city wall building belongs to the early part of the 3d millennium. At EB II Arad there is a stone wall built at ground level, punctuated with semicircular tower bastions (see Fig. CIT.02). The Ebla texts speak of various city gates so it would appear that site was also walled, presumably around the edge of the natural mesa on which the site is built, where in fact the walls of the MB city have been excavated and one major gateway dating to that period has been uncovered which is in a good state of preservation.

In the early 2d millennium, changes in the technology of warfare demanded much more solid fortification walls than had been customary in the previous era. Earthen ramparts were used to raise the level of the wall's foundation and presumably make it more difficult for a battering ram or siege engine to approach. Middle Bronze fortifications were stout enough that they continued to be used at many sites until the end of the Bronze Age, centuries after their original construction.

The last major innovation in wall construction was the introduction of casemate walls in the Iron Age. Although casemate walls were not as strong as solid constructions, they presented an impression of mass and solidity that was perhaps as important as real strength in an age in which royal propaganda appears to have been an international passion.

Gateways show an evolution toward increasing complexity from the 3d through the 1st millennium B.C. Initially consisting of simply reinforced towers or buttresses on either side of the entrance, they developed a multichambered form at the beginning of the 2d millennium. This gatehouse form persisted into the Iron Age, although it was further elaborated into the "Solomonic Gate" with four, rather than three, portals. The Levantine tradition of the S did not include sculptural decoration of these gateways, although the early example from MB Ebla does make use of ashlar masonry. In northern Syria, the Hittite tradition of reliefs on orthostats was maintained in Iron Age principalities.

c. Other Public Buildings. It is probable that much of the administrative activity of sites of the ancient Levant was in fact conducted in ordinary residential buildings which give no architectural manifestations of this additional function, except perhaps size. One distinctive form of a planned public building is quite conspicuous at most major sites in the S during the Iron Age, however, and has parallels in Urartian sites of the same era. The essence of the ground plan is a large rectangular building with two parallel rows of columns flanking its long axis. The floors between the columns and the walls were paved, but the central corridor was not. Sometimes groups of these structures were placed next to each other, sharing long walls. The function of these buildings has long been a matter of controversy; when first discovered at Megiddo they were identified as royal stables and many still hold to this view, but it has also been argued that they are storehouses, or possibly even markets (Herr 1988). See also STABLE, STABLES.

F. The Legacy of ANE Architecture

It would be hard to make a case for any strong persistence of ANE architectural traditions in the modern world. Mud brick, whose characteristics so conditioned ancient monumental building in the area, is not much favored today, except in rural vernacular architecture. While many of the architectural forms have continued directly up to the present, particularly at the level of domestic architecture (e.g., the courtyard house) on the more monumental level one must look only for indirect influences. Long after the megaron form was first attested in Anatolia it became a hallmark of Mycenaean architecture and its plan is mimicked within the peristyle of the Greek temple. Some Hittite influence is seen in Urartu, and Urartu's influence, such as it was, is apparent in the architecture of Achaemenid Persia. But generally, monumental building traditions of the ANE died out as they were modified and transformed during the Persian, Hellenistic, and Parthian eras, the periods in which Mesopotamian civilization itself faded and eventually died.

MESOPOTAMIAN ART AND ARCHITECTURE

The art and architecture of ancient Mesopotamia (now Iraq) have their foundations in the fertile area between the Tigris and Euphrates rivers, Mesopotamian art began in the late 4th millennium B.C., during the Uruk and Jemdet Nasr periods; developed in the 3d millennium under the Sumerians and Akkadians; and flourished in the 2d and 1st millennia under the Babylonians, Mitannians, Kassites, and Assyrians. A well-defined architecture, although in the beginning very simple, evolved into elaborately planned temple sanctuaries and secular edifices. Artistic creativeness was expressed in a long tradition of sculpture and relief carving. Wall paintings were utilized during the historical periods, and their subjects range from figural compositions to ornamental bands of animal, floral, and patterned motifs. The chief vehicle of pictorial art is the cylinder seal, whose entire surface was covered with carvings (known as glyptic), so that when it is impressed in a soft clay, the design in reverse appears in relief and can be endlessly reproduced by rolling.

———

A. Protohistoric and Early Dynastic Periods (ca. 3500–2334 B.C.)

1. Architecture. The earliest monumental buildings consist of temples and sanctuaries. Temples were constructed on an elongated, rectangular plan. The nucleus of the layout is a T-shaped room. On each of the two sides of the long room were smaller ones, and on one short side was the cult room, flanked on each side by a smaller room. The entrance to the temple was on one of the long sides, termed the bent-axis approach. The outside walls of the building were decorated with niches in three steps. The cycle of collapse and rebuilding, of many centuries, brought about the raised site of the temple, above the level of its surroundings (Moortgat 1969: 1–2).

A characteristic feature of the buildings was the use of sun-dried mud brick, reed, and wood. Structures were occasionally strengthened with limestone facing. Another method was the use of baked nail-shaped clay cones set into a clay bed. The cones were generally painted in red, blue, black, or white, which resulted in mosaic designs resembling textile patterns. In the Eanna sanctuary at Uruk was a large cone-mosaic court that included a pillared terrace covered with mosaic (see Fig. ART.11). A small temple in the same sanctuary had the walls of the open court entirely decorated with mosaic (Frankfort 1970: 24–25; Moortgat 1969: 3; Strommenger 1964: 378–82).

After 3000 B.C., a fundamental change in religious architecture occurred. The sacred structure, containing a gate room with stairs, one or more shrines, workrooms, and living quarters, was conceived as a unity. All the rooms were grouped around a central courtyard, and a protective wall surrounded the sanctuary. Sanctuaries of the type with the central courtyard, known as the House Plan temple, have been excavated in the Diyala region, at Khafaje, Tell Agrab, and Tell Asmar. Closely associated with temples was the ziggurat. It was a tower of one or more receding stages, more or less square, and at the top was a shrine. A ramp or flight of stairs led to the upper levels. Evidence for ziggurats in the Early Dynastic period occur at Kish, Nippur, Ur, and Uruk. The palacelike complex at Kish was an imposing residential and administrative center. The main building forms an oblong rectangle and a flight of stairs led to the monumental entrance, flanked by towers. The central area is a large square courtyard, with many rooms arranged along the four sides. The walls were white-plastered and fragments of inlaid friezes, showing walking sheep, men and women performing daily activities, and processions of chained prisoners, were found near the monumental entrance (Crawford 1977: 24; Moortgat 1969: 20–25; Strommenger 1964: 398).

2. Sculpture and Relief. Sculptured figures in the round in Mesopotamia before 3000 B.C. consist of idol-like figurines molded from clay. Male and female statuettes of later date are carved from alabaster and gypsum and molded. The statuettes are fixed onto bases and show distinctive anatomical and facial features. Statuettes of males are bearded, with or without long hair, or beardless and bald, and their wrap-around skirts with tufts reach below the knees (see Fig. ART.12). Those of females show a variety of

hairstyles and headdresses, and their long garments cover one or both shoulders. All the figures are posed frontally, their bare feet kept slightly apart, and their hands clasped at the waist. Many statuettes are worshipper types, both standing and seated, each placed in the temple as a substitute for the worshipper himself. Statuettes are sometimes embellished with inlay eyes of shell and black limestone, and hair and beard blackened with bitumen (Frankfort 1970: 45–59; Moortgat 1969: 33–35, 37–41; Strommenger 1964: 394).

Reliefs were employed to decorate cult vessels formed as bowls, libation jars, and tall cylinder-shaped containers. On the stone objects the reliefs vary from flat to high, to the extent of parts being in the round. Their subjects include domestic animals (ox and sheep), beasts of prey (lion and eagle), and mythical scenes. Two alabaster vessels, both from Uruk, have the outside surfaces decorated with extensive friezes. One object, shaped like a trough, shows a herd of sheep around a reed hut. The other object, a tall container, has rows of friezes on which a long parade of figures offering sacrifices, a herd of sheep, and produce of the fields are depicted. The stele, an upright stone block with narrow sides and rounded top, was decorated in relief with pictorial scenes and in later times had carved inscriptions. A basalt fragment of the Protohistoric period depicts two episodes of a king fighting a lion. The historical stele is exemplified by the limestone slab belonging to Eannatum (ca. 2600 B.C.), a ruler of Lagash, ancient Girsu. All four sides are covered with narrative scenes commemorating a military victory, and a detailed inscription fills the open spaces between the pictures. Votive plaques of stone with a perforated center, square in shape, have relief decorations divided into several registers. Themes include the ritual banquet, ritual scenes with gods seated on thrones, wrestling, and animal battles. Stone maces decorated with relief also served as votive objects (Frankfort 1970: 24–31, 67–73; Moortgat 1969: 41–44; Strommenger 1964: 396).

3. Decorative Art and Seal Design. Decorative art objects of the Early Dynastic period were made from precious metal, wood, and stone. A fine example is the engraved silver vessel from Tello. Two pictorial friezes encircle the vessel: cattle lying down, and lion-headed eagles (Imduguds) hovering above grasping lions and goats. A large relief of sheet copper from Tell ʿUbaid, almost a sculpture in the round, again depicts the lion-headed bird Imdugud, this time grasping a stag in each claw. The panel was nailed over a wooden core and set up on the facade of a temple. Exquisite examples of the goldsmiths' work were discovered in the Royal Cemetery at Ur (ca. 2650 B.C.). Objects include fluted beakers, bowls and cops, a helmet of beaten gold in the shape of a hairstyle with added perforated ears, a dagger whose blade and sheath are of gold, and its hilt of lapis lazuli studded with golden nails. There are also statues of a ram by a flowering shrub, the famous "Standard of Ur" with narrative scenes on both sides, lyres and chests, all of which are adorned with red stone, blue lapis lazuli, gold leaf, and white shell inlay over a wooden core (Frankfort 1970: 60–66, 71–75; Moortgat 1969: 41–42; Strommenger 1964: 397–99).

Early cylinder seals are cut from limestone, darker stones, lapis lazuli, rock crystal, and talc (steatite). Designs on seals and sealings (impressions on clay) depict recurrent themes: rows of animals, a bearded man in a variety of roles, boating scenes, activities connected with the production of manufactured goods, and patterns based on the rosette, circle, lozenge, and chevron. Contest scenes have elaborate compositions and among the contestants are a lion, bull, human-headed bull, and naked human figure. In banquet scenes participants drink from a large vessel through drinking tubes, or from cups. Frequently, musicians and servants accompany the banquet (Collon 1987: 14–31; Frankfort 1970: 35–37, 77–82). See also SEALS, MESOPOTAMIAN.

B. Dynasty of Akkad and the Neo-Sumerian Period (ca. 2334–2000 B.C.)

1. Architecture. A new development in temple building was the arrangement on one axis of a succession of courts and rooms leading to the main chamber, which contained the niche for the image of the deity. Examples of this method of building are the Ningal temple and the Enki temple, both at Ur. The Gimilsin (Shu-Sin) Temple at Tell Asmar, ancient Eshnunna, is a square building with a similar ground plan (see Fig. ART.13). The outside is decorated with flat buttresses, but the entrance is emphasized by two towers ornamented with stepped recesses. The best preserved ziggurat is that of the moon god Nanna at Ur. The four corners are oriented to the four points of the compass, and the casing of baked bricks is

arranged in niches and flat buttresses. A central and two side staircases lead to the first level, where a gatehouse was built. The central stair continued to the highest platform, on which the actual temple was built. The temple tower of Innin (Inanna) at Uruk was simpler, and the outside walls were provided with flat buttresses. The ziggurat is constructed of brickwork, and layers of reed matting and reed straw are built into the structure at regular intervals. In addition, horizontal channels in which are thick reed ropes probably served to anchor the outside walls against the pressure of the weight of the bricks from inside (Frankfort 1970: 104–9; Moortgat 1969: 45, 56–59; Strommenger 1964: 406–9).

The palace became of greater importance than it had been in Early Dynastic times. The so-called Akkadian Palace at Tell Asmar is an enlarged dwelling house. The palace at Tell Brak discloses a new formal concept. It was a mighty building, 100 m square, that had a main and three small court systems enclosed by a perimeter wall. The so-called old palace at Ashur shows a similar ground plan. The kings of the Third Dynasty of Ur continued to apply the same building concept of a palace, as exemplified by the royal residence of Ur-Nammu and Shulgi (2112–2047 B.C.) (Moortgat 1969: 45–47, 59–60; Strommenger 1964: 402–3).

2. Art. Sculptures of this period, which show a relationship to the previous ED, have plastic form and gain in calm monumentality. Modeling is more detailed, limbs have more organic proportion than before, and individual differences are prominent. Considerable life-size diorite statues seem to have been made of several rulers; unfortunately, no excavated statue is preserved entire. There are torsos of life-size statues of the Akkadian ruler Manishtusu (2269–2255 B.C.); numerous statues of Gudea (ca. 2200 B.C.), a local ruler of Lagash; and fragmentary statues and statuettes of other kings and women. Portrait heads are often strikingly naturalistic (see Fig. ART.14), and features are symmetrically placed and reflect a canon of proportion (Frankfort 1970: 84–86, 93–97; Moortgat 1969: 48–51, 62–65).

A fragment of a victory stele of Sargon of Akkad (2334–2279 B.C.) contains the portrait of the king, accompanied by a servant with a sunshade. Fragments of other stelae bearing reliefs depict battle scenes arranged in registers. The celebrated stele of Naram-Sin (2254–2218 B.C.) was erected in Sippar. The scene on the stone monument is a dynamic composition in which the Akkadian king, considerably larger than his companions, places his left foot on the bodies of two fallen enemies (see Fig. ART.15). Votive stelae and stone plaques from Tello generally show scenes related to religious ceremonies. The great stele of Ur-Nammu has as its subject matter the cult functions of the ruler as temple builder and builder of canals (Frankfort 1970: 86–87, 102; Moortgat 1969: 47–49, 51–52, 65–68; Strommenger 1964: 404–6).

Akkadian cylinder seals are cut in deeper relief, the compositions are better balanced, and the style acquires a new dynamism. Contest scenes were generally reduced to two pairs of equally matched opponents. In Akkadian times the banquet scene was often replaced by presentation scenes before a deity. The sun god was the most popular, and other popular deities were the water god, vegetation gods and goddesses, and a snake god. Seals of the post-Akkad period depict birds, boats, or two figures on either side of a tree. Presentation scenes become more standardized and there are few variations: a worshipper is led by a goddess before a seated deity, and an inscription is almost always added (Collon 1987: 32–39; Frankfort 1970: 89–91).

C. Dynasties of Isin/Larsa, Babylon, Mitanni, and Kassite (ca. 2000–1150 B.C.)

1. Architecture. Religious sanctuaries excavated so far, both large and small, disclose distinctive ground plans, and architectural decorations are occasionally added. Foundation walls of the main sanctuary at Ashur, dated to the reign of Shamshi-Adad I (1813–1781 B.C.), show that the building was composed of a central courtyard complex and several forecourts laid out at different levels. The Ishtar-Kititum building at Ishchali, ancient Neribtum (ca. 1800 B.C.), was a vast complex joining three temples in a large rectangle. The actual Kititum temple follows the one-axis arrangement of courts and rooms. The small Mitanni temple at Tell Brak (ca. 1600 B.C.), nearly square in plan, has the facade decorated with inset panels of three engaged half-columns. The entrance leads into a wide chamber, with a shallow niche almost opposite the door. The niche is flanked by half-columns, and from it a stepped dais projects into the chamber. The great Karana temple at Tell al-Rimah was entirely symmetrical in plan and attached to a rectangular ziggurat on one side (ca. 1600–1350 B.C.). The building was constructed with an elaborate

architectural decoration of multiformed half-columns and pilasters surrounding the courtyard and the facade of one large chamber. Associated with the door of this chamber are stone orthostats with reliefs of divine figures and hybrid creatures. A modest temple of the Kassite king Karaindash (1445–1427 B.C.) was built at Uruk and dedicated to the goddess Inanna. The building is rectangular and freestanding, its entrance is situated on the main axis, and at the corners are bastions. Entirely new, the outer wall has recesses made out of molded bricks, in which male and female deities who stand and hold vases with water streams flowing from them are depicted. The molded reliefs form the oldest examples of Kassite architectural sculptures (Frankfort 1970: 107–9, 127–29; Moortgat 1969: 76–78, 93–98, 106–8, 116–18; Oates 1967: 78–80, 88–90; 1987: 181–87; Strommenger 1964: 416–17, 423–24, 434–35).

2. Sculpture and Painting. The few examples of stone sculpture in the round that survive are fragmentary, and the finest one is the expressive head of a king (ca. 1750 B.C.). Stone vases in the form of animals retain a precise, decorative style. Among the known small bronze statuettes of the Old Babylonian period are two from Ishchali. One is of a god stepping with the left foot on a couchant lamb, and the other is of a goddess seated on a simple stool. Both deities have four faces (Frankfort 1970: 110–19; Moortgat 1969: 88–89; Strommenger 1964: 420, 422).

Stone reliefs are represented by a number of fragments, which show military battles and the representation of a king beside an inscription. At the top of the stele on which Hammurabi's legal code is inscribed (ca. 1760 B.C.), the king stands alone before the throne of the sun god. The scene is worked in rounded relief. An important type of monument of the Kassite period is the so-called *kudurru* (or "boundary stone"), which recorded a grant of land and was shaped like a stele. Its subject matter consists mainly of symbolic emblems of deities (see Fig. ART.16). The character of the divine symbols is an iconographic picture-language, with the symbols arranged in friezes, one above the other, from the astral gods to the chthonic powers. Reliefs on the front sides of two stone pedestals, supports for divine emblems, are fine examples of Middle Assyrian art (ca. 1240 B.C.). One work illustrates the king as worshipper, once standing and again kneeling, and the other illustrates the king standing between two hero figures who grasp tall wheel-topped standards. Small terra-cotta plaques, showing reliefs pressed from molds, were especially popular in the Old Babylonian period. A majority of the plaques represent deities, and other subjects include mythical scenes, scenes of family life, and individual figures of musicians, craftsmen, and animals (Frankfort 1970: 119–23, 129–30, 131–35; Moortgat 1969: 85–86, 100–3; Oates 1979: 99–101).

Evidence for wall paintings is rare. Impressive wall paintings found at Mari include the so-called Investiture of Zimri-Lim (ca. 1780 B.C.). Those from the palace at Nuzi (ca. 1400–1350 B.C.) are preserved only in small fragments. The designs consist of horizontal and vertical bands and metopes decorated with palmette trees, human and bulls' heads, and geometric patterns. The paintings are in red, pink, white, black, and gray on plaster. A Kassite palace built at Aqar Quf, ancient Dur Kurigalzu, was decorated with wall paintings showing geometric themes, floral patterns, and processions of men in white garments, dark hair, and red faces and arms against the gray walls. A few fragments of wall paintings from the MA palace at Kar-Tukulti-Ninurta (ca. 1240 B.C.) had pictorial motifs placed in metopelike panels and framed by ornamental bands (Frankfort 1970: 132, 135–37; Moortgat 1969: 99–100, 118–19; Oates 1979: 62–63; Strommenger 1964: 421).

3. Seal Design. The business archives (inscribed clay tablets) of the merchants of Ashur (ca. 1920–1800 B.C.), who had a trading colony just outside Kültepe in Anatolia, were sealed with cylinder seals of Assyrian and foreign manufacture. The seals of Ashur are based on previous styles, but the execution is often crude. Figures are flat and linear, or elongated. Isin/Larsa seals are often made from heametite, a hard iron oxide. Presentation scenes continue from earlier periods, but filling motifs are now added in the spaces surrounding the figures. The worshipper stands with his hands clasped and almost invariably faces the seated deified king. Scenes of later date depict only standing figures, which consist of the king with a mace, a suppliant goddess, or the warrior goddess. About 1600 B.C. sintered quartz, also known as faience, frit, or paste, appeared as a new material for seals. It was easy to cut, could be fired or glazed, and was mass-produced. Subjects include horned animals, stylized human figures, decorative bands of net

patterns, and linked chevron trees, center-dot circles, stars, and guilloches. Kassite seals were made of hard stones, such as chalcedony, and the designs reflect their dependence on Mesopotamian traditions. Most of the seals have prominent inscriptions, leaving little space for the designs. Seals of the MA period (ca. 1350–1150 B.C.) reflect a new, vital, and original style. Popular themes are winged griffin-demons holding up their prey by the legs, an animal striding toward a tree, and fights between animals (Collon 1987: 41–47, 58–59, 65–69; Frankfort 1970: 140–42).

D. Late Assyrian Period (ca. 1150–612 B.C.)

1. Architecture. Major evidence for Assyrian architecture comes from four cities: Ashur, Kalhu (Nimrud), Dur-Sharrukin (Khorsabad), and Nineveh. The main plan of the Assyrian temple is a long room, with or without an anteroom, that leads to a small cult room on a low platform, reached by a flight of stairs. The double temple at Ashur was dedicated to the gods Anu and Adad (ca. 1120 B.C.). The temple proper consists of two long chambers with deep cult niches and side rooms between two massive stepped towers. In front is a rectangular courtyard surrounded by a suite of rooms. The temple precinct with ziggurat at Khorsabad, ancient Dur-Sharrukin, contained five shrines of the Assyrian plan arranged around open courts enclosed by small rooms (late 8th century B.C.). Each shrine was dedicated to a different deity. More elaborate is the temple of Nabu at the same site. It is placed on a terrace and is divided into a forecourt and central court; the temple itself lies behind the latter and is enclosed by long corridors on three sides. Ezida, an enormous religious structure at Nimrud, ancient Kalhu, contained within it the temple of Nabu. There were over 35 rooms, in addition to four large courts and a number of long corridors. Ezida was organized like a fortress: there was a defensive wall and the only access to the building was up a ramp that led through a gate with heavy buttresses on either side. It remained in use from the 9th through 7th centuries (Mallowan 1975: 231–38; Oates 1968: 115–120; Strommenger 1964: 444–47).

The Assyrian palace, together with temples and administrative buildings, was situated within the fortified acropolis of the city. The NW Palace at Nimrud was built in the reign of Ashurnasirpal II (883–859 B.C.). It includes the forecourt (the *bābānu*) and the primary apartments, reception halls, domestic quarters, and an administrative wing (the *bītānu*). The largest room in the whole layout is the throne room, the true center of the whole palace. The plan radiates about a great open court; all the groupings of the chambers and smaller courts are neatly balanced and articulated. Other palaces excavated at Nimrud are the so-called Center Palace of Shalmaneser III (858–824 B.C.), the Central Palace of Tiglath-pileser III (745–727 B.C.), the SW Palace of Esarhaddon (680–669 B.C.), and the remains of a palace of Ashur-etel-ilani (after 626 B.C.). The palace of Sargon II (721–705 B.C.) at his newly founded city of Dur-Sharrukin stands on its own terrace and extends outside the city wall and at the same time forms its strongest bastion (see Fig. ART.17). The great throne room has three entrances that face onto a vast open court. The two palaces of Sennacherib (704–681 B.C.) and Ashurbanipal (668–627 B.C.) are situated on the hill of Nineveh. Sennacherib described his royal residence as the "palace without a rival," and it was built in accordance with a new ground-plan design. The palace has at least three main entrances, of which two are provided with huge triple portals. The room arrangements grouped around the courts are completely different in shape and function; moreover, the room complexes are accessible from several sides. The North Palace of Ashurbanipal was only partially excavated. Within the complex is a large, long rectangular room that can be reached from a great hall through a triple portal. In particular a series of connecting long corridors or ramps lead up from a columned entrance to the main palace area (Frankfort 1970: 143–51; Mallowan 1975: 93–97, 164–65, 200–5; Moortgat 1969: 126–29, 151–53; Strommenger 1964: 437–88, 450–51).

Fort Shalmaneser at Nimrud, the so-called *ekal-masharti,* was an independent military installation. Its exclusive character is indicated by the line of the outer wall, reinforced externally by towers set at regular intervals. The fort proper with its 200-odd rooms and four separate quadrants had residential quarters for officers, barracks, stables, workshops, magazines, and the residency for the king and his court. Fort Shalmaneser was built in the reign of Shalmaneser III and continued in use till 612 B.C. Palace F at Dur-

Sharrukin copied the *ekal-masharti* in Nimrud. It was the royal arsenal, the military center of Sargon II (Mallowan 1975: 369–83; Moortgat 1969: 137–39).

2. Sculpture and Decorated Monument. A rare bronze statuette dedicated to an Assyrian king, probably Ashur-dan I (1178–1133 B.C.), is of a slender figure dressed in a tunic, with a small shoulder shawl. Missing are the head, arms, and feet. Another unusual work is the torso of a statue of a nude woman, modeled in stone and inscribed with the name of Ashur-bel-kala (1073–1056 B.C.). There are several large stone statues of 9th-century-B.C. Assyrian kings. The royal figures are posed frontally and dressed in long wraparound shawl garments. Statues of deities, each distinguished by a horned cap and holding a box in both hands or else a vase from which streams of water flow, were placed in temple precincts (Frankfort 1970: 152; Mallowan 1975: 88–89; Moortgat 1969: 121–22; Strommenger 1964: 440–41, 443).

Reliefs with historical subjects appear on pillarlike stone monuments described as obelisks. The Broken Obelisk shows within a recessed panel bound captives before the Assyrian king, and above the scene are divine symbols (ca. 1070 B.C.). The White Obelisk has relief friezes in eight registers that extend around all four sides. The pictorial themes include warlike expeditions, ritual activities, and the hunt of wild animals. The monument is dated to the reign of Ashurnasirpal I (1049–1031 B.C.) or Ashurnasirpal II. The Black Obelisk of Shalmaneser III has five registers of panel reliefs on each of the four sides. The scenes show local rulers paying homage to the Assyrian king, while attendants from different regions bring tribute. On royal stelae, the Assyrian king is always portrayed with shoulder-length hair and long beard; he is dressed in the prescribed royal costume and carries the weapons of kingship. In the space above and in front of the ruler's head are symbols of important deities whose awesome splendors are conferred upon the king, pictorially. The royal stelae were set up in temples, at city gates, and in captured foreign cities. Rock reliefs of Assyrian kings were carved at the sides of mountains located in different parts of the Near East, and many are extant (Barnett 1975: pl. 2; Mallowan 1975: 62–63; Moortgat 1969: 122–23; Strommenger 1964: 208).

3. Wall Relief and Ivory Work. The integration of architecture and pictorial art occurred early in the 9th century B.C., when wall reliefs replaced painting in the Assyrian palace. The unity of art and architecture was maintained throughout the following two centuries. Important portals throughout the palace area were lined with huge winged human-headed bull (*lamassu*) and winged human-headed lion (*šedu*) sculptures, whose duty it was to prevent evil spirits from entering. Stone slabs framing the doors were carved with winged and wingless human-headed and bird-headed genies and their images engendered a divine, protective atmosphere. Whole rooms within the palace had the lower part of their walls covered with limestone blocks, several meters high. Narrative scenes carved in relief on the stone blocks are essentially historical and deal with the Assyrian king's great deeds in war and hunting (see Fig. ART.18). The events are expressed in monumental manner. Pictorial compositions, which became a determining factor in the development of style, are arranged in various ways. The episodic scene centers around a single activity; the narrative frieze shows a sequence of related events in one or more registers; the mural-type scene abandons the use of registers and, instead, dominates the entire surface of the stone block; and processions of large-scale human figures consist of soldiers, Assyrian officials, priests and musicians, and foreigners advancing to the Assyrian king and his personal attendants (Barnett 1975; Frankfort 1970: 157–60, 168–71, 174–94; Strommenger 1964: 441, 443, 448, 451).

Ivory carving as an art form was established in the Near East by the start of the 1st millennium B.C. Ivories in Assyrian style generally consist of flat plaques carved with incised designs of subjects and persons familiar from the palace wall reliefs. Other plaques show highly skilled carving in flat, low-relief style. Many decorated ivories were overlays for furniture and smaller objects. Purely Assyrian-style ivories became rare in the 8th century, in consequence of overhunting and extermination of herds of elephants which roamed parts of Syria (Mallowan 1978: 12–25; Herrmann and Mallowan 1974).

E. Neo-Babylonian Dynasty (625–539 B.C.)

Babylon's principal palace was the Southern Palace, built in the reign of Nebuchadnezzer II (604–562 B.C.). It contains five great courtyard complexes in parallel arrangement, resembling the multiplicity of

the ordinary dwelling house. The decoration of the facade of the vast throne room facing the outer court was made of multicolored glazed bricks. Richly decorated glazed bricks were also used for the massive walls of the so-called Processional Way and Ishtar Gate. Enamel brick technique in Babylon had two variants: a completely flat, painted and glazed surface or a glazed relief composed of molded bricks. The subject matter consists of slender trees with volute capitals, friezes of palmettes, and lions, bulls, and serpent-dragons (*mušhuš*). Babylon's most important temple was Esagila, the dwelling place of the god Marduk. The Marduk sanctuary is a complex of buildings around open courts, the temple, and the ziggurat, all of which are enclosed by a rectangular perimeter wall. Remains of impressive NB temples have been found at excavated cities, including Sippar, Ur, Borsippa, and Kish (Frankfort 1970: 203–5; Moortgat 1969: 158–62; Oates, 1979: 144–46).

Art objects of the Neo-Babylonian period are sparse. The upper part of a stele of Nabonidus (555–539 B.C.) illustrates the royal figure standing below three divine symbols. Seals of Babylon, both in iconography and style, were probably influenced by Assyrian glyptic. One class of NB seals depicts a priest before the symbols of various deities (Collon 1987: 80–83).

F. Summary and Trend

Throughout the millennia, the art and architecture of Mesopotamia were linked by a unified tradition which stemmed from a comprehensive religious, political, social, and economic outlook that was homogeneous. The essential character of works of art may be defined as a striving for harmony, symmetry, and lucid description. Moreover, specific structures and works of art display a striving for monumentality, magnificence, and dynamic description, such as the ziggurat, Assyrian palace, and stele of Naram-Sin. The complexity and outward variations between artworks reflect the different levels of technical skill and feeling for style prevailing at any one time.

Systematic studies on Mesopotamian art have progressed in several important ways. One method of study focuses upon stylistic development and art-historical interpretation (Schlossman 1979; 1981–82; Reade 1979a, b; 1980a, b). Another method examines works of art within the context of aclinistrative, historical, or social settings (Gibson and Biggs 1977; Winter 1976). Both approaches have contributed to the understanding of Mesopotamian art. Finally, recent archaeological exploration has uncovered additional ancient edifices, and those discoveries have enlarged the understanding of Mesopotamian architecture (Weiss 1985: 6–19).

PAULINE ALBENDA

EGYPTIAN ART AND ARCHITECTURE

Egyptian architectural monuments and the other works of art which they contained constitute the largest visible legacy from pre-Classical times in the Near East. Their traditions continued into the early centuries A.D., and were very influential in much of the ancient world. Architecture and representational art formed an integrated system, whose basic organization was created around the beginning of the dynastic period (Baines 1989a). The majority of works of all periods down to Roman times fit within this system, which forms the most important presentation of ideology. Writing also partakes of the system: much preserved writing is on permanent monuments incorporated within architectural and artistic contexts, and has its full meaning within those contexts. Art was central to Egyptian high culture; in times of prosperity, a high proportion of resources was used to create works of art (see in general Aldred 1980).

Representational art in particular must be understood in terms of iconographic as well as representational conventions (see C.3 below). Both these types of convention affected compositions in ways that are sufficiently alien from those of Western art to need explicit study. Iconography related to a system of decorum which governed what was depicted and how it was shown in most contexts, and had extensions outside the artistic sphere (Baines 1985a: 277–305).

———

A. The Status of Art

It is often wrongly claimed that Egyptian art is not "art": that there was no Egyptian word for art, the concept of artistic creativity was lacking, and all works had a function (e.g., Wolf 1957: 66–68; Junge fc.). The linguistic argument is based on the fact that the Egyptian word *hmt* means "craftsmanship" rather than Western "art," but it is invalid, because Egyptian lacks words for many comparable abstractions, such as religion or politics, yet this does not show that Egypt lacked those phenomena. The absence of these words demonstrates something about Egyptian classification, but not about art (see Müller fc.). The other components of the argument implicitly use an over-narrow Westernizing conception of art—that it must be the expression of an individual personality and is essentially functionless. They cannot be sustained in the face of the demonstrable high status of some artists (e.g., Krauss 1983), the meaningful variation and stylistic development of works of art, and the resources and prestige vested in their production. Artists worked in teams, as is normal in most artistic traditions and necessary for manipulating intractable materials and creating very large works. This does not imply any devaluation of the resulting product or of those who were responsible for its design and execution. What can hardly be attributed to Egypt is the ideologically and behaviorally loaded Western conception of the "artist" (see also Drenkhahn 1976: 62–72).

Another debate has been about the interpretation of artistic production as having a "re-creative" purpose. Rituals that might be depicted on temple walls would substitute for their real performance, while statues of the deceased and the decoration of his tomb would enable him to survive the loss of his mummy and the cessation of his mortuary cult. The unquestionable "realism" of Egyptian representational forms

would be explained along the same lines, as being required so that what was shown should come to life in the correct form (e.g., Iversen 1975: 5–7). This interpretation is not based on texts, but rather seeks to explain the choice of subject matter in temple and tomb decoration and some particular features of the record, such as the mutilation of signs representing human and animal figures in the Pyramid Texts inscribed in the mortuary chambers of late 5th and 6th Dynasty pyramids (Lacau 1914). Although some aspects of decoration have "performative" elements (Derchain 1989), this approach is generally implausible. In these areas, Egyptian art partakes of the character of central symbolic statements, and comparable phenomena could be found in many cultures.

B. Architecture

1. Introductory: Domestic and Other Structures. Architecture is both the principal artistic form and the context for other works of art (Jéquier 1920–24; Badawy 1954–68; de Cenival 1964; Smith 1981). The ultimate context of architecture is the Egyptian natural and social environment. Any general influence of the natural environment on architectural forms is, however, uncertain, except insofar as the dry, hot climate allowed the use of flat forms and encouraged measures to circulate air. An important environmental element is orientation. One or two temples have an astronomical orientation (Krauss 1985: 49), but the main astronomically oriented structures are mortuary, in particular the pyramids, whose sides face the cardinal points. Most temples are oriented to the Nile. Those on the west bank are entered from their "east" side and have an axis facing "west"; the reverse applies to those on the east bank. These orientations are variable according to the local direction of the river, so that, for example, the temple of Dendara faces north; the orientation of many other buildings was dependent on their connections with different structures on the same site.

The social environment is more significant than the natural. The highly centripetal Egyptian state was organized around the king, the capital or residence of the king, and, in earlier periods, the king's mortuary monument. In the New Kingdom and later, the royal city had a cosmic significance and formed a stage on which the king's actions and the life of the whole settlement assumed "historical" meaning. Rather similar meaning should be attributed to the royal palace, whose design shows many analogies with temples (O'Connor fc.a; fc.). At the other end of the scale of society and of architectural grandeur, everyday dwellings could have had architectural significance, as in many societies, but such a meaning can hardly be recovered. Most preserved nonelite housing is proletarian in organization and acquires architectural value chiefly through its context in large planned settlements. Elite manorial houses, as depicted especially in New Kingdom tombs, were set in large garden compounds, and had an urban counterpart in the elite "villas" of el-Amarna. These structures had both prestige and religious aspects, but have hardly been investigated for their architectural meaning (collection of material on domestic architecture: Roik 1988). Rural housing of the nonelite, which could have preserved more general cultural significance, is almost wholly unknown.

The majority of preserved architecture is stone built and funerary, consisting of freestanding or rock-cut tombs sited on the edge of the Nile Valley between Cairo and Aswan. These include royal tombs, varying in size from modest structures to the Great Pyramid. Preserved temple complexes belong principally to the New Kingdom and Greco-Roman period. There are also rock-cut temples in the desert escarpment in Egypt and Lower Nubia.

2. Materials and Forms. The principal constructional materials were stone and brick, but reed and matting were widespread for temporary structures, while some prestige building, for example of baldachins for royal and divine thrones, was in wood.

a. Brick. Mud brick, which survives less well than stone, was used for religious and secular structures from temples to houses (Spencer 1979). The earliest preserved brick dates to the Naqada II period, before the unification of the country. At first, the material was used for prestige purposes, becoming widespread only later. Nongeometric use of mud, as in wattle-and-daub, was probably always the standard technique for rural houses.

Mud brick was used with skill and imagination. Rich effects were created in elaborately paneled facades to the enclosures and outside walls of palaces and tombs. The characteristic "palace facade" form of these

was perhaps originally royal, and remained a royal symbol, but it was used by others as well, especially in mortuary contexts. Its design is comparable with Mesopotamian motifs, but may not have been derived from them.

Brick enclosures were often on a colossal scale, especially in the Late Period; some walls are as much as 15 m thick. A characteristic feature of enclosure walls is the alternation of level sections of brickwork with undulating or concave and convex ones (e.g., Barguet 1962: 29–40). The purpose of this practice has been argued by different authors to be symbolic of the primeval waters, or to be structural (see Spencer 1979: 114–16, favoring the symbolic interpretation).

In brick buildings with interior spaces, the Egyptians mastered difficult structural elements such as wide unsupported vaults and domes. One reason for developing these techniques, which are more commonly found in burnt-brick traditions, is the scarcity of structural timber in Egypt. These forms contributed to the impressive appearance of utilitarian buildings, such as groups of magazines within temple complexes (see Fig. ART.20; Vandersleyen 1975: pl. VII). But the design of large dwelling and ceremonial areas, such as palaces, which have to be studied principally from ground plans, appears superficially less orderly, and is not well understood.

b. Stone: Forms and Symbolism. Most of the main preserved monuments are built of limestone or sandstone (with parts in granite and other hard stones). Their structural forms are simpler than those of mud brick, but their symbolism is more elaborate. The earliest large-scale buildings, in the 3d Dynasty step pyramid complex of Djoser at Saqqara, look to plant models, from reeds and flowers to tree trunks, for the forms of columns and of decorative motifs. The complex is a successor of mortuary enclosures of the first two dynasties, in which similar structures may have been built in mud brick (O'Connor fc.b.), but brick hardly influenced the stone forms.

Stone structures are either largely solid, like the pyramids, or are based on load-bearing walls, columns, and pillars (Clarke and Engelbach 1930). Roofs are flat, and the distance spanned by roof beams is restricted to the maximum length for an unsupported architrave, about 3 m for limestone and 7 m for sandstone (used from the New Kingdom on). Forms are generally rectilinear, but are relieved by the characteristic batter of external surfaces (perhaps derived from brickwork or building in mud), by column styles, and by decorative features. Only a few buildings are geometric, the best known being the Valley Temple of Chephren at Giza (e.g., Lange and Hirmer 1968: pls. 32–33) and the cenotaph of Sety I at Abydos (Frankfort 1930); both are constructed mainly of granite. Large internal spaces are interrupted by the columns which carry the roof, and include the typical hypostyle halls of temples. In contrast with the generally axial design of temples, these halls have strong transverse accents.

Arches were not used in stone until the Late Period, and the only vaulting was corbelling, which was carved in New Kingdom temples to produce curved ceilings for sanctuaries and occurs in the rock-cut burial chambers of New Kingdom royal tombs (e.g., Vandersleyen 1975: pl. 93).

Most columns have capitals, and abaci are common (*LÄ* 5: 343–48). Their forms are generally derived from aquatic plants, especially papyrus, but including lotus, date palms, and, in late times, elaborate composites. The date palm, which is also a common model, should be considered aquatic, because palms frequently have their bases in marshy ground. Fluted and polygonal columns are known. Two characteristic features of wall design are the torus moulding, a cylindrical treatment of edges and corners applied to the most varied structures and features, and the cavetto cornice, a form which flares forward above a vertical or battered surface. Detailed examples of these suggest plant models in the lashing of edges of panels and the gathering of heads of plants at their tops. Two vital decorative motifs are the uraeus, or protective rearing cobra, which often occurs as a frieze, and the sun disk, which is found typically in the cavetto cornice above doorways.

Wall surfaces of stone structures were decorated with painted reliefs. By the 4th Dynasty some royal mortuary temples had a rich repertory of scenes, whose subjects included the worship of the gods, the provisioning of the temple by its estates, and "historical" events primarily showing the king's dominance of the world and maintenance of order. The relief area of a wall was set off by a dado of horizontal

moulding lines at the bottom, and at the top the hieroglyph for sky or a *kheker* frieze, which seems to derive from tassels at the edge of a fabric.

Temples in particular exploited the potential of light and darkness (see Fig. ART.21). They were theoretically oriented to face sunrise or sunset, and their outer areas were relatively light, but light struck directly into the interior only down the axis, when the inner doors were opened. Small window openings were cut in roofs, in the upper parts of walls, and at the juncture of wall and roof. Side rooms were completely dark. The decoration, whose primary purpose was its enacting of the symbolic world depicted in the reliefs, rather than creating something to be seen, could be seen only when illuminated by lamps. As in many other traditions, the completed work of art was hardly intended to be viewed.

In addition to their decoration, temples contained ritual equipment and many large and small statues. They were surrounded by service buildings and enclosed within mud-brick enclosure walls. Priests alone could enter temples and the gods, whose dwellings they were, left them only at festivals. Despite this seclusion, temples had a central significance as symbolic, sanctified representations of the perfect world at creation (Barguet 1962: 336–40; Baines 1976; Finnestad 1985). This meaning can be read in linear fashion off the plan of a complex, from the enclosure wall through the various areas and rooms into the sanctuary, or vertically, in the decoration of single walls. The slightly raised floor level of the sanctuary marked the original mound of creation, while the individual scenes and the wall surface as a whole represented the sanctified cosmos, terminating in the sky at the top. The entrance pylon of a temple (e.g., Vandersleyen 1975: pls. 91, 103), which consisted of a pair of high walls with battered faces flanking a central doorway, was its largest single element and was decorated with semi-apotropaic scenes of the king slaughtering his enemies. The wall decoration within the temples added to its meaning. Their reliefs show the king (in Graeco-Roman times the Ptolemy or Roman Emperor) offering to the gods and receiving benefits from them, and are organized into registers with sequences of scenes that summarize the stages of rituals or obey more abstract schemas. The world of the reliefs is almost exclusively divine and royal; its relation to humanity is indirect.

The forms of tombs are more various than those of temples and their meaning less well understood. There was almost always a distinction in location and form between royal and nonroyal tombs.

Royal tombs developed from the unmarked brick-lined pits of the first two dynasties at Abydos, through the pyramid complexes of the Old and Middle Kingdoms (Edwards 1985–86), to the rock-cut tombs of the New Kingdom in the Valley of the Kings (Hornung 1988) with their accompanying mortuary temples at the Nile Valley edge, and small Late Period structures in temple enclosures (Stadelmann 1971). Early royal tombs point to a cosmic destiny of the king in the next life. The pyramids have a stellar orientation, but may also be related to solar beliefs, while perhaps further symbolizing the first created matter. Their meaning seems closely related to that of the obelisk, which was both a cult object in its own right and a decorative element placed in pairs outside tombs and later temples. New Kingdom royal tombs are decorated with compositions concerned with the nightly passage of the sun god through the underworld, and their design too may symbolize the underworld.

Early nonroyal tombs, which are termed mastabas, have the form of stylized mounds with battered sides (in stone constructions from the 4th Dynasty on); the symbolism of this form is uncertain. The deceased was buried in a chamber at the bottom of a shaft cut within the mastaba structure. The mortuary cult centered on a niche, normally at the south end of the tomb, whose form derived from a section of mud-brick paneling. This niche became the Old Kingdom "false door," through which the deceased's spirit received offerings, while the area before it was extended to form a chapel, and much of the originally solid mastaba superstructure was gradually taken up by additional decorated rooms.

Rock-cut nonroyal tombs were constructed in all periods from the late 4th Dynasty on. Their decoration and focus on the false door were similar to mastabas, and their burials were also at the bottoms of shafts. Often rock-cut tomb complexes consist of a forecourt and paneled facade in front of the internal rooms. The standard form of a New Kingdom Theban tomb comprised a transverse room, parts of which might have "secular" decoration, with a longitudinal room behind leading to an offering place at the back. In the 18th Dynasty these tombs began to have religious scenes among the decoration, and by the 20th Dynasty

almost all secular decoration had disappeared. In the artisans' tombs at Deir el-Medina, the decorated chambers were often underground and had vaulted ceilings, assimilating them to the forms of sarcophagi and burial chambers; these rooms had exclusively mortuary decoration.

From the mid–New Kingdom on, new forms of free-standing tombs modeled on temple designs developed in the Memphite area. These were influential into very late times, producing such masterpieces as the 4th–3rd-century B.C. tomb of Petosiris at Tuna el-Gebel (Lefebvre 1923–24). By that date, however, few of the elite built major tombs, and this type is relatively poorly known. Examples at such sites as Saqqara have been more thoroughly destroyed than earlier tombs.

C. Representational Art

1. Introduction. The images that filled architectural spaces and decorated their surfaces were all designed on the same basic principles. Egyptian art therefore has a stylistic unity which has been recognized since antiquity. The application of its principles is best seen in the canon of proportions (e.g., Robins 1986), which provided a convenient and accurate means of depicting objects, especially the human form, on squared grids (see Fig. ART.22), while facilitating the organization of artists in teams. The rendering of nature, which underlay the canon of proportions and has analogies in sculpture in the round, is very different from that of Western art. Its most important characteristics are its reliance on outlines and nonincorporation of foreshortening and related optical phenomena. Within its conventions, it strove toward what may be termed realism, that is, proportional accuracy and approximation to visual schemata, rather than toward extremes of stylization. For Westerners, there has often seemed to be a contradiction between its nonuse of perspective and its realism, and this problem has been alternately overlooked and commented on at length. Since perspective and foreshortening are characteristic of few artistic traditions, the methods so clearly exemplified in Egyptian art should be considered universal (Baines 1985b) and perspective a special case, rather than the other way around. Although the Westerner's difficulty with finding a way to approach Egyptian representation results largely from its realism, there is nothing inherently contradictory in the presence of realism in a nonperspective tradition.

As in many cultures, almost all works were planned to be painted, or were naturally colored (cf. Reuterswärd 1958). With few exceptions, coloring was polychrome. The basic coloring system consisted of black, white, red, yellow, green, blue, with gray both as a hue and as a neutral; brown and pink were later added to the repertory. Colors could appear in more than one shade. The color classification visible on the monuments is more complex than that known from the Egyptian language, but both fit the universal "color encoding sequence" of Berlin and Kay (Baines 1985c). Painting was the last stage of work on sculpture and relief; because many works were not finished, people will have been familiar with the appearance of unpainted works (see also Smith 1949: 105–29; 244–72).

2. Sculpture in the Round. The products of Egyptian techniques are easily appreciated in statuary (e.g., Russmann fc., Vandersleyen 1975: pls. 115–236). Apart from a geometrical character which is basic to the system and was probably valued for its dignity, the human figure is depicted realistically. Great mastery was achieved in stone-working, in rendering the masses of the human form and of detail, and in the modeling of faces and of the upper part of the body (see ART.23).

Except for the Old Kingdom, most statues come from temples and show gods, kings, and human beings more or less in repose, standing with the left foot forward, or seated or squatting (see Fig. ART.24), singly or in small groups. They are idealized, with a concept of beauty not very different from that of the modern West. Transient or dynamic poses and the depiction of aged and careworn features are relatively rare, but are characteristic of many of the finest works. Iconographic details indicate the identity of many gods and of the king, but in addition most statues are inscribed with the owners' names and titles; statue and inscription complement each other so that the statue is the last "hieroglyph" of the text (which does not mean that text is more important than statue; Fischer 1974). Sculptures from colossi 15 m high to figurines of a few centimeters are remarkably uniform in style, but small works can be surprisingly free, especially in wood (which is greatly underrepresented in the record). This applies particularly to decorative figures like unguent jars in the form of offering bearers carrying pots (see Fig. ART.25).

Art-historical work has tended to focus on the faces of statues and on problems of dating. The question of whether the Egyptians made "portraits" is much debated. While the features of some individuals, especially of royalty, are evidently depicted in statuary, the term "portrait" is so culturally loaded as to make its application to alien traditions problematic; meaningful answers to these questions depend on clarifying what is being asked. It is clear that the features chiefly at issue are those of kings (e.g., Tefnin 1979; Müller 1988), and that during the periods when distinctive royal faces were carved many other people were depicted with faces similar to those of kings. The only time when faces have a very clear iconographic significance was the later 12th Dynasty, when Senwosret III and Amenemhat III were depicted with suffering countenances probably signifying the role of the "suffering king." For other periods, especially the Late Period (Bothmer 1969; Brooklyn Museum 1988), marks of age were typical of nonroyal sculpture. Statues additionally derived acquired much of their meaning from iconography. People commissioned many statues of themselves with differing iconography that included the physique, which was youthfully slender in most cases, and prosperously obese for older, wiser figures.

The two principal contexts for sculpture were tomb and temple. There is little evidence for statues in other public places, except where large areas of a city were linked by avenues, principally of sphinxes (best known in Thebes). In addition to stone and wood, statues were made in copper or bronze and precious metals, and sometimes in composites of different substances. Very little bronze sculpture is known from before the Late Period, but casting was mastered impressively, if only for royal statues (Wildung 1984: 209, fig. 184; Old Kingdom molded statue Lange and Hirmer 1968: pl. 80). Temple reliefs depicting cult statues show a far wider range of types than is physically preserved (e.g., Davies 1953: pls. 1–5), most of them being made of wood, metal, or a mixture of the two.

Sculpture of different periods varies greatly in style and character. The time of the widest range of contemporary variation was the Late Period, when statues were the principal monuments of most members of the elite (Bothmer 1969; one group of royal sculpture: Russmann 1974).

3. Relief and Painting. Egyptian principles of representation have more distinctive consequences in relief and painting (Schäfer 1986). Despite fundamental differences of type, these two media share a linear mode of representation, and reliefs could be carved on the basis of existing paintings (e.g., Baines 1989b); preparatory drawings for both were essentially the same. Low raised relief was normal indoors and sunk relief, in which the stone of the background between the figures was not removed, outdoors; sunk relief shows up better in sunlight.

Compositions are organized as groupings conveying information visually, not as visual or perceptual images (see Fig. ART.26). The picture surface is an area to be filled, not three-dimensional space or a specific location, and there is no fixed point from which compositions are to be viewed. Figures are related to one another by their actions and gestures or by overlapping, while relative size indicates relative importance, not distance. The chief organizing element in compositions is the register, a sequence of figures or separate scenes on a single baseline. A set of registers fills a wall surface, while principal figures or scenes may be the height of several registers and bracket them together. Designs are arranged to fill a surface evenly and arrange it meaningfully, rather as in the layout of an illustrated book. The register compositions of temples (see Fig. ART.27), especially of the Late and Greco-Roman Periods, are more rigid than those of nonroyal tombs, and exhibit complex ordering principles that unify entire walls (Winter 1968: Part 1). The composition of scenes is so highly conventionalized that it is often meaningless to ask what locations or furnishings are shown in the scenes. The most prominent exceptions to, or extensions of, the normal principles of composition are in the royal battle reliefs of the New Kingdom (e.g., Gaballa 1976; Epigraphic Survey 1986).

The human figure exemplifies representational principles most fully. The body is treated as a set of aspects unified by its outline (the composition of male and female figures differs slightly). For figures standing at rest, a profile head encloses a single, mostly enlarged eye, and the shoulders are shown at full width, while a front profile joins the forward armpit to the waist. The hips and legs are again in profile; the feet are mostly separate. This construction retains proportional accuracy and allows figures to interact naturally on the picture surface, as well as being in harmony with Egyptian ideals of physical beauty.

Because full faces are not shown, it does not address itself to the viewer or suggest the third dimension strongly. Similar compositional principles govern the representation of most objects. Any conventional form is necessarily a choice among many possibilities; once forms were devised, they mostly varied only in detail.

Private tombs of the Old-Middle Kingdoms contain a wide range of scenes of "daily life," such as agriculture, fishing, marsh pursuits (see Fig. ART.28), and craftsmen; religious elements are largely confined to burial scenes and texts (Vandier 1964–78; Harpur 1987). The absence of scenes of gods and kings is probably determined by decorum. The purpose of the decoration is little understood and is hardly stated in the accompanying texts. Essential aspects seem to be commemoration of a successful life and praise of the deceased (Assmann 1983), and the preparation of offerings for the mortuary cult. The deceased "observes" the agricultural activities around him and only participates actively in hunting in the marshes, which probably symbolizes in part passage into the next world (Groenewegen-Frankfort 1951: 28–62). In the New Kingdom, scenes of the king rewarding the tomb owner were added to the repertory. Almost all scenes have identifying and descriptive text captions. Most Old Kingdom tombs at Giza and Saqqara are decorated in relief, while New Kingdom Theban tombs have more paintings, whose flexible medium encourages freer and livelier effects (see Fig. ART.29; Davies and Gardiner 1936; Mekhitarian 1954); relief, however, was used in some of the finest Theban tombs (e.g., Lange and Hirmer 1968: pls. 166–77). Late Period reliefs divide into Theban (e.g., Kuhlmann and Schenkel 1983) and Lower Egyptian types (Leahy 1988). Both regions are significant for their artistic innovations, for their inclusion of new subject matter, such as the major underworld compositions characteristic of New Kingdom royal tombs, and for their complex mix of innovation and eclectic use of models from earlier periods.

D. Minor Arts

In prosperous periods, especially the mid–New Kingdom, vast numbers of decorative everyday and funerary objects were made (e.g., Hayes 1959; Boston 1982; Hildesheim 1987). These followed the same representational principles as relief and painting, and, because of the diagrammatic character of representation, depictions of items such as boxes and preserved pieces can correspond closely to each other.

The "minor art" which consumed most resources may have been jewelry (see Fig. ART.30; Aldred 1971; Wilkinson 1971), for which gold, silver, and precious stones were used in great quantities. Egypt was the major producer of gold in the ANE, and the Eastern Desert abounded in semiprecious stones, but some materials, such as lapis lazuli, were imported from great distances at corresponding cost. Both royal and nonroyal jewelry are known, apart from its probably extensive use in the cult of the gods and deposition in burials, while body ornaments were worn by men and women in many contexts. Some jewelry, for example from the tomb of Tutankhamen, is of great symbolic and iconographic complexity.

Egyptian furniture, which is the chief preserved corpus from the ancient world (Fischer 1986: 169–240), is remarkably elegant and sophisticated, and several other genres, such as cosmetic equipment, were as highly developed. Art was thus not confined to temples and tombs, but pervaded elite life as a whole. Nonetheless, the principal preserved record is from tombs, and includes very important categories of material, such as coffins and sarcophagi. Despite the constraints of decorum, there was stylistic and formal uniformity across the genres of minor art, from temple and tomb to objects of household use.

Some categories of objects were generally devoid of artistic significance. Most pottery is plain and utilitarian, and painted wares are known only from one or two short periods (Bourriau 1981; Hope 1981, 1987). The reason for this is probably in part that the focus of elite interest in vessels was on stone—worked with astonishing virtuosity in the Early Dynastic Period (el-Khouli 1978)—and metal. Metal vases were widespread, but few are preserved (see Insley Green 1987).

E. Change; Legacy to the Near East

Egyptian art may seem static and rigid, but within its representational system it evolved very greatly. Development tended to be uniform in direction within major periods, mostly moving toward greater complexity and richness, but artists often sought inspiration in works of much earlier times than their own (cf. Baines 1988: 133–40). This tension between continuity with the immediate past and innovation with a

backward glance is known from many long-lasting traditions. The fruitful development of native Egyptian art continued at least until the Roman conquest. The only time of truly radical departures was the attempted religious "revolution" of Akhenaten, during which both the style and the subject matter of reliefs and statuary were transformed, while representational conventions also changed significantly; most of these innovations were soon rejected. The motivation for Akhenaten's artistic changes may have been principally a desire for a radical break with what went before. The king will have commissioned the artists who produced the new style, among whom Bak is known by name and from his mortuary monument, but the phrases with which Bak describes his dependence on the king for teaching turn out to be conventional, so that they may not support the hypothesis of a special role for Akhenaten (Krauss 1986).

Egyptian artistic forms were very influential in the ANE. From the Old Kingdom or earlier, Egypt had close relations with Byblos, from which it imported timber in particular, and to which it exported both works of art and raw materials. Poorly provenanced finds of this period have appeared in Anatolia and the Aegean (e.g., Smith 1965: figs. 10–11). By the early 2d millennium B.C., objects and motifs like scarabs and the winged solar disk, as well as more general Egyptian iconography, spread to Syria (Teissier 1989). During the late 2d and early 1st millennium, Egypt exercised a dominant cultural influence in parts of Syria-Palestine, while particular categories of objects, such as ivories, acquired an "Egyptian" style and were disseminated as far afield as Mesopotamia (e.g., Herrmann 1986: 18–19; Kitchen 1986).

In the case of ivories, the medium for transmission of this influence may have been the material itself, for which Egypt was the principal source, but the influence may be earlier than the date of the objects discovered. In other cases, it is more difficult to assess what objects carried artistic styles abroad, because the most easily transported materials, such as wood or Egyptian faience (e.g., Tait 1963), are seldom well preserved archaeologically, while jewelry, which is known, for example, from Byblos (Vandersleyen 1975: pl. 396b), will have tended to be recycled, and has largely vanished. Here, the inventories of gifts in the Amarna letters (Moran 1987: e.g., nos. 13–14, 22, 25), which describe objects by weight of materials used and largely ignore their manufacture, have similar implications. In addition, fragile objects, particularly ones used in everyday contexts, are poorly known from Egypt. Such gaps in the material will tend to suggest that Egyptian exports and influence in the Near East were less significant than they may in fact have been.

JOHN BAINES

PERSIAN ART

This article will focus on the art of the Achaemenid Persian empire (ca. 538–330 B.C.), but will also include some comments about Persian architecture. The art of this period not only reflects the complexity and diversity of the empire itself; it also ideologically reinforces the notion of a world now under control.

A. Historical Background
B. An Overview of the Evidence
C. Achaemenid Monumental Art
D. Achaemenid Seals
E. Conclusion

———

A. Historical Background

The Persians, like the Medes, were of the Indo-European linguistic family. They had gradually migrated from an aboriginal eastern homeland to the Zagros mountains of W Iran by the close of the second millennium B.C. By the 9th century B.C., these Persian and Median tribes had established themselves securely along the E fringe of the Assyrian empire. The heads of the Persian tribes were vassals of the Medes during the critical period when the Assyrian empire was overthrown by a Median and Babylonian alliance (612 B.C.). The Persian Cyrus II (reg ca. 550–538 B.C.) was a prince of the Achaemenid clan. When he overthrew the yoke of Median domination, he fell heir to the large territories acquired by the Medes from the earlier Assyrian realm.

It was once thought that the Medes and Persians were nomadic groups without traditions of monumental architecture and sculpture up until the time of Cyrus the Great. More recent discussion (Root 1979: 28–42) has attempted to place these peoples firmly in a context of settled patterns of assimilation within the Mesopotamian/Iranian cultural sphere. We learn from Assyrian annals that Medes and Persians lived in fortified citadels as early as the 9th century B.C. Archaeological investigations in the W Zagros area have now verified these Assyrian records by retrieving sites in Median territory which show the architectural sophistication of these citadels and, in some cases, their closeness to representations of W Iranian settlements on Assyrian historical reliefs (Young 1969; Young and Levine 1974; Stronach 1969; Gunter 1982). Even in its preempire phase, then, the Achaemenid dynasty enjoyed access to the ancient traditions of Mesopotamia and Elam. In art, these traditions form a critical backdrop to the imperial program created by the early Achaemenid kings. Again from Assyrian royal annals we know that Cyrus I, grandfather of

Cyrus the Great, sent one of his sons to the court of King Assurbanipal (mid-7th century) in a diplomatic maneuver. This demonstrates the integration of the dynasty already in its preimperial period within the political networks of the time. It also shows that these Persians were actively exposed to the visual grandeur of Assyrian palatial contexts. At the end of the same century, paylists record Persians working alongside Egyptians, Ionians, Lydians, Medes, and Elamites at the court of Nebuchadnezzar II of Babylon. This demonstrates the integration of the Persians within the systems of artistic *production* as well as consumption in Mesopotamia before the formation of their empire. Persian interaction with the indigenous Elamites in SW Iran was also an important factor in their ultimate imperial artistic formulations. The Achaemenid dynasts took over the ancient Elamite title King of Anshan; they used Elamite as an administrative language; and it is becoming increasingly clear that they also drew extensively upon Elamite artistic models in the creation of their own imperial style.

Under Cyrus II the Achaemenids pushed all the way to Lydia, conquering the mighty Croesus in 547 B.C. Babylon fell to Cyrus in 539 B.C. The empire reached its greatest extent under Darius I (reg 521–486 B.C.)—stretching from India into N Greece and across Egypt. The Achaemenids maintained power until 330 B.C., when Alexander finally succeeded in crippling the Persian regime after prolonged campaigning.

Achaemenid art must be understood against the historical background of the ANE cultures which preceded it. It must also be understood with reference to the factors of cultural idiosyncracy which the Persians brought with them into the Mesopotamian/Iranian sphere. And finally, it must be understood in terms of the diversity of regionalisms reflected in the vastness of the imperial domain.

B. An Overview of the Evidence

Achaemenid art is preserved in a full range of media: official architecture in stone and brick, architectural sculpture in stone and molded brick, freestanding sculpture in stone and metal, rock relief, wall painting, seals (preserved as actual artifacts and as impressions on documents), imperial and provincial (satrapal) coins, jewelry, horse trappings and weaponry, vessels of stone, glass, and metal, ornamental ivory and wood carving, and textiles. Only tantalizing vestiges of wall paintings, textiles, glassware, metalwork, ivory and wood carving have been preserved—owing to their ephemeral nature and to the tendency for metal to be melted down for reuse. The major sites from which evidence has come for the study of Achaemenid art are the capitals of Pasargadae (Stronach 1978), Persepolis/Naqsh-i Rustam (Schmidt 1953–70; Tilia 1972–78), and Susa (Perrot 1981; Perrot et al. 1971; 1972; 1974)—all in SW Iran—and the rock relief and inscription at Behistun in NW Iran (Root 1979: 58–61, 182–226). Retrieved Achaemenid remains from Babylon are significant but not extensive (Haerinck 1973; Seidl 1976). Ecbatana, the Median capital in NW Iran which was occupied later by the Achaemenids as a summer residence, lies under modern Hamadan and has not been systematically explored (Muscarella 1980: 31–35). To date, no satrapal governor's palace has been excavated, although the site of the important palace at Daskyleion in Anatolia has been identified and surveyed, with an impressive corpus of small finds awaiting full publication (Balkan 1959).

Significant random finds from outlying sectors of the Achaemenid sphere provide glimpses of art and society under the Persian kings which add to the picture encapsulated most completely at Persepolis. Nevertheless, it remains unfortunate that at present very little is yet known archaeologically about the eastern periphery of the empire. New perspectives on the history of the Achaemenids in this region should encourage further archaeological investigation (Briant 1984).

One of the difficulties in dealing with aspects of Achaemenid art relates to the types of textual sources available for interpretive assistance. The official imperial texts which have come down to us are informative on a certain level (Kent 1953); but some tend to be neglected by art historians and others tend to be misinterpreted (Root 1979: 7–11; 1988; fc.). A good example of the latter phenomenon is the so-called Susa Foundation Charter of Darius the Great. This text enumerates specific tasks performed by specific subject peoples in the construction and decoration of the palace at Susa. Its function as a propaganda text meant metaphorically to characterize imperial domain has usually been overlooked in favor of a interpretation which takes literally the allocation of tasks along strict ethnic lines. The absence of Persians in the listing has been used to show that Persian artisans must have had no role in the building

of Achaemenid Susa. It seems clear, on the contrary, that the absence of Persians in the list reflects the idea that the text is a way of describing Persian political power over other peoples.

None of the imperial texts preserves an explicit narrative account of court ceremonies, such as might help to fathom some of the iconographical intricacies of official representations. Similarly, there are no extant travelogues written by Persians of the Achaemenid period giving descriptions of cities or monuments. Administrative documents, letters, and graffiti provide valuable but oblique views of certain aspects of artistic production (Roaf 1980; Root 1979).

The texts most often culled for information on Persian art and society are the Greek sources such as Herodotus' *Histories* (5th century B.C.) and Xenophon's *Anabasis* (4th century B.C.). The classical texts are rich; but they are problematic because of the externality of their perspectives on the Persian empire—an externality which is compounded by the naturally Greek-oriented focus of most of the scholars who comment upon them. Important recent discussions, however, are attempting to redress the balance (Sancisi-Weerdenburg, ed., 1988; Sancisi-Weerdenburg and Kuhrt, eds., 1988; Kuhrt and Sancisi-Weerdenburg, eds., 1988).

The OT contains little *explicit* information on Achaemenid art, although it may well be that careful analysis can reveal more suggestive material than was once thought (see below).

C. Achaemenid Monumental Art

Pasargadae was founded by Cyrus II after his victory over Croesus of Lydia in 547 B.C. It features a fortified citadel (originally intended to accommodate administrative and ceremonial structures). In the plain below, palaces, a garden pavilion, a gatehouse, a tower (probably for the safekeeping of ritual paraphernalia) and the house-type tomb of Cyrus have been excavated and studied. Remains of the stone water courses for a formal garden provide our first documented example of the Persian "paradeisos" (see Fig. ART.31). This predilection for reception palaces with deep shady porticoes overlooking gracious symmetrical gardens is echoed throughout the subsequent history of Persian architecture. A striking reminiscence of the paradise ambiance of Pasargadae is the 17th-century-A.D. palace of Chehel Sutun at Isfahan, where the features of architecture and environmental tableau are still well enough preserved explicitly to evoke the original aesthetic and conceptual principles common to both the medieval and the ancient sites.

At Pasargadae, as at Persepolis somewhat later, the palace architecture uses stone for the skeletal structure: for foundations, stairs, columns, and door and window frames. Mud brick originally fleshed out these elements. The stoneworking at Pasargadae displays significant characteristics of Lydian and Ionian technique and aesthetic (Nylander 1970). The masonry of the citadel platform clearly reflects a desire to emulate Hellenic forms of drafted ashlar blocks, for instance. And the technical details of joining and tooling suggest the important part played here by masons from the west brought to work at the Persian court in the wake of the fall of Sardis.

The buildings at Pasargadae also incorporate elements of ANE tradition. With great doorways and columns of stone, the Pasargadae Gatehouse was designed to impress the visitor with allusions to the triumphs and aspirations of the king. Assyrianizing attached sculptures of guardian bulls protruded from the main portals, while the jambs of the side doors were decorated in low relief with the image of a winged figure wearing the royal robe of Elam and an elaborate Egyptian war crown. See Fig. ART.31. An accompanying inscription declared, "I am Cyrus, an Achaemenian." The inscription may well have been meant to suggest that the representation showed the king himself in an allegorical mode of imperial aspiration. In this context, the wings acquire interest as an echo of the benevolent guardian figures of Assyrian palace reliefs. They may have been intended to allude to the protective, nurturing properties of these magical creatures—creatures who in manifold variants figured prominently in the symbol-laden architectural decoration of Israelite palaces as well (e.g., 1 Kgs 6:23–37). The wings possibly also relate more specifically to a prophetic dream recorded by Herodotus (I. 209). Here, Cyrus is supposed to have envisioned Darius with wings overshadowing the entirety of the Achaemenid empire encompassing both Europe and Asia. Thus the winged figure of Pasargadae may symbolize at once the perpetuation of

venerable Near Eastern traditions of guardian creatures and also a more assertive allegorical concept of world dominion.

Indeed, the concept of harmonious world order is the central theme of the entire program of Achaemenid Persian imperial art. This art is not historical in the annalistic sense. Rather, it is historical in a cosmic sense. Ideas about political events and relationships are distilled for presentation in elaborate metaphorical statements. Quasi-realistic depiction of the events themselves (such as are featured in Assyrian palace reliefs) have no place in the extant repertory of official Achaemenid art.

The monument of Darius I at Behistun emphasizes this aspect of Achaemenid art. See Fig. ART.32. Often characterized as the sole example of Achaemenid historical art, this rock relief is in essence highly abstract in its depiction of history. The inscription gives details of a series of battles against rebels fought by various of Darius' generals in far-flung regions of the empire over the course of more than one year. But the accompanying relief offers an ideological précis of this narrative. Here, Darius stands with one foot upon the squirming prostrate figure of the pretender Gaumata. Behind the king, two of his generals and weapon bearers symbolize the full host of loyal men who backed the newly declared monarch. Stretching out before Darius is a row of bound captives—the rebels who in the historical narrative were described as having been dispatched separately in diverse encounters. Hovering above the entire scene, facing Darius, appears the figure of Ahuramazda in the winged disc.

The god Ahuramazda is repeatedly invoked in the imperial texts as the agent of imperial success with whom the king appears to enjoy a symbiotic relationship. The rendering as a half-length human figure emerging from a winged disc hearkens back to Neo-Assyrian representations of the god Assur. Because the image of Ahuramazda is never actually labeled in Achaemenid art, it has generated much controversy among scholars. Some have rejected the traditional interpretation in favor of variant nuances of the idea that the figure in the winged disc represents the "Xvarnah"—the essence of glory—of the king himself as this concept is articulated in later (post-Achaemenid period) Zoroastrian texts (Shahbazi 1974; 1980; Calmeyer 1979; Jacobs 1987). Others have urged retention of the traditional interpretation as the one which suits the conceptualizations apparent from texts of the Achaemenid period itself (Root 1979: 162–81; Lecoq 1984). The figure of Ahuramazda (as this article will persist in characterizing it) plays a role in many representational contexts of Achaemenid art. The very fact that the divine figure resembles the royal figure in dress and attitude correlates neatly with the complete marriage of goals between god and king as portrayed in the texts.

The controversy over the identity of the figure within the winged disc is particularly significant in the context of biblical studies because it forces us into the vexing issue of the religion practiced at the Achaemenid court (Herrenschmidt 1980). Although Ahuramazda is the primary deity invoked in the official texts, allusions do exist in the documentary evidence to the veneration of other gods as well, e.g., Behistun (Kent 1953: 132). Similarly, some evidence exists for *representations* of gods other than Ahuramazda in Achaemenid art (characterized with reference to seals in Moorey 1979). If the Achaemenids were Zoroastrians, their Zoroastrianism was of a variety not fully clarified through non-Achaemenid texts. Certainly, for instance, it was not strictly monotheistic, and the rendering of divine images was not prohibited.

Official Achaemenid policy emphasized the pragmatism of condoning regional spiritual behavior as well as regional political and economic structure. In keeping with this policy, the Achaemenid king might display himself as Pharaoh, Son of Ra, in Egypt (Posener 1936; Root 1979: 61–72); he might rebuild the temple at Jerusalem; and he might patronize an artistic establishment in the Persian heartland which drank deeply of ancient Mesopotamian/Iranian cult practices. It is difficult to assess the extent to which the ecumenicalism of official policy reflects active cult belief as opposed to purely formal embrace of the imagery and protocols of other cultures (Kuhrt 1987). The monumental art of the dynasty in the heartland suggests conscious reinforcement of links with the critical ancient traditions of the empire. This is seen first at Pasargadae (where we have already noted the winged figure of the Gatehouse). In the partially preserved door-jamb reliefs of Palace S, creatures of the Assyro-Babylonian cult world (a bull-man, a

fish-garbed priest, an eagle-footed, human-legged creature) proceed out of the courtly chamber along with a presumably sacrificial bovine (Stronach 1978: 68–77).

At Persepolis, founded by Darius II in ca. 515 B.C., the program of architectural reliefs is more elaborate and more subtle in its evocations of ecumenical hegemony. The carved facade of Darius' rock-cut tomb at nearby Naqsh-i Rustam (copied by all subsequent Achaemenid kings) shows the king before a blazing fire altar with Ahuramazda and an emblem of the sun and moon in the field above. See ART.33. The king and his altar stand atop a great carved platform which is raised off the ground by personifications of the lands of the empire. Darius' platform recalls the throne of Solomon (2 Chr 6:12) upon which Solomon stood in appearance before the assembly of Israel. Interestingly, the Achaemenid representation is the only preserved illustration of a royal appearance atop a dais of such dimensions from the entire ANE, excluding Egypt.

The lifting of the platform by peoples of the empire is frankly metaphorical. As the tomb inscription states: "If now thou shalt think that, 'How many are the countries which King Darius held?' look at the sculptures [of those] who bear the throne, then thou shalt know, then it shall become known to thee: the spear of a Persian man has gone forth far …" (Kent 1953: 138).

The supporting figures on the Achaemenid relief lift up their king by assuming the ancient Atlas pose—frontal torso, with arms raised above the head and burden resting effortlessly on outspread fingertips. Within the iconographical traditions of the ANE, from Egypt to Iran, this pose had consistent and significant cosmic implications relating to the joyous elevation of celestial bodies (Root 1979: 131–61, for full discussion of this image). Under the patronage of Darius, a conflation of political and cosmic associations was achieved in imperial art. A provocative parallelism occurs here with the poetic metaphor of Psalm 22—where Yahweh is characterized as enthroned on the praises of Israel (v 4—Eng v 3).

Another important representational type depicting the Achaemenid king in monumental art is preserved on the stairway facades of the great Apadana at Persepolis (Root 1979: 227–84; 1985 passim). See Fig. ART.34. Here, in its original state, both the N and the E stairway were decorated with the same relief program. At the center an over-life-size representation of the king enthroned under a baldachino acts as a visual and conceptual fulcrum for a vast expanse of figural imagery. An official bows before the king, serving to announce the imminence of a procession of gift bearers from the subject lands. Ranged in three registers of relief facing the central royal tableau appear depictions of delegates of non-Persian peoples of the empire. A Persian usher takes the leader of each delegation by the hand. This motif places the scene squarely within the ancient Mesopotamian tradition of presentation scenes in which a petitioner is brought forward by the hand or the wrist into the presence of a deity or a deified king. The specific sculptural formula used for the execution of the Apadana image of hand-holding is a conscious reminiscence of a traditional Egyptian patterning of interlaced hands. In the Egyptian context, the image and its precisely articulated rendering was used from the Old Kingdom through the Late Period in depictions of the deceased being brought forward into the presence of Osiris for the last judgment.

The Apadana reliefs thus offer another example of a conflation of political and spiritual message. The Achaemenid king has assumed the role of a quasi-divinity before whom a regiment of pious, gift-bearing petitioners will be led by the hand. In this case, the petitioners are the members of the imperial world created by the Persian king. This world has been characterized in the official artistic program of the dynasty as a harmoniously ordered enterprise. The force of the Persian king is played out in terms evocative of a kind of spiritual power which is more compelling than mere military might described in annalistic detail.

The question naturally arises as to whether or not the reliefs of the Persian kings show him as a deified ruler who was actually worshiped at the court. At this point in our understanding of the issue it seems best to acknowledge the suggestiveness of the artistic program without insisting upon any specificity of underlying cult activity. We have absolutely no Persian textual reinforcement of Achaemenid date for the worship of the king as a god. The nature of Achaemenid kingship is certainly revealed in part through careful analysis of the imperial art (Root 1979). It becomes clear that the Persians established a concept or ideal of kingship which stressed the notion of peaceful coexistence centered around the charismatic

persona of the Great King, King of Kings. But many questions remain (Kuhrt 1984; 1987). Hopefully the time will soon be ripe for an informed reappraisal of several brilliant, if problematic, commentaries on the impact of Achaemenid concepts of kingship upon the imperial cults of later periods—from Alexander to the Hellenistic and Roman rulers and the dynasts of Sasanian Persia (e.g., Taylor 1927; 1931; L'Orange 1953).

D. Achaemenid Seals

Numerically, the single most frequently depicted image in Achaemenid art—both monumental and small-scale—is the image of the hero mastering beasts. See Fig. ART.35. This motif, in many variants, accounts for roughly two thirds of all extant Achaemenid representations in the medium of seal carving (Garrison 1988; Greenfield 1962). Research currently underway (Root and Garrison fc.a. and fc.b.) will soon provide the material basis for reassessing the relationships in meaning between the many privately owned seals bearing the hero image and the examples of the image employed in official contexts of imperial relief sculpture and imperial administrative seals.

The variant of hero motif which portrays the human protagonist controlling two symmetrically placed beasts may ultimately prove particularly interesting in this regard. Like most imagery in Achaemenid art, this one has a very ancient pedigree. Under the patronage of the early Achaemenid kings, its significance may, however, have achieved a subtle tuning—just as other venerable images were adapted to a new imperial environment. The tomb inscription of Darius the Great emphasizes the supreme moral importance of the blameless life: e.g., "By the favor of Ahuramazda, I am of such a sort that I am a friend to the right, I am not a friend to the wrong" (Kent 1953: 140). On Achaemenid seals, the image of the master of beasts—quietly and without weaponry controlling the forces of animal violence in an emblem of balanced accomplishment—suggests the possibility of a specific meaning. In Daniel 6 (which is set in Achaemenid times although not written in Achaemenid times), Daniel is delivered from the lions by the force of his blamelessness, as one who has done no wrong. Post-Achaemenid seal imagery in Iran develops the antique master-of-beasts image into an illustration specifically meant to allude to the Daniel story (Lerner 1977: 22–30). It seems plausible that under the Achaemenids, the popularity of this image on private seals already reflected a conceptual reworking of the ancient visual formula. In the Achaemenid context, the reworking took place, of course, before the writing of Daniel. Thus, its significance to Daniel is of a different order. The Achaemenid motif would have been popularized specifically to display an emblem of officially sanctioned virtue: the owner as a blameless person whose rectitude and right-minded attitude toward the king was symbolized by his portrayal as pacifier of wild beasts. In this case, the story in the book of Daniel would carry historical weight as the reflection on some level of a metaphorically expressed ethos actually current at the time when the story was intended to be set. An interesting issue—too complex for full discussion here—involves the fact that the hero on these seals often seems to wear a Persian royal crown. Without pursuing all the ramifications of this feature, one relevant possibility emerges in the context of biblical studies. The easiest solution to the issue of identifying the crowned figure would name it an image of the king himself. In this case, it would be the king depicted on innumerable private seals as the Blameless One, rather than a generalized personage meant to epitomize the *owner* of any particular seal. On the other hand, further insights may possibly be gleaned from Esth 6:6 and 8:15. Here, Mordecai is decked out in the robes and crown of the king for a public appearance in order to demonstrate the royal favor bestowed upon him. The private seals of the Achaemenid period showing crowned masters of beasts may thus relate to an actual Persian tradition of bestowing honor—a tradition reflected also in the later textual allusions in Esther.

E. Conclusion

The last 20 years have witnessed great scholarly advancement of our knowledge about Achaemenid Persian art in the dynastic heartland of SW Iran. The impact of this art upon the cultures under imperial control is, however, largely an undeveloped topic. One overview of the material evidence provides an indispensible step in the right direction (Moorey 1980). Specifically regarding the impact of Persian rule in Israel, major efforts now enable us to begin an evaluation of the penetration of Achaemenid art (Stern 1973). Analytical studies are moving in the direction of seeing far greater Persian artistic impact in the

provincial regions than was once thought. And some scholars are making significant advances in correlating occurrences of strong artistic influence from Persia with specific historical events and political climates within the 200-year span of the empire (e.g., Mørkholm and Zahle 1972).

As we are told in the book of Esther, decrees of the Persian king were sent out far and wide, translated into the languages of specific localities. We learn the same from Darius' own words at Behistun. The discovery that an Aramaic version of the Behistun text from Elephantine in Egypt incorporates segments drawn from Darius' *tomb* text as well enhances our appreciation of the availability of material originally created in the heartland (Greenfield and Porten 1982). Now we know that the Behistun relief of Darius was copied for Babylon along with the text (Seidl 1976).

Official Persian art was designed for widespread dissemination and message conveyance, just as the official decrees were. From the imperial coinage emblazoned with imagery of the king-as-archer (Carradice 1987; Root 1989) to the grandiose metaphorical displays on the architectural facades of Persepolis, the overarching message is one of a world under control. The pervasive image of kingship stresses dynastic identity rather than personal idiosyncracy. The pervasive image of imperial domain and social hierarchy stresses cooperative—even joyous—service and the virtues of blamelessness.

EARLY JEWISH ART AND ARCHITECTURE

This article will focus on two distinctive periods when Jewish art and architecture flourished: late in the Second Temple period (Hellenistic and Early Roman), and in the period of late antiquity immediately following (Late Roman and Byzantine). Differences between these two periods are significant, and are primarily political and social. In the former period, when the Jews enjoyed varying degrees of political autonomy, the art reflects not only the influence of the larger Greco-Roman culture but also the attempt to withstand those influences through the development of strictly aniconic features. In contrast to the national spirit of Second Temple period art, that of late antiquity is more an expression of communal and local life, and is replete with concrete visual images that are both figurative and symbolic.

C. Conclusions

———

A. Late Second Temple Period

During the Second Temple period, when there was a Jewish state in Palestine and a central Temple in Jerusalem, the ruling classes, though Hellenized, retained parts of their Jewish faith and laws. The art and architecture of the period show connections with the neighboring Greco-Roman culture. However, at the same time it reflects an attempt to withstand those influences by evolving strictly aniconic features. It is characterized by highly skilled indigenous stonework, by the predominant oriental elements of endless patterns, by the elements of *horror vacui*, by plasticity of carving, and by symmetrical stylization.

1. Architecture. The architecture of the late Second Temple period is reflected in Hasmonean remains found in sites and in structures that were later reconstructed or completely renovated in connection with subsequent Herodian architectural projects. These buildings and renovations left an enduring mark upon the art and architecture of the period.

a. Hasmonean. Hasmonean architecture mostly survives in remains of fortifications, desert fortresses, in funerary art, water systems, and the recently excavated Hasmonean palace at Jericho. The Hasmonean palaces especially exhibit clear architectural features. The characteristic features of the Hasmonean palaces include a central court surrounded by rooms. A hall with two columns *in antis* in the southern part of the court led to the triclinium, and probably served as a reception hall. This basic plan characterizes all the palaces at Masada, as well as the twin palaces at Jericho probably built at the same time, and was inspired by Hellenistic architecture.

b. Herodian. Comprehensive and monumental building projects were undertaken during Herod's reign (37–4 B.C.E.). The two sources of data relating to the Herodian construction projects are literary and archaeological. The major literary sources are the works of Josephus, particularly *Ant.* 15–17 and *JW* 1–2 and 5. Extensive archaeological excavations undertaken recently add information which both complements and contradicts the literary sources.

Josephus mentions 33 building projects, 20 of which were within the borders of Herod's kingdom while 13 were in other countries. This list of Herodian architectural projects includes references to the construction, reconstruction, and extension of towns, fortifications, palaces, and fortresses, as well as references to the Temple in Jerusalem, the largest single structure (the Royal Stoa), the largest palace (the 50-acre palace at Herodium), and one of the largest harbors ever constructed in antiquity (at Caesarea). Many of these monumental structures have survived and have been excavated in the last decades. See HEROD'S BUILDING PROGRAM; HERODIUM (M.R. 173119); CAESAREA (PLACE); etc. Most of these structures were built during Herod's reign, but renovations and reconstructions were undertaken during the 1st century C.E. until the destruction of the Second Temple in 70 C.E.

Herod built three new towns: Antipatris, Caesarea with its magnificent harbor, and Sebaste (Samaria) with its temple of Augustus. In the newly established towns Herod built temples, palaces, theaters, stadia, fortifications, and harbors. Within the Jewish Kingdom Herod carried out several projects. He built extensively in Jerusalem, particularly its Temple, a palace, town fortifications, and towers, as well as many public buildings and institutions. In the Judean desert he constructed or renovated several splendid palace-fortresses: Masada, Herodium, Alexandrion (Sartaba), Cypros, Machaerus, and the winter palaces at Jericho. The Herodian building projects included public structures and private buildings, as well as other structures such as palace-fortresses which incorporated monumental as well as utilitarian, functional sections. The palace-fortresses in particular combined luxurious, leisurely living with the need for security.

(1) Jerusalem Temple. Herod's temple in Jerusalem is the largest known temple in antiquity. One of the architectural wonders of the ancient world, and a unique structure, it must have made a magnificent impression on visitors. The Temple was the focal point for the Jewish nation, the center for worship, and the place where political, economic, and spiritual affairs of world Jewry could be discussed and determined. It was also the destination for pilgrims during the festivals, and therefore needed to accommodate thousands of people who gathered there to celebrate. One of the major reasons behind the enormity of the Herodian Temple building project was to meet this need.

The archaeological excavations carried out during the course of a decade (1968–78) have resulted in important data being disclosed concerning the areas of the Temple Mount gates and the areas outside the west, south, and east retaining walls. Streets, squares, and monumental passageways have been uncovered. See also TEMPLE, JERUSALEM.

(2) Palaces. King Herod's reign is remarkable, in the architectural sphere, for the many monumental edifices either renovated or newly built in both towns and fortresses. Herod concerned himself especially with the building of palaces which could be used both for administrative as well as for recreational purposes.

The typical architectural features of these palaces followed the common plans of the Roman *domus* and *villa* ("townhouse" and "country-house" respectively). A Herodian palace was usually an elaborate building with several wings. The main wing contained the triclinium (a peristyle court with rows of columns and double columns in its corners), an inner garden, a bathhouse, and dwelling rooms. The

extended palace complex usually also included recreational facilities, including pools for swimming and sailing boats, and elaborate gardens, such as the sunken garden at Jericho (palace III). Water installations, such as aqueducts and channels, brought water to the pools and gardens, as well as to the residential wings.

(3) Fortresses. Seven fortresses known to have been built in the Judean desert (Masada, Herodium, Cypros, Hyrcania, Alexandrium, Machaerus, and Dok) constitute an important component of Herodian architecture. The fortresses were located in the desert, within view of each other. They were isolated and autonomous. Built on mountaintops, they were each strongly fortified, and had extensive systems for the entrapment and storage of water. They functioned primarily as military bases for defense, but also as places of refuge for political and spiritual reasons. In times of violent confrontation and upheaval, they acted as shelters. The fortresses also served as administrative centers for important routes, and for agricultural and royal farm areas and palaces; they were also used for guarding the borders. They even served as burial places both for the Hasmoneans and for Herod. Elaborate palaces were constructed on their premises. Masada was the most spacious of all and had several palaces on its summit, which served as leisure resorts. The fortresses sometimes extended into the lower areas of their mountains; Herodium had buildings and installations built below the mount.

2. Art. Second Temple period Jewish art is a purely decorative art characterized by a mixture of native traditions and Hellenistic-Roman features. Hellenistic-Roman culture greatly influenced the upper classes (of all the Near Eastern countries), as is attested to by the predominance of Hellenistic-Roman architecture and by the use of the Greek language and its institutions which affected many aspects of everyday life. Politically, the country was first under Hellenistic and later Roman rule. However, resistance to the intrusive culture was strong, in part because of the force and vitality of the Jewish religion which continued to influence the community's activities. Traditional aspects of Judaism so conceptually dominated its decorative art that neither figurative nor symbolic representation were depicted.

The various ornamental devices and the repertoire of motifs were part of the general stream of Roman art, especially its provincial and eastern tributaries. Decoration in Herodian architecture attests to the influence of Roman art. Hellenistic tradition, moreover, survived into the later Herodian period. A locally developed style is encountered mainly in funerary art, on tomb facades, on ossuaries, and on sarcophagi (see BURIALS, JEWISH). The style of Jewish art followed the basic oriental elements: (a) the "endless" and "all-over" patterns, (b) symmetrical stylization; (c) deep carving resulting in contrasts between parts, intensifying the play of light and shadow; and the so-called (d) *horror vacui*—the ornament filling of all available space.

Decoration of buildings, palaces, houses, and bathhouses of the Second Temple period mainly focused on the use of wall paintings, stucco-plaster moldings, and ornamental floor pavements. The decorative elements, motifs, and designs are characterized by a total lack of animate motifs or symbolic emblems. This stems from the reluctance of all Jews, including the ruling families such as that of Herod and his dynasty, to decorate any building or tomb with religious or iconic symbols. The biblical prohibition of "no graven image" (Exod 20:4; Deut 4:16; 27:15) was carefully kept.

Jewish art in the late Second Temple period exhibits several characteristic features. First, stonework, carving, and use of relief characterize Jewish Second Temple–period art and continue later in Jewish synagogal art. Stonework was one of the most prevalent crafts of Jewish art that flourished in Herodian times. It utilized the locally available stone, and created a new type of ornament. The designs were sketched in by compass and ruler and carved out by chisel in a deeply incised and stylized manner. Stonework is found in the architecture of buildings and tombs and in funerary art. Stone craft is also used for objects of daily life, such as ornamented stone tables and domestic vessels. Second, the repertoire of ornamental aniconic motifs reflects a rigid choice of floral, geometric, and architectural patterns, some of which were adopted from Hellenistic art. Third, Jewish art also displays many oriental elements, including the simple local art encountered mainly in Jewish burials as well as that seen in the palaces and

tombs. The difference lies usually in the quality of execution and in the attention paid to decorative details.

Thus, there evolved a local Jewish art, strictly aniconic, using neither figures nor symbols. In their struggle against paganism and idolatry, the Jews refrained from using animate motifs and representational art. Only with the decline of paganism during the 3d century did the attitude of Jewish art change, resulting in the use of figurative motifs (see B. 2 below).

3. Synagogues. Several public structures of the Second Temple period which have been discovered in the last decades are considered to be synagogues. These include structures found at Masada, Herodium, Gamla, and Migdal, a recently uncovered structure at Capernaum (under the later synagogue), and another synagogue—now lost—reported at Chorazin.

The excavated structures are assumed by scholars to be synagogues because of the circumstantial evidence of similarity to each other in architectural plan and, therefore, in function, even though no actual proof has been uncovered. All the structures were built as oblong halls, and the halls were divided by rows of columns into a central nave and surrounding aisles. See Fig. ART.36. Stepped benches were erected along all four walls of the hall facing the center. The structures also share a similar date for their construction in the 1st century C.E. (although Gamla may have been erected as early as the end of the 1st century B.C.E.).

Upon the evidence of the structures themselves, it should be noted that they differ from later synagogues in plan, function, and decoration. First, from the architectural point of view, no new conceptions in construction have been discerned, but the impression is rather one of local extemporization. Second, these structures existed only for a short time in the 1st century C.E., and were never built again, except for Capernaum. Only in the case of the 1st-century building found under a later synagogue at Capernaum can one assume that it is a synagogue, due to its location. Third, these assembly halls lack the most important feature of the later synagogue: the Torah shrine. Finally, during the 1st century the Temple in Jerusalem was still the center for worship and ritual for the entire Jewish community in Judea and the Diaspora; it was *there* that one could participate most fully in the ceremonies, in the teaching of the Law conducted in the Temple courtyards, and in the resolution of administrative questions. These local centers of worship probably existed as community assembly halls, where services would be conducted probably only on Sabbaths and feast days. The assembly structures at the fortresses of Masada, Herodium, and Gamla probably served as local assembly halls during the years of the revolt against Rome, a time during which it was extremely difficult for their respective congregations to travel to Jerusalem to participate in Temple worship. At the same time as these structures were serving as small community centers, worship was presumably also being conducted in them, although no convincing proof of this has been found. With the destruction of the Jerusalem Temple in 70 C.E., local structures began to flourish which necessarily became sites of local worship and community centers. In these halls Torah reading came to be emphasized, and thus the distinctive feature of the later synagogues, the Torah shrine, begins to emerge.

B. Late Antiquity

1. Synagogue Architecture. An important innovation of Jewish art in Late Antiquity (3d–7th cents. C.E.) is associated with the construction and decoration of the synagogue. The synagogue building functioned as an assembly hall for the local congregation as well as a spiritual, religious, and social center. Its use as a community assembly hall determined its architectural plan, which took the form of a large hall divided only by supporting columns, with benches along the walls. But the diverse architectural styles uncovered indicate that no universal or uniform synagogue plan existed. Opinions vary considerably as to the evolution of synagogue architecture. Several attempts have been made to categorize and explain the different types and the divergence in style of the synagogues scattered throughout many regions (see Avi-Yonah 1981: 272–73; Meyers 1980: 97–108).

Generally the internal plan of the synagogue building consists of two rows of stone columns which divide the main hall lengthwise into a central nave and two side aisles (as in the late Second Temple period). The majority of synagogue plans are oblong and all have longitudinal axes. In addition,

synagogues within Israel itself exhibit several other common features, the most prominent of which are the facades and its portals, the Torah shrine, and the gallery.

The major architectural feature they shared was the Torah shrine. From its inception following the destruction of the Jerusalem Temple, the Torah shrine became a permanent fixture in the synagogue building. Always built on the wall facing Jerusalem, the Torah shrine housed the Ark of the scrolls and structurally took the form of either an aedicula, a niche, or an apse. See Fig. ART.37. The preponderance of *aediculae* found in excavated Galilean and Golan synagogues indicates that the aedicula was the characteristic structure for containing the Ark in these regions. In the case of synagogues which possessed two flanking aediculae, it seems that they had separate functions. One aedicula served to house the Ark of the Scrolls, while the other possibly held the menorah. Synagogues with *niches* have been found scattered throughout Palestine. There may have been local as well as traditional influences at work, because two of the niched synagogues are located at Tiberias while three are in Judea within close proximity of each other (Susiya, Eshtemoa, and Rimmon). The *apse* is a dominant architectural feature in the synagogue from the 6th century on, functioning as the container for the Ark and, possibly, the menoroth. The orientation of the apse is toward Jerusalem. Typological differences in the Torah shrines should be attributed either to local preferences, popular vogues, or historical development. Chronologically, the aedicula is the earliest type of Torah shrine (already in existence by the 2d century) and the most popular type in Galilean and Golan synagogues.

Construction of new synagogues in the 6th century shows a significant change in synagogue architecture by the addition of the apse as Torah shrine enclosure. Several renovated synagogues had their aedicula or niche replaced by an apse already in the 5th century (Ḥammath-Gader and Maʿoz Ḥayim). In the 6th century the apse was an integrally planned structure. The aedicula, on the other hand, even though built to be used as a permanent structure, was an appendage built onto the original internal wall only after the synagogue building had been constructed.

The most striking feature of synagogue architecture is the fundamental uniformity of design among synagogue structures. Differences occur, however, when certain structural features have to be adapted to liturgical requirements: to the changes, for example, in form of the Torah shrine (aedicula, niche, and apse) or to the development of the monumental facade in Galilean and Golan synagogues. Generally, the Jews tended to use a spacious hall to serve the congregation for reading the Torah and for prayer, but added the specific features of Torah shrine, benches, and gallery to suit their particular needs. Nevertheless, a definite originality of design can be distinguished in the characteristic triple facade of the building, and in the ornamentation infused with Jewish motifs and symbols (see below).

Scholarly opinion differs concerning the origin of the synagogue building plan and its sources of inspiration, such as the Hellenistic basilica, pagan triclinium, or other public structures. It appears most likely that synagogue structures were a synthesis and accumulation of a variety of plans and architectural features which were themselves influenced by traditional customs as well as by contemporary vogues, together with the Jewish congregation's social and religious needs. The rich ornamentation of the facade, walls, floors, and other areas of the synagogue was influenced by contemporary architectural styles in secular and religious buildings in both Israel and Syria. A combination of all these elements resulted in a house of worship functionally planned and lavishly decorated by the Jewish congregation. Utilizing previously constituted tenets within their own tradition, the Jews also adapted various elements of architecture and art from their neighbors. In this way, they succeeded in creating aesthetic and monumental structures.

Synagogues were not built according to a stereotyped plan, nor were they designed according to fixed custom or law. Synagogue building plans can be classified in two distinct categories: (1) those where the longitudinal stone structure is columnated, has benches, and is characterized by a richly decorated stone facade (distinctive of the Galilean and Golan synagogues); and (2) those where the broadhouse or "basilical" type of building is characterized by an axial court and narthex in front of the prayer hall, which obviates the need for a decorated facade. Buildings of this latter type were usually constructed of concrete, and constitute most synagogues found in Palestine.

Furthermore, several features encountered in most of the excavated and surveyed synagogues direct attention to an originality and individuality in their plans. These features include the Torah shrine, the triple portal, and the gallery, as well as various methods of ornamentation of the facade, interior, and floors. The highly ornamented facade exterior, characteristic of the Galilean and Golan synagogues, is an additional original synagogue structural feature.

Differences in plans among contemporary synagogues are usually due to regional and local traditions and local priorities as well as fashion. Changes in synagogue designs probably came about as a result of changes in theological concepts. Whereas Galilean synagogues indicate a preference for entrances and Torah shrines both on the same, Jerusalem-oriented wall, in other localities the Torah shrine is on the Jerusalem-oriented wall with the entrance on another.

2. Art. In contrast to Second Temple–period art which was aniconic and devoid of any figurative designs, a major change occurred at the end of the 2d century and even more so during the 3d century when representational art began to flourish. It was at this time that the barriers within which Judaism protected itself against foreign influences were being shattered. During this period the Jews acquired some of the customs and decorative elements from surrounding cultures; despite the traditional prohibition of such art contained in the Second Commandment (Exod 20:4–5; Deut 5:8–9), Jews began to develop their own figurative and representational art, using pagan motifs, figures, and animals, both for synogogal and for funerary art.

Symbolic and figurative art became possible for several reasons. First, the attitude of the rabbis became more tolerant. Such changes, reflected in Talmudic literature, were the result of political, economic, and social circumstances (Urbach 1959). Second, the influence of the surrounding cultures, from which certain pagan and mythological motifs were taken, became much stronger. Third, Jewish literature, legends, and Midrashim began to influence artistic traditions.

Judaism had no tradition of figurative art, and consequently the Jews were influenced by Hellenistic figurative art, using contemporary pattern books as well as creating their own. The Jewish attitude that developed with respect to art was basically to regard it as decorative—something to add beauty and ornamentation to buildings. Even mythological scenes found their way into Jewish buildings (such as the House of Leontis) as did many other pagan motifs (e.g., funerary art of Beth Shearim and synagogal architectural decoration and pavements). Jews of this period were unafraid of idolatry, and indeed felt that they were allowed to depict religious subjects. Judaism seems to have been indifferent to pictures and did not ascribe to them any sanctity. Therefore, for example, there was no reason to prevent the depiction of representations on pavements which were trodden upon; furthermore, walking upon pavements with such depictions insured that no sanctity or sacred quality would be attached to the scenes. Such a depiction was not considered to be a "graven image" such as those prohibited by the law. This might have been the reason why even pagan elements such as the zodiac were used. Judaism instead attached much more importance to the written word; this may be inferred from the iconoclastic destruction of the Naʿaran synagogue pavement, in which the letters, however, were preserved, or from the synagogues at Rehov and En Gedi, where floors paved with long inscriptions were left untouched.

a. Jewish Symbols. Specific Jewish symbols, such as the menorah, the Ark, and the ritual objects are attested in both synagogal and funerary art. These symbols express profound and significant values distinctly associated with Judaism, and thus were used frequently throughout Late Antiquity by Jews not only within Israel but also in the Diaspora, where they held a prominent place in the repertoire of Jewish art. These chosen religious symbols were derived from the Temple rites and ceremonies, which is why only a few symbols were actually used and why the repertoire is so limited.

Many other symbols and images were taken from the contemporary Hellenistic-Roman world; forms were borrowed but divested of their original meaning. Even if the form of the pagan motif was appropriated it would be wrong to assume that its symbolic value was also transferred. On the contrary, a symbol has a certain value which is applicable only within its context; it loses that significance and value when transplanted into another cultural context.

The real threat to Judaism's survival from this time on was from Christianity, which developed out of Judaism and had religious and cultural affinities with it. This challenge to Judaism's independence was even stronger from the 4th century on, when Christianity became the official religion of the Roman Empire. It was this time especially that the Jews needed to assert their own identity and therefore turned to certain symbolic expressions. They chose specific symbols which the Jewish communities as well as individuals felt expressed their distinctive faith, and could represent religious ideas with which they could identify.

An interesting example of the way in which a sign developed into a symbol may be seen in the case of the menorah. The menorah was probably a professional sign of the priests during the Second Temple period, signifying their duty and office, as well the sacred Temple vessel, along with the Table. Only after the destruction of the Temple did the menorah image change from a limited and specific official emblem into a more universal symbol of general but profound connotation, thus becoming the principal symbol of Judaism itself.

The major Jewish symbols were objects such as the menorah, the Ark, the ritual utensils, and the conch shell. The motifs and emblems in Jewish art borrowed from the pagan world were used without their original meaning, and for their decorative effect only, or were given a different significance in Jewish art (such as the zodiac, which now served as a calendar, and lions, which now signified the guarding of the Jewish symbols such as the menorah and the Ark). Jews carefully selected motifs and iconography of a symbolic character and depicted them in their synagogal and funerary art.

Due to extensive synagogue excavations as well as historical research, knowledge and evidence are now much more extensive than before. It seems reasonable to infer that an Ark of the Scrolls (in the shape of a wooden chest) stood inside the architectural structure of the Torah shrine in the synagogue building. Representations of the Ark in Jewish art confirm that in the synagogues of Late Antiquity a wooden Ark of the Scrolls stood inside the Torah shrine, regardless of its form (aedicula, niche, or apse). Nevertheless the Ark was also part of the symbolic repertoire of Jewish art: it represented much deeper connotations, being an integral part of the focal point of Jewish worship, the Torah. It also symbolized the place of prayer and of the Scriptures and their study in the destroyed Temple. Renditions of the Ark are encountered on tomb walls and doors, and on lamps found outside a synagogue context. On mosaic floors the Torah shrine is commonly depicted with two menoroth flanking it; this probably represents the actual positioning of the Torah shrine and menoroth in their prominent place on display in the synagogue building (see Fig. ART.38).

Depictions of a menorah flanked by ritual objects, or of the more elaborate Torah Shrine flanked by menoroth and ritual objects, came to symbolize participation in the annual pilgrimages, the Feast of the Tabernacles (the most important annual festival), and, by association, the Temple and its eventual rebuilding.

b. Figurative Art. The repertoire of Jewish figurative art included themes such as biblical stories, mythological designs, and motifs of animals and human figures which also occur in Jewish poetry. The significance of these symbolic and iconographic themes lies in its contrast with the contemporaneous aniconic Christian art; these artistic themes thus became a means of emphasizing the difference between the Jewish and Christian arts.

(1) Biblical Scenes. Biblical themes on synagogue mosaics were selected from a relatively small number of familiar biblical stories: the Sacrifice of Isaac, Noah's Ark, Daniel in the Lions' Den, the Twelve Tribes, and King David. Noteworthy is the recurrence of biblical scenes in more than one synagogue mosaic pavement within Palestine and on mosaics and frescoes in the Diaspora: *The Offering of Isaac* at Beth ›Alpha (see Fig. ART.39) and Dura Europos; *Noah's Ark* at Gerassa and Misis-Mopsuestia in Cilicia; *Daniel in the Lions' Den* at Na‹aran and Susiya; and *David* (= Orpheus) at Gaza and Dura Europos, and with Goliath's weapons at Marous. They were depicted in simple narratives, although some of the scenes as a whole may have had symbolic meanings. The scenes had in common the illustration of the theme of salvation and were associated with prayers offered in time of drought. The choice of themes was derived from the religiocultural climate of the period and meant to be a reminder of

and reference to traditional historical events; there was no intention of using these themes for symbolic or didactic purposes, as suggested by some scholars (Goodenough 1953, 1: 253 ff.). However, the style, form, and artistic depiction on each of these floors is completely different, and each scene may be traced back to a distinct influence or source. The biblical scenes found so far do not seem to have a common denominator as regards style or origins. However, some similarity does exist in the arrangement of connecting panels and subject matter found both at Beth ›Alpha and Na‹aran, suggesting a common source of social affinities.

(2) The Zodiac Panel. Four of the ancient synagogues discovered so far in Israel, ranging in date from the 4th to 6th centuries, contain mosaics showing the zodiac cycle: Ḥammath Tiberias, Beth ›Alpha, Ḥuseifa, Na‹aran. A fifth synagogue, that of Susiya near Hebron, at one time also contained a zodiac mosaic floor, but it was later changed into a geometric pattern. The mosaic at the ‹En Gedi synagogue yielded an inscription which includes the names of the zodiac signs followed by the names of the corresponding Jewish months.

It is highly characteristic of Jewish art that a pagan subject (in this case the zodiac) should be adapted to express a Jewish idea (such as an annual calendar). In the Roman world zodiac signs are of solely cosmic and astronomical significance, whereas in Christian, as in Roman, art, the calendar is represented by the labors of the months. Jewish art preferred an abstract and symbolic zodiac, rather than the naturalistic representation of human activity depicted on the Christian examples, in order to assure the people of the religious nature of the calendar. The fact that the zodiac was used frequently makes it clear that the Jewish community was not interested merely in a strictly decorative design for its floors. The fundamentally pagan zodiac cycle came to serve the Jewish community as a popular, symbolic calendar, and was employed as a significant framework for the annual synagogue rituals.

c. Artistic Motifs. Popular and common motifs in Jewish art indicate a persistent preference for particular themes in Jewish ornamentation. Sources for the motifs used in Jewish art include (1) tradition and the continuation of popular motifs deriving from Jewish art of the Second Temple period; (2) selected decorative patterns and motifs taken from contemporary (Greco-Roman, Syrian, and Nabatean) art, but now devoid of their symbolic context and significance; (3) chosen motifs from pattern books; and (4) motifs of symbols significant for Judaism. A motif consists either of a combination of several antithetic or heraldic elements such as lions flanking a menorah or Nikae flanking a wreath, or of a single image or object such as a rosette. The motifs include: flora and plant ornaments, geometric motifs, fauna and animal motifs, human figures, mythological motifs, and genre motifs.

Definite tendencies are revealed in the persistent selection of heraldic and antithetic symmetrical designs, such as lions, eagles, bulls, Nikae, peacocks, birds, horned animals, dolphins, and rosettes, which are depicted on sarcophagi, synagogue lintels, friezes, and mosaic floors. A common source for the motifs in Jewish art, most probably a pattern book, is indicated by the stylization of pose and posture as well as the patterning when representing animals, plants, and other ornaments; it is less likely that such motifs were copied directly from nature.

C. Conclusions

The strictly aniconic and nonsymbolic art characterizing the Second Temple period was the outcome of Judaism's struggle against paganism and idolatry. By the rigid observance of the prohibition against animate images, the Jews retained their own identity and distinctiveness.

This quality of the art of the Second Temple period completely disappeared during the period of Late Antiquity. In Late Antiquity, art and architecture were influenced by political and social changes in Palestine, most particularly by the destruction of the Jerusalem Temple and the removal of the center of Jewish life to Galilee. The prevailing architectural structure was now the synagogue, which replaced the Temple as the center of Jewish religious, national, and social life. In addition, the decline of paganism and the rise and expansion of Christianity caused a change in the Jewish attitude toward its own art; it now expressed its ornamentation and decorative architecture by figurative and symbolic means. With the destruction of the Temple, the need for a concrete visual image became strongly felt. Thus, only during this period do the Temple implements take on a symbolic significance in synagogal and funerary art.

Jewish art is an example of an art lacking figurative tradition, and having a weakly developed visual sense and an environment with strong external cultural influences. It is based on the ability and skill with which the artists related to the needs and requirements of their patrons, whose prerequisites were based mainly on decorative demands. A limited selection of symbols and subjects were chosen by the Jewish community and by its donors, who made their choice from available pattern books. Certain original aspects of ancient Jewish art which continually occur could be explained as being the result of the specific needs of the Jewish community, of its traditions, and of artists' innovations.

Jewish art was essentially a decorative art with both ornamental and iconographic functions. It was an art which consisted of an indigenous local tradition, with at the same time appropriations from the surrounding Greco-Roman and Christian cultures; it possessed an oriental style, and was characterized by the use of specific symbols, motifs, and iconography. However, despite those elements borrowed from neighboring cultures, Jewish art retained within it the fundamental beliefs, customs, and traditions of the Jewish people.

EARLY CHRISTIAN ART

While some elements of early Christian art have always been available for observation, our present knowledge depends on the advent of archaeology as a scientific discipline. Early Christian archaeology has been closely, though not exclusively, attached to the excavation of the catacombs in Rome. It was there that Giuseppe Marchi (1795–1860) projected a series of studies which would encompass inscriptions, architecture, pictures, and sculptures. The expedition of this gigantic task fell on the able shoulders of Giovanni B. de Rossi (1822–94), then secretary of the Vatican Library. From his efforts sprung a school of collecting, organizing, and interpreting—a school which produced many journals and dictionaries (e.g., *DACL* and the more recent *Enciclopedia cattolica*). The school at Rome tended to interpret early Christian art in light of concerns found in contemporaneous patristic literature, or in terms of later dogmatic considerations.

There were detractors from this position, but not until about 1930 did another school of interpretation arise. Scholars like Hans Lietzmann, Franz Joseph Dölger, Theodor Klauser, and Erich Dinkler formed a group that interpreted early Christian art in light of the culture of the Mediterranean world. This more contextual approach has inspired a prodigious number of studies and is best represented by the *RAC* and the serial *JAC*.

_____

A. Stages

The first art of the Christians bore little resemblance to Jewish art as we know it. Though we can note similarities in style and in relationship to the Hellenistic environment, there is little correspondence in content. The art of the floor of the synagogue at Beth ›Alpha, for example, or the front wall of the synagogue of Dura-Europos reflects either the influence of non-Jewish artisans (such as the use of the zodiac) or an interest in illustrating Jewish practices and episodes from the Hebrew Bible. See EARLY JEWISH ART AND ARCHITECTURE, above. Similar concerns do not appear in the earliest Christian art.

For the first 150 years of the church there was no type of Christian pictorial art. As the Christian faith interacted with Hellenistic culture it slowly developed, independent of Judaism, its own symbol system and eventually pictorial art itself. If there were a Christian art it now lies indistinguishable from contemporary Greco-Roman materials. The first art consisted of symbols derived primarily from the Hellenistic social matrix. About the turn of the 2d century Clement approved certain of these key Christian symbols:

> Let our seals be the dove, or the fish, or a ship sailing before a fair wind, or the lyre for music, which seal Polycrates used, or a ship's anchor, which Seleucus carved on his device, and if there be a fisherman, he will recall an apostle and children drawn from the water. (*paed.* 3,11)

All of the symbols mentioned by Clement can be found at the earliest stages of Christian art. Near the end of the 2d century, about 180 C.E., pictorial representations began to appear which could be identified as Christian. The themes of these representations derived from Hellenistic culture, often utilizing the earliest symbols, though the context often reflected a biblical story or a liturgical practice. Christian pictures appeared simultaneously as plastic carvings on sarcophagi and as frescoes in catacombs and house churches. Though most of the early Christian pictorial representations were utilized in Christian contexts, they obviously addressed those formed by the contemporary Hellenistic culture. Eventually, as the culture became more Christian, and as Christianity was recognized as a legitimate faith expression, Christian art took on more of an illustrative and pedagogical role. For the sake of epochal clarity we speak of that change as the accession of Constantine in 313 C.E., though the time of the Roman Bishop Damasus (366–84) better represents the beginning of Christian orthodoxy. Any discussion of early Christian art would note the changes which might occur through these historical stages.

B. Sources

In order to distinguish stages in early Christian art it becomes necessary to determine what elements preceded the Constantinian era. For such a determination accuracy in dating is preferable to completeness.

A narrow list of sources for 3d-century *frescoes* includes the baptistry at Dura-Europos, the sacrament chapels at St. Callixtus (Rome), the double chamber of the Lucina Area in St. Callixtus, the Flavian Gallery in the Domitilla catacomb (Rome), the Capella Greca in the Priscilla catacomb (Rome), and the hypogea in the catacomb of St. Gennaro (Naples).

There are also numerous early *plastic scenes on sarcophagi:* one found in the Kaisar Friedrich Museum, Berlin; the Sta. Maria Antiqua sarcophagus, Rome (see Fig. ART.40); Museo Pio cristiano 119, the Vatican; Ny Carlsberg 832, Copenhagen; the Jonah Sarcophagus in the British Museum, London; the Sarcophagus of Hertofile in the Thermal Museum, Rome; Museo Pio cristiano 236, Julia Juliane, the Vatican; the Noah sarcophagus in the Rheinisches Landesmuseum, Trier; the Jonah-Sarkophag, Prinz-Paul-Museum-Garten, Belgrade; le Mas d'Aire Sarcophagus in l'eglise Sainte Quitterie du Mas, Aire-sur-l'Adour, France (see Fig. ART.41); the Albana sarcophagus, Quirinius-Kappelle, Friedhof St. Matthias, Trier. In addition to these complete sarcophagi, there are a number of fragments in Rome and elsewhere throughout the ancient Roman Empire. Some pieces, found in the provinces, though 4th-century pieces actually parallel Roman Christianity of the 3d century (e.g., the remarkable collection found in the Musée d'Art Chretien in Arles, France).

There are no known certain *sculptures* which predate Constantine. The remarkable Jonah statues (Jonah Swallowed, Jonah Cast Up, Jonah at Rest, and Jonah as an Orante) as well as the Good Shepherd, now lodged in the Cleveland Museum of Art, appear early in many respects but cannot be accurately dated. The *mosaics* of Mausoleum M in the Vatican necropolis are the only certain 3d-century Christian mosaics, though one can hardly ignore the floor on the N hall of the cathedral at Aquileia. Yet, little can be learned from its animal scenes. The S floor at Aquileia, with its Jonah and Good Shepherd, could be considered borderline 3d century.

C. Major Symbols

As in any culture the first Christian symbols not only identify the developing faith, but serve as an artistic resolution for what otherwise are significant conflicts or tensions for the community. Symbols are to be read in terms of such temporal conflicts rather than necessarily as dogmatic theological signs. This is especially evident in several of the earliest nautical symbols which reflect a conflict with the environment.

1. The Anchor. As a simple symbol the anchor appeared frequently on catacomb *tituli* (marble grave markers) of the 3d century. See Fig. ART.42. By the 4th century it had almost totally disappeared. The anchor had no significant prior use as a religious symbol. Since any significance in Hellenistic culture was lacking, it has been suggested that the anchor represents a hidden cross, a disguise no longer needed when Christianity went public. However, in 3d-century popular Christianity there were few, if any, symbols of efficacious suffering and dying. As a popular symbol the cross was not hidden; it simply was not utilized. As a Christian metaphor the anchor occurs only once in the NT (Heb 6:19, as a symbol of hope). Since early Christian symbols or scenes seldom reflect any biblical meaning, there is no reason to assign the sense of hope to the anchor. Along with the other nautical symbols mentioned by Clement, the anchor reflects Christian conflict with the environment (implied by water). In the faith community the believer finds security.

2. The Boat. Like the anchor, the boat expresses security in an alien environment; but unlike the anchor it had a prior history. In some ancient religions the boat bore the dead to the other world, while in the Bible boats normally protected from threatening waters—e.g., the ark (Gen 6:19); Jonah's boat (Jonah 1:4); and the stilling of the storm (Mark 6:45–52). While the boats of early Christianity are not yet the salvific Church of the 4th century (Cyprian, *de catholicae ecclesiae unitate,* 6), they do offer deliverance to a threatened people.

3. The Fish. Though one of the most frequently used symbols of the early church, nevertheless the fish defies accurate analysis. Like the other nautical symbols the fish signifies secure life in conflictive situations. It is found with another nautical symbol, the anchor. One famous stela, that of Licinia (Museo Nazionale, Rome) contains a fish on each side of an anchor. An inscription reads "fish of the living" (Gk *ichthus zōntōn*).

Some suppose this inscription, and the fish itself, refers to the use of Gk *ichthus* ("fish") as an acrostic meaning "Jesus Christ, God's Son, Savior." While no other symbols bear such a dogmatic meaning, and many uses of the fish symbol cannot refer to the Jesus acrostic, still the identification of the fish with Jesus cannot be denied. Tertullian wrote: "But we little fish, according to our *ichthun* Jesus Christ, are born in the water, nor were we saved in any other manner than by remaining in the water" (*De Bapt.* 1).

While Tertullian knew the social context of the fish (the newly baptized Christian remains in the water), he also knew the acrostic reference of "fish" to Jesus.

Apart from the acrostic, Jesus can be identified with the fish of the agape meal. Every known representation of the agape meal prior to Constantine shows fish, bread, and wine. While the meal may be based on the NT eucharistic passage of the Feeding of the Five Thousand (Mark 6:30–44), other inscriptional material identifies the fish meal with "the Fish from the Fountain, the very great, the pure, which the holy virgin seized" (Epitaph of Abercius). Fourth-century literary material can speak of the eucharist as the Christ feeding the people with 5 loaves and 2 fishes, and Christ is himself that bread and that fish (Paulinus of Nola, *epist.* 13, 11).

The fish symbol then refers both to the social implication of entering the faith community (baptism into a community of security) and a major means of maintaining membership in that community (the fish of the eucharist and/or agape). By the end of the 2d century this powerful symbol had also started to take on the dogmatic nature of the famous acrostic.

4. The Bread. Like the fish, the symbol of bread refers primarily to liturgical practices. It always appears in meal scenes with fish and wine (note the well-known combination symbol from the crypt of Lucina in S. Callixtus, Rome). Normally the artist portrayed bread as a small round object, often placed in a basket. In the eucharistic meal scenes there are 5 or 7 such baskets (see Mark 6:30–44 and 8:1–10). Such loaves or baskets of bread can be found in the symbol systems of many religions (Goodenough 1953–68; 5: 62–95). For most unofficial religions of the Mediterranean area, bread symbolized the fellowship of a religious meal or fellowship with the extended family and community through meals for the dead.

5. The Vase. While the vase does not appear as a eucharistic calix (or chalice) until the peace of Constantine, it does appear fairly often as a symbol in early Christian art. It cannot be the container from which the eucharist/agape wine was drunk, which was a small glass beaker. The vase occurs often with a dove, the primary symbol of peace for early Christians. Given that meaning and its frequency in both Christian and non-Christian burial areas, we can suppose it represents the unity of the extended family or faith community. As such it symbolically held the wine for the nearly universal meal for the dead. After Constantine its meaning and function shifted to the newly formed orthodox eucharist, where it was now portrayed as a calix.

6. The Vine and Grapes. The artistically ubiquitous vine brought a rich history of meaning. In Judaism and early Christianity it signified the source of life, especially the life of the faith community (Isa 5:1–7; John 15:1–11), and was prominent in Hellenistic religions (e.g., the cult of Dionysus'. The most prominent use of the vine in early Christianity occurs in Mausoleum M in the necropolis of St. Peter's. A green vine surrounds a gold sky with Christ Helios driving across it. See Fig. ART.47.

Grapes sometimes occur with the vine, though more often with a dove. The dove signifies the peace of the faith community, achieved by eating the grapes (drinking the wine) of the community meal. As with the fish and bread, eventually the grape was identified with Christ, a grape (wine as blood) which suffered for us (Clem. *paed.* 2,2). The grape survived the peace of Constantine because it took on the Christological, cultic meaning.

7. The Lamb. In most instances the lamb of early Christianity appears in bucolic scenes, either with the Good Shepherd or an Orpheus-like figure. See Fig. ART.40. While it would be tempting to identify the lamb with such biblical images as the innocent ewe lamb of Nathan's parable (2 Sam 12:1–6), it is more probable that pastoral scenes reflect the hospitality of the early church. Like the sheep of John 10:1–8, the lamb symbolizes the religious actor enjoying the presence of (and community associated with) the Good

Shepherd. That sense of community can be found as late as in the apse of S. Apollinare in Classe, Ravenna, though there restricted to the community of the apostles.

After the peace of Constantine the lamb became a major symbol of the crucified Christ (Gallia Placida, Ravenna). The celebrative Passover lamb, as Jesus (1 Cor 5:7 and John 1:29), has become the sacrificial *agnus dei* (Rev 5:6).

8. The Dove. This symbol has a rich and extensive history. In other cultures it can refer to fertility, sexuality, love, and religious sentiments. In early Christianity the dove, as a symbol, appears often with the olive branch, a symbol of peace (see Figs. ART.42 and ART.43), and frequently with the inscription *IN PACE* (see Table 1, from Bruun 1963).

Table 1

	WITHOUT *IN PACE*	WITH *IN PACE*
Dove alone	45	37
Dove with olive branch or tree	21	30
Dove with Christogram	17	24
Dove with other symbols	16	15

Prior to Constantine (and the Christogram) the dove must have signified that peace and satisfaction deriving from faith and participation in the faith community. The dove and its counterpart, the Orante (see below), occurred often in biblical scenes of conflict. After the peace of Constantine, when social conflict had lessened, the dove referred more to peace of the soul, while the Orante eventually disappeared altogether.

9. The Olive Branch. The olive branch occurs primarily with the dove, though sometimes alone. In biblical scenes it is found almost always in Noah and the Ark, sometimes in Jonah, and sometimes in The Three Young Men in the Fiery Furnace. Its consistent placement makes fairly certain its symbolic identification with *pax*—the peace of the community in the face of conflict, as well as the peace of the *refrigerium* (meal with extended family and special religious dead).

10. The Orante. One of the two human symbols consists of a woman with upraised hands. See Figs. ART.40, ART.43, ART.44. Her head is nearly always covered with a veil and a tunic of the 3d century (*orans tunicata et velata*). She exists as a separate figure, but, more important, through the 4th century is the main figure of nearly every biblical scene, both fresco and sculpture. She is Noah in the Ark, Jonah in the Boat, Jonah Spewed Out of the Sea Monster (Fig. ART.41, right side of lid), Daniel Between the Lions (Fig. ART.41, left of center), Susannah with the Elders (Fig. ART.44), The Three Young Men in the Fiery Furnace, and sometimes Lazarus. She is the most important symbol in early Christian art.

The Orante has a long history in the Greco-Roman social matrix. Since there seems to be no major significance assigned to the biblical contexts in which the Orante is placed, it must be assumed the Orante has kept its traditional meaning, now transferred to a Christian pictorial backdrop. From examples of the Orante in public art (coins) and sepulchral art, it seems to have been associated mainly with familial piety. Given the biblical contexts used by the artists, the scenes must indicate a community (familial) victory in the midst of various conflicts (deliverance). Once the conflicts diminished during the reign of Constantine, the Orante essentially disappeared from Christian art.

11. The Good Shepherd. The second human figure is a male shepherd pictured with a member of the sheep family, normally a ram, on his shoulders. See Fig. ART.40. The symbol, a *criophorus,* has an ancient history dating as far back as 1000 B.C.E. in Near Eastern circles. A number of meanings for the symbol have been suggested. The use of the Good Shepherd in baptistries (Dura-Europos, Naples?) as well as catacombs and meeting places indicates that the shepherd bore the religious actor into the faith community (or family of the dead). For that reason the Good Shepherd has been identified as *humanitas,* in contrast to the Orante as *pietas.* One might think of it as ecclesial hospitality. After Constantine, the Good Shepherd became the most popular symbol for Christ himself.

D. Pictorial Representations

Given the sources for early Christian art as noted, we can make a comparative analysis of subjects. Despite the limited number of pre-Constantinian sources, nevertheless a numerical count of artistic subjects is possible (see Table 2). Such a count reveals some remarkable data. The Jonah story completely dominates the subject matter of early Christian art (60 percent of all subjects represented belong to it); of subjects derived from the OT, 72 percent are specifically from Jonah. The story of Jonah stresses deliverance (often Jonah appears as the Orante), and most other subjects drawn from the OT also stress deliverance: Noah in the Ark, the Sacrifice of Isaac (Isaac also as an Orante, though see Fig. ART.41, left lid of sarcophagus), Moses Striking the Rock, Jonah Cast into the Sea, Jonah and the Ketos (or Sea Monster), Jonah at Rest (see Fig. ART.40, left), Three Young Men in the Fiery Furnace, Daniel in the Lion's Den (see Fig. ART.41, left of center), Susannah and the Elders (see Fig. ART.44), and David and Goliath. Of all early Christian pictorial interpretations, 74 percent deal with deliverance and, even more striking, 94% of all subjects from the OT involve the deliverance motif. While the biblical narrative appears to have no place in this material, perhaps the crisis represented does: threat of water (social environment), threat of religious persecution, threat of starvation, threat of death, threat of oppression by the state, and the threat of legal prejudice. After the time of Constantine all of these scenes disappeared except Noah and the Ark (which remained now as a symbol of the church) and Moses Striking the Rock (shifted to Peter Striking the Rock).

Table 2

Biblical Representation	Fresco	Mosaic	II Sarc	Roman Frag	Other	Total
1. Giving Life to Eve					1	1

18. Baptism of Jesus	3		1	2		6
19. Jesus Teaching			1	1		2
20. Healing of the Paralytic	2		1			3
21. Healing of the Demon Possessed			1			1
22. Healing of the Lame				1		1
23. Healing of the Crippled				1		1
24. Multiplication of the Loaves and Fishes			1	1		2
25. Woman at the Well	2					2

26. Resurrection of Lazarus	2		2	1	5
27. Walking on the Water	1				1
28. Women at the Tomb	1				1
29. Fisherman		1	2		3
30. Woman with Flow of Blood			1		1
31. Christ Helios		1			1

Adam and Eve is the only biblical scene of any consequence which does not convey deliverance. See Fig. ART.45. For most of later Christian history the scene portrays the fall of the first man and woman, but in these earliest scenes there is no sign of sin. Instead, the scene represents the same bucolic paradise of Jonah at Rest or the Good Shepherd.

The Jonah cycle requires special consideration. There are three Jonah stories: (1) Jonah, often as an Orante, standing on a troubled boat; (2) Jonah, often as an Orante, coughed up from inside a sea monster; and finally (3) Jonah lying under a vine. See Fig. ART.40 left. In the latter scene the iconography of Jonah matches precisely the iconography of Endymion (a mythical companion of the moon goddess Selene), who is also pictured reclining in paradisiacal repose (Endymion was a favorite figure on Roman sarcophagi). The three scenes, not always seriatim, represent chapters of the book of Jonah. Yet each stands on its own. Jonah in the boat and with the sea monster are both nautical scenes in which the Orante Jonah finds deliverance. According to the Jonah narrative there is no reason for Jonah to "be delivered" while in the boat. The last scene simply combines the pastoral scene of the Good Shepherd with the well-known iconography of Endymion.

Scenes from the NT center on Jesus rather than the Orante. Though deliverance often occurs, the artists focus on the deliverer, Jesus. Normally they portrayed Jesus as a young, curly-haired, beardless, wonder-worker. The figure reminds one of contemporary Hercules iconography. Of 31 NT scenes, 12 show Jesus healing (e.g., the paralytic; see Fig. ART.41 lid, left of center) or raising from the dead (e.g., Lazarus; see Fig. ART.41, left). In these Jesus often has his hand outstretched toward the healed, although sometimes he points with a wand.

Despite the emphasis on healing, the baptism of Jesus appears more often than any other scene. Jesus appears as an older child being baptized by a bearded adult (typical iconography representation of a river God), while a dove hovers overhead. See Fig. ART.40, right. While we may have an illustration of the baptism of Jesus with the descent of the Spirit, more likely the scene reflects the baptismal practice of the 3d-century church: an adolescent is baptized into the peace (dove) of the faith community. If this reflects baptism, then the Multiplication of the Loaves and Fishes signifies the agape meal (also a rather frequent scene) with its inevitable fish and baskets of bread. The Multiplication scene might refer to deliverance for the hungry, but more likely it associates the meals of the early church with the popular feeding of the five thousand (recounted 4 times in the Synoptics). The meal could be the eucharist, the Love Feast (*agape*), or the meal with the dead (*refrigerium*).

Most of the NT scenes relate iconographically to the Hellenistic social matrix. The scene of the wise men portrays representatives of foreign powers giving a crown of gold (*aurum coronarium*) to the emperor. See Fig. ART.46. In the birth scene, Mary and Jesus are represented iconographically similar to Isis and the child Horus.

On Roman sarcophagi or in mausoleums the deceased (male) often was portrayed reading to a younger person. Transferred to Christian sarcophagi (see Fig. ART.40) the scene has been taken by some as the *traditio legis*, the passing of the law the next generation (Jesus to Peter). If the teaching figure is indeed Jesus, the iconography fits better with that of wandering philosophers. In addition to the wonder-worker Jesus there was in the earliest art a *Christus philosophicus* who taught the faith community (sarcophagus of Velletri). Only after the peace of Constantine did that shift to Jesus teaching only the apostles (based on scenes of the emperor with the officers of the empire; see the arch of Constantine and then eventually the Jesus of the Byzantine apses, the *maiestas domini.*

A beautiful mosaic of Christ Helios was discovered in mausoleum M of the necropolis under St. Peter's. See Fig. ART.47. The scene shows a Christ figure, with sun rays streaming from his head, crossing a golden sky in a biga. Earlier some Jewish artists had portrayed the ascension of Elijah as a contrast to the intensely popular Sol Invictus (synagogue of Dura-Europos). Christians followed the example. While the carving on the wooden doors of 5th-century S. Sabina shows the same scene, the artist of Mausoleum M took an extra step: Christ, in the iconography of Elijah, became the sun god himself.

E. Conclusion

One critical scene (the crucifixion of Jesus) and its accompanying symbol (the cross) did not occur in early Christian art. Probably the first scene of Jesus suffering occurs on the Vatican's Passion sarcophagus, carved ca. mid-4th century. About the same time one artist transformed the Constantinian *chi-rho* to a cross, the *crux immissa.* This may be the first clear use of the cross as a symbol, if we discount as a prank the so-called Palatine cross, a donkey on a cross. See Fig. ART.48.

In the social matrix from which Christianity arose, the major concerns were deliverance, security, kinship, and healing. The symbol of suffering and criminal death did not appeal to an oppressed people. After the peace of Constantine the passion narrative and the cross could symbolize the redemptive use of power. Thus, attempts to find hidden crosses in anchors, ship masts, palm trees, and cryptic language miss this important point.

GRAYDON F. SNYDER

ARTAPANUS. A Jewish author who flourished in Egypt prior to the mid-1st century B.C.E. and wrote a historical romance entitled *On the Jews* (perhaps *Judaica*). Three short fragments of the work survive, treating respectively Abraham, Joseph, and Moses, primarily as they relate to Egypt. The fragments display a remarkable level of syncretism, reflected by the manner and extent to which popular religious and cultural traditions from Egypt and the Graeco-Roman world are interwoven into the biblical story.

No verbatim excerpts from Artapanus' work survive. Instead, portions were summarized by the pagan author Alexander Polyhistor, who flourished in Rome in the mid-1st century B.C.E., and these summaries were later quoted directly in Eusebius *Praep. Evang.* 9.18, 23, 27. Prior to the time of Eusebius (ca. 260–340 C.E.), a brief portion of the third fragment concerning Moses was quoted by Clement of Alexandria (ca. 150–215 C.E.) in *Strom.* 1.23.154.2–3.

The first fragment (*Praep. Evang.* 9.18.1), consisting of only a few lines, describes Abraham's migration to Egypt and his subsequent return to Syria twenty years later, noting especially his role in providing astrological instruction to Pharaoh.

A somewhat longer second fragment (*Praep. Evang.* 9.23.1–4) depicts the circumstances of Joseph's coming to Egypt and his subsequent rise to power. The biblical account is embellished considerably as Joseph is made responsible for impressive land reforms and the discovery of measures, both of which earned him high esteem among the Egyptians. Also mentioned is his marriage to the Egyptian Asenath, daughter of a priest of Heliopolis.

A considerably longer third fragment (*Praep. Evang.* 9.27.1–37) focuses on Moses, covering the period from his birth until the arrival of the Israelites in the wilderness. It follows the storyline of Exodus but includes many nonbiblical features which give the story a distinctively Egyptian cast. Like Abraham and

Joseph, Artapanus' Moses emerges as a cultural benefactor of the Egyptians, but his list of achievements exceeds that of his biblical predecessors. Besides being a brilliant military strategist who protects Egypt from the Ethiopians (also reported in Josephus *Ant* 2.10.1–2 §§ 238–53), he embodies the Hellenistic ideal of scientific discovery as the inventor of ships, military weapons, and other implements useful to Egyptian life. Perhaps most important, he emerges as the originator of philosophy. His role as renowned sage is underscored in the claim that he became the teacher of Orpheus and came to be identified with the god Hermes. Artapanus also credits him with the efficient organization and administration of the state, as well as the founding and organizing of Egyptian religious cults, a role in which the Egyptians came to revere him as divine. Another nonbiblical feature is an encounter between Moses and Pharaoh in which Pharaoh died for blaspheming the name of God but was miraculously restored to life by Moses. Artapanus also modifies the biblical account of the plagues and omits reference to the Passover. He also reports local traditions explaining how the Israelites crossed the Red Sea.

What is known about the author is derived largely from the surviving fragments themselves. Other than the above mentioned passages, he is referred to nowhere else. His unusual name seems to be of Persian origin, and this may suggest a mixed descent. Though earlier scholarship found it difficult to conceive of a Jewish author capable of such a high level of syncretism (and for this reason viewed him either as non-Jewish or as an apostate Jew), recent scholarship is much more certain of his Jewish identity, primarily because of the subject matter of the fragments. His main concern is to relate sympathetically the biblical story, which he knows from the LXX. He not only portrays Abraham, Joseph, and Moses in heroic terms, enhancing their stature as worthy religious leaders and cultural benefactors of Egypt, but also appears to be responding to negative criticisms. Thus he both promotes and defends the biblical story. His ardent zeal for his own religious tradition typifies the popular romance literature during the Hellenistic period: concern to establish legitimacy for one's own cultural tradition *vis-à-vis* other national traditions by presenting an attractive, interesting account of the heroes of that tradition based on one's own sacred books.

As to his date, it is only known for certain that he preceded Alexander Polyhistor (ca. 105–30 B.C.E.), who summarized his work (see Freudenthal 1875: 143–74, 215–18). His use of the LXX would place him after the mid-3d century B.C.E., when a Greek translation of the Hebrew Bible probably began to become available. If he is responding to anti-Jewish accounts of the Exodus, such as those of Manetho (ca. 280 B.C.E.), as seems likely, this would also establish an earlier reference point for dating. Within this 200-year range, 250–50 B.C.E., other dates have been suggested based on specific evidence. References in the fragments to the worship of Isis and allusions to mystery religions have been correlated with efforts by Ptolemy IV Philopator (221–205 B.C.E.) to promote the worship of Dionysus among Jews in Egypt (cf. *3 Macc.* 2:29–30). The reference to the conscription of Egyptian farmers (Frg. 3.7) may also point to the time of Philopator, who initiated the practice prior to the battle of Raphia (217 B.C.E.). If the mention of a Jewish temple built in Heliopolis (Frg. 2.4) is a reference to the temple at Leontopolis (established by Onias IV ca. 167–164 B.C.E.), this would suggest a time during the reign of Ptolemy VI Philometor (180–145 B.C.E.). Another clue to dating may be provided by Artapanus' mention of elephantiasis as the cause of the Egyptian king's death (Frg. 3.20). Although Plutarch (*Mor.* 731A) reports that the disease was first identified in the 1st century B.C.E., it appears to have been known and described in Egypt by Bolus of Mendes as early as the 3d century B.C.E. The strong apologetic tone of the fragments would suggest a period from the end of the 3d century to the middle of the 2d century B.C.E. The level of confidence they reflect would point to a period of relative stability reminiscent of the reign of Ptolemy VI Philometor.

As for the provenance, the thorough Egyptian cast of the fragments and the explicit preoccupation with Egyptian names and places makes an Egyptian setting almost certain. Whether the setting was specifically Alexandrian is not as certain, primarily because Artapanus reflects awareness of a broader range of native Egyptian traditions, and in certain respects differs conspicuously both in outlook and literary sophistication from other Jewish literature generally associated with Alexandria.

The Artapanus fragments are generally grouped with Hellenistic Jewish historical writings, but they are "history" only in the minimal sense that they rehearse the biblical story. Their nationalistic flavor, their

conspicuous tendency to glorify ancestral heroes, and the incorporation of a wide range of popular traditions suggests that Artapanus' work belonged to the genre of popular, historical-romance literature.

While the Artapanus fragments provide some useful information relating to Egypt and Egyptian Judaism, their value does not depend on whether what they report is historically accurate, but rather on what they reveal about the historical situation out of which they arose and to which they attest. Specifically, Artapanus becomes a valuable resource for understanding the historical reality of Greek-speaking Judaism in an Egyptian setting perhaps as early as mid-3d century B.C.E. Scholars have always been intrigued by the extent of syncretism reflected in the fragments, even though their assessment of Artapanus' motives and ultimate loyalties have differed widely. Because of his portraits of Joseph and Moses in particular, he has figured prominently in the "divine man" debate. Scholars continue to debate what it meant for a Jewish author during the Hellenistic period to elevate Moses to near-divine status and offer such a positive description of Egyptian religion. All such assessments, however, must reckon with the question of genre in determining appropriate criteria for judging Artapanus' literary achievement. The widely acknowledged apologetic dimension in the Artapanus fragments makes them a valuable resource for understanding the social dynamics of Jewish responses to anti-Jewish polemics in the Hellenistic period. To the extent that the fragments reflect Artapanus' attempt to clarify misconceptions about Judaism and thereby gain cultural respectability, his work belongs within the tradition of "competitive historiography" that became well developed in the Hellenistic age (Collins, *OTP* 2:891–92). Yet, however outwardly directed his work might have been, it doubtless functioned to reinforce the faith and confidence of his fellow Jews.

CARL R. HOLLADAY

ARTAXERXES (PERSON) [Aram ʾ*artaḥšaśtā*ʾ (אַרְתַּחְשַׁשְׂתָּא); Gk *Artaxérxēs* (Ἀρταξέρξης)].

Persian king in whose reign the missions of Ezra (Ezra 7:1) and Nehemiah (Neh 2:1) took place. There were three Persian kings having this name, yet the biblical text neither specifies nor distinguishes among them: Artaxerxes I (Longimanus) son and successor of Xerxes I, ruled 465–425 B.C.E.; Artaxerxes II (Mnemon) son and successor of Darius II, ruled 404–358 B.C.E.; and Artaxerxes III (Ochus) son and successor of Artaxerxes II, ruled 359–338 B.C.E. The name may also have been assumed by Arses who ruled 338–336 B.C.E., and Bessos, who claimed the throne soon after Alexander's conquest (Cook 1983).

The name Artaxerxes appears in the books of Ezra and Nehemiah in five distinct contexts:

1. Ezra 4:7 relates that a letter was sent to Artaxerxes by BISHLAM, MITHREDATH, and TABEEL. Nothing of the contents of this correspondence is told.

2. Ezra 4:8–23, in Aramaic, reports correspondence from REHUM and SHIMSHAI to Artaxerxes; included is a copy of a letter from Persian officials notifying Artaxerxes that repatriated Jews are rebuilding Jerusalem—the wall and its foundations are specifically mentioned (Ezra 4:12–13). Also included with this report is a rescript from Artaxerxes ordering a halt to all such building in Jerusalem "until a decree is made by me" (Ezra 4:21). Olmstead (1948:313) suggested that the complaint to Artaxerxes in Ezra 4:8–23 is a result of a nationalist faction who tried to gain independence after Ezra's mission but before Nehemiah's. Others have seen the complaint of Ezra 4:8–23 as a result of Nehemiah's work on the wall. See Rowley (1955:554–57) for a discussion of these and other positions.

3. Ezra 6:14, still part of the Aramaic source, is a summary statement attributing the completion of the Temple to the Persian rulers CYRUS, DARIUS, and Artaxerxes. The anachronistic character of the

mention of Artaxerxes in the context of the building of the Temple has been a point of much discussion on the composition of the Aramaic section and of the books of Ezra and Nehemiah as a whole.

4. The mission of Ezra in the reign of Artaxerxes is introduced at Ezra 7:8; included is a rescript in Aramaic from Artaxerxes authorizing Ezra's religious and judicial duties, and instructing the treasurers of the satrapy Beyond the River to provide support to Ezra. Ezra began his mission in the "seventh year of the king" (Ezra 7:8); along with Ezra a contingency of people were allowed to emigrate to Judea "in the seventh year of Artaxerxes the king" (Ezra 7:7). If Artaxerxes I is the intended king then the mission occurred in 458 B.C.E. Herrmann (*HHI,* 309) argues that this is the view of the final editor. However, some scholars, most recently Miller and Hayes (1986), argue that Ezra's mission occurred under the authority of Artaxerxes II, that is, in 398 B.C.E. Bright *(BHI*) and Noth *(NHI*), by emending or rejecting the dates in the text, have argued that Ezra's mission occurred late in the reign of Artaxerxes I.

5. Neh 2:1 states that "in the twentieth year of King Artaxerxes" Nehemiah made his request directly to Artaxerxes to return to Jerusalem to rebuild it. Neh 5:14 identifies the inclusive dates of Nehemiah's mission in the reign of Artaxerxes "from the 20th year to the 32d year of Artaxerxes the king, 12 years." See also Neh 13:6. If Artaxerxes I is the intended ruler the 20th year would be 444 B.C.E. and the 32d year would be 427 B.C.E. Nehemiah made a return visit to Judea sometime after Artaxerxes's 32d year and remained in Judea for an unspecified time (Neh 13:6). Texts from Elephantine (*CAP* no. 30) and the Samaria Papyri (Cross 1975) have provided external evidence for identifying SANBALLAT, Nehemiah's rival, as the governor of Samaria in the reign of Artaxerxes I. Most scholars are now agreed that Nehemiah's mission occurred in the reign of Artaxerxes I.

Artaxerxes's name is rendered with 2 spellings in the MT: (1) ›*artaḥšaśtĕ*‹ in Ezra 4:8, 11, 23 and 6:14 (but note the variant ›*artaḥšaśtā*‹ in Ezra 4:7); and (2) ›*artaḥšastĕ*‹ beginning in Ezra 7:1. The 2d spelling is used to the end of Ezra and throughout the text of Nehemiah. Torrey (1910:38) suggested that the change from the Hebrew *śin* to *samek* is indicative of Artaxerxes I and Artaxerxes II respectively: the enemy of the Jews in Ezra 4 is Artaxerxes I, while the friend of the Jews in Ezra 7 and Nehemiah 2 is Artaxerxes II. Aramaic texts from Elephantine (*BMAP*, 132) spell Artaxerxes's name with the *samek.* Kraeling's papyrus 12, an Aramaic text dated to the reign of Artaxerxes II, uses the same spelling as those texts dated to Artaxerxes I (*BMAP*, 270). Other variants are involved as well which make Torrey's correlation difficult since variants occur even when the same ruler is intended (see *BMAP*, 142). Despite the difficulty of arguing that a practice in Egypt is the same as that of the redactor of Ezra and Nehemiah, Torrey's suggestion has not met with widespread acceptance.

DAVID E. SUITER

ARTEMAS (PERSON) [Gk *Artemas* (Ἀρτεμας)]. A companion of Paul in the later years of Paul's career (Tit 3:12). It is never mentioned, however, where Artemas and Paul met. The letter to Titus portrays Paul as planning to send either Artemas or Tychicus to Crete, presumably to take Titus' place temporarily as the leader of the church there. Thus freed, Titus would be able to meet Paul at Nicopolis where he had decided to spend the winter. Of the several cities named Nicopolis, most commentators judge the reference in Tit 3:12 to be Nicopolis in Epirus on the W coast of Greece. Since there is a tradition preserved in 2 Tim 3:10 that Titus went to Dalmatia, to the north of Nicopolis, it is probable that he visited Paul along the way in Nicopolis and that Artemas (or Tychicus), if Paul followed through with his plan, spent time in Crete serving the church while Titus was away.

FLORENCE MORGAN GILLMAN

ARTEMIS (DEITY). Probably the most popular of the Hellenic deities, Artemis was worshiped wherever the Greeks settled and by the Romans as Diana after she was identified with the Italian goddess of that name. Her occasional identification with the Greek moon-goddess Selene had begun by the 5th century B.C., but she did not popularly become the moon until the advent of astrology religion in the Hellenistic age. Daughter of Zeus by the Titaness Leto and twin sister of Apollo, Artemis was born either on the island of Delos, where the Horn Altar, constructed of the horns of goats sacrificed to her, became famous as one of the wonders of the ancient world, or on the nearby island Ortygia. She consistently appears among the twelve Olympians, as in the Parthenon frieze, and is prominent in Greek literature, art, and public festivals from the Homeric period on. Her name, however, is etymologically obscure and her personality multifaceted and enigmatic.

Her typical form in literature and art (see, e.g., *Od.* 6.99–109, *Hymn. Hom. Ven.* 16–20, Eur. *Hipp.;* Callim. *Dian.* 1–182) is that of the Lady of the Wilds (Agrotera), a virgin huntress, pure and inviolable (*hagne*), who ranges the woodlands and mountains amid a retinue of sportive, dancing nymphs. Youthful, lithe, and dispassionately beautiful, she is often accompanied by a deer, and the bow is her constant attribute. She could be deadly and remorseless toward those who threaten her chastity or offend her, as when she turned Actaeon into a stag and let his own hounds tear him apart because he came upon her at her bath in a mountain stream, or when she sent the Calydonian boar to ravage the lands of Oeneus who had ignored her at sacrifice, or when she slew the daughters of Niobe with her arrows—as did Apollo her sons—to avenge Niobe's disparagement of Leto. Her role in the destruction of the giant Tityus, who attempted to rape Leto, and of the giants Otus and Ephialtes, who assaulted respectively her chastity and Hera's, seems, at least to a modern, more justifiable.

Before Artemis became one of the great gods, she may have been merely a wood nymph herself; for in the Peloponnesus she bore such epithets as Limnatis (Lady of the Lake), Lygodesma (Willow-Bound), and Cedreatis (Cedarn). She may at some point in her development have exhibited theriomorphic qualities: The visual arts sometimes represent her as winged, and in her cult at Brauron, in Attica, girls in her service pretended to be bears (cf. the varying accounts of her attendant nymph Callisto, who was seduced by Zeus and then turned into a bear).

Artemis the virgin huntress paradoxically contained within her personality obvious characteristics of a mother goddess, probably acquired in Asia Minor and from the Creton goddesses Britomartis and Dictynna, with whom she was sometimes identified. She zealously protects the suckling young of all wild animals, nuturing at their birth the very creatures she will later slaughter in the hunt; see, e.g., Aesch. *Ag.* 134–143, where she is incensed with Zeus' two eagles for devouring a pregnant hare. Fertility characteristics are strikingly apparent in her cult at Ephesus in Asia Minor: The Artemis whom the Ephesian mobs proclaim as "Great" at Acts 19:23–40 is a multi-mammary grotesque. In her capacity as mother goddess, Artemis was even the protectress of human children and was often identified with Eileithyia, the goddess-proper of human childbirth.

The darker aspect of Artemis' personality is perhaps summed up and symbolized in her frequent identification with Hecate, a goddess of witchcraft and the moon who roves the night and was worshiped at the traditionally haunted-crossroad. It is an aspect alluded to in *Il.* 21.479–88, where Hera reviles Artemis for being a "lion to women" with a Zeus-given right to kill them at her pleasure, presumably at childbirth; and it is present in the myths of Actaeon, Niobe, and the Calydonian boar. Nowhere does this aspect come to the fore more starkly than: (1) at *Ag.* 104–247, when Artemis demands, and receives, the sacrifice of Agamemnon's virgin daughter Iphigenia, as simultaneously an atonement for the eagles' slaughter of the pregnant hare and a propiatory act to procure the release of the wind-bound Greek fleet from Aulis for the expedition against Troy; and (2) in Eur. *IT* when Iphigenia, saved from sacrifice at Aulis by the miraculous substitution of a hind and transported by Artemis to the land of the Taurians on the farthest shores of the Black Sea (according to the variant legend here followed), presides as priestess of Artemis over the sacrifice of all foreigners who wander to that land. There was probably a symbolic reminiscence of human sacrifice in the cultic rites of Artemis Tauropolus in Attica (a man's throat is

scratched to the point of bleeding with a sword), whither according to the *IT* (see especially 1446–1461) Orestes and Iphigenia brought the goddess' cult statue after they escaped from Taurica. The shedding of human blood was also an important component in the rites of Artemis Ortheia at Sparta; during these events, which became a tourist attraction in Roman times, youths were whipped until they bled. Similarly, human sacrifice may lie behind the holocausts of fruit and live animals in honor of Artemis Laphria at Patrae. The substitution of a hind for the sacrificial victim (see Eur. *IA* 1532–1618 for an account of this miracle) bears comparison with that of the ram for Isaac in Genesis 22.

We may, at least to a point, account for the confusing multiplicity and ambivalence in Artemis' personality by regarding her as a humanized representation of untamed nature, which appears benign and life-giving at one time or place and cruel and destructive at another. And we may risk going somewhat further by regarding her as simultaneously a representation of what the Greek male, in the collective psyche of a male-dominated society, both admired and feared in the female. But Artemis is perhaps the most difficult of the Hellenic deities to comprehend and will undoubtedly always elude full explanation.

ARTHROPODS. See ZOOLOGY.

ARUBBOTH (PLACE) [Heb *ʾărubbôt* (אֲרֻבּוֹת)]. A city mentioned only once in the Bible as the seat of Ben Hesed, governor of Solomon's 3d district (1 Kgs 4:10). The difficulty in identifying the city is a result of this singular reference, containing no specific geographic indicators. Its identification therefore requires a proper overview of the nature and character of this Solomonic district list (1 Kgs 4:7–19).

D. The History of Arubboth-Narbata

———

A. Location of Solomon's Third District

Two primary approaches have been suggested for understanding the geographic principles of the district divisions. According to the first (Alt, *KlSchr* 2: 76–89; Aharoni 1976), the districts were of 2 different types, the first being identical to the Israelite tribal territories, and the second including former Canaanite areas in the coastal plain and large valleys (the latter being defined by a listing of cities). The 3d district is defined as follows: "Ben Hesed in Arubboth, to him belonged Socoh and all the land of Hepher." According to this first approach, the fact that this district included a list of cities means that this district was formerly "Canaanite," located in the N Sharon between the Yarkon and Wadi ez-Zerqah rivers. (Consequently, in this approach the first district [the hill country of Ephraim] would have stretched far N of the tribe's original inheritance to include, during the period of the district division, the tribal territory of

Manasseh as well.) Thus, Mazar (1935) suggested locating Hepher at Tel Iphshar (M.R. 141197), and Arubboth at Tel el-Assawir (M.R. 151210), near the W opening of the ʿIron pass leading to Megiddo.

Albright (1925) in particular offered another approach, pointing out the methodological problem of identifying Arubboth and Hepher in the coastal plain. The daughters of Zelophehad (the granddaughters of Hepher, Josh 17:1–4), appear in the Samaria Ostraca as territorial units in the NE part of the Manasseh hill country. Tirzah, for example, who belongs to Hepher's family, is located well inland, about 10 km NE of Shechem. Therefore, it seems more likely that the 'Land of Hepher' should be located in the hill country *within* the nuclear tribal allotment rather than in the formerly Canaanite area in the coastal plain (annexed to the monarchy only in the time of David). A coastal plain locale for the 3d district is also challenged by the archaeological data: Tel Iphshar is too small to have been a Canaanite city-state like Hepher (Josh 12:17), and Tel Assawir contained no sherds of the 10th century B.C.E. The site therefore could not have been a district capital during this period.

B. Other Possible References to Arubboth

Certain assistance for the identification of Arubboth is found in the fact that the city (and the district) of that name probably existed throughout the Iron Age, the Persian, Hellenistic and Early Roman Periods as well. According to Grintz (1957: 31), the tradition in Taanit Scroll, describing Jewish fortified cities in the Samaria region in either the Persian or the Hellenistic period, is linked with the Jewish settlement in the Dothan Valley, as told in the book of Judith. Others relate it to the settlement of the area by Jews after its conquest by John Hyrcanus in 106 B.C.E. It is possible that the name of the area in the Taanit Scroll, *Nabrachta,* is connected to one of the offshoots of the geographic name Arubboth (see below).

The area is mentioned in 1 Macc 5: 21–23: Simon the Hasmonean, after his victory over the Gentiles at Acre, brought to Jerusalem the Jews of Galilee and "Arbattoi," which seems to be a Jewish district located between the W Galilee and Jerusalem. The syntax of the name indicates a possible connection to Arubboth, since only the suffix differs from the original, without change in the basic consonants of the name.

The Byzantine historian Georghios Kedrenos cites a list of the Herodian toparchies (divided among Herod's sons), where the toparchy of Narbatton is mentioned along with Galilee and Perea. All 3 came under the jurisdiction of Herod Antipas. This list suggests that during the Herodian period there existed in N Samaria a Jewish district named Narbatton. Since both Galilee and Perea were Jewish districts, we may assume that this division was based upon the necessity of separating the Jewish toparchies from those of the Gentiles. It is worth noting, however, that this Byzantine source is controversial.

Finally, the area is mentioned twice by Josephus, along with a definition of its geographic location. First, in his description of the events close to the outbreak of the Jewish Revolt in May, A.D. 66, Josephus reports that a clash broke out between Greeks and Jews around the Great Synagogue of Caesarea; after the emperor Nero ruled in favor of the Greeks, the Jews took their Torah scrolls and went to one of their inheritances called Narbata, located 20 stadia from Caesarea (*JW* 2: 291). The second reference is connected with the report about Cestius Gallus' punitive campaign against Jerusalem in October A.D. 66; Josephus reports that Gallus sent forces of cavalry from Caesarea to Narbata, who "destroyed the district and set the villages aflame" (*JW* 2: 509).

The name of the area is not mentioned again. An analysis of the sources suggests a linguistic connection in the series Arubboth–Nabrachta–Arbatta–Narbata, based on the preservation of the ancient nucleus *r-b-t,* whose meaning is uncertain. The changes over a millennium are probably connected with the influx of Aram prefixes and suffixes into spoken Hebrew. Such include the prefix *n-* and the geographic suffix *-a* (as in Suseita and Gamla). Kampffmeyer (1892) showed that changes in suffix and prefix do not alter the nucleus of the name, and therefore we have in these sources evidence for the continuity of the district and the city in the same area (N Samaria, not the N Sharon valley). As for the distance of 20 stadia (12 km) from Caesarea to Narbata (*JW* 2: 291), Avi-Yonah (1962: 12, 127) showed that most of Josephus' distance indicators relate to distances between the district capital and the toparchy's border. We may, therefore, suggest that the border between the boundary of Caesarea and the toparchy of Narbata was the point where the Coastal Plain meets the Samaria hills, at a distance of 12 km from Caesarea.

C. Khirbet el-Hamam

1. Location and Description. During the course of a detailed archaeological survey on behalf of Tel Aviv and Haifa Universities, a previously unknown tell—Kh. el-Hamam—was discovered in 1978. This site seems to fit well the identification of Arubboth-Narbata. The site (M.R. 163201) rises S of the riverbed of Wadi Jiz, in a rugged and stony hill area, between the Dothan valley and the Coastal Plain.

The city stretches across two hilltops. The N hilltop is approx. 70 dunams in size; it is fortified naturally by means of steep slopes at the W, N, and E; at the S it is connected to the lower slope by means of a gradual and convenient downgrade. Its upper acropolis, about 25 dunams, was surrounded by a double city wall. The S hilltop is the larger one, and contains remnants of structures and caves with no indication of fortification.

A sophisticated Roman siege system surrounding the city was discovered and explored, including a circumvallation, three camps, and a siege ramp. The circumvallation is 1,516 m long and 2.2 m thick, encompassing the city from the W, N, and E. Alongside it were discovered Camp B (excavated) and Camps C–D (unexcavated). The supposed location of Camp A was the S hilltop.

2. Excavations. The siege system and the city itself were excavated during 1980–1984 (Zertal 1984). Camp B of the siege system lies on the el-Birkeh hill, approx. 600 m E of the city. It is a square structure (22 × 22 m) with opposite gates at the N and S. Rooms and floors were unearthed inside, upon which were found cooking pots and other vessels dated to the 1st century A.D., very similar to the material of Masada. In addition, a coin of Herod Archelaus (4 B.C.E.–A.D. 6) was found. The excavated part of the circumvallation was found to be identical in structure and dimensions to the E circumvallation and the walls of Camp A at Masada. Some towers were discovered along the circumvallation. Camp C at Kh. el-Hamam is a small structure (10 × 10 m), and camp D which lies on a slope next to the paved road that led to the city from the important Caesarea-Ginae road, is similar to Camp B. The siege system at Kh. el-Hamam is one of 4 extant, complete Roman systems connected with the Jewish Revolt (A.D. 66–70) and the Bar-Kokhba Revolt (A.D. 132–135): Masada, Bethar, Machaerus, and Narbata (Kh. el-Hamam). The latter is the only one found N of Jerusalem.

Three areas within the city itself were excavated: (1) the central section and the siege ramp; (2) the S wall; and (3) a group of houses in the upper W part of the city. In the central section a continuity of pottery groups was discovered, ranging from the 10th century B.C.E. until the 2d century A.D., confirming the conclusions of the survey. The city wall of the Iron Age dates to the 10th century B.C.E. and should possibly be identified as the Solomonic city wall of Arubboth. It is approx. 3 m thick, and was founded upon a low stone cliff. This wall continued to be in use during Iron II (the Israelite kingdom), and possibly also through the Persian period into Hasmonean times (2d century B.C.E.), when the city was refortified by an additional and new wall. At this stage, the Iron Age city wall became a supporting wall which encircled the city and lay outside the new wall. The entrance to this new wall was from the protected N side. The width of the Hasmonean wall is approx. 2 m, and it was the wall used to protect the city during the Jewish Revolt in A.D. 66. Two blocks of structures were excavated in the upper W area, dating to the Hellenistic-Herodian periods. Beneath it, fragmented Iron Age structures were exposed.

Beneath and outside the line of the walls, a sophisticated water system was explored and partially excavated. This includes 3 hewn cisterns in the form of subterranean chambers, plastered with a special plaster identical to that of the water system at Masada. Each of the chambers contained 600–1,000 cubic m of water, and were filled by means of a hewn opening. An aqueduct, whose entire route is as yet unknown, was connected to the cisterns.

The small finds include nearly 100 coins, dating from Ptolemy II (beginning of the 3d century B.C.E.), through the beginning of the 2d century A.D. In addition, carved stone vessels were unearthed, typical of Jewish settlements during the Second Temple period.

From a historical point of view, the results of the excavation support the identification of the city as Narbata, which was the only city in Samaria to take part in the Jewish Revolt. According to Josephus, it was also the only Jewish region in this area, otherwise populated by veterans of the Hellenistic and Roman armies (Sebaste) and by Samaritans. A few arrowheads, catapult stones, and a partial level of

destruction at Kh. el-Hamam indicate that the battle over the city did not last long. We may assume that the city surrendered not long after the siege system was built. It is unclear why there is no mention of the siege of Narbata by Josephus. Despite that, there are actually no alternate identifications for the site, and it fits the location of Arubboth-Narbata in 3 major criteria: (1) the archaeological and historical periods of occupation, (2) the geographical context and location, and (3) the preservation of the name. The latter is still preserved in the vicinity in the form of Arrabeh (M.R. 169201), a village some 6 km to the SE, at the S fringe of the Dothan Valley. Apparently, the name shifted there after the destruction or abandonment of the city Narbata.

D. The History of Arubboth-Narbata

The results of the excavation indicate that the city was founded at the middle of the 10th century B.C.E., but there may have been a small village there founded a few decades earlier. Along with the foundation of the city the N hilltop was fortified, evidently creating an administrative center and seat of the regional governor. This foundation coincides with the intentions of the authorities, who preferred founding new sites, free of previous tribal traditions. Wright (1967) and Mazar (1975: 131) showed that Makaz (probably the capital of the 2d district) and Arubboth belong in this category.

The existence of the city, which was supported by the Arubboth district, continued during the period of the N Israelite kingdom. It is probable that the Jewish district of the Persian period in the Dothan valley, mentioned in the book of Judith, was connected somehow with the Arubboth district. Upon the Hasmonean conquest of Samaria by John Hyrcanus, the city underwent great development. A new city wall was built, thus creating a kind of fortified acropolis. During this period, or a bit later, the city of Arbatta grew and many new homes were built on the slopes of both the N and S hilltops. During the 1st century A.D. the name was changed to Narbata, and the city maintained some connection with the Jews of Caesarea.

Upon the outbreak of the Jewish Revolt, some of the Caesarean Jews moved to Narbata, taking with them their Torah scrolls. In this account, Josephus is possibly referring to persons belonging to the Zealot party in Caesarea, who thus declared an open revolt against the Romans (Zertal 1982). The place was finally abandoned at the beginning of the 2d century A.D.

From a geographic-historic viewpoint, it seems that the 3d Solomonic district coincided with the boundaries of Manasseh in the hill country (Josh 16:5–9; 17:7–13). This conclusion, which supports in broad lines Albright's approach (see A above), is also based upon the recent identification of Hepher (Josh 12:17) with Tel Muhaffar, a large fortified site situated at the N boundary of the Dothan valley. The identification of Hepher and Arubboth within the bounds of the Manasseh hill country conforms with the biblical data, the evidence of the Samaria Ostraca, and the Second Temple traditions.

ADAM ZERTAL

ARUMAH (PLACE) [Heb *ʿărûmâ (אֲרוּמָה)]. A town in Ephraim mentioned once or twice in the story of Abimelech son of Gideon (Judges 9). According to Judg 9:41, Abimelech resided briefly at Arumah. The text of Judg 9:31 is problematic. MT reads "he (scil. Zebul) sent messengers to Abimelech *bĕtormāh";* the last word consists of the Heb preposition *bĕ-* "in, at, by means of," and an otherwise unattested noun *tormâ,* whose root is possibly *rmh* "to deceive" (thus LXX^{B} *en kryphē,* "in secret" [cf.

LXX^{A} *meta dōrōn* "with gifts," reading *trmh* as *tĕrūmâ* "offering, gift"]; KJV "privily"; ASV "craftily"; Boling *Judges* AB, 179 "by a ruse"). The consonants *btrmh* of MT should perhaps be read **bêt [ʾă]rūmâ* "Beth Arumah," thus creating a second mention of the site (*GTTOT*, 297).

Arumah is generally located at Khirbet el-ʿOrmah (M.R. 180172) 5 miles SE of Shechem (*LBHG*, 242). It is not to be identified with RUMAH further N (*LBHG*, 329–31).

HENRY O. THOMPSON

ARVAD (PERSON) [Heb *ʾarwād* (אַרְוָד)]. ARVADITES. One of the "offspring" of Canaan (Gen 10:18), who supplied rowers and guards for Tyre (Ezek 27:8, 11). Arvad is named in the list of places to which the Roman consul sent his proclamation of alliance with Simon (1 Macc 15: 23, if the textual rearrangement of Goldstein *Maccabees* pp. 492–500 is followed). The Genesis reference has the gentilic suffix *-î.*

The city of Arvad, modern Ruad (M.R. 229473), is the most nothern of the Phoenician cities, located on an island adjacent to the coast. It is mentioned in an Egyptian text (*ʾá-r-du;* cf. Helck 1962: 310). In the Amarna letters it seems to have allied with Amurru against Byblos and Tyre (*ar-wa-da;* cf. Klengel 1969: 206; Katzenstein 1973: 42; Hess 1984: 436). It appears frequently in Assyrian and Babylonian texts on into the 1st millennium B.C., having to do with Syria (Unger *RLA* 1: 160–61).

Of some interest for comparison with the military aspect of the Arvadites mentioned in Ezekiel 27 is the mention of 200 soldiers from Arvad who fought with the opponents of Shalmaneser III at the battle of Qarqar in 853 B.C. (cf. Katzenstein 1973: 156). For the Assyrian kings, Arvad was the city "in the midst of the sea" (*qabal tamtim;* cf. Wiseman 1951: 24). There is a possible portrayal of Arvad as the island receiving wood in a Khorsabad relief (Parrot 1961 plate 48; Katzenstein 1973: 243). In this context, the Ezekiel passage associating renowned rowers with Arvad becomes meaningful (Ezek 27:8). Apparently it was sufficiently independent of the Seleucids in the mid-2d century B.C. to receive a proclamation from Rome.

RICHARD S. HESS

ARZA (PERSON) [Heb *ʾarṣā* (אַרְצָא)]. Chamberlain of Elah, king of Israel, at Tirzah (1 Kgs 16:9). Though it was at the house of Arza that an intoxicated Elah was assassinated by Zimri, it is not known if Azra was a part of the conspiracy against the king. As chamberlain, literally "over the house," Arza may have been responsible for the royal property at Tirzah as well as the king's domestic affairs. The name, Arza, may be derived from the root, *rṣh,* (to be pleased, acceptable). Noth suggests an Arabic derivation from *ʾaraḍatun* "wood fretter" (IPN, 230). (See Gray *Kings* OTL; Noth *Könige* BKAT; Würthwein *Könige: 1 Könige 1–16* ATD; De Vries *1 Kings* WBC.)

PAULINE A. VIVIANO

ARZARETH (PLACE) [Lat *Arzareth; Arsareth*]. A land to which the 10 tribes of Israel were deported; to reach this region required a journey of a year and a half from the Euphrates river (2 Esdr 13:45). No place by this name is attested. To understand this reference, one must appreciate that the original Heb or Aram of 2 Esdras is no longer extant, and that all we have are Lat (and other) translations. Thus, some have suggested that the name preserves a corruption of Heb **ʾereṣ ʾarat,* "land of Ar (ar)at" (i.e., N Armenia). However, it is more likely that the Lat here contains and conceals the Heb *ʾereṣ ʾăḥeret,* "another land" (cf. also 2 Esdr 13:40). This phrase appears in Deut 29:27 (—Eng 29:28), an exilic

addition attributing to Moses the prediction about the scattering and deportation of the sinful Israelites. It is noteworthy that the early rabbis applied this phrase in their discussions about the dispersion of the Ten Tribes (*m. Sanh.* 10:3). Therefore, it is likely that the Semitic original of 2 Esdras did the same, and that the Lat translator has corrupted the original and transformed it erroneously into a proper name "Arzareth" (see Wright 1871).

GARY A. HERION

ASA (PERSON) [Heb ʾāsā (אָסָא)]. Son and successor of Abijam/Abijah and the 3d king of Judah after the division of the united monarchy. According to the synchronisms provided in 1 Kings, Asa's rule began while Israel's first king, Jeroboam, was still in power (15:9); it spanned the reigns of Nadab, Baasha, Elah, Zimri, and Omri; and it ended in the early years of Ahab's rule (16:29). He ruled for 41 years (1 Kgs 15:10; 2 Chr 16:13), which Albright (1945) dated to 913–873 B.C.E.

A. Sources

The primary account of Asa's reign is given by the Deuteronomistic historian in 1 Kgs 15:9–24. The author indicates that he has drawn his information from the annals of the kings of Judah (1 Kgs 15:23), but his ideological perspective is clearly stamped on the account.

The Chronicler presents a somewhat longer account in 2 Chr 13:23b–16:14 (—Eng 14:1b–16:14), parts of which parallel the account in 1 Kings but the rest includes added material of debated historical worth. It is clear that the Chronicler has used the Kings account as a principal source, even as he reshaped and added to it in order to present his own perspective on Asa's reign. Whether the Chronicler has used sources beyond 1 Kings to present his account of Asa is uncertain, but it is possible that he has. For example, the Chronicler's detailed information about Asa's army (2 Chr 14:7) and related notes elsewhere in his work (cf. 17:14–19; 25:5 and 26:11–15) may preserve "authentic material relating to the conscript army" (Williamson *Chronicles* NCBC, 20, 261–2). Welten, however, contends that these passages are pure fabrications, reflecting the organization of Hellenistic armies in the time of the Chronicler (1973: 79–114). Whether the Chronicler's added information is based on additional sources or not, it must be used with caution in reconstructing the events of Asa's reign.

Two major aspects of Asa's reign are covered by both the Deuteronomistic historian and the Chronicler: (1) a religious reform and (2) a successful response to Baasha's invasion of Judah.

B. Asa's Reform

The account in 1 Kings indicates that the reform included the following actions by Asa, who (a) expelled the male cult prostitutes from the land; (b) removed all the images which his predecessors had made; (c) deposed his mother (grandmother?) Maacah from her position as queen mother (*gĕbîrâ*) because she had made an abominable image (*mipleṣet*) for Asherah; (d) destroyed this image by cutting it down and burning it; and (e) brought votive offerings into the temple. The Deuteronomistic historian praises Asa for doing "that which was right in the sight of Yahweh, like David his father" (15:11) and claims that, although the "high places" (*bāmôt*) were not abolished, the king was completely loyal to Yahweh all his life (15:14).

The Chronicler adds that Asa abolished the foreign altars and incense altars, and also claims (2 Chr 15:9–12) that Asa, in the 3d month of the 15th year of his reign, assembled all of Judah, Benjamin, and those who had come to live with them from Ephraim, Manasseh, and Simeon, to enter into a covenant to seek guidance from Yahweh. Those who refused to seek Yahweh, whether old or young, male or female, were put to death (2 Chr 15:13). Whether such a covenant ceremony took place is debated, but Williamson has suggested that the Chronicler's account of these matters is based on a special source and presents a plausible rendering of what took place (*Chronicles* NCBC, 269–71).

Asa's removal of Maacah from the position of queen mother is mentioned in 1 Kgs 15:13 and 2 Chr 15:16. Because her association with the goddess Asherah would have brought her into conflict with Asa's reform, Ahlström has concluded the queen mother's position was essentially cultic in nature (1963: 57–

85). Other possibilities for understanding the queen mother's role have been reviewed recently by Andreasen (1983).

C. Asa's Response to Baasha's Invasion

1 Kgs 15:16 indicates that border conflicts between Judah and Israel continued throughout the reigns of Asa and Baasha, but the Deuteronomistic historian focuses on a decisive phase of the struggle. According to this account, Baasha marched into Judah as far as Ramah, which he fortified to cut off access to Jerusalem. Asa responded by sending an appeal, sweetened with a good portion of Judah's treasure, to Ben-hadad, the king of Aram, in Damascus. At that time Aram and Israel were allies, but Asa's request was for Ben-hadad to break off the alliance with Israel. Ben-hadad did so, and sent his forces into N Israelite territory, forcing Baasha to abandon Ramah. Asa then issued a proclamation to all Judah, with no exemptions, and they dismantled Baasha's fortifications at Ramah and used the stones and timbers to fortify Geba and Mizpah (vv 17–22).

The Chronicler's account places these events in the 36th year of Asa's reign (2 Chr 16:1; this conflicts, however, with 1 Kgs 16:6 and 8 which indicate that Baasha had died some 10 years earlier). On the theory that the Chronicler's chronology is based on a source which referred to the 36th year of the division of the monarchy, not of Asa's reign, Baasha's invasion and the related events would have taken place in the 16th year of Asa's reign (Williamson *Chronicles* NCBC, 256–7). It is possible, however, that the Chronicler's chronology serves theological rather than historical purposes (Rudolph 1952; Dillard 1980).

D. The Chronicler's Other Additions

The Chronicler has also added to his narrative about Asa an account of the invasion of Zerah the "Cushite" (14:7–13) and speeches to Asa by Azariah ben Oded (15:2–7) and the seer Hanani (16:7–10).

The speeches of Azariah and Hanani are taken by most scholars to be creations of the Chronicler. Azariah's speech is inserted between Asa's victory over Zerah and the account of Asa's religious reform. The Chronicler uses it to depict Asa's reform as inspired by Yahweh. Hanani's speech, on the other hand, condemns Asa for relying on Ben-hadad in the affair with Baasha, rather than on Yahweh as he did in the victory over Zerah. Von Rad has maintained that these and other speeches in 1 and 2 Chr reflect standard Levitical homiletic practice which the Chronicler has employed for his own theological purposes (*PHOE,* 267–80).

Many scholars believe that the account of Asa's victory over Zerah, though written in the Chronicler's style, is based on an event which the Chronicler knew from one of his sources. There is debate, however, over the identity of the invading forces. One view is that Zerah "the Cushite" was an Ethiopian general dispatched to Judah by Osorkon I in his latter years (Kitchen 1973: 309); another view is that the invading forces were a mercenary group stationed at Gerar from the time of Sheshonk's campaign against Judah (*BHI,* 234–35); still another view is that "Cush" in this context refers to an ethnic Bedouin group in the vicinity of Judah which menacingly invaded Asa's territory (Hidal 1976–77: 100–1). In the absence of more evidence, all of these theories remain mere speculation.

The Chronicler also credits Asa with the fortification of cities in Judah (2 Chr 14:6–7). Without entirely ruling out building activity in Asa's reign (cf. 1 Kgs. 15:23), Williamson notes the Chronicler's thematic emphasis in these verses, i.e., the author seeks to establish a connection between Asa's building activity and the peace that Yahweh had supposedly given him as a result of his reform (*Chronicles* NCBC, 260; cf. Welten 1973: 15–19).

E. Asa's Death

Asa developed a disease "in his feet" near the end of his life (1 Kgs 15:23); the Chronicler says this happened in the 39th year of his reign (2 Chr 16:12). The nature of this disease has been much discussed. Gout, dropsie, or gangrene have been most frequently suggested. The possibility cannot be excluded, however, that "feet" in this instance, as elsewhere in the Hebrew Bible, is a euphemism for genitals (Williamson *Chronicles* NCBC, 276–7; *HAIJ,* 241). Asa was buried in Jerusalem and succeeded by his son Jehoshaphat.

CARL D. EVANS

ASAHEL (PERSON) [Heb *ʿăśâ›ēl* (עֲשָׂהאֵל)*;* Gk *Asael* (Ἀσαελ)]. The name of 4 or 5 men in the OT.

The name Asahel is formed as a sentence using the verb *ʿaśâ* "to make," "to do" with the divine name El. Asahel means "El has done" or "El has made."

1. Asahel was one of the 3 sons of Zeruiah, David's nephews and retainers (see ZERUIAH). As with other figures of tradition, Asahel was remembered by a brief descriptive verse: he was "fleet as the gazelle" (cf. Goliath of Gath, "the shaft of whose spear was like a weaver's beam," 2 Sam 21:19; 1 Chr 20:5). While his brothers served throughout David's reign, Asahel was killed by Abner, the son of Ner, during the war between David and Ish-bosheth, the successor to King Saul (2 Sam 2:18–32); he was buried in the tomb of his father in Bethlehem. Joab, his brother, treacherously slew Abner in revenge for Asahel's death (2 Sam 3:22–30), an act which brought bloodguilt onto David's house, and in expiation for which David had his son and successor Solomon kill Joab (1 Kgs 2:5–6).

The inclusion of Asahel in the lists of David's heroic warriors (2 Sam 23:24; 1 Chr 11:26) suggests that these lists go back to the beginning of David's reign. That this same Asahel is listed as an officer over David's monthly levies (1 Chr 27:7), by which time he should have been dead, however, calls into question the historicity of that list (see DAVID'S CHAMPIONS), unless his name was placed upon this division posthumously to honor him (*IDB* 1:244).

Na›aman's argument (1988: 77–79) that the story of Asahel's death at the hands of Abner was fabricated upon the strength of his mention in these lists is merely meant to support his own view that David's champions were really his high officer corps. 1 Chronicles 27 is the only text where a significant number of David's heroic warriors are presented as officers. Na›aman's thesis requires him to discredit the account of Asahel's death during David's reign in Hebron, since it is highly unlikely that David had actually had a highly organized standing army based on successive monthly levies of 24,000 men each, 288,000 in all, *before* he became king of Israel. (Even the inflated figures of 1 Samuel 11 give Judah only 30,000 men; but cf. *IDB* 1:244.) The story of Asahel's death then, while likely embellished (storytelling and the writing of history were not mutually exclusive categories in the ancient Near East), is probably based on solid historical traditions.

2. One of six Levites sent in the 3d year of Jehoshaphat into the villages of Judah with the priests Elishama and Jehoram to teach the book of the law (2 Chr 17:7–8).

3. A Levite who assisted in the collection of tithes and devoted offerings in the temple during Hezekiah's attempted centralization of worship (2 Chr 31:11–13; cf. Hayes and Irvine 1987: 48–49).

4. The name of the (otherwise unknown) father of one Jonathan, an exile at the time of Ezra. Along with Jahzeiah, the son of Tikvah, this Jonathan opposed Ezra the scribe in his efforts to get the exiles to put away their foreign wives and children (Ezra 10:1–15, esp. v 15).

Although there is some ambiguity about this verse (cf. Vg and NJPSV, which put Jonathan and Jahzeiah in charge of Ezra's commission), Williamson (*Ezra, Nehemiah* AB, 156–57) has convincingly argued for the RSV rendering. 1 Esdras 9:14, however, clearly agrees with the Vg and NJPSV Ezra.

5. One of the "sons of Ezora" who dismissed his foreign wife following Ezra's action (1 Esd 9:34). The RSV name is AZAEL, as in Ezra 10:41, but it is rendered "Asahel" in and Meyers equates it with the name in Ezra 10:15 (Meyers *Esdras* 89). It is *azaelos* in the LXX. The name is also found as *aazaēlos, azēlos* at Murabba‹at (Meyers *Esdras* 93; DJD 2.227; *Les Grottes de Murabba‹at,* DJD 2/94:12). If this

person is the same as Asahel (4) above, then it is understandable that Jonathan would oppose an action which would result in the expulsion of his mother.

D. G. SCHLEY

ASAIAH (PERSON) [Heb *‹ăśāyâ* (עַשָׂיָה)]. The name of 4 individuals in the Hebrew Bible.

1. A Levite from the Merari clan, one of the leaders appointed by David to move the ark from the house of Obed-edom to Jerusalem (1 Chr 6:15—Eng6:30; 15:6, 11). Many regard 15:4–10 as a later insertion into Chronicles; however, Talmon (*IDBSup,* 322) and Williamson (*1 and 2 Chronicles* NCBC, 89, 121–22) argue that the repetition of the names in 15:11 is a literary device marking an insertion of source material by the original author.

2. One of the royal officials under Josiah, sent as part of a delegation to consult with the prophetess Huldah regarding the discovery of a book of the law in the temple (2 Kgs 22:12, 14; 2 Chr 34:20).

3. One of the leaders of the tribe of Simeon (1 Chr 4:36), among those who fought near Gedor (= Gerar?) and against the Meunites (1 Chr 4:38–43).

4. One of the descendants of Judah's son Shelah who returned to Jerusalem after the Babylonian captivity (1 Chr 9:5). Since the Chronicler gives the total number of those from the tribe of Judah who returned (1 Chr 9:6b), and since he lists descendants of Judah through Perez (1 Chr 9:4) and through Zerah (1 Chr 9:6a), MT Shilonites should be revocalized to Shelanites, the descendants of Judah's son Shelah (cf. Num 26:20; Neh 11:4–6).

RAYMOND B. DILLARD

ASAIAS (PERSON) [Gk *Asaias* (Ἀσαιας)]. A descendant of Annan and one of the returned exiles who was required by Ezra to divorce his foreign wife (1 Esdr 9:32). In the parallel text of Ezra 10:31, the name ISSHIJAH appears in the position Asaias holds in 1 Esdr 9:32.

JEFFREY A. FAGER

ASAPH (PERSON) [Heb *›āsāp* (אָסָף)]. ASAPHITE. Three individuals in the OT bear the name Asaph (see also 4. below). In addition, this name occurs in the inscription *l›sp* on a seal from Megiddo which has been variously dated to the 8th or 7th century B.C.E. (Diringer 1934: 168–69).

1. Son of Berechiah, eponymous ancestor of "the Asaphites" (RSV: "sons of Asaph"), and one of the great families or guilds of musicians and singers in the Jerusalem temple (1 Chr 6:39; 25:1, 2; 2 Chr 5:12). The headings of 12 psalms (50,73–83) include the designation *lĕ›āsāp,* most likely an indication that they were a part of an Asaphic collection or were performed according to the style or tradition of the guild bearing Asaph's name (note also the Asaphic attribution of the psalm anthology in 1 Chr 16:7–36). The theory that the Asaphic tradition was of N Israelite origins (Buss 1963) is intriguing but highly speculative, given that the rationale for attribution in the headings of the psalms remains uncertain.

At the time of the return from the exile, "temple singers" (1 Esdr 5:27; 1:15) in general could be referred to simply as "Asaphites" (Ezra 2:41 [= Neh 7:44; 1 Esdr 5:27]). The prominence of this guild is also apparent in the designation of the Asaphite Uzzi the son of Bani as "the overseer of the Levites" (*pākîd halĕwiyyim*) over the work of the house of God (Neh 11:22). The subsequent reference to Persian support (Neh 11:23; see Rudolph *Esra Nehemia* HAT, 187) and the contrast of Uzzi's area of responsibility with that of Pethahiah the son of Meshezabel in the succeeding verse ("all matters concerning the people," Neh 11:24) support the suggestion that this guild at some point oversaw the Jerusalem cultus under Persian sponsorship (for a differing view see Clines *Ezra, Nehemiah, Esther* NCBC, 219). This scenario would accord well with the prominence given to the ancestor Asaph in 1 Chr 16:1–6, 37–42, where he is designated "the chief" (*hāro›š*) of the Levites minstering before the ark in Jerusalem, while the priest Zadok and the singers Heman and Jeduthun were appointed by David to serve at Gibeon. Postexilic development in the guilds of singers (Gese 1974, Williamson *Chronicles* NCBC,

120–22; opposed by Clines *Ezra, Nehemiah, Esther* NCBC, 55–56) resulted in the replacement of the Asaphites by the guild of Heman as the preeminent group (cf. esp. 1 Chr 25:5).

Of Asaph himself, little can be said with confidence. According to the Chronicler, Asaph was a descendant of Gershom the son of Levi and one of three Levitical singers whom David placed in charge of the service of song in the house of YHWH (1 Chr 6:16–33—Eng6:31–48; 15:16–19). Nevertheless, both the Levitical and Davidic connections are so characteristic of the Chronicler's attempts to legitimate the cultus of his own day (Williamson *Chronicles* NCBC, 73, 122) that they must remain suspect. Mowinckel speculated that if Asaph was a historical figure at all, he "probably belonged to the temple personnel after the reconstruction under Zerubbabel, or perhaps in late preexilic times" (1962: 2: 96; contrast, however, Clines [*Ezra, Nehemiah, Esther* NCBC, 56] Asaph "was not improbably a contemporary of David"). That Asaph is designated "the seer" (*haḥōzeh,* 2 Chr 29:30; see also Heman in 1 Chr 25:5, Jeduthun in 2 Chr 35:15, and "who should prophesy" [Qere: *hannibbĕʾîm*] in 1 Chr 25:1) is probably an indication that the musical guilds of the Chronicler's day fulfilled the function of cultic prophesy (see Johnson 1962: 69–74).

2. Father (or possibly "ancestor") of Joah the recorder under Hezekiah (2 Kgs 18:18,37 = Isa 36:3, 22). Nothing more is known of this individual.

3. "Keeper of the forest" under the Persian king Artaxerxes (Neh 2:8). Nehemiah requested authorization from Artaxerxes to procure timber from the forest under Asaph's jurisdiction for rebuilding Jerusalem's wall and temple. This Asaph may have been a Jew who, as Nehemiah did, rose to a position of some administrative prominence under Persian rule. It is also possible, however, that the name is an assimilation into Hebrew of a Phoenician or Persian name (Clines *Ezra, Nehemiah, Esther* NCBC, 143). The location of the forest is unknown.

4. "From the sons of Asaph" in 1 Chr 26:1 should be read "son of Ebiasaph" with LXX^{B} and with 1 Chr 9:19. Asaph of the Levitical genealogies (see item 1 above) belonged to the family of Gershom; it was Ebiasaph who was of the lineage of Kohath (Exod 6:25; 1 Chr 6:8,22—Eng6:23,37).

ASARAMEL (PLACE) [Gk *Asaramel* (Ἀσαραμελ)]. According to 1 Macc 14:27–28, "on the eighteenth day of Elul, in the one hundred and seventy-second year, which is the third year of Simon the great high priest, in Asaramel in the great assembly of the priests and the people and the rulers of the nation and the elders of the country, the following was proclaimed to us." Asaramel (*en asaramel* in Codex Alexandrinus, VL, and Vg; *en saramel* in all other witnesses) appears to be the location where a proclamation was made recognizing the contribution of the Hasmoneans in the defense of Judaism and the Jewish people. One cannot escape the conclusion that the Gk text treats Asaramel (or Saramel) as a place, and yet no such location is known to have existed. Asaramel has been generally treated by translators as a corruption of the original Heb occurring during translation into Gk or during the transmission of the Gk text. Goldstein (*1 Maccabees* AB, 501) notes that although there is mss evidence that the point of origin could be included in a decree, our text places the reference "in Asaramel" after the date and not after the reference to the assembly (14: 28) according to the form of extant witnesses. One possibility is that *en asaramel* is a corruption of the Heb *ḥāṣēr ʿam ʾēl,* "the court of God's people." This means that Simon was the great high priest in the Temple. Such an interpretation raises the question of why the term would have been transliterated rather than translated. The Syr translator of 1 Macc translated the Gk as *rbʾ bʾsryl* (or *dbʾsryl*), "prince of Israel." Syr uses *rbʾ* to translate the Heb *śar* (cf. Sir 10:24). If the Syr is correct, the original Heb behind Asaramel was *śar ʿam ʾēl,* "the Prince of God's People." We are therefore dealing

with a title rather than a location. This possibility is supported by 1 Macc 13:42 and 15:1 which accord Simon a political title as well as the priestly. Thus 1 Macc 14:27 declares Simon to be both a great high priest and prince. Zeitlin (1950: 227) proposed that the preposition *en* which preceded *asaramel* could have been added later to make sense out of what was thought to have been a place name, and Goldstein (1976 *1 Maccabees* AB, 502) suggested that an original *waw* ("and") was changed into a *bet* ("in") owing to an error in phonetic spelling or hearing or perhaps a garbled Gk text. It is also possible that a later scribe, thinking Asaramel to be a place name, altered the "and" to an "in" in order for the text to make sense.

MICHAEL E. HARDWICK

ASAREL (PERSON) [Heb *ʾăśarʾēl* (אַשַׂרְאֵל)]. One of the 4 sons of Jahallelel in the genealogy of Judah (1 Chr 4:16). In the LXX, the name appears as *Iserael*, which Curtis (*Chr* ICC, 110) believes to be an altered form of "Israel." Among the brothers of Asarel, Ziph is actually the name of a town in southern Judah (*LBHG*, 256, 291) so there is a possibility that Asarel may also be an eponym. (For further discussion, see Myers *1 Chr* AB; Williamson *Chr* NCBC.)

H. C. LO

ASCENSION OF CHRIST. The doctrine of the ascension includes the ascent, the session at God's right hand, and the judgment. It has been interpreted through the Person of Christ, through the work of Christ, and through both (Walker 1968: 80–81). There is "no incident in the life of Jesus at one and the same time so beset with difficulties and so essential as the Ascension" (Barclay 1961: 315). It may well be the most neglected doctrine of the church (Jansen 1959: 17), even though it is considered one of the most important themes of the NT, and the heavenly intercession and PAROUSIA are inexplicable apart from it (Donne 1977: 567) and the doctrine of God makes no sense without it (Haroutunian 1956: 280).

———

A. OT Roots of the Ascension
B. NT Witness
C. History of the Doctrine

———

A. OT Roots of the Ascension

The coronation psalms (24, 47, 68, 110, 118) prefigure the ascension, exaltation, and session (Toon 1984: 21–29). In the LXX ascent language is used in Psalms 24(25):3, 47(48):5 and 68(69):18, and the phrase "sit at my right hand" of Ps 110(111):1 prefigures Christ's exaltation and is the most quoted OT text in the NT. Enoch (Gen 5:24, Heb 11:5) and Elijah's (2 Kgs 2:1–18) ascensions give other historical examples. The word *anelēmphthē,* used of Elijah's translation in the LXX of 2 Kgs (4 Kgdms) 2:11, is used of Christ's ascension in Mark 16:19 and 1 Tim 3:16.

B. NT Witness

The ascension is considered the essential link between the Jesus of history and the Christ of faith (Donne 1983: 25). For the NT, the description of the ascension is secondary to its theological meaning (Robinson *IDB* 1: 246). Nearly all NT writers testify to the ascension, although the Epistles (Rom 8:34, Ephes 1:20–21, 4:8–11, Heb 6:20) assume rather than describe it (Holwerda *ISBE* 1: 311). The Gospels focus on the physical aspects, whereas Paul, the theologian, emphasizes Christ's spiritual body (Simpson 1968: 419–20). The Johannine pericopes do not mention the ascension, but imply it on several occasions (John 8:14, 21; 13:3, 33, 36; 14:4, 5, 28; 16:5, 10, 17, 28). They portray Christ in the descent-ascent motif of his journey from and to his Father.

Gk terms describing or referring to Christ's ascension include *analēmpseōs* "received up," "assumption" (Luke 9:51); *diestē apʾ autōn* "withdrew from them" (Luke 24:51); *hypagō* "I go" (John 7:33; 8:14; 13:3, 33, 36); *metabē ek tou kosmou* "remove out of the world" (John 13:1); *poreuomai* "going away" (John 14:2; cf. *apelthō,* John 16:7); *aphiēmi ton kosmon* "I leave the world" (John 16:28); *kai poreuomai pros*

ton patera "and go to the Father" (just as in the incarnation he came from the Father, *egō para thou Theou exēlthon* [John 16:27]; cf. *pros se erchomai* "I come to you" [John 17:11, 13]); *analēmphtheis aplˋ humōn eis ton ouranon* "taken up from you into heaven" (Acts 1:11); *anabas eis hyphos,* "ascended on high" (Eph 4:8); *hyperypsōsen* "highly exalted" (Phil 2:9); *anelēmphthē en doxę̄* "was taken up in glory" (1 Tim 3:16); *poreutheis eis ouranon* "gone into heaven" (1 Pet 3:22); and *hērpasthē* "was snatched up" (Rev 12:5). In Luke 24:51, Acts 1:11, 22 and 1 Tim 3:16 the verbs are all passive, whereas in John 3:13, 6:62, Eph 4:10 and Heb 4:14 they are all active—indicating that Christ is drawn from the world by God and also goes of his own volition (cf. Metzger 1968: 80).

C. History of the Doctrine

"Belief in the ascension was universal in the early church, both in East and West" (Swete 1910: 1), but its critics are found through the centuries. By the 4th century the ascension was celebrated in the liturgy, although even after Augustine (354–430 C.E.) its doctrinal development continued (Bray 1988: 47).

The only direct reference to the ascension in the Apostolic Fathers is the phrase *anebē eis ouranous* "He ascended into heaven" (*Ep. Barn.* 15.9), showing already the confessional formulation of the doctrine. This is also evident in Justin Martyr (*1 Apol.* 21.1; 31.7; 42.4; 46.5; 50.12; 54.7; *Dial.* 34.2; 39.4; 63.1; 85.1; 108.2; 132.1). Melito of Sardis refers to the ascension in his paschal homily (*Pass.* 104.788). The doctrine is assumed by Irenaeus (*Haer.* 1.10.1; 3.4.2) and Origen (*Princ. praef.* 4) and adverted to by Tertullian (*Adv. Prax.* 2; *Praescr.* 13; *Virg. vel.* 1). Its formulation in the Apostles' Creed—*ascendit in caelis sedit ad dextram Patris* ("he ascended into heaven, seated at the right hand of the Father")—became normative for the theology of the western churches.

The scholastic interpretation of the ascension in medieval theology is exemplified in the *Summa Theologiae* of Thomas of Aquinas. It was fitting that Christ's unchanging life after his resurrection take place in heaven, the "place of incorruptibility," rather than on earth, a place subject to change and corruption (*Summa* 3 q. 57a 1).

With the Reformation, early Protestant orthodoxy appropriated the doctrine of the ascension particularly in the context of disputes concerning the Real Presence of Christ in the Eucharist.

In the 16th century, Melancthon was the first to attempt to harmonize the ascension with science, and Calvin produced a Copernican revolution through his ascension studies. Whereas previously scholars focused on Christ present with his Body—the Church—making it impossible (they thought) to be bodily present at God's throne, Calvin reversed this by stressing the bodily presence of Christ in heaven alone (*Institutes* [1559] 4.17.12, 26). Whereas, too, emphasis had been on the person of Christ, Calvin considered the work of Christ—Godwards and manwards, breaking new ground in his *triplex munus* (threefold office) of the ascended Christ as prophet, king, and priest. Calvin upheld the bodily ascension of Christ to God's throne, with no bodily presence in church or sacrament (*Institutes* [1559] 4.17.12). He supported a localized humanity of the ascended Jesus in contrast to Luther's ubiquitous omnipresence of his humanity (WA [1527] 23.133).

Friedrich Schleiermacher (1768–1834) rejected the ascension as having any part in the doctrine of Christ's person (*Christian Faith* [1830] 2.99). The century was preoccupied with history rather than with the session at God's throne, with individualism rather than with the corporate humanity in Christ, with his prophetic ministry on earth rather than also with his priestly ministry in heaven. Most of the 19th-century "lives of Jesus" omitted the ascension, ending with the resurrection, and systematic theologians (Hodge, Shedd) barely mentioned it. By contrast, Milligan's book broke new ground by presenting the ascension's authenticity.

Cosmological questions, biblical criticism and secularization reduced interest in the ascension in the 20th century (Toon 1984: 141). Harnack's article "Das Apostolische Glaubensbekenntniss" ("The Apostles' Creed") (1892) had questioned the biblical data because of its cosmology. Today the 16th-century Eucharistic controversy is deemed by some irrelevant, because Christ is viewed as above space and time (Harvey 1966: 28). Karl Barth (1960: 453–54) opposed visualizing the ascension "as a literal event, like going up in a balloon." Rather it was an entrance into a dimension of the created world "provisionally inaccessible" to the disciples. T. F. Torrance presented (1976) the reality of the ascension

within a post-Copernican cosmology, and many concur that the ascension is not destroyed by an outdated cosmology.

NORMAN R. GULLEY

ASCENT OF HERES (PLACE). See HERES, ASCENT OF (PLACE).

ASCENT TO HEAVEN. See HEAVEN, ASCENT TO.

ASCLEPIUS (NHC VI,*8*). The title assigned to the 8th tractate in codex VI of the collection of 4th-century Nag Hammadi Coptic manuscripts. The text, which extends from line 15 of p. 65 to line 43 of p. 78 of codex VI, has suffered considerable damage to the first half-dozen lines or so of each page beginning with p. 67. The Coptic dialect of NHC VI is Sahidic, with some Akhmimic and Subakh-mimic variants.

The document lacks a title in the manuscript. The title *Asclepius* derives from the fact that this tractate represents a Coptic translation of a portion (sections 21–29) of the Hermetic dialogue which is so entitled in its Lat translation (the only version preserving the complete dialogue). The title *Asclepius*derives from the name of one of the interlocutors of the dialogue, the Greek and Roman demigod Asclepios/Aesculapius. The Greek original underlying both the Coptic and the Lat versions was entitled *The Perfect Discourse,* fragments of which are preserved in citations made by later authors. The earliest of these authors, the church father Lactantius, proves that *The Perfect Discourse* existed at the beginning of the 4th century C.E.; its composition may therefore be plausibly assigned to the 3d century. In those passages where the Gk original can be compared with both the Lat and the Coptic, the Coptic is markedly and consistently closer to the Gk than is the Lat, confirming that it more faithfully translates *The Perfect Discourse* than does the paraphrastic Lat *Asclepius.*

It is uncertain why the parameters of the Coptic excerpt are such as they are. It is possible that the Coptic text represents one or more of what may have been originally smaller, independent units of Hermetic literature that were eventually redacted into a larger Gk tract summarizing all Hermetic doctrine, hence a "perfect" discourse. This may also help to explain why the prayer that concludes the Latin *Asclepius* (sec. 41) appears in Coptic as a separate, *preceding* tractate in NHC VI (see THANKSGIVING, PRAYER OF). It is equally possible, however, that the current parameters of the Coptic *Asclepius* are simply due to the whims either of the Coptic translator or, more likely, of the copyist. In a note which immediately precedes the excerpt (65.8–14) and which he may have intended in part as an introduction to it, the translator/copyist informs the reader that many Hermetic discourses are in his hands and that he hesitates to copy them all.

As defined by the parameters of the Coptic excerpt, at any rate, *Asclepius* preserves the typically Hermetic form of a dialogue between mystagogue (in this case Hermes Trismegistos) and initiate (here Asclepios), covering a wide range of topics. Beginning with an exposition of the mystery of sexual intercourse (65.15–34), Hermes expounds on the distinction between the many who have no knowledge of God's mysteries and the few who do (65.34–66.25). For the latter, this *gnosis* is a healing of their passions, while the passions of the former are incurable. Although mortal and subject to passions because of their material bodies, humanity has been granted such knowledge from God, making man immortal and akin to God (66.26–68.19). This kinship with God enables man, like God himself, to create gods, if only in human likeness (68.20–69.27). Such gods are truly living gods, not merely the statues by which they are portrayed, as disbelievers think. There will come a day, however, when Egypt's worship of the gods will be scorned by blasphemous foreigners who will prohibit their worship, persecute the faithful, and fill the land with tombs. Egypt, the temple of the world, will be deserted by the gods and desecrated by the crimes of these men (69.27–73.22). But the Creator, who desires the Good, will destroy this perverted society as he has before, with water and fire, finally restoring the world and the faithful (73.23–at least 75.36). The excerpt closes by describing death and depicting the examination of the departed soul by a great spirit appointed by God to judge souls. The respective rewards and punishments due are described at length.

What its Christian readers made of the originally pagan Egyptian justification for the cult of images and eschatological polemic against its destruction (68.20–73.22) is difficult to say. Perhaps they simply saw in themselves the fulfillment of its prophecies, much in the same way as other contemporary Christians adduced pagan oracles as witnesses, however grudging or unwitting, to the truth and power of Christianity. It is readily understandable, on the other hand, that contemporary Christian readers, in particular ascetics, would find the discussion of saving *gnosis*, elimination of the passions, kinship to God, the destruction of a sinful world and the judgment of souls (65.34–68.19; 73.22–78.43) attractive reading. *Asclepius* attests, at any rate, the free exchange of literature among various religious groups, Christian and non-Christian alike, in late antique E Roman settings.

HOWARD JACKSON

ASCLEPIUS, CULT OF. Asclepius was the most important god of healing in the Greco-Roman world. In the 1st century C.E. and even more in the 2d, his benefactions as a miraculous healer and divine guide were celebrated in hundreds of temples across the Roman empire. Inevitably, as Christianity emerged proclaiming traditions of Jesus as a miraculous healer, Jesus' virtues were compared with the powers and widely attested wonders of Asclepius.

Asclepius was probably originally an earth deity worshiped before the Greek migrations in the town of Tricca in Thessaly (Hom. *Il.* 2.729–31), though later Epidaurus claimed to be his birthplace (Paus. 2.26.1–27.6). His name was spelled in a variety of ways in its earliest Greek forms, including Aiskalapios, which gave rise to the Latin form, Aesculapius. The etymology of the name is obscure, but by the 4th century B.C.E. a tradition of interpretive word-plays had begun to emerge (Plut. *Mor.* 845B). In the 1st century C.E., for example, Cornutus says that "Asclepius derived his name from healing soothingly (*epios*) and from deferring the withering (*aposklesis*) that comes with death" (*Compend.* 33).

Asclepius was incorporated into Greek mythology with characteristics of both hero and deity. He was the son of Apollo and the mortal Coronis, according to the most common myth. In a jealous rage Apollo killed Coronis but saved Asclepius from her womb, and gave him to the centaur Chiron, who taught him all the healing arts (Pind. *Pyth.* 3; Ov., *Met.* 2.542–648). Asclepius had a family, which included the heroic sons Podilarius and Machaon, whom Homer identified as physicians among the Greeks at Troy (Hom. *Il.* 2.729–33; 11.833–36). His wife and daughters were his familiar companions in his various sanctuaries and were believed to personify aspects of the healing arts: Epione, his wife; Hygieia, his most prominent daughter; and other daughters, Panaceia, Akeso, Iaso, Aigle, and others. Asclepius' skill was such, according to the myth, that he even raised a mortal from the dead and might have done the same for all humankind, but Zeus forestalled granting humanity such salvation from death by striking Asclepius down with a thunderbolt. In his death, however, Asclepius was elevated to the status of a god, and it is as a full deity with both chthonic and celestial characteristics, that he functions in the historical Asclepius cult centers. He was always closely linked to Apollo, sharing the epithet "Paean," and in the imperial period sometimes even identified with Zeus.

The expansion of the Asclepius cult began in the 5th century B.C.E., especially from Epidaurus, where Asclepius was associated with the ancient cult of Apollo Maleatas. Epidaurus actively promoted the cult and established branch sanctuaries in numerous cities. Perhaps most important was the introduction of the cult into Athens in 420 B.C.E., under the patronage of the aged Sophocles, who was said to have provided his home as a sanctuary of the god until his temple on the S slope of the Acropolis was finished (*IG* II^2, 4960a; *Etym. Magn.* s.v. *dexion*). Sophocles composed a paean to Asclepius that continued in use at least into the 3d century C.E. Athenian influence may have contributed to the expansive building program that enhanced the sanctuary at Epidaurus throughout the 4th century. In the early 4th century Epidaurus fostered a branch sanctuary in Pergamon and later in the century sponsored another just inside the city walls of Corinth.

In 293 B.C.E., when a plague struck Rome, the Sibylline Books—perhaps supported by an oracle from Delphi—instructed the Romans to bring Asclepius from Epidaurus to Rome. He was brought, according to legend, in the form of a sacred serpent and chose the Tiber Island for his sanctuary (Livy 10.47; Ov. *Met.* 15:622–745). The only major sanctuary of Asclepius that tried to maintain independence from Epidaurus was that at Cos, the home of Hippocrates, which claimed to have been established directly from Tricca in the 6th century B.C.E. In Ptolemaic Egypt, Asclepius flourished through his identification with the legendary deified physician Imhotep (Imuthes).

The Asclepius cults went through major periods of expansion in the 4th and 3d centuries B.C.E. and again in the 2d century C.E. During the earlier period, Epidaurus, as the god's greatest center, not only expanded its role as place of pilgrimage for healing—promoted in official inscriptions recounting scores of the god's miracles—but also strove to become a Panhellenic center like Delphi or Olympia. In addition to buildings directly related to the cult, Epidaurus added a gymnasium, stadium, baths, and its justly famous 14,000–seat theater. Its wealth was attested in the excellent construction of such buildings as the

round Tholos and in the colossal gold and ivory cult statue of the seated Asclepius by the Parian sculptor Thrasymedes. The god's Zeus-like visage expressed grandeur and benevolence; he held a staff in his left hand and extended his right over the head of his sacred serpent (Paus. 2.27.2). In the Roman period, Epidaurus again expanded, adding Roman baths, a music hall, and hotel facilities with 160 rooms.

Epidaurus early developed the regimen of incubation in the sanctuary that was widely used throughout the history of the cult. Typically a pilgrim might undergo a 3-day period of purification with baths and abstinence from sexual intercourse and certain foods such as goat meat and cheese. Afterward, he brought an animal sacrifice to Apollo and offerings of honey cakes to other divinities. He then might sacrifice a piglet to Asclepius and give an offering of money appropriate to his own wealth. As he entered the sleeping chamber (*abaton* or *enkoimeterion*), where he hoped and expected to receive either immediate healing or some helpful prescription from the god in a dream, he would bring offerings of cakes to Fortune, Memory, and Law. The person slept wearing a sacred laurel wreath and left it behind on his bed in the morning (Burkert 1985: 267–68). What followed depended on the dreams experienced by the pilgrim and might vary from an instant cure to a prescribed dietary regimen to an extended period of apparently nonsensical treatments. In any case, the pilgrim was expected to complete his visit to the sanctuary by bringing a thank-offering to the god.

The effectiveness of Asclepius' ministry throughout the Greco-Roman world is attested by the archaeological discovery of hundreds of votive tablets and graphic representations of portions of the body healed by the god. The cult gave emphasis to the needs of the individual and promoted a personal devotion to the god. Such attachment is apparent in numerous inscriptions, but appears most vividly in *Sacred Tales* of orator Aelius Aristides, who was incapacitated by a variety of maladies and spent many months at the Asclepieion in Pergamon during the 2d century C.E. In that period the sanctuary at Pergamon reached its greatest prosperity. Like Epidaurus it had grown with the affluence of the times and the popularity of its deity to be a large health spa complex, and supported a school of medicine led by Galen, the leading physician of the period.

In pagan debates with Christianity, Asclepius as savior and healer played a distinctive role. Both Celsus and later Julian portrayed his activity as clearly parallel to Christ. Christian polemic disparaged many details of the myths attached to Asclepius, and even when powerful deeds were conceded to him (such as driving the plague out of Rome), these were attributed to the power of the devil, since Asclepius himself was a demon. In spite of Christian persecution, the cult continued until the 5th century C.E.

ASENATH (PERSON) [Heb *ʾāsĕnat* (אָסְנַת)]. Egyptian daughter of Potiphera, priest of On, given by Pharaoh to the patriarch Joseph as wife, and mother of his sons Manasseh and Ephraim (Gen 41:45, 50–52; 46:20). While the Hebrew Bible simply identifies Asenath as Joseph's Egyptian wife and mother of his sons, later Jewish traditions sought to explain how one of the most revered patriarchs could marry the

foreign daughter of a pagan priest (Aptowitzer 1924:239–306). By far the longest of these traditions is an anonymous Gk work, JOSEPH AND ASENETH, *(Jos. Asen.*) composed between the 1st cent. B.C.E. and the 2d cent. C.E., probably in Egypt (*OTP* 2: 177–201). What is striking about this work, vis-à-vis the biblical narrative, is that the female character is as fully developed as that of the patriarch Joseph, if not more so. Asenath is the beautiful 18-year-old virgin daughter of Pentephres, priest of Heliopolis and satrap of Pharaoh. A willful and headstrong woman, Asenath spurns all her suitors, preferring the seclusion of her tower to worship her many idols. After rejecting her father's request for her to marry Joseph, Asenath later falls in love with Joseph upon seeing him. Joseph, however, refuses Asenath's love, insisting that he cannot kiss a foreign woman who worships dumb idols and eats at their table. Asenath then repents of her idols and her arrogance and converts to the God of the Hebrews. She can now become a suitable mate for the most pious and chaste of the patriarchs, Joseph.

The name Asenath is characteristically Egyptian. The first 2 consonants have the meaning, "she belongs to …," followed probably by the goddess Neit. This is a common name of the Middle Kingdom and first Intermediate (2000–1500) (*ISBE* 1: 314; Kidner *Genesis* TOTC, 197).

GALE A. YEE

ASHAN (PLACE) [Heb *ʿāšān* (עָשָׁן)]. Var. BOR-ASHAN. A city which was originally part of the allotment of the tribe of Judah (Josh 15:42, but see below) and which was later given to the tribe of Simeon (Josh 19:7, 1 Chr 4:32). The site has been associated with Khirbet Asan, NW of Beer-sheba (see *IDB* 1:248). This site remains unknown archaeologically (Boling and Wright *Joshua* AB, 438). A variant, Bor-Ashan ("well of Ashan"), occurs at 1 Sam 30:30 as one of the cities to which David sent spoil after his defeat of the Amalekites.

Ashan served as a Levitical city according to 1 Chr 6:44—Eng6:59. A difficulty arises when one notices that some mss of the LXX have *asan* (the Gk form of Ashan) at Josh 21:16 rather than Ain as in the MT. Since Joshua 21 lists the cities given to the tribe of Levi, this would reinforce the placing of Ashan with the Levitical cities. The relationship between Ain and Ashan in the other city-lists, however, is unclear.

Another problem arises when one compares the Simeonite city-lists of Joshua 19 and 1 Chronicles 4 with the Judahite list of Joshua 15. The terms of the scholarly debate on this comparison center on whether Ashan rightfully belongs at Josh 15:42 (it is missing from the LXX at this point) or at Josh 15:32 on the basis of comparisons with the Simeonite lists. In favor of the first position, see Kallai-Kleinman 1958:159 n. 1. The case for the second position is made by Cross and Wright 1956:214. This debate has implications for the administrative location of Ashan. If Ashan belongs at Josh 15:42, then it was grouped with the cities of the Shephelah, or Lowland, region (cf. Josh 15:33). If Ashan belongs at v 32, however, one would place its administrative district further S (cf Josh 15:21).

JEFFRIES M. HAMILTON

ASHARELAH (PERSON) [Heb *ʾăśarʾēlâ* (אֲשַׂרְאֵלָה)]. Var. JESHARELAH. One of the 4 sons of Asaph who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:2). The KJV reads Asarelah in accordance with the dominant MT tradition, while the RSV reads the name according to the Heb variant tradition *ʾăšarʾēlâ.* Williamson (*1 and 2 Chronicles* NCBC, 186) and others suggest that *ʾăšarʾēlâ* is a conflation of the words *ʾăšarʾēl* and *ʾēlleh,* "Asharel. These (are) …" Such a scribal error may also have included the omission of the word "four," thus explaining why the sons of Asaph are not explicitly numbered as are the sons of Jeduthun (1 Chr 25:3) and Heman (1 Chr 25:4).

A comparison of the lists of names in 1 Chr 25:2–6 and 1 Chr 25:9–31 reveals that the three brothers of Asarelah in 1 Chr 25:2 receive the 1st, 3d, and 5th lots which were cast to determine duties (1 Chr 25:8–12). The 7th lot fell to Jesharelah (1 Chr 25:14), and the resulting pattern suggests that Jesharelah and Asharelah are names for the same person. While most scholars suggest that 1 Chr 25:9–31 is either literarily dependent upon or historically later than 1 Chr 25:2–6 (Williamson 1979: 255–7), Petersen (1977: 67) contends that 1 Chr 25:9–31 contains the more-original forms of the variant names. Such a view opposes the conflation theory mentioned above. Petersen (1977: 68) suggests that 1 Chronicles 25 originally dealt only with the sons of Asaph, thus explaining the lack of explicit numbering of the sons of Asaph in 1 Chr 25:2.

ASHBEA (PLACE) [Heb *ʾašbēʿa* (אַשְׁבֵּעַ)]. See BETH-ASHBEA (PLACE).

ASHBEL (PERSON) [Heb *ʾašbēl* (אַשְׁבֵּל)]. ASHBELITES. One of the sons of Benjamin and head of the Ashbelites, according to 3 genealogies of Benjamin (Gen 46:21; Num 26:38; 1 Chr 8:1). A 4th Benjaminite genealogy replaces Ashbel with "Jediael" (1 Chr 7:6), a substitution made perhaps to remove the heathen sounding "Ashbel" (man of Baal?), replacing it with the more acceptable sounding "Jediael" (known to God?). The Syr and Ar read "Ashbel" in 1 Chronicles 7:6 instead of "Jediael." Two of the Benjaminite genealogies which include Ashbel speak of him as Benjamin's 2d son (1 Chr 8:1; Num 26:38), while the other (Gen 46:21) lists him as Benjamin's 3d son. In Genesis 46:21, the 2d son is "Becher." Johnson *IDB* 1:248 suggests that Becher can be restored to both Numbers 26:38 and 1 Chronicles 8:1, rendering Ashbel as Benjamin's 3d son in all 3 genealogies. He does this by suggesting that Becher was misplaced in Numbers 26:35 among the sons of Ephraim (the LXX does omit Becher from Numbers 26:35), and that Becher (Heb *beker*) was mistakenly treated as "his first-born" (Heb *bĕkōrô*) in 1 Chronicles 8:1. Williamson is critical of attempts to emend 1 Chronicles 8:1 to read "Becher" as a 2d son, pointing out that the series of ordinals, "the second, the third, etc.," continue through all 5 of Benjamin's sons, making a harmonistic emendation unlikely in this text (*Chronicles* NCBC, 83). See BECHER.

SIEGFRIED S. JOHNSON

ASHDOD (PLACE) [Heb *ʾašdôd* (אַשְׁדּוֹד)]. Var. AZOTUS. An important Philistine city mentioned in several passages in the Bible. The ancient city is identified with modern Tel Ashdod (M.R. 117129), 15 km N of Ashkelon and ca. 4 km inland from the Mediterranean Sea. The main coastal road from Gaza to Jaffa runs just E of the tell; in antiquity this was known as the "Way of the Philistines" or the "Via Maris." The Lachish river in the region of Ashdod was navigable until recently; at its outlet stands Tel Mor, which most probably served as Ashdod's harbor (Dothan 1960; 1973b).

6. Roman and Byzantine Periods

A. Textual References

The people of Ashdod are first mentioned in Ugaritic, both in cuneiform and alphabetic texts from the 14th–13th centuries B.C. These texts deal mainly with Ashdod textile merchants who brought both purple wool and garments from Ashdod probably to Ugarit. The Ashdod merchants living in Ugarit and in its port Maʿhadu (Minet el-Beideh) bear mostly W-Semitic names.

Ashdod, its inhabitants, and its surrounding territory appear in the Bible many times. In Josh 11:21–22, which recounts how Joshua wiped out the Anakim, there is a note indicating that some Anakim remained in Ashdod. Although Ashdod was assigned to the tribe of Judah (Josh 15:47), it does not seem to have been conquered by the Israelites. After the battle of Ebenezer, Ashdod became the scene of the story about the temple of Dagon to which the ark of the covenant was brought by the Philistines (1 Sam 5:1–7). After the Philistines suffered several more disasters during its stay, the ark was moved to Gath.

Ashdod is not mentioned in the Bible again until the reign of Uzziah, king of Judah, who "broke down … the wall of Ashdod and built cities about Ashdod and among the Philistines" (2 Chr 26:6). The conquest of the city in 712 B.C. (Isa 20:1) and its relations with Assyria are well-known from the inscriptions of Sargon II (cf. *ANET*, 284–287). From these sources we know that in 713 B.C. the city, under Azuri, revolted against Assyria. Consequently, Sargon placed Ahimetu on the throne, quelling the revolt while Yamani, who had made himself the king of Ashdod, fled to Egypt. The destroyed city and its territory were annexed by the Assyrians and became a province under an Assyrian governor. In the period of Sennacherib the city did not participate in the revolt of other Philistine cities, and the territory of Ashdod was restored to an independent monarchic status under Mitinti (*ANET*, 287–88). The next vassal king, Ahimilki is mentioned in Assyrian sources under Esarhaddon and Ashurbanipal (*ANET*, 291, 294). According to Herodotus, during Ashurbanipal's reign Ashdod withstood an Egyptian siege for 29 years, until it was conquered by Psamtik I. After Nebuchadnezzar's conquest, the king of Ashdod is mentioned as a captive at the Babylonian court (*ANET*, 307–8), while Ashdod and its territory became a Babylonian province. Some of these and later events of Ashdod's history are also mentioned in the Bible (Zeph 2:4; Zech 9:5–6; Neh 4:1–2). During the Persian period Ashdod is mentioned in the book of Judith (2:28).

Our primary sources for the history of Ashdod during the Hellenistic and Roman periods are 1 Macc (5:68; 10:77–78; 13:34; 16:10) and Josephus' *Antiquities*, which contains many references to Ashdod, some of which do not occur in the Bible (*Ant* 5.87; 5.128; 13.395). The city is mentioned only once in the NT (as Azotus; Acts 8:40). In the Roman period, Pompey returned Ashdod, among other cities, to its former inhabitants, and Gabinius restored it (*JW* 1.156, 165f). Later, Ashdod belonged to the Herodian dynasty, until it fell into the hands of the Romans (*JW* 4.130). Strabo and Pliny are among the Roman writers who refer to Ashdod. Eusebius' *Onomasticon* records that *Azotus* (i.e., Ashdod) was a "notable small town," and Hieronymus writes that Ashdod, described as *insigne oppidum* in his time, was the oldest of the 5 Philistine city-states.

B. Excavations

The city of Ashdod consisted of 2 parts: an acropolis of at least 20 acres, and a lower city, the exact limits of which have not yet been determined since it is still covered with dunes (but which certainly extended over more than 100 acres). The excavations were carried out in 10 areas. On the acropolis 23 strata were uncovered; in the lower city only the 10 uppermost strata were excavated.

Seven seasons of excavations were conducted between 1962–70. The first 2 were sponsored by a joint project of the Pittsburgh Theological Seminary, the Carnegie Museum of Pittsburgh, and the Israel Department of Antiquities, while the last 2 seasons (1971–72) were conducted by the Department of Antiquities alone.

1. Middle Bronze Period. The acropolis was first settled at the end of the MB III period (stratum XXIII). The most significant discovery is a city gate in area G at the N end of the tell. The brick gate has a straight entrance and two pairs of pilasters. Remains of an earth rampart were traced on both sides of the gate. The join between the gate and the rampart is reinforced by short, tongue-like walls. The plan is similar to that of the E gate at Shechem. The pottery is mostly of the second half of the 17th century B.C.,

indicating that the fortified city was built during the early part of the 15th (Hyksos) Dynasty (1674–1567 B.C.), possibly during the reign of Apophis I. A cylinder seal (Kassite?), though unstratified, is evidence for contacts with Mesopotamia, while some early black-on-red pottery testifies to contact with Cyprus. The earlier gate was destroyed and a new fortification line and probably also a gate—of which little was preserved—were built N of it in the later phase of stratum XXII. In stratum XXI some walls and a paved floor were found in this area. The pottery, including some Cypriot imports, dates from the time between MB III and LB I.

2. Late Bronze Period. In the later stage (stratum XX) a section of a thick brick wall with an adjoining pavement may have been part of a defensive structure (gate?) in area G. Bichrome ware now appears in quantity and the Cypriot pottery imports grow. At least two small early LB buildings were uncovered. The most prominent feature of stratum XIX is part of a complex including three parallel walls, a wall perpendicular to them, and a courtyard. The pottery, both local and Cypriot (base ring I) and some Mycenaean wares, testify that this stratum belongs to the last stage of LB I. A great stretch of paving (stratum XVIII) was unearthed in area G, enabling a clearer separation between the strata below and above it. This stratum was also attested in area B, the earliest in the E part of the tell. One of the trenches revealed a foundation laid down for the construction of the city wall protecting the S edge of he acropolis; the wall itself was almost completely washed away. The finds include imported base ring I and bi-chrome wares and suggest dating of stratum XVIII to the transition between LB I and early LB II.

The building remains above the site of the gate in area G indicate that the area again became important. The first substantial structures encountered since stratum XX were found here. The walls, pavement, and floors associated with a large fortified building (probably constructed already in stratum XVIII) may best be followed in the remains of strata XVI–XIV. Its 1.5 m thick walls were made of bricks resting on a ca. 1-m-high stone foundation. According to one possible reconstruction, this was a rectangular fortified building (ca. 34 × 27 m), with 8 rectangular rooms and halls in parallel rows, as well as a plastered pool and a cistern. Two circular stone column bases probably supported columns at the entrance to the building. A plastered cistern in one of the courts collected rainwater from the roofs and transferred it through a channel to another cistern. The building was damaged at the end of stratum XV; the finds, however, which included LB II local, Cypriot, and Mycenaean pottery, indicate the continued prosperity of the LB II city. Sporadic murex shells found in this and in other LB strata point to the significance of the purple industry at Ashdod and its anchorage at Tel Mor. Some of the finds also come from the debris used as a fill for the later settlements (strata XIII–XII). These include a glass fragment with a cartouche of Rameses II, an Egyptian stone palette, and a large fragment of a stone doorjamb with part of a hieroglyphic inscription: "Fanbearer (on) the Right Hand of the King." This inscription, which may be attributed to the 18th–19th Dynasties, is the first found in Canaan mentioning one of the highest Egyptian officials. The building thus seems to have been an Egyptian stronghold palace. In the same period (strata XVI–XIV), on the S side of the tell (area B), a large brick building was uncovered; it may have been a farmhouse, consisting of a central courtyard flanked by rooms. Finds, including Mycenaean pottery, figurines, and scarabs, indicate the prosperity of the city during the Amarna and 19th Dynasty periods.

The end of the LB, though well-attested all over the site, was especially evident in area H. A destruction layer ca. 1 meter thick covered the remains of a brick building with LB and Mycenaean IIIB sherds still on the floors. The destruction of stratum XIV all over the site (and specifically the destruction of the palace in area G) seems to end the Egyptian domination of Ashdod towards the late 19th Dynasty.

3. Iron Age Period. a. Stratum XIII. Though the impact of the destruction is evident throughout the site, the transition from the LB city (stratum XIV) to the Iron Age city (stratum XIII) can best be demonstrated in area G. The new inhabitants reused some parts of the stronghold palace for completely different purposes. Some small, poorly constructed rooms were constructed in one of the yards, including a potters' workshop and storerooms. A large number of whole vessels found there show a new style of pottery belonging to the new inhabitants, who came with the 1st wave of the Sea Peoples. These people brought with them a different cultural background expressed, e.g., in the forms and decorations of their pottery, some of which had monochrome decoration very close to the Mycenaean IIIcI pottery in Cyprus.

Near the potters' quarter was a square structure of plastered bricks, covered with ashes mixed with small bones and potsherds and with a reused round stone pillar base blackened by fire. This was probably an altar used by the new settlers. The most interesting of the other finds was a cylinder seal with seated figures, having bird-like heads in Aegean style, and undeciphered signs (letters?).

In area H a large residential quarter was uncovered with two complexes of buildings separated by a wide street. A large rectangular building (17 × 13 m) N of the street had a courtyard and a few rooms bounded on one side by a double wall. Some of the pottery was still made in the Canaanite tradition; however, the most distinctive group was of the Mycenaean IIIc1 type. This pottery appeared at Ashdod before the typical Philistine pottery and may have been brought by some as-yet-unidentified group of the Sea Peoples prior to the arrival of the Philistines proper (stratum XII).

b. Stratum XII. The Philistine settlement is represented best in this stratum in area G. The new inhabitants used the remains of the Canaanite-Egyptian palace as part of their defensive line, creating a kind of "casemate" wall (two parallel walls with regular partitions between them). Some of the empty areas of stratum XIII now became industrial centers. In one of the rooms was found a clay bathtub-like basin containing some sherds and a glass ingot. Nearby, a stone bench, a few crushing stones, and remains of a brick structure indicate some sort of an installation (perhaps a glass kiln). The pottery included typical Philistine bi-chrome ornamented vessels.

In area H the residential quarter with the dividing street continued to utilize the stratum XIII plan, with some changes. However, a significant addition was found in the N complex of the buildings: an apsidal-like brick structure built above a rectangular base. On the N-most part of this complex a large hall included stone column bases, which might have supported a roof and a rectangular structure (altar?). At a short distance from the apsidal (cultic?) structure was found a figurine of a seated woman, shown as part of a throne. It probably represents a Philistine goddess (nicknamed "Ashdoda"). Fragments of such figurines, whose prototype seems to have been the Mycenaean "Great Mother," were found on the acropolis throughout strata XII–X. The finds in the rooms of this complex—which contained Philistine pottery, scarabs, beads, cosmetic ware, and ladies' jewelry made of gold, faience, bone, and ivory, as well as gold discs ornamented with Aegean patterns and a seal engraved with enigmatic signs—indicate that this residence may have belonged to high-status women.

In area A remains of a well-built brick structure were uncovered. One of the walls was a double one (1.25 m thick). This structure, most probably part of a tower, served as a part of the defense line of the acropolis and continued this function into strata XI and X; it subsequently lost its importance when a new line of defense, the city wall, was constructed also encompassing the lower city.

c. Stratum XI. The increasing prosperity of the city and the growth of its population led to the expansion of the acropolis, N of the casemate city wall of stratum XII (area G). The casemate wall, as well as the courtyards and rooms S of it were rebuilt on a plan similar to that of stratum XII, but with some changes. In the open area to the N of this fortification, a new building complex, made of bricks, was built. The pottery, mainly Philistine, also included a *lekane* bowl known from Greece (Mycenaean IIIcI period) and a large fragment of a pithos decorated with wavy molded application, certainly of foreign origin. In one area a large number of slags and lumps of bronze may suggest a metal industry.

In area A the tower from the previous stratum was still in use. The walls, however, were preserved only on its N side. On the floor, sherds characteristic to the 11th century, mostly Philistine, were found. In area H, a part of a city (?) wall at least 4 m wide was discovered. In addition to the usual Philistine vessels, some sherds of the Mycenaean IIIcI type were still found.

d. Stratum X. In this stratum the expansion of the Philistine city reached its climax. The settling of the lower city probably progressed in all directions outside the acropolis. Its excavated section (area M) reached as far as ca. 400 m to the SE of the acropolis. This enormous expansion was certainly due to the increase of population and wealth in the 11th century. This led to the establishment of a new defense line, which had to secure both the upper and the lower city from a possible enemy attack from the E.

The "casemate" wall in area G was demolished and a residential quarter was built above it. To the N was found a wall (4.5 m wide), probably part of the above-mentioned wall in the lower city (area M).

Under its foundation a "foundation deposit," consisting of vessels characteristic to the 2d half of the 11th century, was found. A seal in the form of a seated lion with an incised "Ashdoda"–like figure of a seated musician also helped to date this stratum.

The first settlement in the lower city in area M—stratum Xb—was most probably unwalled; a few trenches revealed a kind of "pioneering" settlement of the early 11th century with few pottery kilns and foundations of some walls. The pottery still exhibited Philistine elements. Only after a generation or so, in stratum Xa, was the settlement fortified. An excavated section of this fortification revealed a city gate and a wall attached to its S and N. The gate consisted of 2 towers, each containing 2 chambers on the W and a solid watchtower in front with a passageway 4.2 m wide. The gate area was 13.75 m long and 16.5 m wide, and it was built of bricks with some stone foundations. The partly exposed city wall is ca. 4.5 m wide. This fortification, which is not unlike some of the early Iron Age fortifications in the Israelite hill country, suits the period of the climax of Philistine power and expansion, which continued during Saul's reign and may have been established as a defense against the Israelites. This is probably the city associated with the biblical story of the capture of the ark (1 Sam 5: 1–7). In a silo and kiln beside the gate a few complete storage jars provide a probable dating for the end of this stratum. Both the typical "Ashdod ware" with a red hand-burnished slip and a black decoration and the black-on-red decoration are first attested in this stratum. The fortifications of stratum Xa in Ashdod were destroyed in the first half of the 10th century, probably by Siamun (ca. 967 B.C.), though a possible conquest of Ashdod by David should not be excluded. There are no building remains from the transition period between the destruction of this and the construction of the next gate a generation or so later (stratum IX; see below).

Stratum X in area H/K is likely to correlate with its later phase (Xa) in other areas. The finds show a mixture of Philistine and other elements in pottery (e.g. red, irregularly burnished pottery). One outstanding find from this area was an incense pottery stand, which shows 5 figurines of musicians playing different instruments. Above them is an incised procession of domestic animals. Such musicians (as depicted in this cult stand) probably served in a local cult place not yet discovered. The scene recalls the story of Samuel foretelling Saul's encounter with the band of prophets coming down from the high place and playing musical instruments, an incident associated with the Philistine fortress at Gibeath-elohim (1 Sam 10:5). It seems that Dagon's cult in Ashdod as described in the Bible and represented probably also by this stand fits the city of stratum X, in contrast to the female-oriented (probably Aegean-inspired) cult of Ashdod in the early Philistine strata XII–XI.

e. Stratum IX. The lower city wall and gate (area M) were destroyed sometime in the 1st half of the 10th century B.C. Only about a generation later a new fortification was built to the S of the earlier (stratum X) gate. The new gate (20.5 m by 18.5 m) was much larger than the former one; made of bricks with rubble foundations and ashlar at the front and rear, it consisted of 2 watchtowers with 3 rooms each. The gateway, 5 m. wide and paved with crushed kurkar, passed between the 2 towers and led into the city. The city wall, 8.7 m wide, narrows after 40 m to a width of 5 m on the S. On both sides of the gate, several storerooms were uncovered with bronze and iron tools, a pair of scales, and other finds. This was the largest gate in the history of Ashdod and was of the "Solomonic" type and period, which has occasioned some debate. Evidence of subsequent repairs in the gate indicates its use over a long period of time. It was partly destroyed ca. 760 B.C., possibly by Uzziah (2 Chr 26:6).

The expansion of the lower city in this period is well represented in area D, located to the S of the acropolis. The early remains included a large building of which brick foundations and several floors were uncovered. In the S the area was surrounded by a 3-m-thick wall which may belong to the city wall of this period. Among the finds the typical Ashdod Ware (red burnished with black decoration, which had already been attested in stratum Xa elsewhere on the site) was predominant, completely replacing the Philistine ware.

f. Stratum VIII. In this stratum a group of large houses consisting of courtyards surrounded by rooms was excavated in Area D. In one of these buildings 7 kilns were established, indicating a potters' quarter; each of these kilns was rebuilt and reused many times. In the S part of area D a building was excavated, a part of which at least served as a temple. To one of the walls was attached a rectangular altar made of

white-washed bricks. Both in this room and in adjacent areas was found a large quantity of small figurines (both male and female) belonging to clay offering-tables. With them was also found a large number of domestic animal figurines belonging to the *Kernoi* type of round, hollow libation vessels.

In some of the rooms, secondary mass-burials were found, and a very large amount of human remains was uncovered beneath the floors. It seems that this is probably the city destroyed during the Assyrian conquest by Sargon II in 712 B.C. Three fragments from an inscription on a basalt stele, erected in Ashdod and found in a dump, corroborate this evidence. They belong to a stele which is a copy of a victory stele erected in Khorsabad, where the names of Sargon and the conquered cities, including Ashdod, are preserved. Ashdod seems to be a unique site insofar as the archaeological, the biblical (Isaiah 20), and the Assyrian evidence all corroborate this same event.

Following the destruction of the stratum IX gate complex in area M (see above), the gate complex was repaired, probably by Azuri (ca. 730 B.C.) after Tiglath-pileser III's compaign. The new gate tower was similar to the one of the previous stratum, but the chambers were larger than in the previous gate and a new defensive element was added to its N tower. The plan of the N storerooms was also changed. New floors covered the remains of stratum IX. Part of a wall, which belonged to a large structure, was uncovered outside the N tower. A passage probably served either to house a staircase or as a postern. The finds scattered on the floors, in addition to pottery and other objects, also included fragments of a crucible and tuyere. The gate and the whole vicinity were destroyed by Sargon II; the signs of the breached gate tower are still visible.

g. Strata VII–VI. Even after the destruction of most of the excavationVIII city, the potters' section in area D was still active in stratum VII. Several large pits full of ashes and refuse were found near the kiln area with additional figurines, which belonged perhaps to the discarded temple of stratum VIII. Some of the kilns were found with their air vents still intact, and a number of finished vessels were also there.

The few inscriptions in Hebrew characters found (not in situ) may be ascribed to stratum VII or VI. Among these are *(h)phr,* " (the) potter," the denominations *nṣp, bqʿ,* and *pym* on weights, and a *lmlk* stamp on a jar handle. The Hebrew script indicates trade relations between Ashdod and the kingdom of Judah. Perhaps Ashdod was even conquered by Judah in the days of Josiah who, according to some scholars, probably expanded his kingdom as far as Mesad Hashavyahu, N of Ashdod.

The gate of stratum VIII (area M) was reconstructed, perhaps as Sennacherib's reward to Mitinti, king of Ashdod, for his loyalty to Assyria. No major alterations could be observed in the plan of the gate of stratum VII, but at least two phases of settlement were recognized. Few burials found in the area, both human and animal, belong to the earlier phase. The final destruction of the gate area (by Psamtik I or Nebuchadnezzar) took place most probably around 600 B.C.

The scanty remains of the Babylonian period (stratum VI) indicate the decline of the city. The fortifications of Ashdod (area M) do not seem to have ever been used again, and some buildings covered the ruins of the gate. There are few remains of buildings, but the few pottery kilns and traces of metalworking suggest that the area became primarily an industrial site.

4. Persian Period. In this period (stratum V) a partial revival could be detected, at least on the acropolis (area A). Although most of the remains in this area were destroyed during the Hellenistic period, the Persian occupation is still well-represented here. Foundations of 2 buildings and a deep fosse were discovered. The large quantity of pottery characteristic to the whole Persian period found here suggests a long period of settlement in this area. A small ostracon with Aram cursive script was found describing the quantity of wine delivered in the name of a man called Zebadia. Dated to mid-5th century B.C., this Aram inscription might be in "the language of Ashdod" mentioned in Neh 13:24, the dialect probably spoken by the Philistines.

The Persian period is best represented in area K by the remains of a large building of which 4 of its halls were excavated; it seems to have served as an administrative center for the Persian governor. Although its exact dimensions have not been determined, the building was certainly not smaller than the "governor's palaces" of this period excavated in Lachish and Qasile. Remains of 2 buildings were found in the former gate area (area M). The walls, ca. 1 m wide and made of bricks, were preserved to a height of 2 courses.

In addition to the pottery characteristics of the Persian period (such as the mortaria and lamps), there was also the earliest import of the Attic black-glazed ware. In a number of oval pits some burials of dogs were found.

5. Hellenistic Period. Town planning is obvious in the Hellenistic strata (IV–III) in area A, though no remains of fortification were found. Streets were laid out between groups of well-constructed buildings. A special technique, combining brick foundations and stone walls, was employed in these buildings, as well as in a public building which was probably part of the agora of the city. In one of its rooms was a small cult place, on the floor of which was found a stone offering-table. In Stratum IIIb the courtyard of the building was used for storage. The finds included large Rhodian wine jars and black-glazed Attic vessels. A lead plaque, probably representing a deity with a fish tail (Atargatis?), as well as 2 miniature stone altars—one incised with the letter M (Marnas?)—and some weapons were found in a thick layer of ash from stage IIIb of the cult place. A coin of Ptolemy II (271–246 B.C.) found in the IIIb level helps to date this stratum. The latest coin found there was of Antiochus VIII, dated to 114 B.C. This coin establishes a *terminus post quem* date for John Hyrcanus's conquest of Ashdod, which stayed in Hasmonean hands until the time of Pompey.

Very few structures were preserved in the Hellenistic strata (IV–III) of area K. These included a pottery kiln and a large refuse pit containing Hellenistic pottery. Also, the floors provided a very rich repertoire of both local and imported pottery of the 3d and 2d centuries B.C., ending ca. 50 B.C. The only structure which survived in area M was a pottery kiln full of Hellenistic sherds. Among these, a fragment of a bowl with dark reddish glaze dated to the mid-2d century B.C. was found. Several coins were found here, the earliest being a coin of Ptolemy II, minted in Tyre.

6. Roman and Byzantine Periods. The layout of the town changed completely during the period of King Herod (stratum II) and it is obvious that the city by then was much smaller. A large building of at least 3 rooms was uncovered NW of area A. In one of its rooms, paved with stone slabs, were remains of a circular, clay oven. Among the finds were lamps, which have parallels in Corinth, stamped handles of amphorae, and Terra Sigillata bowls. A large pit filled with burned sherds, animal bones, and refuse might be related to the neighboring kilns. The last phase of stratum II came to an end most probably with the destruction of Ashdod by Vespasian during the 1st Jewish Revolt. The only remains in area M are pits with metal slags and kiln refuse. The pottery found in a pit dug into the Iron Age city wall helps to date this stratum to the early Roman period.

The general features of the previous early Roman stratum (II) could still be identified at the first phase (Ib) of stratum I, which dates to the late 1st century A.D. In area A a small pit was dug inside the larger pit from stratum II; it was full of workshaft refuse. A reservoir, probably for water storage, was also uncovered. Among the finds, a peculiar pilgrim flask should be mentioned as well as a few coins of this period. The few area M structures excavated from the late Roman period included a kiln made of brick discovered to the E of the early city-wall. Although Eusebius still referred to Ashdod as a "significant town," it seems that such a description did not apply to *Azotus Mesogaios* (i.e., inland Ashdod) but to *Azotus Paralios* (on the coast). See ASHDOD-YAM (M.R. 114132). By that time the inland Ashdod was inhabited by Jews (as indicated by a synagogue screen found there) and by Samaritans (as indicated by a section of an inscription and a talisman found in the excavations of the uppermost stage of stratum I).

ASHDOD-YAM (M.R. 114132). An archaeological site ca. 5 km NE of Ashdod. The city is mentioned (as *ašdud-immu*) in connection with Sargon II's 713 B.C. campaign against Yamani, king of Ashdod (*ANET,* 286). Yamani hastily fortified not only Ashdod, but also Gath and Ashdod-Yam, the latter apparently serving as a rear base for the city in times of danger.

Archaeological surveys were conducted at Ashdod-Yam from 1965 to 1968. Ten cuts were made in the rampart-like structure and at its base, and the city wall was exposed in 3 of these cuts. Two earthen glacis retained the wall on its inner and outer sides. The 3.1-m-thick wall was built of reddish sun-dried brick, and the outer glacis was mainly made of local sand and kurkar. It was evidently designed to prevent assaults by siege engines and battering rams. The inner glacis served to counter the pressure of the outer one. Two periods of occupation are attested at the site itself. The earlier, which includes the period of construction of the fortifications, dates to the latter half of the 8th century B.C. The later occupation dates to the 7th century B.C., a time when the fortifications were no longer used. Thus, the uncovered wall and glacis are likely the ones built by Yamani (Kaplan 1969).

In Roman-Byzantine times occupation stretched 500 m N of the Iron Age fortifications, along the coast, and the city was then known as *Azotus Paralius.* Here are found the ruins of the Crusader-Mamluk fortress known to the Crusaders as *Castellum Beroardi* and to the Muslims as *Mahûz Isdûd*.

J. KAPLAN

ASHER (PERSON) [Heb *ʾāšēr* (אָשֵׁר)]. ASHERITE. The eponymous ancestor of the Israelite tribe of Asher, reported to have been the 8th-born son of Israel's eponymous ancestor Jacob. The name means "happy one," "righteous one." It may also be the name of a god, the male form of the goddess Asherah (*IPN,* 131).

Asher's secondary status among the Israelite tribes is marked in tradition by his "birth" to Leah's handmaid Zilpah, rather than to one of Jacob's 2 wives (Gen 30:12). As a member of the idealized premonarchic Israel, Asher is included alongside its 11 brethren tribes either implicitly or explicitly in the oppression in Egypt (Exod 1:4); the exodus, the Sinai covenant, and the wilderness wandering (Num 1:40–1; 2:27; 10:26; 26:44–47; Deut 27:13); and the conquest of the land of Canaan (Josh 19:24–31; Judg 1:31–32).

The territory traditionally associated with Asher is located in the W Galilean hills, adjoining the Phoenician coast to the W, Sidon to the N, Naphtali to the E, Zebulon to the SE, and Mt. Carmel to the SW (Josh 19:24–31; *HGB* 204–24). The narrow strip of territory was fertile land, particularly suited to olive orchards (Deut 33:24) and vineyards. Gen 49:20 alludes to Asher's agricultural bounty, referring to the "royal dainties" the region will yield. Judg 5:17 indicates that involvement in maritime activity provided Asher's inhabitants with an additional source of economic prosperity.

The association of the name Asher with the W portion of Galilee tends to be supported by Egyptian texts. The name appears with the determinative for foreign land as early as the reign of Pharaoh Seti I (1291–1272 B.C.E.) (Simons 1937: 147). Two additional occurrences are known from the reign of Rameses II (Simons 1937: 162; *ANET* 475–79), and an additional unpublished reference appears in the Golenischeff collection (Gauthier 1925: 105). The occurrence of Asher in the list of Seti I provides the clearest indication for the name's connection with W Galilee. It appears in a geographical sequence between Kadish, probably representing the Syrian city-state of Kadesh on the Orontes River with its surrounding domain, and Megiddo, the city-state that controlled the NW portion of the Megiddo Plain–Jezreel Valley corridor. Asher seems to represent the hinterland of Phoenicia at the time of Seti I, the W Galilean hills N of Megiddo, as far as Lebanon (Müller 1893: 236).

The Galilean region of Asher did not become part of the Israelite state until the reign of David. Saul did not control Galilee (2 Sam 2:9; see ASHURITES). David was the first Israelite king to have secured the Megiddo Plain–Jezreel Valley corridor by capturing Megiddo and Beth Shean. It is logical to conclude that he was able to gain subsequent control over Galilee. Although no administrative lists from David's reign have been preserved, under Solomon, Asher was joined with Bealoth, probably Zebulon, to form one of the 12 administrative districts of Israel (1 Kgs 4:16). It is likely that Solomon had inherited the pre-established district from his father. Solomon ceded the N portion of Asher, the region of Cabul, to Hiram of Tyre as payment for Tyrian workers and supplies in connection with the building of the palace and temple in Jerusalem (1 Kgs 9:13). Israel's ability to maintain control over Asher and the rest of Galilee during the period after the split of the United Monarchy (ca. 917 B.C.E.) has not been documented, but was probably sporadic.

In addition to the Galilean territory of Asher, there was a group of Asherite clans located in the S portion of the central Ephraimite hill country (Abel 1937: 219–20; *LBHG*, 244; Edelman 1985: 86; Edelman 1988; see ASHURITES). While it is possible that the two groups were not interrelated but merely shared the same name by coincidence, it is generally presumed that the two groups ultimately shared a common origin and that the more S group had somehow splintered off from the better-known Galilean group (Steuernagel 1901: 31; Abel 1937: 219; Malamat 1962: 146; Yeivin 1957: 99–100; *LBHG*, 244; Edelman 1985: 86).

The detailed genealogy for the tribe of Asher in 1 Chr 7:30–40 pertains to the S Asherite group exclusively. Two analyses of its structure have been proposed. The first considers it to be a homogenous segmented genealogy, containing a few textual corruptions that have obscured its otherwise systematic presentation. Textual errors have crept in vv 35–38 in the listing of the descendants of the 4 sons of Helem/Hotham: Zophah, Imna, Shelesh, and Amal. Thus, Beri and Imrah of v 36 (*bry ymrh*) are not to be seen as additional sons of Zophah, but instead, as corruptions of an original phrase "sons of Imna" (*bny ymnh*). In v 37, the word "sons" (*bny*) should be restored before Shelesh to signal the listing of his offspring, and an additional 3d name is suspected to have inadvertently been dropped from the roster of descendants. Finally, in v 39, a medial *mem* should be restored in the name Ulla, rendering an original Amal rather than Ulla, to list descendants of Helem/Hotham's final son from v 35. According to the second structural analysis, the genealogy contains 3 source strands (vv 30–35; vv 36–37; vv 38–39) that have been combined secondarily to form a single genealogy. The occurrence of name-overlap between the 3 strands (Zophah; Beriah/Beri; Shelesh/Shilshah; Shua/Shual; and Jether/Ithran) indicates that the strands represent enumerations of the same group at different points in its existence (Edelman 1988).

The only names in the Asherite genealogies that can possibly be associated with clans in the N Galilean territory of Asher are Beriah and his siblings Imnah, Ishvah/Ishvi, and Serah. Beriah, Serah, and Imnah also appear as clan groups within the enclave, but it is possible that segments of these clans remained in the Galilean Asherite territory while other portions migrated S. The preservation of the names of Beriah and siblings by the S group may have been motivated by a desire to maintain a record of their founders' positions in the genealogical tree of the parent tribe.

ASHERAH (DEITY) [Heb *ʾăšērâ* (אֲשֵׁרָה); *ʾăšêrâ* (אֲשֵׁירָה)]. Asherah appears in the OT both as the name of a Canaanite goddess and of her wooden cult-symbol. She is known in the Ugaritic texts under the name of Athirat (*ʾaṯrt*), where she functions as consort of the chief god, El, and mother of the gods. Prior to the discovery of the Ugaritic texts some scholars denied that Asherah was the name of a goddess while others wrongly equated her with Astarte (Ashtoreth). Since Yahweh is equated with El in the OT, it is understandable that in syncretistic circles Yahweh also appropriated Asherah as his consort.

———

A. Asherah in Extrabiblical Texts

1. Akkadian Sources. We know from the Ugaritic texts that Athirat was equivalent to the Mesopotamian deity Ašratum. Ašratum is known from cuneiform texts dating from the 1st Dyn. of Babylon (ca. 1830–1531 B.C.), where she appears as the consort of the god Amurru. In the first half of the 14th century B.C. the name of the goddess Asherah appears in the name of the king of Amurru Abdi-Aširta ("servant of Aširta"), who is mentioned a number of times in the El-Amarna letters. It has also been generally supposed that Asherah is mentioned in one of the 15th century B.C. Akkadian texts from Taʿanach, but this has been questioned by A. F. Rainey (1977: 59).

2. Ugaritic Texts. The most complete source of information about the goddess Asherah comes from the Ugaritic texts, discovered at the site of Ras Shamra on the Syrian coast from 1929 onwards. She is there called *ʾaṯrt*, generally vocalized as Athirat, and she is the consort of the supreme god, El. Sometimes she is called *ʾilt* (Elat), lit. "goddess," as befits the wife of El (*ʾil*). She is the mother of the gods and is accordingly called *gnyt ʾilm* "the procreatress of the gods." The gods are referred to in *KTU* 1.4.VI.46 (= *CTA* 4.VI.46) as "the seventy sons of Athirat" (*šbʿm. bn. ʾaṯrt*). The later Jewish notion of the 70 guardian angels of the nations (cf. 1 En 89:59; 90:22–25; Tg. Ps.-J. on Deut 32:8) must ultimately go back to this, via the idea in Deut 32:8 whereby the Most High "fixed the bounds of the peoples according to the number of the sons of God" (so LXX, 4Q Deut).

Her stock epithet is *rbt ʾaṯrt ym* (e.g. *KTU* 1.4.III.27 = *CTA* 4.III.27), which should be rendered "Lady Athirat of the sea." The view that the expression should be rendered "She who treads on the sea," which is popular in some circles (e.g., Cross *CMHE*, 31), is to be rejected, since (1) the goddess was simply called Ašratum already in the 1st Dyn. of Babylon, which suggests that the shorter form of the name is original, and (2) we know of no conflict between Athirat and the sea. Though certainty is not possible, it may be that the name *ʾaṯrt* means "sanctuary." One should perhaps compare her epithet *qdš,* which similarly means "holy place" or possibly "holiness" (see below).

Athirat plays an important role in the Ugaritic text involving Baal's desire for a house (palace/temple) in *KTU* 1.4 (= *CTA* 4). Having defeated the sea god, Yam, and assumed the kingship (*KTU* 1.2 = *CTA* 2), Baal is in need of a house. First Anath demands a palace for Baal from El, but without success (*KTU* 1.3.V = *CTA* 3.V). When Athirat, however, intercedes with her husband El, she is successful (*KTU* 1.4.III–V = *CTA* 4.III–V).

Athirat appears again in another Ugaritic mythological text, *KTU* 1.23 (= *CTA* 23), where she is one of 2 women, the other being *rḥmy,* whom El seduces, and this act leads to the birth of Shaḥar (Dawn) and Shalim (Dusk). It is not clear who *rḥmy* is; the common view that she is Anath is improbable, since we have no other evidence that she was a wife of El, and it seems inappropriate for a goddess repeatedly called "the Virgin Anath" to be a mother goddess.

3. Egyptian Representations. Asherah is sometimes called *Qdš* in the Ugaritic texts. *Qdš* is also attested as the name of a goddess in Egypt, where she appears on reliefs and amulets of the New Kingdom (cf. *ANEP*, pls. 470–74), especially the Ramesside period, and is characteristically represented nude, wearing a Hathor wig, standing on a lion, holding snakes in one hand and flowers in the other, and sometimes she holds snakes in both hands. Often she is portrayed together with the deities Resheph and Min and her erotic aspect is emphasized. Most remarkable is the representation on a Theban relief at Winchester College in England (now missing) where the goddess is called *qdš- ʿstrt-ʿnt,* thus indicating a fusion of *Qdš* (Athirat) with the two other important Canaanite goddesses, Astarte and Anath. Figurines and plaques of the *Qdš* type are attested in Syria and Palestine from the period ca. 1700–1200 B.C., which we may confidently regard as depictions of the goddess Athirat. It is noteworthy that the depictions of Athirat/*Qdš* make her role as a fertility goddess abundantly clear. This aspect of her nature is played down in the Ugaritic texts, but emerges again in the OT, where she is constantly associated with Baal and is clearly connected with sacred prostitution in 2 Kgs 23:7.

4. Hittite Mythology. We possess a Hittite myth about a god Elkunirša, his wife Ašertu, and the storm god, dating from the second half of the 2d millennium B.C. (*ANET,* 519). These deities must correspond to El (more precisely *ʾl qn ʾrṣ* "El creator of the earth"), Athirat (Asherah) and Baal-Hadad, and an underlying Canaanite myth is clearly reflected here. According to the myth the storm god came to Elkunirša's house, and there Ašertu tried to seduce him. Following his refusal, she threatened him with her spindle, but the storm god went off to Elkunirša's tent at the Mala (= Euphrates) river and informed him of Ašertu's attempted seduction. Elkunirša replied by saying, "Go, sleep with her! Lie with my wife and humble her!" The storm god obediently complied but also informed her that he had slain 77/88 of her sons, which led to her lamenting them for 7 years. According to a second fragment, the goddess Ištar (probably = Astarte) overheard a bedroom conversation between Elkunirša and Ašertu and told the storm god about it. Regardless of how the myth ended, we have here evidence of some estrangement between Elku-nirša (El) and Ašertu (Athirat).

5. Syro-Palestinian Inscriptions. At Kuntillet ʿAjrud, in NE Sinai, inscriptions have been found referring to 'Yahweh and his Asherah.' One pithos contains the inscription *brkt. ʾtkm. lyhwh. šmrn. wlʾšrth,* "I have blessed you by Yahweh *šmrn* and his Asherah." The word *šmrn* could be rendered "our guardian," but the translation "of Samaria" is more likely (cf. *lyhwh tmn wlʾšrth* "by Yahweh of Teman and his Asherah," which also appears at Kuntillet ʿAjrud). Scholars disagree as to the meaning of "his Asherah," whether it refers to the goddess Asherah, her cult symbol, or a word meaning cella or chapel. It seems most likely to mean the cult-symbol, a wooden pole or suchlike, related to the goddess Asherah. Indirectly, therefore, the allusions probably do imply that Asherah was Yahweh's consort. That it is the goddess Asherah herself who is denoted by 'his Asherah' is syntactically inappropriate, since personal names are not found with a pronominal suffix in biblical Heb. The meaning 'cella' or 'chapel' may also be excluded, since this is not attested elsewhere in Heb, unlike some other Semitic languages.

The pithos mentioning "Yahweh of Samaria and his Asherah" has underneath the inscription a drawing depicting 3 figures: a lyre player and 2 other figures similar to each other, generally thought to represent the goddess Bes. It has been proposed, however, that these latter represent "Yahweh and his Asherah" of the inscription (Gilula 1978–79). But this is unlikely, and the drawings are probably unconnected with the inscription. For example, why should there be 3 figures, if only 2 are mentioned (Emerton 1982:10)? Moreover, the figure claimed to represent Asherah seems to have a square-cut beard, suggesting a god and, indeed, a characteristic of the god Bes (Beck 1982: 27–28).

Curiously, at about the same time as the discoveries at Kuntillet ʿAjrud, another site, Khirbet el-Qom, near Hebron, also yielded a text which seemingly refers to Yahweh's Asherah:

ʾryhw. hʿšr. ktbh
brk. ʾryhw. lyhwh
wmṣryh lʾšrth hwšʿlh
lʾnyhw
wlʾšrth
ʾ??rth

This should most likely be rendered:

Uriyahu the rich wrote it.
Blessed be Uriyahu by Yahweh.
For from his enemies by his Asherah he has saved him.
by Oniyahu
and by his Asherah
his A (she)rah

A. Lemaire (1977: 599, 602) felt forced to emend the text so that *lʾšrth* follows immediately after *lyhwh,* but as the above rendering shows, this may be unnecessary.

It has been claimed that Asherah is mentioned on a plaque from Arslan Tash in Syria, dating from the 7th century B.C., with Aram script and Phoenician orthography. However, since the word in question is *ʾšr,* those who adopt this view either have to emend the text to *ʾšrt,* the form we should most naturally expect, or suppose that we have an anomalous spelling here. It is far more natural to suppose, as most scholars believe, that *ʾšr* denotes the god Asshur (cf. *ʾšr* as the spelling of the place Asshur in *KAI* 24: 8), and since Arslan Tash (Ḫadattu) was an Assyrian province at the time, a reference to the Assyrian god Asshur at this point is not inappropriate.

6. Later Phoenician Sources. It has been argued by F. M. Cross (*CMHE,* 28–34) and others, e.g. W. A. Maier (1986: 96–118), that the goddess Tinnit is to be equated with the goddess Asherah. Tinnit is best known from Punic inscriptions, where she appears as the consort of the god Baal-Ḥammon, but it is now clear that she was already worshiped in Phoenicia quite early (cf. the Sarepta text below). The arguments in favor of her equation with Asherah are, however, open to question.

First, it is claimed that her name means "the One of the dragon," and Ugaritic *ʾaṯrt ym* is compared, understood as "She who treads on the sea (dragon)." However, not only does *ʾaṯrt ym* not have this meaning, but if *tnt* were really related to *tnn* 'dragon' (which is improbable), one would expect it to mean "the female dragon" rather than "the One of the dragon"!

Second, Baal-Ḥammon is commonly supposed to be El, so it is claimed that his consort Tinnit ought to be Asherah. However, Baal-Ḥammon is probably rather a form of the god Baal. The name itself suggests this, and the god is in fact often simply referred to as Baal in Punic inscriptions, and never as El. Latin inscriptions refer to him as *frugifer* and *deus frugum,* suggesting a fertility deity. It is true that classical sources often equate Baal-Ḥammon with Kronos, who usually represents El, but we know that Kronos could also denote Baal, and the fact that Kronos devoured his own children may well have encouraged his equation with Baal-Ḥammon, the god of child sacrifice. Thus, there are not compelling grounds for identifying Tinnit with Asherah. Tinnit is equated with Astarte in a 7th century B.C. Phoenician inscription from Sarepta and associated with (though distinguished from) Astarte in an inscription from Carthage (*KAI* 81:1). She was perhaps a form of the goddess Anath or alternately an independent goddess serving as Baal's consort.

7. Inscriptions from Arabia. It is now known that Asherah is not mentioned as ʾAširā on a 5th century B.C. Aram inscription from Tema (*KAI* 228) as had previously been commonly believed; rather the divine name in question should be read ʾAšimā, as another Tema stele makes clear (Cross 1986: 393). However, the goddess Athirat is attested in S Arabia (Ryckmans 1951: 44). Although the Arabian Athirat has often been seen as a sun goddess, this is not certain.

B. Asherah in the OT

In the OT the Heb word *ʾăšērâ* is used to denote both the name of the Canaanite goddess, well-known from the Ugaritic texts, and also a wooden cult-object that was her symbol.

1. As a Goddess. The ancient versions failed to recognize that OT Asherah was the name of a goddess, and it was only with the discovery of the Ugaritic texts that scholars as a whole were convinced that this was one of the basic meanings of the word in the OT. The places where the name Asherah seems to denote the goddess rather than her cult object are 1 Kgs 15:13; 18:19; 2 Kgs 21:7; 23:4, in addition to Judg 3:7, where the plural form Asheroth appears. In 1 Kgs 18:19 we read of the "four hundred and fifty prophets of Baal and the four hundred prophets of Asherah, who eat at Jezebel's table," who are to confront Elijah on Mt. Carmel. The fact that the prophets of Asherah play no part in the subsequent story in 1 Kings 18 suggests that the reference to them may be a gloss. However, the parallelism with the prophets of Baal makes it natural to suppose that whoever added the gloss about the prophets of Asherah understood Asherah to be the name of a deity. In 2 Kgs 23:4 the name Asherah is likewise paralleled with that of Baal, as well as with the host of heaven, thereby indicating that Asherah is a deity. Referring to Josiah's reformation in 621 B.C. it states, "And the king commanded Hilkiah, the high priest, and the priests of the second order, and the priests of the threshold, to bring out of the temple of the Lord all the vessels made for Baal, for Asherah, and for all the host of Heaven." Both 1 Kgs 15:13 and 2 Kgs 21:7 speak of the image of Asherah, passages in which it is natural to suppose that Asherah is the goddess. In the former passage we read of Asa's removing Maacah, his mother, from the position of queen mother, because of the abominable image for Asherah which she had made. Asa cut down the image and burned it in the Kidron valley. 2 Kgs 21:7 mentions a graven image of Asherah that Manasseh placed in the temple of Jerusalem.

Judg 3:7 uses the plural form Asheroth—"And the people of Israel did what was evil in the sight of the Lord, forgetting the Lord their God, and serving the Baals and the Asheroth." Some scholars wish to emend Asheroth to Ashtaroth, which is paralleled with the Baals in Judg 2:13; 10:6; 1 Sam 7:3,4; 12:10. However, the fact that Asheroth is the *lectio difficilior* inclines one to believe that it is the correct reading here. It is not clear whether "Asheroth" refers to different local manifestations of the goddess Asherah or is a way of referring to Canaanite female deities generally. The same uncertainty applies to the precise meaning of the terms "Baals" and "Ashtaroth."

2. As a Cult Object. The LXX and Vg usually rendered Asherah by "grove," which accounts for the translation in the KJV. The Mishnah similarly understood the Asherim to be living trees that were worshiped, e.g., grapevines, pomegranates, walnuts, myrtle, and willows (cf. *m.* ʿ*Or.* 1:7, 8; *m. Sukk.* 3:1–3; *m.* ʿ*Abod. Zar.* 3:7, 9, 10; *m. Me*ʿ*il.* 3:8). It is quite clear, however, from a number of OT references that the Asherim were manmade objects; verbs used in connection with them include "make" (ʿ*āśâ,* 1 Kgs 14:15; 16:33; 2 Kgs 17:16; 21:3, 7; 2 Chr 33:3), "build" (*bānâ,* 1 Kgs 14:23), and "erect" (*nāṣab,* 2 Kgs 17:10), which are inappropriate for living trees. It should also be noted that Jer 17:2 speaks of "their Asherim beside every luxuriant tree," which would be odd if the Asherim were themselves actual trees. This makes it impossible to suppose that the Asherim were living trees. The view that they were always living trees is today held by A. Lemaire (1977: 604–7), but some claim more moderately that the Asherim were sometimes living trees. Deut 16:21 might suggest this, often rendered as it is "You shall not plant any tree as an Asherah beside the altar of the Lord your God, which you shall make." However, the word ʿ*ēṣ* can mean "wood" as well as "tree," and since all the other references to the Asherah in the OT indicate that it is a manmade object, including various references elsewhere in the Deuteronomic corpus, it is more natural to suppose that this is the meaning of ʿ*ēṣ* here.

That the Asherah cult object symbolized the goddess Asherah in some way is clear from the fact that both are mentioned in similar contexts in the OT. Thus, 2 Kgs 21:3, where we read that Manasseh "erected altars for Baal, and made an Asherah, as Ahab king of Israel had done, and worshiped all the host of heaven, and served them," can be compared with 2 Kgs 23:4, where we read of "all the vessels made for Baal, for Asherah, and for all the host of heaven."

W. L. Reed (1949) has argued that the Asherah was simply an image of the goddess Asherah. However, though symbolizing the goddess Asherah, the Asherah cult object does not appear to have been an image of her, since the Asherim are frequently mentioned alongside *pĕsîlîm* "graven images" (an expression

including images of wood) as distinct objects (cf. Deut 7:5; 12:3; 2 Chr 33:19; 34:3, 4, 7; Mic 5:12–13—Eng5:13–14).

The most likely view is that the Asherah was a wooden pole symbolizing the goddess Asherah. We may compare the statement in Philo of Byblos which declares that the Phoenicians "consecrated pillars and staves (*rhabdous*) after their names (i.e. of their gods)" (Eusebius, *Praep. Evang.* 1.10.11).

In view of the perishable nature of wood and our lack of certain depictions of the Asherah, we cannot be dogmatic about its form. However, it is plausible to suppose that, as a wooden pole, it may also have embodied tree symbolism. If so, this would explain the later misunderstanding that they were actual trees. This interpretation may perhaps claim support from the following consideration. It has been shown (Day 1980) that Isaiah 26–27 appears to be modeled on Hosea 13–14, there being a series of eight parallels which they share, all but one of them coming in the same order. Now the verse corresponding to that mentioning the Asherim in Isa 37:9 is Hos 14:9—Eng 14:8, which alludes to trees; Yahweh declares, "Ephraim, what has he still to do with idols? It is I who answer and look after him. I am like a luxuriant cypress, from me comes your fruit." There may even be a word play on the names of the goddesses Anath and Asherah in the words *ʾanî ʿānîti waʾăšurennu,* "It is I who answer and look after him," though it is probably going too far to accept J. Wellhausen's emendation to *ʾănî ʿanātô waʾašērātô,* "I am his Anath and his Asherah." Further evidence which might possibly support the equation of the Asherim with stylized trees comes from Pella in Transjordan. Here 2 cult stands were discovered dating from the 10th century B.C., one of which has stylized trees on its sides and the other has depictions of a nude goddess standing on a lioness' head (cf. Asherah/*Qdš*).

The view here adumbrated, namely that Asherah in the OT is the name both of a goddess and of her wooden cult symbol, is the most widely held view, and indeed seems clear enough from the evidence. É. Lipiński, however, supposes that Asherah in the OT denotes variously a sacred grove and a shrine (chapel/cella). It should be pointed out against Lipiński's view that instances which he ascribes to each of these two meanings occur in the same context—cf. 2 Kgs 18:4; 23:14, 15, where Asherah is alleged to mean "grove"; and 1 Kgs 14:23; 2 Kgs 17:10, where it is claimed that it means "shrine." This suggests that Asherah has only one meaning, not two, throughout these passages. Now the former group of passages refers to the Asherah being cut down, and here Lipiński himself agrees that a shrine cannot be intended, while the latter group of passages alludes to Asherim under every luxuriant tree, which makes it unlikely that the Asherim were themselves trees. Since we have seen that the Asherah refers to the same object in both groups of passages, it follows that the Asherah can be neither a shrine nor a grove.

The Asherim, together with *maṣṣēbôt* "pillars," as well as altars, were a regular feature of the local shrines, the "high places" (*bāmôt*), where Canaanite or syncretistic Canaanitizing worship was practiced in ancient Israel. Those who are accused of worshiping Asherah or constructing Asherim include the people in the period of the Judges (Judg 3:7), Jeroboam I (1 Kgs 14:15), Rehoboam (1 Kgs 14:23), Asa's mother Maacah (1 Kgs 15:13), Ahab (1 Kgs 16:32; cf. 1 Kgs 18:19), Jehoahaz (2 Kgs 13:6), the N Kingdom before its downfall in 722 B.C. (2 Kgs 17:10, 16), and Manasseh (2 Kgs 21:3, 7). Those who are said to have removed this cult include Gideon (Judg 6:25–30), Asa (1 Kgs 15:13), Hezekiah (2 Kgs 18:4), and Josiah (2 Kgs 23:4, 6, 7, 14, 15). We do not hear of Asherah or Asherim in later literature, apart from Isa 27:9 (perhaps dating from the 5th century B.C., part of a section which is probably dependent on Hos 13–14).

In the prophets, in addition to Isa 27:9 and Jer 17:2, Asherim are also mentioned in Isa 17:8 and Mic 5:13 (—Eng 5:14). It is possible, though by no means certain, that the Asherah is intended in the reference in Hos 4:12, "My people inquire of a thing of wood, and their staff gives them oracles." The context suggests that we have here an idolatrous practice connected with the Canaanite fertility cult. It is unlikely, however, that Asherah is intended in the allusions in Isa 6:13; Jer 2:27; Ezek 8:3–5; Amos 8:14; or in Gen 30:13.

ASHHUR (PERSON) [Heb *ʾašḥûr* (אַשְׁחוּר)]. According to 1 Chr 2:24, he is the son of Hezron and father of Tekoa. However, the birth of Ashhur after his father's death and the textual confusion of the MT of 1 Chr 2:24 have caused many scholars (e.g., Braun *1 Chr* WBC, 27; Williamson 1979:355) to emend the text on the basis of the LXX, which states that Ashhur is a son of Caleb.

In 1 Chr 4:5 the descendants of Ashhur are incorporated into the genealogy of Judah. This may reflect the later assimilation of the Calebites into the tribe of Judah. The fact that Tekoa is the name of a town in southern Judah has led some scholars to understand the word "father" to mean "settler" or "founder." The similarity between Asshur and Hur, another son of Caleb (1 Chr 2:19), causes some confusion. Curtis (*Chr* ICC) believes the two names actually refer to the same person, Hur being an abbreviated form of Ashhur. Williamson (*Chr* NCBC, 59), on the other hand, prefers to regard Ashhur as the younger brother of Hur. In the LXX, the name Ashhur appears differently in 1 Chr 2:24 and 4:4; in the former passage the name is spelled *Aschod,* while in the latter it appears as *saour.* In Codex Alexandrinus, however, the name is spelled *aschour.*

ASHIMA (DEITY) [Heb *ʾašîmāʾ* (אַשִׁימָא)]. A god or goddess of uncertain identity, worshiped by the people of Hamath (modern Hama in Syria) who were settled in Samaria by Sargon II after he had deported most of the local population (2 Kgs 17:30). The most widely accepted interpretation of the word Ashima is that it is an Aram form meaning "the Name." As such it would likely refer to one or more of the NW Semitic goddesses Anat, Astarte, or Asherah. Designations such as Face-of-Baal, Name-of-Baal, and possibly Sign-of-Baal are not uncommon for these goddesses, and seem to indicate that the goddess in each case is a particularized manifestation of Baal (*EncRel,* 1: 262–63, 471, 491–92).

A peculiar extension of this type of name formation is encountered at the Aramaic-speaking Jewish community at Elephantine, Upper Egypt, ca. 400 B.C. Bethel, literally "Temple-of-El," is a well-attested divinity in the Levant, but in this rather syncretistic community there are also *ʾšmbytʾl* and *ʿntbytʾl,* Name-of-Bethel and Anat-of-Bethel (*BMAP,* 87–90; *ArchEleph,* 163–79). Some scholars (e.g., Gese in Gese, Höfner, and Rudolph 1970: 189–92) would associate the *ʾšm-* element with the god Eshmun, but this is not a widely accepted view (see also Cogan and Tadmor *2 Kings* AB, 211–12); the suggestion that deities with names compounded with *ʾšm-* are masculine (*ANET,* 491, n. 9a) does not seem to square with the comparative Sem evidence.

The only other possible reference to Ashima in the Bible is Amos 8:14, "those who swear by the *ʾašmat šomrôn,* … and say 'as the *derek* of Beer-sheba lives.' " Although many translate "shame of Samaria" and

"way of Beer-sheba" in this verse, it seems more likely that the first expression is "Ashima of Samaria." If that is the case, the obscure *derek* is probably not "way," but a garbled reference to the same deity referred to in 2 Kgs 17:31 as *tartaq.*

WILLIAM J. FULCO

ASHKELON (PLACE) [Heb *ʾašqĕlôn* (אַשְׁקְלוֹן)]. A large seaport town located on the Mediterranean coast 20 km N of Gaza and 50 km S of Tel Aviv (M.R. 107119). The city has had a long and eventful history, stretching from at least the latter part of the 4th millennium. Its biblical significance begins in the Conquest narratives as one of the cities of the Philistine Pentapolis (Josh 13:3) and later is the object of one of Samson's outbursts (Judg 14:19). During the prophetic period, Ashkelon was a frequent object of denunciation (cf. Jer 25:20; 47:5, 7; Zeph 2:4, 7; Zech 9:5). Ashkelon's importance as a port city was enhanced by its fertile soils and easily accessible fresh water. Famous in antiquity for its onions, the modern word "scallion" is derived from the name Ashkelon.

Archaeological investigations at Ashkelon were undertaken by John Garstang and his assistant W. J. Phythian-Adams in 1920 (Garstang 1921; 1922; 1924; Phythian-Adams 1921; 1923). Modern archaeological excavations resumed at Ashkelon in 1985 (Stager and Esse 1987). The most-recent excavations have recovered traces of 3d millennium B.C. occupation on the N edge of the site, but the first recorded historical attestation of the name Ashkelon appeared in the Egyptian Execration Texts, in which Ashkelon was vilified as an enemy of Egypt. The city was mentioned in both the Berlin and Brussels texts (Sethe 1926: 53; Posener 1940: 65), and its appearance in the Execration Texts is no doubt a result of its strategic importance as a major city located in the border zone between Egypt and Palestine.

Evidence from modern excavations indicates that at least the N end of the massive ramparts surrounding the city was constructed during the MB, roughly corresponding to the date of Ashkelon's mention in the Execration Texts. If the MB city included the area encircled by the more recent Byzantine and Crusader fortifications, ancient Ashkelon would have been more than 60 hectares in size, one of the largest sites in Palestine in that period.

During the LB Ashkelon was firmly under the control of the Egyptian Pharaoh. Ashkelon's king, Widia, sent at least 7 letters to Akhenaten's court at El Amarna, (EA 320–26, 370), in which he promised loyalty and quantities of food, drink, oil, grain, and oxen for the Pharaoh's troops. In another less-cordial context, however, the ruler of Jerusalem, Abdi Ḫeba, revealed a plot involving Ashkelon, Gezer, and Lachish to supply provisions to the Egyptian king's enemies, the Ḫabiru (EA 287).

Ashkelon, as befits its importance as a border city, remained under direct Egyptian suzerainty throughout the LB. Rebellion was punished swiftly. A relief on the walls of the temple at Karnak, originally ascribed to Ramses II but now re-dated to Merneptah (see Stager 1985; Yurco 1986 for a discussion of the problem), depicts Egyptian troops storming the city of Ashkelon with the legend "the wretched town which his majesty took when it was wicked, Ashkelon. It says: 'Happy is he who acts in fidelity to thee, (but) woe (to) him who transgresses thy frontier!' " (*ANET* 256). Ashkelon was mentioned again by Merneptah in what is often referred to as the Israel stela (1207 B.C.), "Plundered is the Canaan with every evil; carried off is Ashkelon; seized upon is Gezer; Yanoam is made as that which does not exist; Israel is laid waste, his seed is not …" (*ANET* 378).

An inscription on a small ivory plaque excavated at Megiddo dating to the time of Rameses III refers to a singer named Kerker who evidently was employed in a Temple of Ptah at Ashkelon (*ANET* 263). By the 8th year of Rameses III (1187 B.C.), a year in which he defeated a coalition of Sea Peoples that included the Philistines, the settling of the S coastal plain of Palestine and its domination by the Philistines was assured. Ashkelon was included, along with Gaza, Ashdod, Ekron, and Gath, as one of the main cities of the Philistine Pentapolis (Josh 13:3; 1 Sam 6:17). These cities would remain linked throughout the

biblical period and into classical times. (For recent treatments of the Philistines see Dothan 1982; Mazar 1985.)

During the Iron I period, references to Ashkelon centered on its association with the Philistines and the cities of the plain which could not be conquered by the Israelites. According to biblical tradition, Ashkelon was allotted to the tribe of Judah, which took possession of the hill country but could not drive out the inhabitants of the plain who had chariots of iron (Judg 1:18–19; also Josh 13:3). Ashkelon also shared the miseries that befell its Philistine neighbors when they captured the ark of the covenant after the battle of Ebenezer. To forestall further suffering, the Philistine cities promptly returned the ark with reparations (1 Sam 6:17). In the period of the Judges, the only direct contact, albeit bloody, is related in the story of Samson's riddle. After the Philistines solved his riddle, Samson went down to Ashkelon, killed 30 men, took their garments, and presented them to his tormentors to pay off his bet (Judg 14:19).

During the 10th century B.C., Ashkelon and the other Philistine cities remained a force to be reckoned with by the fledgling Israelite monarchy. David's reaction to the death of Saul and Jonathan in the battle of Gilboa dramatically illustrates the serious conflict that raged between Philistine and Israelite at that time: "Tell it not in Gath, publish it not in the streets (or bazaars) of Ashkelon; lest the daughters of the Philistines rejoice, lest the daughters of the uncircumcised exult" (2 Sam 1:20).

By the 8th century B.C. Ashkelon remained associated with Ashdod, Gaza, and Ekron, and in the Assyrian records is still reckoned as belonging to Philistia. In 734, the Assyrian king Tiglath-pileser III campaigned in Philistia against a coalition that included Aram, Edom, Israel, and Philistia. While on this campaign he forcibly collected tribute from Ashkelon's king, Mitinti. In a 2d campaign to Philistia, Tiglath-pileser III captured Ashkelon and Mitinti's son, Rukibtu, who had succeeded his father on the throne. During this period the prophet Amos referred to the demise of the "remnant" of the Philistines from Ashkelon, Ashdod, and Ekron (Amos 1:8). Rukibtu, as far as is known, remained loyal to the Assyrian kings. The cities of Philistia played an important role as intermediaries between the Assyrian Empire and Egypt. Tribute from Philistia to Sargon included silver, garments of byssus and linen, rolls of papyrus, and elephant hides (Tadmor 1966: 93; Ephʿal 1984: 87 n. 267). That these exotic items could be sent as tribute to Assyria underscores the active commercial links that existed between Egypt and Philistia during this period.

Loyalty to Assyria was shattered during the reign of Sennacherib, however, as the king of Ashkelon was overthrown by a usurper named Ṣidqia in 701 B.C. Ṣidqia made an alliance with Hezekiah against Assyria, and together they deposed Padi, the ruler of Ekron, who had remained loyal to Assyria along with Mitinti of Ashdod (not to be confused with Mitinti of Ashkelon) and Sillibel of Gaza. Sennacherib's campaign into S Palestine in 701 restored Padi to the throne and stopped Hezekiah's rebellion; Ṣidqia of Ashkelon was deported. The Assyrian monarch replaced Ṣidqia with Sharruludari, the son of the loyal vassal, Rukibtu. Assyrian annals indicate that the territory of Ashkelon was extensive enough to include Jaffa, Beth-Dagon, Azor, and Benei Brak (Tadmor 1966: 96; see also Marcus 1977 for a discussion of the succession from Ru-kibtu to Sharruludari).

By the mid-7th century B.C. Ashkelon was ruled by another Mitinti, the son of the usurper Ṣidqia. Mitinti sent tribute to both Esarhaddon and Assurbanipal. Ashkelon remained loyal to these Assyrian rulers throughout their reigns and probably served as one of the staging posts for the periodic Assyrian invasions into Egypt.

By the latter part of the 7th century, Assyrian power was faltering, and it is to this period that an enigmatic passage in Herodotus describes an attempted invasion of Egypt by hordes of Scythians sweeping down out of the Caucasus. Although their invasion of Egypt was unsuccessful, the returning Scythian soldiers sacked the Temple of the Celestial Aphrodite in Ashkelon, after which, as Herodotus reports, they were struck with a horrible disease as divine retribution (1.103–6). The prophet Zephaniah referred to this period when he warned Philistia of the fate which would befall it (Zeph 2:4), and suggested that Judah would finally possess the seacoast. His prophecy that Judah would "lie down at evening in the houses of Ashkelon" (Zeph 2:7) should be seen against the background of the expansionist policies of Josiah.

The dissolution of the Assyrian empire in 612 B.C. led to a time of shifting loyalties for Philistia. It is clear from the references in Jeremiah that the Philistine cities were rebellious against the new Babylonian regime and courted destruction by their refusal to pay tribute to Nebuchadnezzar (Jer 25:20; 47:5, 7). By the winter of 604 B.C., Ashkelon was destroyed and its king was deported to Babylonia (Wiseman 1956: 69, see also Porten 1981 and Stern 1984: 1–4 for discussions of the campaign). Exiled Ashkelonites received rations at the Babylonian court. Those specifically mentioned included the sons of Aga, the last king of Ashkelon; sailors; and various nobles (Weidner 1939: 928).

Despite the dire prophesies of the prophet Zechariah (9:5), writing toward the end of the 6th century B.C., Ashkelon once more became a flourishing seaport during the Persian period under the nominal control of Tyre. Pseudo-Scylax in his *Periplus* (2d half of 4th century B.C.), mentions a royal Tyrian palace at Ashkelon (Stern 1984: 10). Ashkelon's temples were known throughout the ancient world. In addition to the Temple of Celestial Aphrodite mentioned by Herodotus, Diodorus Siculus (2.4.2–6) writing in the 1st century B.C. describes a large lake at Ashkelon regarded as sacred to the goddess Derceto (Atargatis), a goddess with the head of a woman and the body of a fish. The legend recounts Derceto's union with one of her mortal votaries which led to the birth of the famous Queen Semiramis. Semiramis was abandoned to die of exposure, but was kept warm and fed by doves, a bird which several ancient authors report as sacred at Ashkelon.

After Alexander's conquest of the Levant and Egypt, Ashkelon fell under the rule of the Ptolemies and later the Seleucids (after Antiochus III's defeat of the Egyptian army in 198 B.C.). Ashkelon remained an independent city throughout the Maccabean period, although the city was threatened by the high priest Jonathan in 147 B.C. after his victory over Apollonius, the governor of Coele-Syria. The ancient tension between highland and lowland, so palpable in the book of Judges, was apparent again as Apollonius taunted Jonathan "do not, therefore, deceive yourself, sitting in the mountains and thinking that you are strong; but if you have confidence in your force, come down to the plain … you should know, however, that the best men of each city are in my army, and these are the very men who have always been victorious over your ancestors. And you shall have a contest with us on ground where one cannot fight with stones, but with arms, and where there is no place to which you can flee when defeated" (*Ant* 13.89). Jonathan burned the temple of Dagon at Ashdod, and the Ashkelonites met him outside their city with gifts to prevent a similar calamity in their city. By 111 B.C., Ashkelon asserted its independence from Seleucid rule by minting silver coinage, and by 104 B.C. was minting its own coins according to a new era (Avi-Yonah 1977: 59).

Ashkelon remained a free Greek city throughout the Roman period. In the early 1st century B.C., Alexander Janneaus made Antipas, Herod the Great's grandfather, a general over all Idumea. Antipas established close relations with the Nabateans and the two former Philistine cities of Gaza and Ashkelon (*Ant* 14.10), undoubtedly to control the trade routes across the Negev from the Red Sea to the Mediterranean coast. Ties between Ashkelon and Herod's family were close if one lends credence to Julius Africanus' assertion that Herod's grandfather had spent his childhood as a temple servant in the Temple of Apollo at Ashkelon (Euseb. *Hist. Eccl.* 1.6.2–3). Herod never conquered Ashkelon, preferring that it remain a free city, but Josephus wrote that he built baths, fountains, and colonnades for the populace (*JW* 1.422). Upon Herod's death he bequeathed a palace at Ashkelon to Emperor Augustus who in turn presented it to Herod's sister, Salome (Jones 1938: 165).

With the first significant stirrings of the Jewish revolt in 64 A.D., tensions ran high between the Jews and the inhabitants of the Greek cities. In Ashkelon one riot resulted in the slaughter of 2,500 of the city's Jews (*JW* 2.477). The Jewish revolt against Rome did not directly affect the city, and Ashkelon's sea trade thrived during the Late Roman period. It was known for its agricultural produce, especially wheat, onions (Strab *Geog.* 16.2.29), and a heavy wine that was exported to European markets to be used in celebrating the Eucharist (Avi-Yonah 1977: 195; Riley 1975: 30). The acts of the Council of Constantinople indicate that by 536 A.D. Ashkelon was the seat of a bishop.

With the Muslim conquest of Palestine in the 7th century A.D., Ashkelon became a Muslim city, although Jews and Christians continued to live within its walls. In 940 the Church of *St. Maria Viridis* (St.

Mary the Green) was attacked and destroyed, after which the bishop escaped to Ramla. The probable remains of this church were excavated by the recent archaeological expedition to Ashkelon (Stager and Esse 1987: fig. 2). Crusader efforts to capture Ashkelon did not succeed until 1153. Between the Crusader capture of Jerusalem in 1099 and in 1153, Ashkelon served as the main point of contact between the Fatimid government in Cairo and the Crusader kingdom. Jews taken captive in the Holy Land were ransomed at Ashkelon, often with money provided by the Cairene Jewish community (Goitein 1982: 309–15).

By 1187, Ashkelon had surrendered to Saladin after his victory over the Crusaders at the Horns of Hattin. The 3d Crusade, led by Richard the Lion-Hearted in 1191, forced Saladin to abandon Ashkelon, but not before he purposely destroyed it to prevent its falling into Crusader hands. The destruction is vividly recounted by al-Qadi al-Fadil, where Saladin is reported to have said, "I take God to witness, I would rather lose all my children than cast down a single stone from the walls" (Benvenisti 1970: 118–19). Richard partially rebuilt Ashkelon the following year, but Ashkelon was finally surrendered and completely destroyed in an agreement between Richard and Saladin. A castle was built on the site by Richard, Duke of Cornwall, in 1240, but by 1270 the Mamluk sultan, Baybars, destroyed the castle, and Ashkelon was never reoccupied.

ASHKENAZ [Heb *ʾaškĕnāz* (אַשְׁכְּנָז)*; ʾaškanaz* (אַשְׁכַּנַז)]. First "descendant" of Gomer who is the first "offspring" of Japheth in the Table of Nations (Gen 10:2–3). In Jer 51:27, Ashkenaz appears—along with Ararat and Minni—as a kingdom called upon to oppose Babylon. The name is identified with the neo-Assyrian Ishkuza (*iš-ku-za-a-a;* cf. Parpola AOAT 6: 178), who appeared between the Black and Caspian Seas in the 8th and 7th centuries B.C., driving out the Cimmerians (cf. GOMER; this association is reflected in Genesis 10) and threatening the Assyrians. For Herodotus, these people came to be called the Scythians. The correspondence of the consonants in Ashkenaz, Ishkuza, and Scythian is obvious; although the reason for the *nun* in the biblical name is not clear (Westermann *Genesis 1–11 BK,* p. 506;

Wenham *Genesis 1–15 WBC pp.* 217–18). The use of a prosthetic *ʾalef* in the Sem forms may suggest an initial consonant cluster in the name which was unacceptable to Sem.

Although cultural associations reach back into the 3d and 2nd millennia B.C., present archaeological evidence for a distinctive Scythian culture begins in the 7th century B.C., especially at Nemirov Gorodische, an agricultural settlement between Odessa and Kiev (Yamauchi 1976: 242; 1982: 63–85). Possible portrayals of Scythians appear on 9th century reliefs of Ashurnasirpal II, but the first neo-Assyrian mention of the Ishkuza occurs during the time of Sargon II in the 8th century B.C. Driving back the Cimmerians, the Scythians were able to push S to dominate "Asia" (E Turkey) and Media in the latter part of the 7th century B.C. (Millard 1979). About this time, a Scythian raid against Egypt was stopped by Psammetichus I (Hdt. 1.105). For the later history of the Scythians and the question of their identification with the enemy from the N mentioned in the first part of Jeremiah, see SCYTHIANS.

ASHNAH (PLACE) [Heb *ʾašnâ* (אַשְׁנָה)]. **1.** A town in the Shephelah, or lowlands, of Judah (Josh 15:33), within the same district as Azekah, Zanoah, and Socoh. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Jos 15:21–62; see also BETH–DAGON). The location of the ancient settlement is uncertain. Suggested identifications include Aslin (Cohen *IDB* 1: 254), on the edge of the coastal plain E of Azekah, and Khirbet Wadi Allin (Boling and Wright *Joshua* AB, 384), just SE of Beth Shemesh.

2. Another town in the Shephelah of Judah (Josh 15:43), located further to the S within the same district as Libnah and Mareshah. Its single occurrence is also in the list of towns within the tribal allotment of Judah. The site cannot be identified with certainty, although modern Idna, located 10 km E of Lachish, has been proposed (*IDB* 1:254; M.R. 148107).

WADE R. KOTTER

ASHPENAZ (PERSON) [Heb *ʾašpĕnaz* (אַשְׁפְּנַז)]. An important official in the court of Nebuchadnezzar (605–562 B.C.). In Dan 1:3 he is described as the king's chief eunuch who was responsible for the selection and education of members of the Jewish royal family and aristocracy (among whom were Daniel and his 3 companions, Hananiah, Mishael, and Azariah) who went into exile in Babylon after the fall of Jerusalem (586 B.C.). The etymology of the name has not been satisfactorily explained, but its form points to a Persian origin, possibly Old Persian *ašpinja* "inn," and it has been suggested (Lacocque *Daniel* CAT, 21–22) that originally the text read here *rab ašpinza,* the innkeeper (in the royal palace). Almost the same consonants (*ʾspnz*) are found in an Aram incantation bowl from Nippur dated ca. 600 B.C. Although the name appears only once in the opening chapter of Daniel the descriptive title "chief of the eunuchs" (*śar hassārîsîm*) appears 6 times. The special relationship between Daniel and Ashpenaz (Dan 1–9) has its literary parallel in the association of Joseph and Potiphar, an Egyptian "officer" (lit. "eunuch") of the Pharaoh (Gen 39:4). There is no need to think that Ashpenaz was castrated or that Daniel and his companions were eunuchs. The descriptive title designates a principal functionary employed at the royal court. In the Gk versions Theodotion simply resorts to transliteration (*Asphanez*) and the LXX invents a new name (*Abiesdri*) based on a misinterpretation of the title "steward" in Dan 1:11.

PETER W. COXON

ASHTAROTH (DEITY). See ASHTORETH (DEITY).

ASHTAROTH (PLACE) [Heb *ʿaštārôt* (עַשְׁתָּרוֹת)]. ASHTERATHITE. The name of a city in Bashan, situated on a mound known today as Tell ʿAshtarah in Syria (M.R. 243244). According to the OT, prior to its conquest by the Israelites, it was, together with Edrei, the dwelling place of Og, king of Bashan (Deut 1:4; Josh 12:4; 13:12, 31; cf. Josh 9:10, where it occurs without Edrei). Ashtaroth was occupied by the half-tribe of Manasseh (Machir, Josh 13:31) and became a Levitical city, allotted to the Gershonites (cf. Josh 21:27, where MT curiously has *bĕʿeštĕrâ,* and 1 Chr 6:56 [—Eng 6:71]). See BEESHTERAH (PLACE). 1 Chr 11:44 states that one of David's mighty men was Uzzia the Ashterathite, which appears to place his origin in Ashtaroth. Gen 14:5 speaks of a city ASHTEROTH-KARNAIM, inhabited by the Rephaim, which was subdued by Chedorlaomer and his allies. It is disputed whether Ashteroth-karnaim is to be equated with Ashtaroth or with the neighboring site of Karnaim.

Ashtaroth is possibly mentioned in the Egyptian Execration Texts at the end of the 19th century B.C.E. as *ʿs[ ]ʾtm* (Egyptian ʾ can represent Sem *r*). More clearly the place is referred to in the records of Thutmose III (ca. 1479–1425) as *ʿstrt,* in the el-Amarna letters (14th century) as *ʿaš-tar-te,* and in Assyrian inscriptions as *as-tar-tu.* A limestone relief discovered at Nimrud and now in the British Museum depicts Tiglath-pileser III's capture of the city in 732 (*ANEP,* 366).

In two Ugaritic serpent charm texts *ʾṯtrt*, i.e., Ashtaroth, is mentioned as the seat of the god *Mlk*, apparently the prototype of the later Molech and/or Milcom (*KTU* 1.100.41 = *Ugaritica* V 7.41, and *KTU* 1.107.17 = *Ugaritica* V 8.17; Pardee 1988). More controversial is the proposal of B. Margulis (Margalit) (1970: 292–304) who finds that the place-name "Ashtaroth" in the word *ʾṯtrt* in the passage in *KTU* 1.108.2b–3a (= *Ugaritica* V.2.2b–3a) *ʾil. yṯb. bʿṯtrt ʾil ṯpṭ. bhd rʿy,* which he renders as "El sits (enthroned) in Ashtoreth, El rules in Edrei," provides a remarkable parallel to the passage about Og, king of Bashan, dwelling in Ashtaroth and Edrei (cf. Josh 12:4). Though this rendering is ingenious, one can more plausibly translate the passage as "El (or the god) sits next to Astarte, El (or the god) the judge next to Hadad the shepherd." Against Margalit's view stand the evidence (1) that the place-name Edrei begins with ʾ, but *hd rʿy* with *h*; (2) the alternative translation makes better sense in what is clearly a banquet scene; and (3) the text continues *dyšr wyḏmr bkmr,* "who sings and plays the lyre," suggesting that the preceding *hd rʿy* is a personal rather than a place-name. See also Ferrara and Parker 1972: 37–39.

JOHN DAY

ASHTEROTH-KARNAIM (PLACE) [Heb *ʿaštĕrōt qarnayim* (עַשְׁתְּרֹת קַרְנַיִם)]. In Gen 14:5, the first locality in the enumeration of the places overrun by the 4 eastern kings (see CHEDORLAOMER) on the route of their invasion. There they defeated the REPHAIM. As with most of the chapter's geography and ethnography, this item follows the historical introduction to Deuteronomy, according to which OG, king of Bashan, lived in Ashtaroth and Edrei (Deut 1:4) and was the last remnant of the Rephaim (Deut 3:11). Ashteroth-karnaim is the same city as ASHTAROTH in Bashan, now Tell ʿAštara in S Syria, near the border with Jordan (M.R. 243244). Its name in Gen 14:5 does not mean "the two-horned Astarte" but indicates that it was located near Karnaim, now Tell Ṣaʿd, 4 km NE of Tell ʿAštara. The route of the 4 kings to the Valley of Siddim reproduces, in the opposite direction, the itinerary of the Israelites in Deuteronomy 1–3. See also ASHTORETH (DEITY); CARNAIM.

MICHAEL C. ASTOUR

ASHTORETH (DEITY) [Heb *ʿaštōret* (עַשְׁתֹּרֶת)]. Var. ASHTAROTH. The name by which the Canaanite goddess more commonly known as Astarte is referred to in the OT; Ashtaroth (*ʿaštārôt*) is the plural form of this name. Astarte was a consort of Baal, the great Canaanite storm and fertility god, and is well-attested in many extrabiblical texts.

A. Ashtoreth and Ashtaroth in the OT.

It is generally accepted that the vocalization of the name of the goddess as *ʿaštōret* in the OT is a deliberate scribal distortion of an original *ʿaštart,* which is the form we should naturally expect in light of the extrabiblical parallels (cf. Gk Astarte, Akkadian Ishtar, etc.). It is virtually certain that the distorted vocalization reflects the vowels of the Hebrew word *bōšet* "shame," a term employed in place of the divine name Baal in such references as Hos 9:10 and Jer 11:13 as well as in some personal names (e.g., Eshbaal of 1 Chr 8:33; 9:39 is called Ish-bosheth in 2 Sam 2:10, 12, etc.). The name of the Canaanite god Molech (*mōlek*) is probably likewise distorted.

In the OT we find the singular form Ashtoreth only in 1 Kgs 11:5, 33 and 2 Kgs 23:13. In 1 Kgs 11:5, 33 she is referred to as "the goddess of the Sidonians," an appropriate description since extrabiblical texts make it clear that she was indeed the leading goddess at Sidon. 1 Kings 11 refers to her cult as one of a number of idolatrous practices pursued by Solomon as a result of the influence of his foreign wives. 2 Kgs 23:13 mentions that Josiah defiled the high place which Solomon had set up for Ashtoreth, and this is stated to have been E of Jerusalem, to the S of the mount of corruption.

All the other allusions in the OT are to the plural form Ashtaroth. It has, however, often been supposed that we should emend Ashtaroth to Ashtoreth in 1 Sam 31:10, where we read that the Philistines "put Saul's armor in the temple of Ashtaroth and fastened his body to the wall of Beth-shan," a passage which may imply that the temple itself was in Beth-shan. The emendation is attractive; Astarte among other things was a goddess of war, which makes the placing of armor in her temple not inappropriate. However, it should be pointed out that the parallel in 1 Chr 10:10 says that Saul's armor was placed "in the temple of their gods," which may presuppose the plural reading Ashtaroth already in the Chronicler's *Vorlage.*

All the other references to the Ashtaroth are alongside allusions to the Baals (Judg 2:13; 10:6; 1 Sam 7:4; 12:10) or simply "the foreign gods" (1 Sam 7:3), and are mentioned in connection with the apostate worship of the Israelites during the period of the Judges. When we read of "the Baals and the Ashtaroth," it may be that this is simply a way of speaking about Canaanite gods and goddesses generally, just as in Akkadian *ilāni u ištarāti* means simply "gods and goddesses." On the other hand, it is not impossible that various local manifestations of Baal and Astarte are intended. It has sometimes been supposed that "the Baals and the Asheroth" in Judg 3:7 should be emended to "the Baals and the Ashtaroth," a proprosal supported by 2 Hebrew manuscripts, the LXX, and the Syriac version, but "the Asheroth" should perhaps be preferred as the *lectio difficilior* (i.e., "the more difficult reading," and therefore unlikely to have been corrupted from "the Ashtaroth").

The pairing of the Ashtaroth with the Baals is appropriate, since it is clear from the Ugaritic texts and elsewhere that Astarte was a consort of Baal, as also was Anath. It is actually Anath who plays the preponderant role as Baal's consort in the Ugaritic texts, although Astarte does appear as Baal's spouse in a less dominant role. However, Astarte was apparently more prominent as Baal's consort in the world reflected in the OT (as is certainly also the case in 1st millennium Phoenician inscriptions), and Anath appears only vestigially in OT place names like Anathoth and Beth-Anath. These differences may reflect regional or temporal variations. A further problem is posed by the fact that "Asherah" or "the Asherah" is mentioned alongside Baal a number of times in the OT (Judg 6:25, 28, 30; 1 Kgs 18:18; 2 Kgs 23:4; cf. Judg 3:7), suggesting that she, too, is regarded as Baal's consort, although in the Ugaritic texts she is El's wife. See ASHERAH.

Astarte may be "the queen of heaven" mentioned in Jer 7:18, 44:17, 18, to whom the women made cakes of bread (7:18), burned incense, and poured out drink offerings (44:17, 18). Astarte is referred to as "the mistress of heaven" a number of times in Egyptian texts. On the other hand, it is conceivable that either Asherah or Anath is being referred to in Jeremiah. At any rate, we seem to have here a goddess

popular in folk religion, which suggests a local Canaanite cult rather than the Mesopotamian Ishtar, whom some scholars have envisaged.

In addition to the place name ASHTAROTH or ASHTEROTH-KARNAIM ("Ashtaroth of the two horns"), the name of the goddess lingers on in an interesting expression found in the book of Deuteronomy. This is the phrase *ʿaštĕrôt ṣōʾnekā* (Deut 7:13, 28:4, 18, 51), commonly rendered "the young of your flock," and in each case it is mentioned alongside *šĕgar ʾalāpêkā,* "the offspring of your cattle." This expression is clearly a vestige of an earlier belief when the goddess Astarte was thought of as responsible for the fertility of the flocks. Interestingly there is evidence that *šgr,* too, was regarded as a deity by the Canaanites; he is mentioned alongside Astarte as receiving a sheep by way of offering in *KTU* 1.148.31 (= *Ugaritica* V 9, rev. 9). Cf. too the Balaam text from Deir Alla, I.16, where mention is made of *šgr.wʿštr,* "*šgr* and ʿAshtar."

B. Extrabiblical Allusions to Astarte

Precursors of the Canaanite goddess Astarte are to be found in the Mesopotamian Ishtar and the Eblaite Ashtar. In the Ugaritic texts the name of the goddess Astarte is spelled *ʿṯtrt* (probably vocalized ʿAthtart), and there she appears as a consort of the storm and fertility god Baal, though somewhat less prominently than Anath. As such she is referred to as *ʿṯtrt. šm. bʿl* "Astarte-name-of-Baal" in Keret's curse of his son *Yaṣṣib* (*KTU* 1.16.VI.54–57 = *CTA* 16.VI.54–57) and it is generally accepted that the same epithet should be restored in the similar incantation in the Baal-Yam myth in *KTU* 1.2.I.8 (= *CTA* 2.I.8). It is interesting to observe that the identical epithet occurs much later in the 5th century B.C. inscription of Eshmunazar king of Sidon (*KAI* 14.18), and one may also compare the expression "Tinnit-face-of-Baal" (*tnt pn bʿl*) in numerous Punic inscriptions (e.g., *KAI* 78.2).

Since Astarte and Anath were both consorts of Baal, it is appropriate that we find them mentioned together on a number of occasions. Thus, they appear together in the list of deities cited in both of the Ugaritic serpent charms (*KTU* 1.100.20, 1.107.14 = *Ugaritica V.*7.20, 8.14), the former of which names their common dwelling place as *ʾinbh.* They act together in preparing food at El's banquet (*KTU* 1.114.9–14 = *Ugaritica V.*1.9–14) and subsequently go hunting together (lines 22–23), though in another text Astarte is mentioned hunting alone (*KTU* 1.92 — *PRU* V 1). They unite in attempting to restrain Baal from smiting Yam's messengers (*KTU* 1.2.I.40–42 = *CTA* 2.I.40–42), but later in the story we read of Astarte (alone) rebuking Baal, whether for being too harsh or too lenient towards Yam is not entirely clear (*KTU* 1.2.IV.28–30 = *CTA* 2.IV.28–30). On another occasion (*KTU* 1.108.2 = *Ugaritica V* 2.2) it seems likely that Astarte is referred to as being present at a banquet alongside El or Rpʾu, as well as Hadad and Anath, though some scholars insist that the place Ashtaroth is here intended. In the Keret epic, Astarte's beauty is implied, for it is said of the maiden Huray that her "grace is as the grace of Anath (and) her fairness as the fairness of Astarte" (*KTU* 1.14.III. 41–42 = *CTA* 14.III.145–146).

A common Ugaritic epithet of Astarte is *ʿṯtrt.šd* (e.g., *KTU* 4.182.55, 58 = *PRU* II.106.52, 55), apparently meaning "Astarte of the field," but the precise significance of this has not been properly elucidated. We also read of local manifestations of Astarte, *ʿṯtrt.mrḥ,* "Astarte in Mari" (*KTU* 1.100, margin line 2 = *Ugaritica V.*7, margin line 2), and *ʿṯtrt ḫr* (*KTU* 1.43.1, 112.13 = *CTA* 33.1, *Ugaritica VII,* RS 24.256, line 13), apparently "the Hurrian Astarte," a deity known in ancient Egypt and in a Phoenician inscription (Cross 1971: 189–95). Presumably these are ways of speaking of Ishtar, the Mesopotamian goddess who is equated with Astarte in the Ugaritic god lists (cf. *KTU* 1.47.25 [*CTA* 29, rev. 3]) and *KTU* 1.118.24 (= *Ugaritica VII,* RS 24.264 + 280, line 24) with *Ugaritica V* 18.24). The identity of Astarte with Ishtar as well as later with Aphrodite in classical times makes it virtually certain that she was equated with Venus. Maybe Canaanite ʿAthtar (*ʿṯtr,* the masculine equivalent form) was the morning star and Astarte the evening star, though explicit evidence for this in Canaanite sources is lacking.

In Egypt, the cult of Astarte, alongside that of a number of other Canaanite deities, was especially prevalent during the period of the New Kingdom, but it also continued into the Late period. For example, from the time of Amenhotep II (ca. 1427–1396 B.C.) to the Late period she was worshiped at *Prw-nfr,* the harbor of Memphis, alongside her consort Baal-Zaphon. Herodotus (2.112) refers to her cult there as that of the "foreign Aphrodite." Astarte is prominent as a goddess of war in Egypt and is depicted a number of

times riding a horse, holding in her hands either a spear and a shield, or a bow and arrow (Leclant 1960: 1–67). Further, she is attested as a military patron of the Pharaohs Amenhotep II (ca. 1427–1396 B.C.), Thutmose IV (ca. 1396–1386 B.C.), and Rameses III (ca. 1185–1154 B.C.), and she was also a protector goddess of Pi-Ramesse, the new city of Rameses II (ca. 1279–1213 B.C.). She is sometimes mentioned alongside Anath, as in the Harris Papyrus, where they are referred to as "the two great goddesses who were pregnant but did not bear." (Does this shed any light on the common Ugaritic epithet "the virgin Anath"?) Like Anath she was a consort of Seth (= Baal). Her father is said to be Ptah or Re. A recurring title is "the Mistress of Heaven" and we also find references to "the Hurrian Astarte" (noted above).

Astarte appears in an interesting, although unfortunately fragmentary, Egyptian papyrus of the 18th or 19th Dyn. (ca. 1550–1187 B.C.), commonly dubbed "the Astarte papyrus" (cf. *ANET*, 17–18). The story clearly reflects an underlying Canaanite myth and has at least some points in common with the Ugaritic myth of Baal and Yam. The Sea (called Yam) demanded tribute of the gods, which was brought by Renenut, the harvest goddess. At a later stage, after the Sea had seen Astarte, it demanded Astarte herself as tribute. The end of the papyrus is broken, but probably told how Seth (i.e., Baal) fought and overcame the Sea. Morenz (1962: 307–9) has argued that this myth may well underlie the well-known classical story of Perseus and Andromeda.

The worship of the goddess Astarte was widespread throughout the Phoenician world in the 1st millennium B.C. Thus, she was the chief goddess of Tyre, being worshiped alongside the other main deities Melqart and Baal-Shamem, while at Sidon she was the leading female deity and was worshiped alongside the gods Baal and Eshmun. She is also attested elsewhere in the Phoenician world, e.g., at Kition in Cyprus and at Pyrgi in Etruria. We know from a 6th century B.C. inscription that she was equated with the goddess Tinnit at Sarepta on the Phoenician coast—this is the earliest reference to Tinnit, later famous in Punic inscriptions as the consort of Baal-ḥammon.

In Philo of Byblos' account of Phoenician mythology (ca. 100 C.E.), Astarte, along with Rhea and Dione, is taken by Kronos-El as wife. By Astarte, Kronos had 7 daughters, Titanids or Artemids, and 2 sons, called Desire (Pothos) and Love (Eros). There is a suggestion of Astarte's association with Baal and their subordination to El (cf. Ugarit) in Philo's statement that "Greatest Astarte and Zeus, called both Demarous and Adodos, king of gods, were ruling over the land with the consent of Kronos." Compare also Astarte's epithet "Greatest" with her designation as *rbt* in Phoenician inscriptions. Philo goes on to say that "Astarte placed upon her own head a bull's head as an emblem of kingship," which calls to mind the place name Ashteroth-karnaim (Gen 14:5), lit. "Ashtaroth of the two horns." There seems to be some play on Astarte's name in Philo's further statement that "while travelling around the world she discovered a star (*astera*) which had fallen from the sky. She took it up and consecrated it in Tyre, the holy island." Finally, he reveals that the Phoenicians identified Astarte with Aphrodite, a fact which is well-attested elsewhere.

There was a goddess called Atargatis, the consort of Hadad, whose cult was popular in Syria in the Hellenistic and Roman periods. An important site of her cult was at Hierapolis (Bambyke) and is described by Lucian of Samosata in his *De Syria Dea* in the 2d century C.E. She is there called Hera, and Hadad is named Zeus. It is generally thought that the name Atargatis is a compound of Astarte (*ʿttrt*) + Anath (*ʿnt*) in an Aramaizing form *ʿatta.* (The view that the latter part of the name represents Attis is now rejected.) *ʿtrʿth* is by far the most common Aram form attested, though variants such as *ʾtrʿt* are also found. R. A. Oden (1977: 58–107) has argued that Atargatis combined not only Astarte and Anath but also Asherah, but this is unproven. Whereas Lucian distinguishes Atargatis from Derketo (Lucian, *Syr. D.* 14), other classical sources such as Pliny the Elder (*HN* 5.19) equate the two. Derketo was a goddess who was woman on the top half and a fish on the bottom half.

A number of nude female figurines found in archaeological excavations in Palestine have popularly been known as "Astarte plaques." The emphasized breasts and genitals certainly indicate a fertility goddess, but the close analogy of Egyptian depictions of the goddess *Qdš,* i.e., Asherah (cf. the Hathor hairstyle), suggest that the plaques in question represent Asherah rather than Astarte. Egyptian depictions of Astarte regularly depict her clothed. See ASHERAH.

ASHURBANIPAL (PERSON). The last great king of Assyria, who ruled from 668–627 B.C. (see MESOPOTAMIA, HISTORY OF for a more complete discussion of his reign). The Assyrian form of his name, *Aššur-bāni-apli,* means "the god Ashur is the creator of an heir." Although Ashurbanipal exercised control over the kingdom of Judah, and his soldiers on more than one occasion marched through Palestine on campaigns against Egypt, he is never specifically mentioned in the Bible.
A. KIRK GRAYSON

ASHURITES [Heb *ʾăšûrî* (אֲשׁוּרִי)]. The name of the 2d of 5 districts that comprised the kingdom of Israel during the latter part of Saul's reign, and during Eshbaal's (i.e. Ish-bosheth's) brief reign (ca. 1000 B.C.; 2 Sam 2:9). The Syr and Vg read "Geshurites," while the Targum paraphrases with the expression, "house of Asher." The LXX reads *thasiri.* The present spelling of the name is probably best understood as an early corruption of "Asherites" (Edelman 1985: 85–86).

The Ashurite district is the only one designated by a gentilic form, rather than a geographical term. The district list in 2 Sam 2:9 would seem to be organized according to the common ancient principles of boundary descriptions. Limits are set out in terms of the 4 cardinal directions. The Ashurites can accordingly be understood to represent the westernmost district, in contrast to Gilead, the easternmost; Jezreel the northernmost; and Benjamin, the southernmost. Ephraim is an intermediate N-to-S element (cf. Ahlström 1986: 89).

No satisfactory identity can be found for the Ashurites based on the received spelling of their name. They cannot represent the Assyrians, who were not active in Canaan at this time. Neither can they plausibly be identified with the Arab tribe, the Asshurim, the sons of Dedan (Gen 25:3), who would not have been settled within W Canaan at the time of Saul and Eshbaal (cf. Lahav 1982/83; Ahlström 1986: 90). The variant reading "Geshurites" does not yield an acceptable geographical or political answer either, even though it has been adopted by a small group of scholars (i.e. Mauchline *1–2 Samuel* NCBC 6: 204; Ackroyd *First Book of Samuel* CBC, 33; McCarter *1 Samuel* AB, 82–83; 87–88; *HAIJ* 1986: 139–40). As an independent kingdom located in the S Golan (2 Sam 3:3; 13:37), GESHUR could not have formed the W border of Saul's Israel (see SAUL).

The Ashurites are most commonly equated with the Galilean tribe of Asher, and, by extension, are thought to represent the entire Galilee region (for bibliography, see Edelman 1985: 90, n. 4). Recent archaeological survey work in the S area of Issachar has yielded no remains datable to the Iron I period (Gal 1982), so Saul's reported control over the S Issacharite hills north of the Megiddo Plain–Jezreel Valley corridor (1 Sam 31:7; 1 Chr 10:7) can be considered literary fiction. Bearing this in mind, neither Asher nor Galilee could have formed the W limit of Saul's state.

The most plausible identification of the Ashurites would seem to be with some portion of the Asherite enclave that was located in the S region of the Ephraimite hill country (see ASHER). The detailed tribal genealogy for Asher that is found in 1 Chr 7:30–40 appears to enumerate members of this S Asherite group at 3 points during its existence, at times when it was controlled by the Judahite court (Edelman

1988). Perhaps the term in 2 Sam 2:9 designates the W clans of the enclave, including Beriah, Serah, Shomer/Shemer, and Japhlet, who occupied the towns of Aijalon, Upper and Lower Beth Horon, ʾUzzen-sheʾerah, the area N of Lower Beth Horon, and possibly Timnath-Serah.

DIANA V. EDELMAN

ASHVATH (PERSON) [Heb *ʿašwāt* (עַשְׁוָת)]. The great-great-grandson of Asher mentioned in the abbr. genealogy of Asher (1 Chr 7:33). The complete count of the sons of Asher "enrolled by genealogies, for service in war" numbered 26,000 men. Ashvath, whose name perhaps means "bright," is described in the list as one of the "heads of fathers' houses, approved, mighty warriors, chief of the princes" (7:40).

Perhaps it is because Asher was a tribe of lesser importance, having originated from the Jacob-Zilpah union (cf. Gen 46:17–18), that his lineage received only passing interest. Indeed, one third of the names appearing in Asher's genealogy are found nowhere else in Scripture. The Chronicler is content to give the names of Ashvath's brothers, father (Japhlet), and grandfathers. Beyond this limited information, little or nothing else is known about him.

J. RANDALL O'BRIEN

ASIARCHS. The title signifies an office which was associated with the league of Greek cities in the Roman province of Asia. However, the exact nature of the connection has been much debated because of the apparently contradictory information supplied by the sources.

There are 3 main kinds of evidence for asiarchs. The most common are Gk inscriptions dating between the 1st and 3d centuries A.D. These are followed in number by a fairly large group of bronze coins which were issued by the cities in the province between the mid-2d and the mid-3d centuries, and which bear the names of asiarchs. The 3d type of evidence consists of references in diverse literary works, ranging from *The Geography* of Strabo and the Acts of the Apostles in the early imperial period to passages from legal codices of the 5th and 6th centuries.

Despite this wide-ranging evidence, or rather because of it, the nature of the asiarch's role in the province still has not been fully clarified. The information available is so diverse that no single homogeneous explanation taking all into account has been forthcoming so far. Indeed, over the period of more than a century, there have been many different interpretations. In the main, these have centered on whether or not the asiarch should be considered identical with the high priest of the imperial cult of the province, the "archiereus" of Asia. The division of opinion is not simply between those who believe and those who do not that the terms "asiarch" and "archiereus" of Asia are two designations for the one office. Even among those who agree in this respect, significant differences in detail occur.

According to one view, the titles referred to the same office but were used in specialized ways to denote specific functions of the position; for example, the archiereus of Asia only bore the title asiarch in every 4th year when he presided over the provincial festival (Monceaux 1885: 60–62; Merkelbach 1978: 288). An alternative view is that archiereus of Asia was the title used during the term of office while that of asiarch was a life-long designation retained afterwards (Larsen 1955: 119; Rossner 1974: 106–7). A 3rd interpretation is that the two titles, although originally separate, had become completely interchangeable by the 2d century, the existence of 2 different titles for the same office was due to a development during the 1st century A.D. in which the older title, asiarch, gradually became more popular than that of archiereus of Asia. According to this theory, the title archiereus of Asia was virtually out of use by the time of Hadrian, and the term asiarch was used to describe the head of the imperial cult in Asia from that

time onwards (Lightfoot 1889: 407–8; Taylor 1933: 261; Deininger 1965: 49–50). This last interpretation of the evidence is the one most widely accepted today.

Yet the argument that the titles are identical has not always been accepted as adequately proved (Chapot 1904: 479–80; Sherwin-White 1973: 404); and some indeed have maintained that the 2 offices were entirely separate. One such view argued that the asiarch functioned only as the president of the festival of the league of cities (Le Bas-Waddington 1870: 245–46), while others have gone further and suggested that the asiarch was primarily linked, not to the league of cities at all, but to individual cities. Two versions of this view exist: (1) that the asiarchs were delegates sent by the cities to the annual assembly of the federation of cities (Brandis *PW* 2: 1577–78); and (2) that the asiarchs were benefactors of the cities, which conferred the title on the occasion of important demonstrations of public spirit, such as a festival or a gladiatorial combat (Magie 1950: 449–50).

The question cannot be considered as settled even today, despite the apparent consensus in favor of the identity of the asiarch and archiereus of Asia in scholarly literature of the last decade and a half. All interpretations of the asiarch proposed so far can still be countered at certain points. For example, it can be argued that imprecise chronology, confusion in distinguishing the local and provincial levels of the imperial cult, and lack of evidence connecting the asiarch with the league of cities in the first 3 centuries render useless some evidence. This applies to the *Martyrdom* of Polycarp and the inscriptions concerning Iulius Reginus of Ephesus, on which the pro-identity view is based (Chapot 1904: 476–77; Magie 1950: 1300). Against those who advocate a separate asiarch and archiereus of Asia it can be argued that insufficient weight is attached both (1) to Modestinus' description of the asiarchs as a national priesthood and (2) to the fact that both asiarchs and the archiereus of Asia sometimes bear qualifying titles referring to the temples of one or other of the major cities of Asia (Deininger 1965: 46–47).

Undoubtedly the controversy over the nature of the "asiarchy" has been complicated by attempts to draw in evidence not only from the province of Asia but also from other provinces in which *-arch* titles are attested (Guiraud 1887: 97–99; Taylor 1933: 256–57; Deininger 1965: 42–43). However, since this question is not yet settled in provinces such as Lycia, Galatia, Bithynia, or Pontus, arguments based on such comparisons are of little value, if any. Moreover, regional differences between provinces, as well as differences in the historical development of the various leagues of cities, make such an approach methodologically unreliable (Chapot 1904: 468–69; Sherwin-White 1973: 442–43). In addition, the broad assumption that all evidence is equally applicable to all periods takes no cognizance of changing political and economic factors (Larsen 1955: 119; Rossner 1974: 111). When these variables are taken into account, it seems unlikely that jurists writing in the first half of the 3d century can be used without extreme caution to throw light on the nature of the asiarchy in the 1st and 2d centuries. The situation demands a comprehensive study of a single, yet representative, body of evidence combined with a strict chronological approach. Such conditions are fulfilled by the inscriptions from Ephesus which now number approximately 5,000; more than 100 asiarchs and archiereis (pl. of archiereus) of Asia are represented over a period of two and a half centuries (*IvEph* 1–8 [1979–84]).

These inscriptions provide the greatest body of direct evidence available at present concerning asiarchs who lived relatively close in time and place to those mentioned in Acts 19:31. In particular, there are 4 asiarchs whose terms of office can be precisely dated between the years A.D. 92/93 and 117/18: P. Vedius Antoninus, Tib. Claudius Aristio, T. Flavius Pythio, and T. Flavius Aristoboulus (*IvEph* 2: 429, 508; 3: 858; 5: 1500). The earliest, Aristio, was asiarch in 92/93, less than 50 years after the events recorded in Acts as taking place in that very city. All 4 asiarchs are documented by 5 or more inscriptions. Aristio appears in more than 20 separate texts and is also mentioned in a letter of Pliny the Younger (*Ep.* 6/31:3).

These 4 asiarchs all held Roman citizenship and belonged to important families of Ephesus. Moreover, the inscriptions reveal a common pattern of participation in the life of the city, including their activities as benefactors: the financing of specific projects such as an aqueduct (*IvEph* 7/2: 4105); the erection of statues to members of the imperial family or to important Roman officials in Ephesus (*IvEph* 7/1: 3033); and the performance of public services such as an embassy to Rome on behalf of the city (*IvEph* 3: 728; Wörrle 1973: 473–74). The standing of the asiarchs at Ephesus is also indicated by the statues erected by

the city to them and to their relatives in turn (*IvEph* 2: 425; 3: 638, 728; 7/1: 3064). All this, however, was typical for members of most of the leading families of Asia during the early imperial period and was not limited to the asiarch or archiereus. It therefore reveals nothing specific about these offices except that holders of both titles were frequently drawn from the same families. Nevertheless, this similar family background conceals details of the specific function of each of the two titles which may be extracted by a closer examination of the other aspects of the office-holder's activity.

Aristio, one of the four earliest epigraphically attested asiarchs of Ephesus, is recorded on different occasions with each title, from which it is possible to observe in what circumstances the titles were used. From the various texts in which Aristio appears in an official capacity—as distinct from those inscriptions which are purely honorary—it is clear that each title was used in a different sphere of public life. When Aristio officiated at the dedications made by certain cities of Asia to Ephesus's first provincial temple of the imperial cult in 88/89 and 89/90, he bore the title archiereus of Asia (*IvEph* 2: 234, 235; 5: 1498). But when he bore the title asiarch he was acting as a city magistrate in the capacity of prytanis (chief official) or secretary of the populace, at the same time that he participated in projects of the city not of the provincial league (*IvEph* 2: 427, 461, 508). This close association between the asiarchy and the highest city magistracies of Ephesus, particularly the grammateia, is equally in evidence in the careers of the other 3 early asiarchs, Antoninus, Pythio and Aristoboulus. Each of these was asiarch at the same time as he was grammateus of the populace (*IvEph* 2: 429; 3: 858; 5: 1500). Indeed, the association between these two offices may also be reflected in the Acts of the Apostles since these are the only 2 official positions of the city which are mentioned in the description of the riot of the silversmiths of Artemis (19:28–41).

The available chronological information confirms such an interpretation of the asiarchy's close link with civic magistracies and its individual existence apart from the *archierosynē,* "high priesthood," of Asia. Where proconsular dates are included in the inscriptions, they provide a clear distinction between the occasions on which Aristio held first the provincial *archierosynē* and then the asiarchy (*IvEph* 2: 234, 235, 461, 508). The occurrence of the title asiarch here cannot be interpreted simply as an honorary title retained by Aristio after his term of office as archiereus of Asia had expired; for he, and also Pythio, appear in inscriptions without the title some years after they are known definitely to have been asiarch (*IvEph* 5: 1500; 7/1: 3217b). Furthermore, the features that are commonly taken to imply that the title asiarch was an alternative designation for the provincial priest are lacking, not only in the case of Aristio but also in that of the other 3 asiarchs. There is no evidence, for example, of the so-called temple titles which later appear attached to the names of asiarchs and which, it has been suggested, prove that the titles asiarch and archiereus of Asia were identical (Deininger 1965: 47). Nor is there any indication in the inscriptions relating to the 4 asiarchs that they were in any way connected with the festival of the league of cities of Asia. Although the probability of such a link has frequently been proposed by those seeking to prove that the titles were identical, it is of no relevance here.

The separation in function of the asiarch and archiereus of Asia appears to be confirmed by another inscription from Ephesus (*IvEph* 1a: 27), dating to A.D. 104, which records the details of the perpetual foundation established in that year by Vibius Salutaris. In specifying the benefits and duties under the terms of the endowment, the inscription lists the archiereus of Asia and other sacred officials as a group quite distinct from those described as former asiarchs. The ex-asiarchs are grouped with civic bodies such as the *gerousia* (council of elders) and *boule* in a manner which coincides exactly with the way the inscriptions of Aristio, Pythio, Aristoboulus, and Antoninus link the asiarchy with the *grammateia* (office of secretary) or the *prytany* (presidential office of the senate) (Kearsley *NDIEC* 4 fc.).

When it is recalled that asiarchs are documented by Strabo (14. 649) well before the institution of the imperial cult in Asia, the independence of the asiarchy from the provincial *archierosynē* is not remarkable. Since also there is no evidence at all for a connection between the asiarchs and the league of Asian cities during the Late Republican period, their close relationship with the leading officials of Ephesus under the early Empire is quite credible. Unfortunately, however, it is not yet possible to determine more precisely the function of the asiarch, nor to ascertain whether or not there was more than one at a time. So far no unequivocal epigraphic evidence on this point is available and, although Acts

19:31 refers to "asiarchs," it has usually been argued that the designation there only represents a life-long honorific title applied to wealthy members of society (*contra* Kearsley 1988: 50–51). Moreover, the limited time period to which the evidence of the inscriptions of Aristio, Pythio, Aristoboulus, and Antoninus applies, from the late 1st century until the beginning of the reign of Hadrian, must be emphasized. Any developments which may have occurred subsequently between the asiarchy and the *archierosynē* of Asia remain outside the scope of this evidence.

ASIBIAS (PERSON) [Gk *Asibias* (Ἀσιβιας)]. See HASHABIAH (PERSON).

ASIEL (PERSON) [Heb *ʿăśîʾēl* (עֲשִׂיאֵל)]. **1.** The great-grandfather of Jehu, one of 13 princes or chiefs in the tribe of Simeon during the reign of the Judean king Hezekiah (715–687 B.C. [1 Chr 4:35]th). Jehu was one of only 3 princes whose lineage was traced. Apparently the genealogy in vv 24–43 was intended to update earlier genealogies (Gen 46:10; Exod 6:15; and Num 26:12–14) and to explain the demise of Simeon vis-à-vis Judah (cf. 1 Chr 4:27; Myers *1 Chronicles* AB, 30).

2. An elder ancestor of Tobit from the tribe of Naphtali (Tob 1:1). Asiel transliterates the Heb name *yaḥṣîēl* (Jahziel, cf. 1 Chr 7:13), a variant of *yaḥṣĕēl* (Jahzeel, cf. Gen 46:24 and Num 26:48). Jahzeel is listed as the eponymous founder of a family within the tribe of Naphtali (Num 26:48). If Jahzeel and Asiel are the same person, Tob 1:1 designates the particular family to which Tobit belonged. Whether the genealogy is genuine cannot be determined. The presence of geographical and historical errors in the book of Tobit (e.g., Tobit claims to have been a young man when the Israelite monarchy divided in 921 B.C. and to have gone into exile in 722) has led many scholars to consider the book fiction.

3. One of the 5 scribes trained to write rapidly (2 Esdr 14:24), who took down the books dictated by Ezra (2 Esdr 14:37–46). Various mss list the total number of books as 94 or over 900. The passage is often interpreted to mean that Ezra dictated 24 canonical and 70 non-canonical books (cf. Myers *Esdras* AB, 320–21; Russell 1964: 85–88), though the nature of the books is not clear from the text. In view of the obscurity of these verses, their import for the understanding of the canonical process is limited.

ASKEWIANUS, CODEX. See PISTIS SOPHIA.

ASMAR, TELL. A site located on the plain of the lower basin of the Diyala, a river that descends from the Zagros mountains and joins the Tigris at the point where Baghdad is situated. Its ancient name, Eshnunna, is the Sumerian form of the Semitic name Ishnou by which it was known in the 3d millennium.

Two extensive archaeological operations, different in nature but complementary, yielded some very precise information on the history of the region. The 1st was a series of traditional campaigns led by the Oriental Institute of Chicago under the direction of H. Frankfort and P. Delougaz to the tells of Tell

Asmar, Khafadje, Tell Agrab, and Ischaeli 1930–36—a remarkable undertaking, the results of which for many years formed the basis of our knowledge of Babylonia of the 3d and 2d millennia. The 2d operation was carried out in 1957–58, again under the auspices of the Oriental Institute; this survey by R. McC. Adams indexed 867 archaeological sites. The study of fragments of ceramic pottery collected on these sites allowed for the dating and defining of the major evolutionary phases of the region from the end of the Neolithic period to our day, shedding light on the fundamental role played by irrigation in that period. It established the initial emergence of the first cities in the 4th and 3d millennia B.C., linked to their birth, and their renaissance at the end of the 1st millennium A.D.

Tell Asmar is a good example of the 1st phase of development of the region. The ruins extends more than 1 square km; it is formed by a main tell, approximately 600 by 400 m, and bordered on the W and S by smaller tells. It was on the main tell that most of the research was carried out. It is probably at the end of the 4th millennium B.C. that the beginnings of the site are dated, but practically nothing is known of the city of that era.

A part of an older wall with a gate was found by the excavators on the N and E sides of the N palace. This seems to show that the city in the 1st part of the 3d millennium was rather limited in its dimensions and could have occupied only the central part of the main tell. Judging from what was uncovered by the excavation, the N palace was a long building, approximately 70 by 30 m, separated from the outer wall by a small open space and bound on the E by a passageway that ran N–S with an entrance door leading to it. The most remarkable feature of the building is in the oblong rooms of the E part, where installations of baked bricks coated with bitumen-like little platforms are backed against the wall. Midway a fissure had been cut that was the starting point of an evacuation duct connected to a drainage system, which was also constructed of baked bricks and was closed in by an arch. The main pipe of the sewage system was found under the surface of the N–S passageway. One is tempted to interpret these platforms as toilets, although the number of these installations (7) in a constricted space casts doubt on this supposition. However, certain authors have seen them as unworkmanlike installations. In spite of this uncertainty, the quality of this arrangement emphasizes the attention that the Sumerians gave to the problems of urban sanitation in the middle of the 3d millennium B.C.

A recent analysis of the ruins of this palace points to 2 important conclusions: (1) The existence of a floor over the totality of the discovered edifice has been established and (2) it has been shown that this edifice was the most imposing part of a complex which also developed on the E side of the passageway. This E wing was composed of 2 or 3 main buildings situated next to one another, whose interior arrangements are unfortunately unknown. The whole structure was linked by halls running through the individual blocks. The main hall was placed exactly in the pathway of the door of the older wall and served as the backbone of the complex by giving access to all the buildings. Transversal footbridges on an upper level connected the different architectural units. The palace therefore appears more important in function than it did at the time of its uncovering, revealing the sophisticated aspects of an architecture often poorly perceived.

Dwelling houses were uncovered on the W flank of the palace, and in the middle of these was a small temple, known as the temple of Abu, where excavation has allowed scholars to trace the history and the modifications throughout the ED period (1st half of the 3d millennium). Usually, the temple comprised a single long room with a podium which undoubtedly received the insignia of the divinity; at times, 1 or 2 small rooms for storage or for lodging the priest were added. Nevertheless, one phase was characterized by a building which was more important than the others; it was called the “square temple.” Instead of a long room with one podium, this temple contained three podiums, each one occupying part of a square central space in the foyer of the building where the passageways crossed. A stairway situated in the NE corner gave access to either a terrace or an upper floor. This monument became famous because one of the sanctuaries contained a set of small statues which had been buried in the ground during antiquity according to the common practice when sacred or worship-related articles were no longer used. Most of them depict worshipers and generally measure not more than about 30 cm in size; 2 of them are particularly interesting: the taller one measures 72 cm and portrays a person of masculine sex; the 2d

measures 59 cm and portrays a woman. Some scholars see them as a divine couple, others as a royal couple—there is no proof to substantiate either interpretation. The sculpture does not possess the fine quality of the one from Mari, but the general outline and the facial features as well as the emphasis laid on the huge eyes, which nearly cover the face, give them an uncommon force.

South of the palace and the temple of Abu was a residential quarter. A level-by-level detailed study yielded precious information on the dwellings and private life of the ED III period and the beginning of the Agade period.

In the late 3d and early 2d millennium B.C. the city may well have known its most splendid period. The new city wall (the Larsa town wall) reveals the great expansion of the area occupied by the city and important monuments constructed 200 or 300 m to the S of the preceding group of buildings. The main block was called the palace of the rulers and the Gimil-Sin temple. That the edifice was the official power center is clear from its plan, centering on the foyer which was also the throne room according to the then-prevailing custom in Mesopotamia. A central corridor leads through a large courtyard to a first long room along one small side; in the back of this was a beautiful suite of rooms, including a very large room where receptions, banquets, and official ceremonies took place. Smaller architectural suites served as apartments for the king and his relatives, or as centers specializing in administrative management and economic reserves. This layout characterized all the palaces of that period. The palace was in use for at least 3 centuries and underwent changes which really did not affect the official residential suites but did remodel the outlying buildings.

The most remarkable added feature, still unique today, was the Gimil-Sin temple (now called the Shu-Sin temple), dedicated to a deified king of the 3d dynasty of Ur which dominated the region for some decades; this was added onto the E facade of the palace. Built according to the common Babylonian plan (a square space in the center surrounded by rooms), this edifice was desacralized at the time that the dynasty disappeared in 2004 B.C., a fact clearly showing the political character of the edifice. This building was then transformed into an annex like any other in the palace. Other monuments of that era (e.g., the building of Azuzum, the S building, the audience hall of Naram-Sin, and living quarters) complete the description of the city. Regaining its independence, Eshnunna played an important political role especially by opposing for a while Hammurabi's hegemonistic intentions; but it finally capitulated, and the region then went into a long decline.

The influence exercised by a regional capital such as Eshnunna can be measured thanks to the excavation of Tell Harmal (ancient Shaduppum). Excavated by T. Baqir in 1946, this small trapezoidal shaped city, lying a little to the S of Baghdad, certainly played an administrative role in the region. The team uncovered a double temple, a group of 2 temples joined side by side, chapels, and a large building where the priests and administrative personnel undoubtedly lived, as well as private houses. But it was the discovery of cuneiform texts which assured the importance of that small site. Tariffs, mathematical texts, literary texts, and above all fragments of a compendium of laws written in Akkadian by King Dadusha around 1790 B.C., clearly show the role of that city as a division of the central administration located in Eshnunna.

TRANS. PAUL SAGER

ASMODEUS [Gk *Asmodaios* (Ἀσμοδαιος)]. The name of the evil demon that killed the first 7 husbands of Sarah, the daughter of Raguel, each on their wedding night in the apocryphal story of Tobit (Tob 3:8). When Tobit's son Tobias was married to Sarah, however, by following the advice of the angel

Raphael he warded off the demon by placing a fish's heart and liver on burning incense. Raphael then captured and bound the fleeing demon.

The derivation of the name is uncertain. It is often taken to come from Aesma Daeva, "the wrath demon," of the Zoroastrian *Avesta*. According to popular Jewish etymology, the Heb name Ashmedai (whence the Gk Asmodeus) was derived from *hismid,* "destroy, exterminate."

For the postbiblical assessment of Asmodeus—a very different one, found in the Talmud and in later Jewish folklore—see Roth, *EncJud* 3: 754–55.

HERBERT G. GRETHER

ASNAH (PERSON) [Heb *ʾasnâ* (אַסְנָה)]. The head of a family of NETHINIM (temple servants) listed among those exiles returning from Babylon to Jerusalem and Judah (Ezra 2:50 = 1 Esdr 5:31). The name is absent from the list as recorded in Nehemiah 7. Galling (1951: 157) prefers to view these lists as registers of the *gôlāh* religious community in Judah. Although Zadok (1980: 113) believes the name remains unexplained by using onomastic criteria, its similarity to ASENATH (Heb *ʾāsĕnat*), the name of Joseph's Egyptian-born wife (Gen 41:45), has suggested that it has an Egyptian theophoric origin.

ASPHAR (PLACE) [Gk *asphar* (ἀσφαρ)]. A pool in the wilderness of Tekoa, to which Jonathan Maccabeus, his brother Simon, and their army fled from Bacchides (1 Macc 9:33). Bacchides was one of 2 commanders sent to Judah ca. 160 B.C. by the Seleucid ruler Demetrius I Soter (reigned 162–150). Eschewing retreat, Judas threw himself and his dwindling army into battle against Bacchides and eventually was killed (1 Macc 9:18). When the Jews regrouped under Jonathan, Bacchides sought his life, but Jonathan and his army fled to Asphar. The full name of the place reads in Gk "*to hudor lakkou asphar*." Goldstein (*1 Maccabees* AB, 380) thinks that the LXX translated the Heb word "*bor*" ("cistern") as a common noun "*lakkou,*" missing the fact that "*bor*" was part of the name of the place: Bor-Asphar. Asphar was located "in the wilderness of Tekoa" (1 Macc 9:33). F.-M. Abel (1949: 196–97) identified the site with a place named Bir ez-Zaʿfarān near Tekoa, where a pool or cistern provided water, an identification accepted by Goldstein (*1 Maccabees* AB, 380), but rejected by Simons (1959: 412 §1151–52) on the grounds that the name occurs at several different places.

PAUL L. REDDITT

ASRIEL (PERSON) [Heb *ʾaśrîʾēl* (אַשְׂרִיאֵל)]. ASRIELITE. The 3d son of Gilead and great-grandson of Manasseh listed in the 2d census taken by Moses in the wilderness (Num 26:31). The Asrielites, along with the other clans of Gilead, received land allotments in Cisjordan (Josh 17:2). The identity of Asriel is confused, however, by the obscurity of 1 Chr 7:14. Rather than Asriel being understood as a son of Manasseh, in the more orderly readings of Numbers and Joshua he is the son of Gilead. Some phrase or understanding, unimportant to the descent of Asriel, has been lost from the

Chronicler's reading, which only mentions 2 of the 6 clans, or 3 if Abiezer is taken to be Jeezer. The name Asriel may mean "God is joined."

ASSEMBLY, GREAT. See GREAT ASSEMBLY.

ASSHUR (DEITY). See MESOPOTAMIA, HISTORY OF (HISTORY AND CULTURE OF ASSYRIA).

ASSHUR (PERSON) [Heb *ʾaššûr* (אַשּׁוּר)]. One of the sons of Shem and the eponymous ancestor of the Assyrians (Gen 10:22; 1 Chr 1:17). There is debate over whether the reference to Asshur in Gen 10:11–12, which follows vv 8–10 in which Nimrod is associated with the cities of Babylon, Erech, and Accad in S Mesopotamia (Shinar), names a person or a place (either the land or the city). Those who support the former derive it from a literal translation of the passage "from this land (Shinar) went forth Asshur." Those who prefer the latter assume that the context from the previous verses requires that Nimrod, not a ruler named Asshur, be responsible for the construction of the Assyrian cities; they generally translate (although the syntax is awkward) "from this land, he (referring to Nimrod) left for Asshur." For further discussion see *Genesis* AB.

Bibliography

Lipiński, E. 1966. Nimrod et Aššur. *RB* 73: 77–93.

GARY H. OLLER

ASSHUR (PLACE) [Heb *ʾaššûr* (אַשּׁוּר)]. The references to Asshur in the Bible are not to be confused with the references to the tribe of Asher. Also to be distinguished is a certain man called Ashhur who was the son of Caleb and the father of Tekoa who is mentioned in 1 Chr 2:24 and 4:5.

In the Bible the references to Asshur are always to the land, people, and king of Assyria as well as to their patronymic Asshur. In Gen 10:22 and 1 Chr 1:17 Asshur is said to have been a son of Shem. Assyria and Assyrians are frequently mentioned in the books of the Bible and often these references can be fitted into the larger context of Assyrian history and ancient Near Eastern history in general. (See MESOPOTAMIA, HISTORY OF.) However, there are several references, particularly in the prophets, for which no specific date or historical context is known. These references are best considered in the context of the specific book involved.

The god Asshur, the national god of Assyria, is never mentioned in the Bible although there is the rare reference to Assyrian religion. The city Asshur, which was the original capital of the kingdom of Assyria, is also never specifically referred to in the Bible. Nevertheless, it ranked with Nineveh, Calah, and Arbela, as one of the chief cities of Assyria and therefore deserves some further description.

The location of the settlement which developed into the city of Asshur was a logical one from the point of view of social and economic patterns in the region. Asshur was located on the Tigris River at the extreme S limit of the zone of regular rainfall in the Assyrian heartland. Thus it could draw on the rich agricultural resources of the surrounding countryside and at the same time was in proximity to the flourishing Sumero-Babylonian civilization to the S. In other words it was strategically located on the N-S trade route going up and down the Tigris. It was also well situated on a major E-W trade route since it was precisely at the site of Asshur that caravans commonly forded the Tigris river, the reason being that the mountain chain called the Jebel Himrin, which dominated the landscape E of the Tigris, faded into the plain at the site of Asshur. In fact the city of Asshur was built on the final outlying spur of the Jebel Himrin, which circumstance also provided Asshur with natural fortifications, particularly on the N frontier.

Although native traditions, preserved in Arabic sources in medieval and modern times, never forgot where ancient Asshur was located, it was only in the 19th century that Europeans recognized the identification of the site. Systematic archaeological excavation of the site began early in the 20th century with a German expedition led by Walter Andrae. This continued until the outbreak of World War I in 1914. Excavations were not resumed until the late 1970s by an Iraqi Expedition which has been continuing until the present time.

The history of the city of Asshur is intricately involved with the history of Assyria. Only a brief survey need be given here. There is evidence of prehistoric settlement at the site but it is only in the mid-3d millennium B.C. (*ca.* 2400 B.C.) that there is written evidence of a real city-state called Asshur. It was Shamshi-Adad I (1813–1781 B.C.) who usurped the native dynasty at the city-state of Asshur and incorporated the city into a larger political unit which included most of N Mesopotamia. In the 14th century B.C. Asshur became the capital of a land which was for the first time called Assyria, a kingdom which included the cities Nineveh and Arbela. This was the beginning of the period of the Middle Assyrian Empire and the start of major building operations at Asshur. Asshur continued to be the capital until the 9th century B.C. when Ashurnasirpal II (883–859 B.C.) moved the capital to Calah. Then in the 7th century B.C. the capital was once again moved, this time by Sennacherib (704–681 B.C.), to Nineveh. Despite Asshur losing its status as the administrative capital of the Assyrian empire, it remained throughout Assyrian history the spiritual heart of Assyria where her kings were crowned and buried.

A. KIRK GRAYSON

ASSHURIM [Heb *ʾaššûrîm* (אַשּׁוּרִים)]. A clan name mentioned in the genealogy of ABRAHAM by his wife KETURAH in Gen 25:3. Asshurim is listed as one of the 3 sons of Abraham's grandson DEDAN, the son of JOKSHAN. These 3 sons are not found in the matching, but abbreviated, genealogical clan list in 1 Chr 1:32–33, perhaps reflecting shifts in population or a changing political situation by the time of the Chronicler. Asshurim is not related to Assyria or the Assyrians, but may possibly be identified with Syrians. This group (note the plural form of the name) is one of many obscure ARABIAN tribal groups which inhabited the fringes of the Negev and N Arabian regions. Their very obscurity was used by the biblical author(s) who wished to contrast starkly the importance of the descendants of Isaac, and even those of Ishmael, with the children of this secondary wife.

VICTOR H. MATTHEWS

ASSIR (PERSON) [Heb *ʾassîr* (אַסִּיר)]. 1. A Levite, the son of KORAH (Exod 6:24; 1 Chr 6:7—Eng6:22). The genealogy of Korah recorded in Exod 6:24 may be one of numerous postexilic expansions (compare Noth *Exodus* OTL, 59). The Samaritan Pentateuch reads Assur (*ʾassūr*) for Assir in Exod 6:24.

2. A Levite, the son of EBIASAPH, a descendant of the preceding (1 Chr 6:8, 22—Eng6:23, 37). Both Assir, the son of Korah, and Assir, the son of Ebiasaph, are mentioned only in the genealogy in 1 Chr 6:1–15—Eng6:16–30. The genealogy in 1 Chr 6:16–33—Eng6:31–48 lists only Assir, the son of Ebiasaph, while Exodus 6:16–25 lists only Assir the son of Korah. The differences in the genealogies can be explained 3 ways: (1) There could be 2 men named Assir; one was accidentally dropped or dropped when compressing the genealogy; (2) there is only one Assir; the lists were accidentally expanded during copying; or (3) the differences can be explained by the artificiality of the lists; the 2 lists were constructed for different purposes and have little basis in fact.

TOM WAYNE WILLETT

ASSOCIATIONS, CLUBS, THIASOI. Clubs, guilds, and corporations were a feature of the Greco-Roman world from the 4th century on into the Roman imperial period. Most of the information about these organizations is derived from inscriptions and documentary papyri.

According to Aristotle, the essence of association (*koinōnia*) is friendship (*Eth.Nic.* 8.9.1 [1159b]). Pythagoras is alleged to have founded in the latter half of the 6th century a society of which it could be

said that "men who live at distant points count one another friends before they even know or speak with one another" (Iamb. *VP* 237).

Developed out of common interests, all associations were cultically oriented, but other objectives were also frequently satisfied (Arist. *Eth.Nic.* 8.9.5 [1160a]). To achieve honored familial status, numerous Attic groups, whose members called themselves *orgeōnes,* were formed in devotion to deities and local heroes. Broader in outreach and interest were the *thiasoi,* originally associated with Dionysos. Also popular were the *eranoi* or mutual-aid societies, which persisted into Roman imperial times. The names of the associations are many. Frequently mentioned are guilds of artists, who were devoted to Dionysos and the promotion of music and drama. Merchants, who are on occasion linked with shippers in common enterprise, found that cities located on sea routes provided an attractive base for combining business with sociability. In addition, there appears an almost endless variety of guilds that shared a common trade or practice: stone masons, bankers, architects, physicians, tanners, cobblers, producers of linen or woolen goods, dyers, farmers, gardeners, bakers, barbers, fishers, to cite but a few.

Aristotle also notes the close relationship of associations to the state (*Eth.Nic.* 8.9.4 [1160a]), and the accuracy of his observation is borne out by many inscriptions relating to crafts whose proceedings are modelled after official records in the public sector. A decree of a society devoted to Sarapis (Danker 1982: 154–55) is typical not only of the style of formulation but of the subject matter included in such decrees:

> WHEREAS [Zopyros], the treasurer of the Sarapiastai, and the clerk Theophanes, and the trustee Olympichos have time and again proved themselves beyond reproach …, be it RESOLVED that the Sarapiastai commend and crown them with a wreath of olive in the temple of Sarapis at the next sacrifice of the Sarapiastai …; and be it further resolved to commend and crown the priestess Nikippe for offering the sacrifices at the appointed times. And be it finally resolved to record this decree on a stone stele and to set it up in the [temple of Sarapis], with expenses for these items to be met by the treasurer Zopyros out of the Association's account.

Luke, who was familiar with Greco-Roman bureaucratic style, uses this type of formulation in Acts 15:22–29 to record the action of the association of Christians at Jerusalem respecting a problem that had originated in Antioch.

Hellenic interest in mental and physical agility encouraged the formation of 2 types of gymnastic associations for men. At Athens, in the 4th century B.C.E., members in the group known as the *epheboi* (ephebes) ranged in age from 18 to 19. The end of the 2d century B.C.E. saw ephebes involved in a variety of cultural activities, including intellectual pursuits and study of literature, mathematics, astronomy, and music, which were in some localities supported by substantial library facilities and visiting professorships as supplements to their gymnastic training (*IG*^{2} 1913: no. 1028 = *SIG*^{3} 1917: no. 717; Danker 1982: no. 17). Alumni from this class of youths formed a substantial membership base for associations called *neoi* or *neōteroi,* whose participants ranged "from a minimum age of nineteen or twenty years to an indeterminable maximum" (Forbes 1933: 2). Their activity was chiefly athletic. The *ephebeia* program spread rapidly from the 4th century on and became especially popular in Asia Minor, where it became a problem especially for Jews (1 Macc 1:14–15; 2 Macc 4:9–15; Josephus *Ant* 12.5.1 §240–41; Schürer *HJP²* 1: 148–49). On the other hand, when Claudius, in 41 C.E., decreed the end of Jewish membership in Alexandria's gymnasium, Jewish aristocrats protested bitterly (*CPJ* 1960: no. 153.88–93). In 1 Pet 5:5, the word *neōteroi* (young men) is part of a common Gk word pair, *presbyteros-neōteros* (elder-younger), and is not used in a technical societal sense.

Roman inscriptions exhibit 2 major classifications of associations, generally termed *collegia:* those sanctioned by the state and a broad range of private associations, many of which were composed of members engaged in a common craft (Kornemann PW 4: 380–480). One of the most exotic was "The Inimitables," whose members' main purpose was to challenge one another in gourmet expenditures (Plut. *Vit.Ant.* 28).

Viability of such private clubs generally depended on their conformity to requirements for public order. Luke's report of the uproar generated by the guild of silversmiths at Ephesos (Acts 19:23–40) captures

both the religious factor that was a feature of all associations and the unpredictable nature of their relationship to the Roman state. For the most part, Rome was inclined to be permissive toward private associations (Pliny 10.33, 34), and Trajan's reply to Pliny's query concerning *eranoi* in the free city of Amisus suggests that policy respected precedent (10.92, 93). Given the whirl of social contacts encouraged by societies, the conversion of a merchant like Lydia (Acts 16:14) and of a craftsperson like Alexander, who is cited in 2 Tim 4:14, would expedite transmission of the Christian message. Similarly, St. Paul's tent-making activity offered generous exposure of the gospel to the gentile world. But as indicated in connection with the affair at Ephesus, political winds could also blow adversely, and Suetonius sums a breadth of imperial viewpoint in his assessment of policies adopted by Augustus: "A number of political parties were formed in the name of a new association, with no other purpose in mind than the commission of every sort of criminal act … Therefore he closed down all associations (*collegia*), except those that enjoyed a long-standing reputation and were not disruptive of public order" (*Divine Augustus* 32.1). Illegal collegia were similarly disbanded after a riot in 59 C.E. at Pompeii (Tac. *Ann.* 14.17).

Some indication of respect for public opinion, and likewise some knowledge of the kind of formalities that were followed in meetings of associations, can be derived from the minutes of a club called the Iobakchoi, whose members were devoted to the worship of Dionysos. So pleased was the membership with the revision of their statutes that with a unanimous vote they had them inscribed on stone (Danker 1982: no. 22). Included in the bylaws are proscriptions forbidding unruliness (cf. 1 Tim 3:3; Tit 1:7), monopolizing the podium (cf. 1 Cor 14:26–33), and publicly litigating internal disputes (cf. 1 Cor 6:6; Jas 5:16), as well as a penalty for lax enforcement (cf. 1 Corinthians 5). In related vein, an association of Ephesian devotees of Demeter assured a proconsul that their annual celebration of the mysteries would be carried on with "due observance of the established customs" (Danker 1988: 288). Ancient and modern generalized allegations of insobriety, promiscuity, and even orgies in connection with guild celebrations and Greco-Roman religious rites in imperial times run the hazard of being libelous. NT broad-brush references to gentile iniquity especially require some discounting.

As Acts 2:9–11 indicates, there was a broad distribution of Jews in the provinces, and inscriptional evidence shows that Luke did not overstate the case (Schürer *HJP²* 1: 3–86). The customary term for Jewish cultic associations in the Greco-Roman world was *synagogē* or congregation (Acts 6:9; 9:2 and passim; Schürer *HJP²* 2: 429–31). This word, along with the title *archisynagogos* (head of a meeting group), is also used in connection with non-Jewish societies (Poland 1909: 355–58), but most frequently to denote a meeting of the society rather than the society as an entity.

Because Jews enjoyed prestige for their ancient heritage, their associations or synagogues received favorable treatment from the state—*religio licita* is not an accurate description of Jewish status—except when they were alleged to be offenders of public order. Thus, on the one hand, Julius Caesar exempted Jews from his restriction on the formation of religious associations (*thiasoi; Ant.* 14.10.8 §215), and Gallio "looked the other way" at Corinth (Acts 18:5). On the other hand, Claudius at one time suppressed their assemblies at Rome (Dio Cassius 60.6.6), avowedly in the interest of national stability. Jewish and Gentile Christians similarly experienced sporadic local animosities. It is not surprising, therefore, that the writer of 1 Peter emphasized that his addressees were to avoid any conduct that was destructive of public order (4:12–16; cf. Paul's counsel in Rom 13:1–7; 1 Thess 5:14; 2 Thess 3:11; and the passages cited above in connection with the *Iobakchoi*).

Since a festive meal played an important part in Greco-Roman associations, St. Paul could not avoid the subject in his pastoral career at Corinth. The minutes of the Iobakchoi association referred to above include one type of format that would be followed in a meeting, with emphasis on sacrificial rites and distribution of sacrificial meat. Their worship program affords insight into the kind of counsel recorded in 1 Cor 8 and 10 and 2 Cor 6:14–7:1, in which St. Paul discusses the subject of participation (*koinōnia*) in the type of meeting described in the minutes of the Iobakchoi. It is also to be observed that Greco-Roman auditors would have been reminded of their previous cultic experience by his emphasis on

commemoration (1 Cor 11:25), which is echoed in Luke 22:19. The social implications for Christians who left their old associations for the new were, as 1 Pet 4:12–16 and Rev 2:20 suggest, formidable.

From the sources hitherto available, it is impossible to define the precision the status of women and slaves in Greco-Roman associations, but the description in Luke 8:1–3 of services rendered by women is in keeping with inscriptional evidence which shows that in collegia of the imperial period women generally took second place to males and were in the main limited in leadership roles to service as benefactors. Thus a number of women, notably Epikteta (*IG* no. 330), founded clubs and gymnasia. Luke's understanding of the role that women of high station played in Hellenic cultural life is apparent from his observations in Acts 17:4, 12, and it is probable that, like Lydia (Acts 16:14–15), Paul's convert at Athens named Damaris became the founder of a house-church (Acts 17:34). It appears that a few clubs, especially those under Roman influence, admitted slaves to their membership. House-oriented groups would naturally include them in some capacity.

The inscription respecting the Iobakchoi probably reflects a common bureaucratic structure. But the differences between their detailed administrative structure and those exhibited in the NT are striking. Indeed, it is improbable that Christians of the 1st century were at all in debt to Greco-Roman structures for administration of their cult. Furthermore, it appears that early Christian communities lacked a fixed-dues structure or rules for admission and made no provision for a priestly office.

Greco-Roman inscriptions offer no evidence of any special interest in meeting the needs of the poor outside of their own associations (Waltzing 1895: 1:145–47; 300–21; Pliny *Tra.* 10.92, 93). Trajan's reply (Pliny 10.93) to Pliny's letter (10.92) shows sympathy for commoners (*tenuiores*), who band together to meet special needs in their midst. In this respect they were like most early Christian groups, which focused on needs within their own religious affiliation (Acts 2:42–47; 4:32–37; 2 Cor 8–9; Gal 6:10). Much other philanthropy in the Greco-Roman world was carried out along other routes and, as inscriptions attest, "both in public and in private" (see BENEFACTOR). In ancient Hellas, care of the deceased was both a public and a private concern, but in the Roman world burial societies became popular, especially as a means of qualifying for legitimate association. Aristotle's view is the sum of the matter: Brothers and comrades have everything in common, yet in varying ways and degrees (*Eth.Nic.* 8.9 [1159b]; cf. 9.2.9 [1165a]).

FREDERICK W. DANKER

ASSOS (PLACE) [Gk *Assos* (Ἄσσος)]. Port city of Assos located in NW Anatolia in the region known as the Troad just N of the island of Lesbos (39°28' N; 26°21' E). In the final stages of the 3d missionary journey Paul went by himself from Alexandria Troas to Assos (cf. Acts 20:5–6 with Acts 20:13), where he then rejoined his companions who came by ship (Acts 20:14). This was a distance of about 20 miles.

It is possible that Paul wanted to be by himself as he contemplated the probability that he would not see his beloved friends in Asia any more (Acts 20:38). Hemer (1976: 105) has suggested that Paul may have lingered behind to instruct the believers at Troas, then left by the more direct land route, perhaps on

horseback, to meet his companions at Assos. Burdick (1978: 42) thinks that Paul may have wished to instruct the believers on the way to Assos.

Assos was founded by Aeolian immigrants from N Greece in the early 1st millennium B.C. By 600 B.C. Assos had become the most important city of the Troad with a population of about 12–15,000 according to Clarke (1882: 77). In the 6th century, Assos came under the domination of the Lydians. It fell to the Persians with Cyrus' conquest of Lydia and Ionia in 546. Assos regained its freedom with the victory of the Greeks over the Persians at Mycale in 479. On the basis of the Athenian tribute lists, Cook (1973: 383) estimates that the population of Assos in the 5th century had fallen to 4,000.

In the 4th century B.C., Hermeias, a former slave who had studied under Plato, became the tyrant of Assos. He invited his friend Aristotle to stay at Assos between 347 and 343. It was during his sojourn there that Aristotle began work on his important treatise *Politics.* Cleanthes, the successor of Zeno as the head of the Stoics in Athens, was born in Assos in about 331. It was possibly from Cleanthes' "Hymn to Zeus" that Paul quoted the phrase "For we are also his offspring" in his famous sermon in Athens (Acts 17:28).

Assos was excavated in 1881–83 by J. T. Clarke and F. H. Bacon. This was the very first excavation sponsored by the newly formed Archaeological Institute of America. The city walls, which were erected in the 4th century B.C., are still in a marvelous state of preservation. According to Akurgal (1970: 64), "These walls are the most complete fortifications in the Greek world."

On top of the 700-foot-high acropolis stood the impressive temple of Athena. The trapezoidal agora was flanked by a N Stoa (115 m long) and a shorter S Stoa. The S Stoa was a 3-storied structure with 13 shops on the middle floor and bathrooms on the lowest floor. The mixture of the Doric and Ionic styles reflects the period of Pergamene influence (241–133 B.C.). The S Stoa overlooked the theater, where the spectators would have had a clear view of the harbor.

Like the rest of W Asia Minor, Assos fell to the Romans with the death of the last Pergamene king in 133 B.C. Inscriptions reveal the presence of many resident Romans, and also a devotion to the cult of the emperors.

In 1981–82, Ü. Serdaroğlu excavated in the area of the W gate and in the area of the Athena temple (Mellink 1983; cf. Wescoat-Holtzmann 1981).

ASSUMPTION OF THE VIRGIN. See VIRGIN, ASSUMPTION OF THE.

ASSYRIA (HISTORY AND CULTURE). See MESOPOTAMIA, HISTORY OF.

ASTARTE (DEITY). See ASHTORETH (DEITY).

ASTROLOGY IN THE ANCIENT NEAR EAST. Ancient astrology is divisible very roughly into 2 essentially different systems: (1) *Omina,* which studied celestial phenomena as *signs* or indicators of future terrestrial events, and which originated in ancient Mesopotamia, and (2) astrology proper, which studied the *influence* of the heavenly bodies on the course of events on earth, and which originated in the Hellenistic Greek sphere.

In the ancient Near East, prediction of mundane events on the basis of celestial phenomena began in Mesopotamia and was a form of divination (*omina*). Celestial divination shared its underlying rationale and the form of its scholastic tradition with those of the other forms of Babylonian divination, such as extispicy (inspection of the liver). The celestial divination which emerged in the context of Old Babylonian scribal scholarship (ca. 1800 B.C.) was subsequently expanded, codified in a compendium entitled *Enūma Anu Enlil* (hereafter abbreviated EAE) and preserved into the Seleucid period; during the Seleucid period, the 2d major form of ancient astrology developed within the context of Hellenistic Greek science, probably under some degree of influence from Babylonian *omina.* This Hellenistic astrology took a number of forms (see below sub C), but all forms had in common the notion that the situation of the heavens at a given moment were determinative of various aspects of terrestrial life (an individual's life, the fate of a nation, or the propitiousness of an undertaking).

———

A. Babylonian Celestial Omina
B. Transmission from Mesopotamia
C. Late Babylonian Developments and Greek Astrology

———

A. Babylonian Celestial Omina

The earliest attestation for the use of celestial *omina* as portents, appears in a number of Old Babylonian tablets. They comprise a purely Akk genre (i.e., no Sum prototypes are known). The Old Babylonian texts are concerned primarily with lunar eclipses (although solar and weather *omina* occur as well) and represent forerunners to the lunar eclipse section of the later EAE (Rochberg-Halton 1988). Textual evidence points to the establishment of the "canonical" series during the Kassite period, but the bulk of surviving sources are those of the Neo-Assyrian version from the library of Assurbanipal at Nineveh (7th century B.C.). Earlier versions of EAE from Middle Assyrian and Middle Babylonian sources with parallels in Hittite sources (Hit and Akk texts from Boğazköy) serve to outline the literary development of the series. While the series provided a standard reference work for the scholars specialized in celestial divination (*ṭupšarrūtu Enūma Anu Enlil*), the textual tradition was not rigidly fixed and it seems that EAE circulated in various recensions.

In its canonical form, EAE numbered some 70 tablets organized into 4 sections according to the phenomena of interest: The 1st section (EAE 1–22) pertains to phenomena of the moon god Sin, such as lunar visibility, halos, eclipses, and conjunctions with planets and fixed stars; the 2d section (EAE 23–36) refers to the phenomena of the sun god Samas, such as coronas, parhelia, and eclipses; the 3d (EAE 37–49/50) contains meteorological phenomena of the storm god Adad, such as lightning, thunder, rainbows, cloud formations and winds; and the 4th section (EAE 50/51–70) contains planetary *omina* such as first and last visibilities, stations, acronychal risings as well as *omina* for fixed star-phases. (Textual sources may be found in Virolleaud 1908–12; Reiner and Pingree 1975 and 1981; Rochberg-Halton 1988.)

The treatment of the phenomena in EAE is predominantly schematic; patterns such as left-right, above-below, or traditional sequences used in noncelestial omen literature, such as the colors white, black, red, yellow, and variegated, are frequently employed. Schematization brought about the introduction of nonoccurring phenomena (i.e., phenomena not observable in nature) for the sake of the schematic symmetries. The schemata also stand in relation to the predictions associated with the phenomena. The techniques for arranging the signs is structurally related to those of all Mesopotamian scholarly divination and to some extent also to the Sum-Akk lexical lists; as such they are determined more by scholastic scribal traditions and conventions than by the natural requirements of the celestial phenomena themselves. It is in this methodological sense that, although EAE comprised a major part of the written corpus of Mesopotamian scribal scholarship, and contributed much to the systematization of astronomical observation, the corpus can in no way be considered scientific in the modern sense, but certainly preliminary to the development of scientific inquiry into nature.

Celestial *omina* are expressed casuistically: if *x* occurs (in the sky), then *y* will occur (on earth). The relationship between *x* the phenomenon and *y* the predicted event was evidently not causative, but one of

simple association or correlation. That is to say, the celestial phenomena were indicators, not causes of future events. This rules out astral influence as an underlying rationale for celestial *omina.* The diviners regarded all natural phenomena as comprising a symbolic language of the gods which made possible knowledge of future events. By means of the system of schematic correlation of celestial sign (omen protasis) and terrestrial event (omen apodosis) the divine language was decipherable to the scholars. Because nature was not yet fully separated from divine forces, the correlations of natural phenomena and human concerns in the form of omens made direct and concrete links between human spheres of existence and the divine. The terrestrial events recorded in EAE apodoses are almost entirely public concerns. Uppermost are predictions concerning the prosperity or downfall of the king and his army, or the country as a whole and its enemies. Floods, crop failure, and pestilence also frequently appear. The existence of predictions for private individuals in celestial *omina* should be noted, however, as a rare exception.

In the period of the Sargonid kings, celestial divination seems to have had its most widespread use and took on a status second only if not equal to extispicy. From the Neo-Assyrian period are preserved "astrological" reports from scholars in various Assyrian and Babylonian cities. The Neo-Assyrian reports contain actual observations of celestial phenomena and omens of relevance excerpted from the reference work EAE (Oppenheim 1969; Parpola 1970–1983). It becomes especially clear in this source material that celestial divination was practiced hand in hand with apotropaic magic (*namburbû* rituals), particularly as a means of protecting the king against ill portents. The best example of this is the substitute king ritual (*šar pūḫi*) which was sometimes necessitated by the occurrence of a lunar eclipse.

B. Transmission from Mesopotamia

Scholarly divination was that product of Mesopotamian intellectual history which made the broadest and most profound impact beyond the cultural and temporal spheres of Mesopotamia proper. Celestial divination, liver divination, birth omens (the series *šumma izbu*), and omens about everyday life (the series *šumma ālu*) can be traced both to the E and W of Mesopotamia beginning already in the 2d millennium, and are preserved within non-Mesopotamian contexts well into late antiquity (in India, Egypt, and in the Greco-Roman tradition).

EAE was transmitted during the 2d millennium to other parts of the Near East: to Susa, with an exemplar of EAE 22 in Akk and an Elamite text containing lunar and meterological omens; to Syria, with Akk lunar eclipse omen texts in both Akk and Hit. Also indicative of a widespread 2d millennium interest in celestial *omina* are a few examples of celestial omens in Ug, as well as a Ug text in which a solar eclipse is reported and interpreted by means of liver divination (cf. a lunar eclipse interpreted by extispicy mentioned in a Mari letter, Oppenheim 1969: 132 n.47, for bibliography, see Rochberg-Halton 1988). In many cases of "peripheral" evidence for celestial *omina,* the material is not directly traceable to early Mesopotamian (i.e., pre-1st-millennium) sources. While our extant 2d-millennium Mesopotamian celestial omen texts represent perhaps only a part of a more extensive and varied corpus, it is clear that once the idea of drawing predictions from celestial "signs" was taken over by other cultures and intellectual traditions these individual interests and requirements produced textual traditions within their specific content and construction that do not present exact parallels to texts from Babylonia proper.

Evidence for transmission to India from the 5th century B.C. onward, probably as a result of the Achaemenid occupation of the Indus Valley, comes from Vedic and Sanskrit omen collections that show clear Babylonian parallels: notably the *Gargasaṃhitā* (1st century, but dependent on older sources); the *Pāli Dīghanikāya* (4th or 3d century); *Bṛhatsaṃhitā* of Varāhamihira (ca. 550); the Jaina *Bhadra-bāhusaṃhitā* (10th century?); and *Pariśiṣṭas* of the *Atharva-veda* (10th or 11th century?) (Pingree 1973: 119 and 1978: 614–18).

A Demotic papyrus (late 2d or early 3d century A.D.) in 2 books dealing with eclipses of the sun and moon (Book I) and other lunar omens (Book II) attests to the transmission of EAE to Egypt, most likely in the 5th century B.C. (Parker 1959). The dominant features of the omen papyrus—the assignment of months, hours of the day or night, and divisions of the sky to countries—clearly stems from the schematic design of the Neo-Assyrian corpus of EAE eclipse tablets. A Gk astrological work composed in Egypt in the 2d century B.C., under the fictitious authorship of "Nechepso and Petosiris," attests to Egypt's role in

the transmission of Babylonian celestial omens (as well as Greek horoscopic astrology) during the Hellenistic period. Other Hellenistic Gk astrological works stemming from Egypt show Babylonian influence: Book II of Ptolemy's *Apotelesmatika,* "Astrological Influences" (also referred to as the *Tetrabiblos*) (ca. A.D. 150), Book I of Hephaestio of Thebes' *Apotelesmatika* (ca. 415), and John Lydus' *Peri se-meiōn,* "On Signs" (560).

In the Hellenistic period various W Semitic traditions stemming ultimately from Mesopotamia but representing admixtures of omens and Greco-Roman astrology may be cited: Hermetic texts associated with the Sabians of Harran, e.g. the *Apocalypse* of Daniel (in Gk, Ar, and Syr); the Syr *Book of the Bee;* the Mandaean *Book of the Zodiac* (Sfar Malwašia) (Drower 1949); and a number of omen texts concerning thunder and earthquakes in Gk, Ar, Syr, and Aram (Qumran Cave 4, Milik 1959: 42).

C. Late Babylonian Developments and Greek Astrology

In addition to reliable textual evidence for the transmission of Babylonian *omina* during Achaemenid and Seleucid periods to the Greek sphere, a great many references to "Chaldeans" in connection with astrology are found in Hellenistic Gk writings. This connection between so-called Chaldeans and astrology represents part of a general trend beginning in the 4th century B.C. and persisting throughout the Hellenistic period in which Greeks credited ancients (Babylonians/Chaldeans or Egyptians) with all manner of esoterica, but particularly astrological speculation. While interest in the ancient "scientific" traditions of Babylonia may have intensified during the later Hellenistic period, what the Greeks actually knew about Mesopotamian celestial divination was doubtless not as complete as the many attributions of astrological theories to "Chaldean astrologers" would indicate. These late attributions found in Hellenistic scientific works do not necessarily provide reliable historical sources for the determination of the origins and sources of astrology.

In the Achaemenid period, there appears evidence of the incorporation within celestial *omina* of a number of elements new to this period, namely the zodiac and the derivation of personal predictions from celestial phenomena at the time of birth, which may be seen as the rudiments of what the Greeks developed as personal horoscopy (genethlialogy). The zodiac became the essential tool for Gk astrology. It represents an imaginary band extending about 6° on either side of the ecliptic (the apparent path of the sun with respect to the fixed stars in one year), and was divided into 12 "signs" of equal 30° length. Its invention in Babylonia, ca. 500 B.C., provided a standard reference system for use in astronomy. The earliest evidence for the existence of the zodiac comes from two 5th century cuneiform horoscopes, in which positions of the planets are cited with respect to zodiacal signs. The existence of the zodiac is also suggested in Achaemenid astronomical cuneiform texts, the oldest of which relates longitudes of conjunctions of the sun and moon, computed by a schematic method, with solar eclipses. The phenomena computed in these texts can be dated with relative certainty to 474, although the writing of the tablets could well have been later. (Aaboe and Sachs 1969: 17, Text B obv. col. v with heading *lu-maš* "zodiacal sign".) Another text whose astronomical phenomena are dated to ca. 430 (Neugebauer and Sachs 1967: 193, 197–98, Text C) lists phenomena for Venus and Mars plus a column containing values of "col. φ" in the Babylonian lunar theory.

Cuneiform evidence for the prediction of an individual's future by the observation of celestial phenomena at the time of birth seems to be of Seleucid origin (4th and 3d centuries B.C.). These *omina* are in the form "if a child is born (*šerru alid*) when Jupiter has come forth, (his life) will be regular, healthy, he will be rich, will grow old, (his) days will be long" (TCL 6 14:29, see Sachs 1952: 66 and 68), or "a child is conceived *(šerru reḫi)*" followed by celestial phenomena and personal predictions (LBAT 1588 and 1589 passim, see Pinches and Sachs 1955). Zodiacal nativity omens are also known, in the form "if (a child) is born in the middle of Aries" (LBAT 1592 i 16). Although quite late in the history of Babylonian celestial divination, such nativity omens have forerunners in older omen traditions referring to the birth of a child on a certain date, but without consideration of the heavens. For example, "if a child is born in Nisannu" (Labat *Calendrier* 64:1ff. [followed by other months of the year] and duplicate Bab. 1 192ff; TCL 6 12 obv. section 4:18). Hittite parallels confirm the antiquity of this tradition (2d millennium) (KUB 8 35:1–10), as does an Akk text from Boğazköy (KUB 37 118 rev. 6–18). Representing another

extension of the traditional omens of EAE, zodiacal omens (often of the moon in various signs of the zodiac) begin to appear in Neo-Babylonian and Late Babylonian texts (Rochberg-Halton 1984).

What may be considered Babylonian precursors to Greek horoscopes begin to appear ca. 400 B.C. and record computed positions of the 7 planets (moon, sun, Jupiter, Venus, Mercury, Saturn, Mars) on the date of a birth. These state the data as follows: "On such-and-such a date a child was born (*šerru alid*); at that time, the moon was in zodiacal sign *n,* the sun was in …, Jupiter was in …, etc." The presentation of data always follows the order of planets mentioned above. Additional astronomical events of that month are frequently appended, particularly eclipses (solar and lunar) as well as the lunar datum "NA," which represents the length of visibility of full moon on the W horizon after sunrise, i.e., the time between sunrise and moonset (Sachs 1952). These texts are clearly related to the aforementioned nativity *omina* in that some have predictions which parallel those found in the apodoses of that genre.

The cuneiform horoscopes attest to the continuation and expansion of Babylonian "scientific" traditions; they comprise a genre with affinities not only to (nativity) omen literature, but also, with respect to terminology, to contemporaneous non-mathematical astronomical texts, e.g., the diaries, almanacs, or eclipse reports (published in LBAT). The horoscopes also provide important source material for the study of the transmission of both astronomy and astrology from Babylonian to Gk science.

Another idea of Late Babylonian origin is the micro-zodiac, in which each 30° zodiacal sign was itself divided into 12 parts (Akkadian *zittu* [HA.LA] "share" or "part"). The micro-zodiac had both astronomical and astrological application, and the 12 parts, or *dodekatemoria,* were later integrated into Greek (and Indian) astrology. Other Babylonian elements may be traced (*bīt niṣirti,* which the Greeks termed *hypsoma* "exaltation"; correlation between stars, planets, and stones and plants; zodiacal triplicities) which were adopted and modified for use in Gk astrology and astral magic; but in the main, Babylonian celestial divination had only selective influence on Greek astrology.

As indicated above, the two systems were founded on entirely different theoretical bases. In contrast to Babylonian celestial divination, astrology depended for its existence on the concept of celestial influence and on the geocentric Aristotelian cosmos. The influence of the heavenly bodies on the sublunar region was given physical justification through Aristotelian physics. According to Ptolemy, the motion of the ether, the 5th (celestial) element, through the 8 celestial spheres penetrated to the sublunar elements (earth, air, fire, water) and affected their change. This constituted the mechanism of astrological causation, not the will of gods (Ptolemy Tetr. I.2). Astrology's claim that the motions of the celestial bodies were not only indications but also actual causes of change on earth shows astrology to be antithetical to divination, which depends solely on the will of the deity to provide signs.

The 4 branches of astrology that emerged and became widespread during the Hellenistic period are (1) genethlialogy, (2) general astrology, (3) catarchic astrology, and (4) interrogatory astrology. Pingree gives a summary of the sources and methods of these 4 categories in (1973: 119–25, see also Bouché-Leclercq 1899).

Genethlialogical or horoscopic astrology stems from the notion that the positions of the planets at the moment of an individual's birth directly influence the future course of that person's life. The *horoscopus* or ascendent (the point of intersection of the ecliptic and E horizon) was computed for the moment of birth and the relative positions of planets in the zodiacal signs at the time are interpreted by means of elaborate theories about their relationships. Just when the Greeks adopted the zodiac (and the notion of ecliptic) is not clear. Despite the fact that Pliny (HN 2:31) credits Cleostratus (550–500 B.C.) with its introduction into Gk science, our only irrefutable evidence comes from the fact that the early treatises on spherical astronomy by Autolycus and Euclid, ca. 300 B.C., already assume knowledge of both ecliptic and zodiac.

Gk horoscopes date from the 1st century B.C. and continue to the beginning of the Islamic period, with the bulk of the documents falling within the first 2 centuries A.D. The documents consist of papyri from Egypt, and Byzantine codices which contain the "literary horoscopes" such as those in the *Anthology* of Vettius Valens (2d century A.D., Neugebauer and van Hoesen 1959). Demotic horoscopes are also known, all but one of which fall within the 1st half of the 1st century A.D. (Neugebauer 1943 and Neugebauer and

Parker 1968). Gk horoscopes provide evidence of the transmission of astronomy from Babylonia to Hellenistic Greece. Linear or arithmetical methods of Babylonian astronomical computation, as opposed to the geometrical-kinematic methods of the Gk astronomical tradition to which the *Almagest* belongs, are employed in Gk astrological texts. Neugebauer has suggested that a Gk horoscope for the year A.D. 137 has preserved the ancient definition of the linear methods. According to Neugebauer's restoration of the passage, the astrologer says he has computed the position of the sun according to the method of "greatest and smallest (velocity)," an apt description of a linear "zig-zag" function (Neugebauer and van Hoesen 1959: 42 No. 137c col. i lines 11–12). The zig-zag function is a term descriptive of the constantly increasing and decreasing arithmetical progressions used to compute the periodic (synodic) phenomena of the moon and planets in some of the Seleucid Babylonian mathematical astronomical texts. In other words, Babylonian linear methods were discarded in the creation of Gk astronomy, but preserved by Gk astrology.

General astrology brings to bear the situation of the heavens at a significant moment (e.g., at vernal equinox, or at an eclipse, or at some planetary phenomenon) on the public sphere. Predictions are given for countries, cities, populations, etc. (Pingree 1973). Parallels with the emphasis on the public sphere in the apodoses of the EAE tradition are readily found. The method and philosophical underpinnings of general astrology, however, are related to those of genethlialogy, not to *omina.*

Catarchic astrology was also developed by analogy with genethlialogy. If a person's life was influenced by the heavens at the moment of birth, then so could any act or undertaking similarly be influenced by the horoscope of its inception. By means of catarchic astrology, an individual could choose propitious moments for various activities. This form of astrology circumvents the determinism of genethlialogy by providing the possibility of choosing one's own future course of action. Catarchic astrology is attested in the 2d or 1st century B.C. in Hermetic texts applying astrology to medicine and in the work of Serapion. Later, catarchic astrology is found in e.g., Dorotheus of Sidon, "Manetho," Firmicus Maternus, and Hephaestio of Thebes (see Pingree 1973: 124 for further discussion).

A distant parallel worthy of note here occurs in a Neo-Assyrian omen text in which divination by the twinkling of stars (*kakkabu išrur*) in various relations to the observer (right, left, behind, in front) determines whether an undertaking will be favorable (*damqu*) or unfavorable (*aḫi*). The text begins "if someone starts out on an undertaking" (*šumma amēlu ana ṣibûtišu tebīma*) (Bab. 4 116 c [K.139] and p. 125).

Interrogatory astrology enabled the determination of answers to specific questions by the casting of a horoscope for the moment the question was presented. The impulse to learn the outcome of certain events or circumstances is also reflected in a relatively poorly attested branch of Mesopotamian divination in which *omina* were impetrated. In this kind of divination, which Oppenheim termed "operational," the deity was asked by a diviner to respond to a query and was expected to communicate the answer by affecting an object to be observed by the diviner. Such was achieved by throwing lots, observing the action of oil on water, or the movement of smoke from a censer. Operational divination generally yielded binary (yes-no) responses. Celestial divination did not belong to this category, but rather provided signs (changes in natural phenomena) unprovoked by a diviner; however, evidence shows that the techniques were sometimes mixed, so that observation of celestial phenomena, such as shooting stars, at the time a question was posed could be interpreted in a binary (favorable or unfavorable) manner, and these decisions were meant for private individuals. Whether or not such celestial divination techniques were transmitted from Mesopotamia and contributed in any way to astrological interrogations is not ascertainable due to a complete lack of evidence. It is more probable, as Pingree suggests (Pingree 1973: 124), that interrogatory astrology developed out of catarchic astrology and provided another wedge between the determinism of genethlialogy and an individual's desire to exercise free will in making decisions.

ASTYAGES (PERSON) [Gk *Astyagēs* (Ἀστυαγης)]. The last king of the Medians (585–550 B.C.) before the rise of the Persian Empire (see MEDIA (PLACE)). His name in Old Persian was *Aršti-vaiga* "Brandishing a Lance," *Ištumegu* in Akk. Astyages married a Lydian princess as part of the peace pact which ended the Medo-Lydian War in 585 B.C. (Herodotus 1.73–74). His daughter Mandane married a Persian, Cambyses I, and gave birth to the famous Cyrus the Great (see CYRUS). This hybrid nature of Cyrus' parentage is reflected in a response from the Delphic Oracle (Hdt. 1.91), which warned the Lydians to beware when a "mule" became king of the Medes. The Persians had developed into a kingdom subordinate to the Medes during the reign of Cyaxares (625–585 B.C.), Astyages' father.

Xenophon's propagandistic *Cyropaedia* "The Education of Cyrus" described Cyrus' perception of Astyages' Median garb: "Then he noticed that his grandfather was adorned with pencillings beneath his eyes, with rouge rubbed on his face, and with a wig of false hair—the common Median fashion."

As in many other examples from Greek folklore, Herodotus tells about a dream which forewarned Astyages that his grandson, if allowed to live, would overshadow him. Later Herodotus narrates the terrible vengeance Astyages took upon Harpagus, the man who failed to see to the death of the child. In a story which recalls the myth of Tantalus and his son Pelops, Astyages served Harpagus with the flesh of his own son (Hdt. 1.110).

When Cyrus came of age, he led the Persians in a revolt against his Median grandfather in 550, as most scholars have interpreted the Nabonidus Chronicle, or, according to Drews (1969), in 553. According to Herodotus (1.127–28) Cyrus overcame the Medes in two battles. Strabo (15.3.8) located the scene of the decisive battle in the plain where Cyrus was to build his new capital: "Cyrus held Pasargadae in honor because he there conquered Asytages the Mede in his last battle, transferred to himself the empire of Asia, founded a city, and constructed a palace as a memorial to his victory."

The Nabonidus Chronicle confirms Herodotus' account (1.127–30) that Cyrus was aided in his victory by the defection of Astyages' own men. Stronach (1971: 4) suggests that Cyrus' half-Median background may explain why the Medes never revolted against him.

Ctesias (König 1972: 50) recounts that Princess Amytis tried to hide her father in the palace. Though he was captured, his life was spared, according to Herodotus 1.130: "As for Astyages, Cyrus did him no further harm, and kept him in his own house till Astyages died."

The apocryphal Additions to Daniel (Bel 1:1; Add Dan 14:1 in the LXX and Vg) asserts: "When King Astyages was gathered to his ancestors, Cyrus of Persia succeeded him" (lit. "received his kingdom").

This is inaccurate on two counts: (1) the Medes did not control Babylon; (2) Cyrus had to wrest the kingdom from Astyages in battle. See the discussion in Moore *Daniel, Esther and Jeremiah: The Additions*.

EDWIN M. YAMAUCHI

ASUR (PERSON) [Gk *Asour* (Ἀσουρ)]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:31). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:52; Neh 7:53). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

ASYNCRITUS (PERSON) [Gk *Asygkritos* (Ἀσυγκριτος)]. A Roman Christian who received greeting from Paul in Rom 16:14 (see PATROBAS). Asyncritus' name occurs only twice according to the epigraphical and literary sources from the city of Rome (Lampe *StadtrChr* 140–42, 148). Since the name was not common there, it probably indicates that Asyncritus immigrated to Rome from the E of the Roman Empire.

PETER LAMPE

ATAD (PLACE) [Heb *ʾaṭad* (אָטַד)]. Place "beyond the Jordan" mentioned in Gen 50:10 and 11 where the funeral cortège, bearing the body of Jacob homeward from Egypt to Canaan for burial, stopped and mourned him for 7 days. Since the name occurs in the phrase "*gōren hāʾaṭad,*" some have translated this as "threshing floor of (the place) Atad," while others have preferred to take the whole phrase, Goren-ha-Atad, as a place name meaning "the threshing floor of (or bordered by) thorns." According to v 11, the local Canaanite inhabitants renamed the place Abel Mizraim after observing the great mourning of the Egyptians. This aetiological explanation seems to be based on the wordplay between *ʾēbel* "mourning" and *ʾābēl,* an element found in toponyms and translated earlier as "meadow" but more recently as "watercourse" or "creek."

Problems exist in locating Atad/Abel Mizraim, described as being "beyond," that is, E "of the Jordan." While the 6th century A.D. Madeba mosaic map presents a possibility in locating an Alon Atad (terebinth of Atad) near Beth Agla (Beth Hogla—modern Deir Hajlah) between Jericho and the Dead Sea, this is on the wrong side of the Jordan. Also scholars have questioned why the procession would choose an indirect route to Hebron which apparently took them around the S end of the Dead Sea and northward through the Transjordan. Numerous explanations have been offered, including that it is a prefiguration of what would happen when the bones of Joseph would make the same journey, so that even in death, Jacob showed his descendents the road to the promised land. Finally it has been suggested that 2 different traditions on the burial place of Jacob, one E of the Jordan, the other W in Canaan, have been combined in the text.

GARY H. OLLER

ATARAH (PERSON) [Heb *ʿăṭârâ* (עֲטָרָה)]. One of the 2 wives of Jerahmeel and mother of Onam (1 Chr 2:26). From the list of descendants in vv 29–33, one may conjecture that Atarah mothered a more-

extended family of Jerahmeelites than did Jerahmeel's 1st wife Hezron. Since Hezron is also a place name, Curtis (*Chronicles* ICC, 93; cf. Myers *1 Chronicles* AB, 14–15) suggests that Atarah derives from the place name Ataroth (Num 32:3, 34; Josh 16:7; also found in various compound place names Josh 16:5; 18:13; and variant compounds Num 32:35; 1 Chr 2:54). He further conjectures that Atarah's position as the 2d wife suggests that Jerahmeel's sons by Hezron were nomad families while the descendants of Atarah represented a settled life. Atarah means "crown" or "wreath" and is derived from the verb meaning "surround."

W. P. STEEGER

ATARGATIS (DEITY). A goddess worshiped in Syria in Hellenistic and later times. Her principal cult center was the city Hierapolis-Bambyke in Syria (modern Membidj), NE of Aleppo. The Hieropolitan temple dedicated to the *Dea Syria* (as Atargatis was widely known) was described with tongue-in-cheek credulity by the satirist Lucian of Samosata in mid-2d century C.E. Details about the identity of the goddess, her iconography, her consort, and the cults celebrated in their honor as given by Lucian in his *De Syria Dea* comport nicely with information derived from other Gk and Latin authors (PW 2/2: 1896) and surviving inscriptions from other sites (see Oden 1977: 47–53).

The name Atargatis is Sem, of Aram origin, and results from the juxtaposition of the names of 2 goddesses of great antiquity in the W Sem-speaking regions of Syria. The name is found in Aram inscriptions (principally Palmyrene) spelled *ʿtrʿth* and in other Aram inscriptions (e.g., Nabatean, Hatran) spelled *ʾtrʿtʾ* (with the initial pharyngeal consonant attenuated to a glottal stop). Gk *Atargatis* is a consensus representation with a number of variants. The 2 elements of the Sem name are *ʿtr-*, the characteristically Aram form of the divine name, best known from Phoenician sources as Astarte, and *ʿt-*, an Aram variant of the divine name Anat, spelled *ʿnt* in Ug texts (on the etymology see *WbMyth* 1/1: 237; Oden 1977: 58–61).

Another important shrine to Atargatis was founded by citizens of the city of Hieropolis resident on the island of Delos in A.D. 128/7. Gk inscriptions from this site make it certain that the consort of Atargatis was the W Semitic god Hadad, also known by the epithet Baal and identified with Zeus. Atargatis was correspondingly identified with Hera (Oden 1977: 55–58). The union of these 2 divinities was celebrated in a ritual of sacred marriage (Gk *hieros gamos*). Among the Nabateans the male consort was Dušara, later identified with Zeus-Hadad.

A temple of Atargatis, called in Greek the *Atargation,* is mentioned in 2 Macc 12:26. The temple was in the vicinity of the Gileadite town of Carnaim (Gk *karnion*), which should be identified with Ashteroth-karnaim of Gen 14:5 (see CARNAIM). It is possible that Carnaim and the *Atargation* were 2 separate places, presumably Seikh Saʿad and Tell ʿAstara. The town of Karnaim was destroyed by Judas Maccabaeus during an expedition into Gilead about 163 B.C. and the inhabitants who fled to the *Atergation* were put to death (2 Macc 12:18–29, 1 Macc 5:24–25; Josephus *Ant* 12.8.4).

While it is certain that *Atargation* means "Temple of Atargatis" (see for example 1 Macc 5:43–44), the Biblical name Ashteroth-karnaim suggests that there was originally a sanctuary of Astarte at the site (see also ASHTAROTH). An Egyptian stele at Tell ʿAstara contains a relief of a goddess with the horns of a cow; Astarte was often depicted as Hathor in Egypt, and the latter's iconography includes bovine features. The link between Astarte and Atargatis is preserved in Strabo's statement that the Syrian goddess was originally called *Athara* (*Geog.* 16.4.27).

Cultic centers for the worship of Atargatis were located throughout the ancient Mediterranean world, with Syrian centers in Baalbek, Caesarea, Ascalon, Khirbet Tannur, Damascus, Palmyra, and Dura Europus. The cult of Atargatis was popularized by Syrian merchants, slaves, and soldiers and by mendicant eunuch priests (Apuleius *Met.* 8.24), spreading the cult to Greece, Macedonia, Egypt, Italy, and the Balkans. The Temple of Atargatis at Baalbek had tame lions, bears, and bulls in its precinct (Lucian *De Syria Dea* 41) and sacred doves were kept at the Temple in Hierapolis (Lucian *De Syria Dea* 14, 41, 54).

Atargatis was depicted as a mermaid or surrounded by dolphins, and her sanctuaries often had sacred pools. According to one legend, the Syrian goddess originated from an egg which fell from the heavens to the Euphrates River. Fish delivered the egg to shore and it was hatched by a dove. Zeus rewarded the fish by making them a sign in the zodiac. Atargatis was also known as Derceto, who was a maiden inspired by Aphrodite with love for a youth who was worshipping at her shrine. Derceto gave birth to a daughter by this youth but was filled with such shame that she exposed the child and attempted to drown herself, at which time she was either miraculously turned into a fish (Diodorus Sic. 2.4) or saved by fish (Hyginus Astron. 2.30). The illegitimate child was saved by a fish and raised in the Temple of Aphrodite and grew up to be the legendary Queen Semiramis. Sacred fish were common to the cult of Atargatis and laws were enacted to punish those who stole or hurt the sacred fish (Lucian *De Syria Dea* 14, 47; compare further with Aelian *De Nat. Animal.* 2.30). The priests of Atargatis ate sacred fish meals according to Lucian (*De Syria Dea* 44), and the image of the goddess at the Temple at Heiropolis was bathed each year in a sacred lake.

SCOTT T. CARROLL

ATAROTH (PLACE) [Heb *ʿăṭārōt* (עֲטָרֹת)]. A name for 2 different places in the OT.

1. A fortified town captured by the tribe of Gad (Num 32:3) from Sihon, king of the Amorites, and Og, king of Bashan, on the E side of the Jordan; it was rebuilt for cattle and sheep (Num 32:34).

Mesha, king of Moab in about 830 B.C.E., boasts on the Moabite Stone of Ataroth's destruction (ANET, 320): "Now the men of Gad had always dwelt in the land of Ataroth, and the king of Israel had built Ataroth for them; but I fought against the town and took it and slew all the people of the town as a satiation (intoxication) for Chemosh and Moab." Ullendorf *(DOTT)* supposes that Mesha captured the "altar hearth of David" (*ʾar'el dawidum*), but this reference seems to be a proper name for the town chieftan who was replaced by the "men of Sharon and Maharith." *ʾr'el* might be similar to the biblical *Ariel,* which is often thought to be an altar hearth in Jerusalem; but it appears doubtful that official cultic sacrifice was sanctioned in the 9th century on this side of the Jordan at Ataroth.

Ataroth, meaning *crowns,* is a reasonable metaphor for an ancient dwelling place, designed with height, to protect people and livestock. The modern location for the town is identified by consensus with Khirbet ʿAṭṭarûs (M.R. 213109).

2. A border town shared with Benjamin and belonging to Ephraim on the W side of the Jordan, which was previously controlled by the Archites (Josh 16:2, 7). The Archites are known in the Bible only because king David's loyal diplomat Hushai was an Archite (2 Samuel 15–17).

Noth recognized that Ephraim (Josh 16:1–3) shared the same boundary description as Benjamin (Josh 18:12–13). However, it is not clear from the text that Ataroth in 16:2 is the same as Ataroth-addar in 16:5, since the narrative is also minimizing the confused contours of territory allotted to Ephraim and the W-Jordan Manasseh—both descendants of Joseph (see Seebass 1986: 78). Alt (1953: 9–10) thinks that this W-Jordan Ataroth is the premonarchic name for Mizpah of Benjamin because modern Khirbet ʿAṭarah is found at the foot of the ancient remains of Tell en Naṣbeh, which is ascribed with great controversy to Mizpah. Alt conjectures that the name was changed to Mizpah during Asa's reign. Muilenburg (*IDB* 1: 305) objects that the remains at Khirbet ʿAṭarah do not date earlier than the Roman period, though Alt is merely speculating that Tell en Naṣbeh had an earlier name which is preserved in the local village memory of Khirbet ʿAṭarah.

PAUL NIMRAH FRANKLYN

ATAROTH-ADDAR (PLACE) [Heb *ʿăṭṭārôt ʾaddār* (עֲטָרוֹת אַדָּר)]. A border town between Ephraim and Benjamin on the W side of the Jordan river (Josh 16:5, 18:13). Many critics conclude that the reference to Ataroth in Josh 16:2 has left out *ʾaddār,* but Boling (*Joshua* AB, 402) suggests that the boundary makes more sense if *ʾaddār* is dropped from Josh 16:5. Thus Ataroth would be the NE border town for Ephraim, and Ataroth-addar of Josh 18:13 a S border town of Benjamin.

However, based on LXX (Codex Vaticanus) translations of these verses, Albright notices that rather than the *ʾaddār* of Heb, LXX^{B} has *erok* (16:5) or *orech* (18:13), which are both misspellings of *erek* (Heb *ʾerek*). Albright proposes that there was an obvious confusion of the Heb *ʾerek* (read *ʾarkî* in 16:2) with *ʾaddar,* since *dalet, reš,* and *kap* are nearly identical in Heb square script. By this reconstruction of a very confused text, all references to Ataroth-addar should actually refer to the same W-Jordan Ataroth of the Archite clan on Ephraim's NE border.

ATER (PERSON) [Heb *ʾāṭēr* (אָטֵר)]. 1. Head of a family of Babylonian exiles listed as returnees under the leadership of Zerubbabel and others (Ezra 2:16 = Neh 7:21 = 1 Esdr 5:15). The leader of the clan affixed the family name to the covenant document of Nehemiah in Neh 10:18—Eng10:17. Since Ater is a Babylonian name, the name Hezekiah (which follows it immediately in the Zerubbabel list and is introduced by *l-,* "namely,") is best understood as the older Heb name for the family (Ezra *IB,* 579). For further discussion see AKKUB.

Many do not regard the list and covenant of Nehemiah 10 as belonging originally in this context. Williamson (*Ezra, Nehemiah* WBC, 325–30) surveys various views about the origins of this list. He concludes that it was compiled from other lists in Ezra and Nehemiah in order to be attached to the terms of an agreement drawn up by Nehemiah following his reforms of Nehemiah 13. This document was then kept in the temple archives until it was inserted into its present position. (See also Clines 1984: 199–200; *Ezra-Nehemiah* AB, 174–75; Jepsen 1954: 87–106.)

2. Head of a family of gatekeepers who are also listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:42 = Neh 7:45 = 1 Esdr 5:28).

ATHACH (PLACE) [Heb *ʿătāk* (עֲתָךְ)]. A village in Judah to which David sent gifts after his defeat of the Amalekites (1 Sam 30:30). Most scholars see a connection between this Athach and the Ether in Josh 15:42 and 19:7. In Josh 15:42 some manuscripts of the LXX read *Ithak* and *Athak,* among other variants (see *NHT,* 227). The presence of a village called ASHAN or Bor-Ashan in each of the lists in Josh 15:42, 19:7 and 1 Sam 30:30 alongside Ether/Athach makes the equation of the two all the more tempting, though which spelling should receive priority remains an open question. The presence of Ether in the MT of 2 of the 3 lists tips the scales in its favor in the eyes of many (see McCarter *1 Samuel* AB, 434; for dissenting opinion to the above, see *ISBE* 1: 349). In either case, a location in the Shephelah is likely (cf. Josh 15:33–47, though some scholars dispute the presence of both Athach/Ether and Ashan at Josh 15:42—see the discussion at ASHAN; see *MBA,* 83) McCarter (*1 Samuel* AB, 434) places the site at modern Khirbet el-ʿAter, about 15 miles NW of Hebron.
JEFFRIES M. HAMILTON

ATHAIAH (PERSON) [Heb *ʾătāyâ* (אֲתָיָה)]. A Postexilic inhabitant of Jerusalem, the son of Uzziah, and a lay leader from Judah (Neh 11:4). Athaiah is described as the family head of the clan of Perez. He is identified by some scholars with Uthai (Heb *ʿwty*), who is also described as a member of the clan of Perez in a parallel list found in 1 Chronicles 9 (see v 4; Batten *Ezra and Nehemiah* ICC, 268; Brockington *Ezra, Nehemiah, Esther* NCBC, 188). However, the list in Chronicles is a considerably different recension, shaped for other purposes, or, perhaps, by other information (Myers *1 Chronicles* AB, 186). As a result, the description of subsequent generations is completely at odds with that found in Nehemiah (Schumacher *IDB* 1: 306).

FREDERICK W. SCHMIDT

ATHALIAH (PERSON) [Heb *ʿătalyāh (û)* (עֲתַלְיָהוּ)]. Var. GOTHOLIAH. In addition to the name of an infamous queen of Judah (see 3. below), "Athaliah" was also the name of 2 men listed in the Heb Bible. The meaning of the name Athaliah is controversial, since it cannot be traced to a Heb verb root. If derived from Akk, the meaning "Yahweh has manifested his glory" (*IPN,* 191) is conceivable. Assuming an Ar root, a meaning like "Yahweh is just" (Bauer 1930: 78) is possible. J. Gray (*1 and 2 Kings* [3d ed.] OTL, 536) also supports an Ar derivation: "In view of the names *ʿaṯal* and *ʿaṯalan* from the Northern Hejaz, we suggest rather an Arabic derivation *ʿaṯala* ('to be abundant, bulky'), the name referring, perhaps, to a robust child." Given the limits of our current knowledge, the problem cannot be solved. In any case, it is likely that this Heb name represents the oldest documented use of a female (see 3. below) having a name with the theophoric component "Yahweh."

1. The son of Jeroham, and the head of one of the prominent Benjaminite families dwelling in Jerusalem (1 Chr 8:26). The name is part of a longer list of Benjaminites that appears immediately before the note suggesting that the list represents census data taken at the time of the exile (1 Chr 9:1).

2. A descendant of Elam and father of Jesaiah (Ezra 8:7). The parallel list in 1 Esdr 8:33 renders his name Gotholiah (Gk *Gotholias*). His son Jeshaiah accompanied Ezra from Babylonia to the river Ahava, and from there back to Jerusalem.

3. Israelite princess who, through marriage into the Davidic dynasty, became queen mother of Judah and briefly ruled there herself (2 Kgs 8:18 [= 2 Chr 21:6], 26 [= 2 Chr 22:2–3]; 11:1–20 [= 2 Chr 22:10–23:21]; 2 Chr 24:7). The actual dates of her reign are disputed: 845–839 B.C. (Begrich 1929); 845–840 B.C. (Jepsen and Hanhart 1964); 841–835 B.C. (Thiele 1965); 842–837 B.C. (Andersen 1969).

a. Athaliah's Parentage. The exact parentage of Athaliah is as unclear as is the meaning of her name, although her descent from the family of Omri is certain. In 2 Kgs 8:26 (= 2 Chr 22:2) she is called a "daughter of Omri." On the other hand, in 2 Kgs 8:18 (= 2 Chr 21:6) she is called "daughter of Ahab," though without reference to her proper name. The Lucianic branch of the LXX tradition has eliminated the contradiction by also reading 2 Kgs 8:26 as "Ahab" in an obvious attempt at harmonization. Josephus, too, echoes that tradition by regularly calling her "daughter of Ahab" (*Ant* 8.15.3; 9.7.1).

The problem has provoked extended discussion. To smooth out the difference, "daughter" in 2 Kgs 8:26 was often taken as "granddaughter" (i.e., of Omri). But this is just as impossible as interpreting "daughter of Omri" as "belonging to Omri's family" in some broader sense. The OT speaks often of the "house of Ahab" but never of the "house of Omri." Thus, the "daughter of Omri" should be understood in its literal sense.

The better and more numerous arguments favor the likelihood that Athaliah was a daughter of Omri and therefore a sister of Ahab. It would be difficult to reconcile her chronological data with that of Ahab if Ahab had been her father. Furthermore, the value of the two text traditions is unequal: 2 Kgs 8:26 is derived from the Judean royal annals, whereas 8:18 is a later theological judgment of the Deuteronomist redactors; thus, the older and more reliable tradition indicates that Athaliah was a daughter of Omri. The designation "daughter of Ahab" (8:18) may finally be explained as of secondary origin. (The Syr Peshitta, incidentally, reads "sister of Ahab" in its rendering of the parallel passage, 2 Chr 21:6.) "Daughter of Ahab" apparently means "member of the house of Ahab," a phrase also occurring in the same verse. The

"house of Ahab" had already become a standard term for the Omridic dynasty. Thus, no textual error needs to be assumed in 2 Kgs 8:18. According to Begrich, the most likely meaning of the biblical phrase is "… for it is from the House of Ahab that his wife descended" (1935). It is possible that Athaliah was born shortly before Omri's death, grew up as an orphan at the court of Ahab, and could therefore be termed a "daughter of Ahab" (Katzenstein 1955). But even this speculation is unnecessary in view of the late origin of 2 Kgs 8:18. Therefore, Athaliah was the daughter of Omri and sister of Ahab.

b. Athaliah's Influence on Judah. In the course of the political alliances pursued by Omri and his son and successor Ahab, Athaliah was given in marriage to the Judean crown prince Jehoram. This political marriage, which took place during the reigns of Ahab of Israel and Jehoshaphat of Judah in the year 867 B.C. (*BHH* 1: 144), put an end to the latent hostilities and tensions which had prevailed between the two kingdoms since the death of Solomon. The price Israel paid apparently was the complete withdrawal from those territories of the tribe of Benjamin which Asa of Judah had occupied a few decades before (1 Kgs 15:16–22). On the other hand, Judah was in turn drawn into the political wake of its stronger neighbor to the N. Apparently, however, Judah resisted being lured into the battles on Syrian soil. There was no Judean contingent in the battle of Qarqar (853 B.C.) in which Ahab, together with Hadadezer of Damascus, Irḫulēni of Hamath, and other allied minor states, managed to halt the advance of the Assyrian king Shalmaneser III.

Athaliah's husband Jehoram, apparently regent for his father Jehoshaphat since 852, ruled only a short time: 847–845 (according to Jepsen). Ahaziah, Jehoram's son by Athaliah, then ascended the throne. As queen mother, Athaliah now held the exalted position of "sovereign" (Heb *gĕbîrâ*), which included an extraordinary ceremonial position, and probably also special influence on matters of state (Molin 1954; on Athaliah's role as queen mother, see Donner 1959 and Ihromi 1974). If, during his brief reign, Ahaziah joined Jehoram of Judah in the campaigns against the Arameans at Ramoth-Gilead (2 Kgs 8:28), we must assume that, already at that time, Athaliah wielded much of the power of government. Ahaziah had gone to be with the wounded Jehoram at Jezreel, was there swept up in the overthrow of the Omri dynasty, and was assassinated at Jehu's behest (2 Kgs 9:21–29). Another 42 members of David's royal family, who happened to be in the N kingdom at the time, were also murdered on Jehu's orders (10:12–14).

This monstrous carnage, and even more the slaughter of Omri's royal family (i.e., all of Athaliah's relatives) in Jezreel and Samaria, swiftly ended the alliance between Judah and Israel. The heavy bloodletting suffered by the house of David as a result of the Jehu revolution enabled Athaliah to seize absolute power in Jerusalem. Following the custom of the usurpers in the N kingdom to annihilate completely the overthrown dynasty (1 Kgs 15:29; 16:11; 2 Kgs 10:17), Athaliah had the surviving males of David's house murdered (2 Kgs 11:1 = 2 Chr 22:10). Thus, the "eternal dynasty" almost ended prematurely. Ahaziah's son Joash, however, escaped the massacre (2 Kgs 11:2–3 = 2 Chr 22:11–12).

Athaliah now ruled as absolute monarch for several years, a circumstance unprecedented in all the history of Israel and Judah until the time of the Hasmoneans. She apparently attempted to apply to Judah patterns of Omridic politics, as they had been practiced especially by Ahab in the N kingdom. Thus, it is historically probable that she erected a temple for Baal and granted certain rights to the cult of Baal in order to accommodate the traditionally Canaanite segment of the population. She found support for her rule in certain circles of the court and with the inhabitants of Jerusalem (some of whom possibly continued to be influenced by Jebusite traditions; 2 Kgs 11:20 = 2 Chr 23:21; *IDB* 1: 306). Opposition to her rule, which eventually brought about her downfall, came from the priests of the temple of Yahweh in Jerusalem, from some military circles, and from Judeans with full citizenship.

In the 7th year of her reign, Athaliah was deposed by a palace revolution (2 Kgs 11:4–20 = 2 Chr 23:1–21). The instigator of the conspiracy was Jehoiada the priest. He and the temple guards (these were "Levites," according to the Chronicler) proclaimed the youth Joash king within the temple precincts. Athaliah, who was apparently surprised by the events, had no opportunity for any counter-measures and was slain in the royal palace (2 Kgs 11:16, 20). The temple of Baal in Jerusalem was laid waste by the "people of the land," that is, by the citizenry of the province of Judah (11:18). The attempt to introduce into Judah a royal rule modeled after that of Omri came to a definitive end with Joash's accession to the

throne. (See Stade 1885; Rudolph 1950; Liverani 1974; and Levin SBS, 105 for discussions of the narrative about the overthrow of Athaliah in 2 Kings 11.)

The Deuteronomistic redactors of the books of Kings attributes the religious apostacy of Jehoram (2 Kgs 8:18) and Ahaziah (8:26–27) to Athaliah's influence over them. This accusation becomes much more explicit in the work of the Chronicler, which depicts her as responsible for Ahaziah's godlessness (2 Chr 22:3). Chronicles further denigrates the image of Athaliah by a remark that is not contained in the books of Kings, noting that Athaliah allegedly let the temple in Jerusalem go to ruin while favoring the cult of Baal (2 Chr 24:7). The Chronicler uses this (historically uncertain) allegation in order to explain renovations in the temple at the time of Joash (2 Kgs 12:4–16 = 2 Chr 24:4–16).

ATHARIM (PLACE) [Heb *hāʾătārîm* (הָאֲתָרִים)]. The name of the route the Israelites were following when they were attacked by the king of Arad (Num 21:1). The Heb word, preceded by the definite article, is obscure, and LXX^{A} reads "spies" (Heb *tārîm?*). Aharoni (*LBHG,* 40, 53, 273) identifies it with the road that S of Hebron branches SE to Arad, passes Aroer and Oboda, and proceeds to Kadesh-Barnea. Although there are no LB remains, during the monarchic period a chain of Israelite forts was built along this road (Herzog 1983: map p. 42; Cohen 1985), and it is reasonable to assume that it was a significant route in even earlier periods (Aharoni et al. 1960). See also RAMAT MATRED.

GARY A. HERION

ATHENOBIUS (PERSON) [Gk *Athēnobios* (Ἀθηνοβιος)]. A courtier of Antiochus VII Euergetes (Sidetes) (1 Macc 15:28, 32). As Antiochus VII sought to reestablish control over the lands of the Seleucid kingdom, he sent Athenobius, who had the rank of "friend of the king," as envoy to Simon the high priest. Through Athenobius, he demanded either the return of Joppa, Gazara, and the citadel in Jerusalem (all former Seleucid holdings) or 1,000 talents of silver as restitution and tribute. Athenobius interpreted Simon's assumed position and his response as defiance to the king. Simon continued the privileges bestowed on Jonathan by Alexander Balas (1 Macc 10:88, 89) and Antiochus VI (1 Macc 11:57, 58), but not reaffirmed by Antiochus VII, although he had previously led Simon to believe they would be continued (1 Macc 15:2–9). Simon's response that Jerusalem was part of Judea's original inheritance and that Joppa and Gazara were captured only as defensive measures was not acceptable to

Athenobius. Simon's counteroffer of 100 talents of silver as restitution further infuriated Athenobius. As a result of his negative report, Antiochus sent Cendebeus to invade Judea (1 Macc 15:35–16:10).
RUSSELL D. NELSON

ATHENS (PLACE) [Gk *Athēnai* (Ἀθηναι)]. ATHENIAN. The polis (city-state) of the Athenians which unified the peninsula of Attica at an early date, thereby creating a political entity geographically defined by sea and mountain with an area of approximately 1,000 square miles. The most prominent topographical feature of the city itself (37°59´N; 23°44´E), situated 3–5 miles inland from its harborage on the Sa-ronic Gulf to its W, was the Acropolis, a precipitous mass of rock around which the city spread out in roughly circular fashion. Lower than the Acropolis and a short distance to the NW is the Areopagus, or Mars' Hill, where in A.D. 51 St. Paul preached his sermon on the unknown god (Acts 17:16–34). The city wall, originally built in the early 5th century B.C. with a circumference of 5–6 miles, reached its greatest extent in the 2d century A.D., when the Roman emperor Hadrian added a segment in the shape of a polygon in the W. Only the vine, the fig, and the olive could thrive in the thin soil, rocky terrain, and generally dry climate of Attica, whose chief natural resources were rich supplies of clay and building stone and the mines at Laurium, which yielded a large quantity of silver into Roman times.

A. History

1. Mycenaean and Hellenic Ages. The story of Athens can be told only in broad outline prior to the commencement of her recorded history in the 7th century B.C. The Gk-speaking invaders who ca. 2100 B.C. began moving into the Balkan peninsula and imposing their control over the earlier inhabitants were attracted to the Acropolis. Athens was both a state of secondary importance in the Mycenaean Age (ca. 1600–1200 B.C.) and a center of relative stability during the Dark Ages (ca. 1200–750 B.C.) that followed.

By the early 7th century B.C., 2 gradual political processes were complete: the unification of Attica and the transformation of monarchy into aristocracy. But the Council of the Areopagus, the governing body of nobles named after the hill where it commonly met, proved unable to resolve the social and economic crisis that afflicted Athens (along with the rest of Greece) in the 7th century; and it was probably in 594 B.C. that the aristocrat Solon was appointed archon with power to reform the entire political, judicial, and economic fabric of the polis. He refused to make himself tyrant and instituted a set of extensive but moderate reforms that pointed Athens firmly in the direction of democratic evolution. They nevertheless failed to eliminate the extreme factionalism that was debilitating the body politic, and in 540 B.C. a nobleman named Pisistratus took advantage of the situation to institute a benevolent tyranny that was to last for 30 years. When Pisistratus' son and successor Hippias was deposed in 510 B.C., the old factionalism immediately flared up, only to be extinguished once and for all by another aristocratic lawgiver, Cleisthenes. In the waning years of the 6th century, Cleisthenes enacted a series of constitutional reforms that moved Athens still further in the direction of total democracy and converted sectionalism and aristocratic rivalry into patriotism and constitutionally regulated ambition.

A stern test awaited the new democracy. During the latter half of the 6th century, the Persians had conquered Ionia (i.e., the Greek city-states of coastal Asia Minor and the nearby islands), and mainland Greece soon lay within their designs. A first move was made in 490 B.C., when King Darius sent an expeditionary force to subdue Athens. Its commander encountered the Athenians on the plain of Marathon in NE Attica, and there the Persians suffered their first major defeat at the hands of Greek hoplites. Marathon, however, gave Athens only temporary respite from the threat of Persian domination, for in 480

B.C. Xerxes, Darius' son and heir, personally led a vast army, supported by an armada of comparable size, across the Hellespont and into Greece from the N; the Athenians, whose triremes constituted half the Greek navy, evacuated Athens and joined the allied fleet in the narrows between Attica and the island of Salamis, where the Persian armada was trapped and annihilated. The next year, the allied Greeks destroyed the army Xerxes left behind after his personal departure, and the Athenians turned to restoring their ravished city.

The half century that succeeded the Persian wars witnessed the evolution of Cleisthenic democracy into the radical democracy associated with the name of Pericles, the dominant figure in Athenian public life from the early 450s until his death in 429 B.C. It also witnessed another event of momentous consequence for the future of Greece: Athens succeeded in gradually transforming the Confederacy of Delos, organized on that island in 478 B.C. by the Athenians and the Aegean Greeks for the purpose of liberating the Ionians and driving the Persians out of the Aegean, into its own maritime empire. It was this empire, and the wealth and naval supremacy it entailed, that provoked the grand conflict between Athens and Sparta known as the Peloponnesian War (431–404 B.C.). In the course of this war, Athens' strategic advantages and military successes were mitigated by a plague that reduced her population by a third, by a failure to accept peace at the appropriate time, and above all by a disastrous attempt to conquer the island of Sicily; eventually, there were no more triremes and Athens was blockaded into surrender.

Athens had inflicted mass executions and enslavements on a number of Greek states that had defied its will; and many Athenians reasonably feared that they themselves would suffer similar punishment. But the terms of peace imposed by Sparta in the spring of 404 B.C., though harsh enough for an imperial city, were much more lenient: Athens was to relinquish its empire, limit its navy to a dozen warships, and demolish a goodly portion of its fortifications. Later that year, the democracy was overthrown and the oligarchical regime notorious as the Thirty Tyrants began its bloody career; in scarcely more than a year, however, the Thirty had been deposed and the democracy restored.

Athens quickly undertook to recover what it could of its lost prestige and power, and Athenian maritime fortunes prospered to the extent that in 377 B.C. Athens was able to form a Second Athenian Confederacy. But Athens' imperialist tendencies drove its allies into revolt, and by 348 B.C. the Confederacy had disintegrated. In the meantime, a new challenge to Athenian maritime supremacy had arisen: Philip II of Macedonia, who in the 350s and 340s B.C. methodically extended his hegemony over the N Aegean littoral and into Thessaly and central Greece. The Theban and Athenian hoplites who confronted him on the plain of Chaeronea in Boeotia (338 B.C.) were unequal to the task required of them, and on that day Athens, and the other city-states of Greece, ceased to be a determining factor in the political life of the ancient world. Philip, however, was uncommonly lenient in his treatment of Athens: he refrained from invading Attica, restored without ransom the 2,000 Athenians captured in the battle, and conveyed the Athenian dead to their city under royal escort. Once more, as in 404 B.C. and as would be the case again and again, Athens had been saved by its past, notably its service to Hellas when the Persians had invaded, and by the artistic and intellectual stature it had achieved.

2. Hellenistic Age. The Hellenistic Age was ushered in by the battle of Chaeronea and by the subsequent conquests of Alexander, Philip's son and successor. As it dawned, Athens made a futile attempt to recover its independence by revolting from Macedon in 323 B.C. (at the news of Alexander's death); the following year the Macedonian regent Antipater put down the revolt, replaced the Athenian democracy with an oligarchy, and stationed a Macedonian garrison in Piraeus, the port of Athens. By 272 B.C. the grand struggle for power among Alexander's successors had ended and in its course determined that the Hellenistic world would have 3 centers of power: the kingdoms of Antigonid Macedonia, Seleucid Asia, and Ptolemaic Egypt. For mainland Greece, the age ended in 168 B.C. when the Romans deposed the last of the Antigonids and divided Macedon into 4 separate republics. During the late 4th and 3d centuries, the Athenians had to accept the presence of foreign garrisons in Piraeus and even in the city itself; and the question of whether a citizen was pro-Macedonian or nationalist in his political sympathies gradually became more significant than that of his constitutional preference.

The oligarchy set up by Antipater yielded in 317 B.C. to the rule of the Aristotelian philosopher Demetrius of Phalerum, maintained in power by Antipater's son Cassander. In 307 B.C. Demetrius the Besieger took Athens from Cassander and reinstated democracy. Proclaimed as "savior-god" by the Athenians, he and his seraglio took up residence in the Parthenon. By 276 B.C., Athens had become a more-or-less-permanent dependent of Demetrius' son Antigonus Gonatas, the philosopher king who founded the Antigonid dynasty and treated Athens as the spiritual and philosophical capital of his Macedonian sphere of authority. This privileged position did not, however, prevent Chremonides and his fellow nationalists from once again raising Athens in revolt. Despite Athens' spirited failure in the Chremonidean War (267–262 B.C.), Antigonus was typically lenient when Athens surrendered. But the revolt had exhausted the Athenian yearning for the old freedom, and for the following century and a half, Athens would be content with its role and reputation as the cultural and intellectual center of Hellas. Its reward for acquiescence and political realism came in 228 B.C., 11 years after Antigonus' death, when the Macedonians for a price of 150 talents withdrew their troops from Attic soil.

3. Athens and Rome. Athens remained at peace with the Antigonids until Philip V invaded Attica a few months before the outbreak of the Second Macedonian War (200–197 B.C.), his disastrous conflict with Rome. Athens sided with Rome, endured Philip's repeated devastation of the Athenian countryside, and rejoiced with the other Greek states when the victorious Roman general Flamininus proclaimed their freedom at the Isthmian Games of 196 B.C. Athens was again allied with Rome when the latter defeated Philip's son and heir Perseus in the Third Macedonian War (171–168 B.C.) and then converted his kingdom into republics. On this occasion (166 B.C.), Athens was rewarded more tangibly for its loyalty to Rome, and was given possession of the island of Delos, now a free port. Athens nevertheless severed its friendship with Rome in 88 B.C., when the nationalists exerted themselves one last time and seized control of the government from the pro-Roman oligarchs. They immediately accepted an alliance with Mithridates of Pontus, who was already in the process of invading Greece and was now able to use Piraeus as his base of operations. The Roman general Sulla soon drove Mithridates out of Greece, but Athens was stubbornly defended by the nationalists and had to be taken by storm (86 B.C.). Given the ancient protocol for dealing with cities so captured, Sulla was benign in his treatment of Athens: his soldiers were allowed to loot and massacre for a while and the ringleaders of the uprising were executed, but no further punishment was exacted; with the oligarchs restored to power, the city was left in possession of its former liberty.

As Athens recovered from the devastation of the Mithridatic fiasco (the city's final attempt at political action independent of the Romans), it became more than ever a cultural center and university town, where the study of philosophy and rhetoric flourished. It became the place to which Roman senators and other wealthy foreigners sent their sons to study (and came themselves to visit and to patronize). Hellenistic kings had done so in the past and so, before long, would Roman emperors. Julius Caesar pardoned Athens for following Pompey in 49–48 B.C., as did Octavian and Antony for espousing the cause of the republican Brutus in 44–42 B.C. The favors with which Antony then courted Athens while he ruled the East came to an end only when Octavian, soon to be Augustus, defeated him at Actium in 31 B.C., ushering in the period of the Roman Empire. Although Octavian deprived Athens of the island of Aegina (which Antony had given to Athens) and imposed some economic restrictions, he did not otherwise penalize the city for supporting his rival; indeed, he even confirmed Athenian possession of Attica and 8 islands, including Salamis and Delos. Athens in fact was never incorporated into the Roman provincial system and enjoyed the privileged status of *civitas foederata,* which gave Athens judicial authority over its own citizens and exempted them from the obligation to pay taxes to Rome.

Athens lost some of its artistic treasures to Caligula and Nero, but the emperors of the 1st century otherwise treated the city with deference, and at the turn of the century (A.D. 98–117) Trajan attempted to rectify the city's fiscal disrepair, which had been initiated by Sulla's depradations and aggravated by the exactions imposed on Athens during the civil wars marking the end of the Roman republic (49–31 B.C.). But the completion of Trajan's task was left to his philhellenic successor Hadrian (A.D. 117–138), who, in the most-favored-city tradition of Antigonus Gonatas, became Athens' grandest patron ever. Hadrian

engaged in a monumental building program intended to render the city worthy to be the material and spiritual seat of his Union of the Panhellenes (created for the purpose of revitalizing Greek civilization). Imperial favors continued under Hadrian's successors Antoninus Pius (A.D. 138–161), who endowed a chair of rhetoric, and Marcus Aurelius (A.D. 161–180), who added 4 chairs of philosophy and thereby transformed Athens into a true university.

The deterioration of Athens had already set in before a band of Heruli and other Goths overran Attica and pillaged the city in A.D. 268, the final year of the reign of Gallienus, another Athenian. Athens nevertheless managed to reassert itself, and even to persist as the leading center of Hellenic rhetoric and philosophy during the 2 centuries extending from the conversion of Constantine in A.D. 312 to the reign of Justinian (A.D. 527–565), when paganism, at least as a publicly practiced religion and formally studied system of thought, was gradually (and for the most part benignly) eliminated from the Roman Empire. Athens indeed fared better than other cities at the hands of Christian emperors collecting the artistic treasures of old Greece: Constantine spared Athenian shrines when he assembled art works to adorn his new capital on the Bosporus, and though Theodosius (A.D. 408–450) confiscated famous statues throughout Greece, he did not remove the chryselephantine Athena from the Parthenon. The Visigoth Alaric left the city of Athens unharmed, but the mysteries of Demeter and Core were never revived after he sacked Eleusis in A.D. 397, and at some point, perhaps not until the 6th century, the Parthenon became the Church of the Virgin Mother of God. In A.D. 529 Justinian, as part of his determined effort to eradicate the remaining traces of paganism from the empire, closed the philosophical schools of Greece and thereby officially terminated the intellectual history of classical Athens.

B. Literature and Philosophy

The extant literature of Athens begins at the turn of the 7th–6th century B.C. with the fragmentary poetry of the lawgiver Solon, in which he set forth his moral and political views. After a hiatus of a hundred years, poetic literature resumed under the aegis of the state with the dramas produced in competition at the public festivals honoring the god Dionysus. The overlapping dramatic careers of the great tragic poets (first Aeschylus and then Sophocles and Euripides) span almost exactly the 5th century: of their surviving plays (which with one exception draw their plots from Greek myth and legend), 7 each were written by Aeschylus and Sophocles and 18 (possibly 19) were written by Euripides. The sole extant representative of the Old Comedy, with its fantastic plots and contemporary references, is Aristophanes; 11 of his plays have come down to us, the first produced in 425 B.C. and the last in 388. We also possess one complete play and substantial portions of several others by Menander (died ca. 290 B.C.), the leading poet of the New Comedy—a theater of manners offering its audiences stylized plots and characters derived from daily life.

The city's extant prose, far greater in quantity than its poetry, may be described under the headings of rhetoric, history, and philosophy. Rhetoric was fostered by democracy with its attendant litigation and public discussion, and a large number of speeches on a comprehensive variety of topics has been preserved from a period extending from about the middle of the 5th to the last quarter of the 4th century B.C. Of the Alexandrian canon of ten orators, two perhaps are most worthy of mention. The first is Isocrates (436–338 B.C.), a failed public speaker but influential stylist, who opened a school of rhetoric and in a series of closet orations and open letters published his views on education, ethics, and political matters. The second is Philip II's antagonist Demosthenes (384–322 B.C.), who attacked the Macedonian king in his *Philippics* and other speeches and defended his own political career in his oration *On the Crown.* We possess a substantial historical literature by two Athenians: Thucydides (ca. 460–ca. 400 B.C.), banished for dereliction of duty as a general during the Peloponnesian War, whose monumental but unfinished account of that conflict comes to an end in 411 B.C.; and Thucydides' continuator Xenophon (ca. 428–ca. 354 B.C.), a prolific writer on a variety of historical and quasi-historical subjects whose *Hellenica* records the history of Greece from 411 to 362 B.C.

Athenian philosophy begins with Socrates, put to death in 399 B.C. after being convicted of impiety. Although he wrote nothing, the example of his moral convictions, personal courage, and dialectic methodology inspired and informed the thought of Plato (427–348 B.C.), who was as great a writer as he

was philosopher, and who made Socrates the central character and spokesman of his own thought in all but a few of his (later) dialogues. After Plato, Athens produced only a single resident philosopher of permanent significance, Epicurus (341–270 B.C.), who in fact had been born and raised on the island of Samos off the coast of Asia Minor.

The Attic dialect as written by Plato and the orators would long continue to provide the dictional standard of rhetoric and learned discourse in Greece, and by the 4th century B.C. this dialect was spreading widely abroad as the Koine, in which the LXX and the NT would be composed. But by the early 3d century B.C. the literary and philosophic creativity of Athens had been spent. Even so, the influence of Plato and the Academy he founded about 385 B.C., which enjoyed a continuous existence until Justinian's edict in A.D. 529, functioned as a kind of philosophical lodestone, and the intellectual vigor and prominence of Athens was maintained by a constant and abundant influx of immigrant philosophers. The first of these was the greatest: Aristotle of Stagira (384–322 B.C.), who came to Athens at the age of 17 to study under Plato and returned in 335 B.C. to establish his own school at the Lyceum, that of the Peripatetics. Aristotle's successor as head of the school, Theophrastus (died ca. 287 B.C.), best-known in more modern times for his *Characters* (30 sketches of ridiculous character types), came from the island of Lesbos. Another such immigrant was Zeno (335–263 B.C.), who came from the island of Cyprus and was probably not even a Greek; he founded the Stoic school of philosophy and became the admired friend of Antigonus Gonatas.

The permanently altered circumstances of Athens' intellectual and political life, as well as the cosmopolitanism that characterized Hellenistic and Roman Greece, are symbolized by the composition of a political delegation the Athenians sent to Rome in 155 B.C.: its members were the heads of the Academy (Carneades of Cyrene), the Lyceum (Critolaus from Lycia), and the Stoa (Diogenes of Babylon). Foreigners continued to dominate the study of philosophy at Athens until the very end; for example, Proclus (5th century A.D.), a leading representative of the final flowering of Greek philosophy known as Neoplatonism (mid-3d to mid-6th century A.D.), was born in Lycia, even though he spent much of his life at Athens and served as head of the academy.

The study of rhetoric, that other pillar of Athens' intellectual life, was also sustained by immigrants after the 4th century B.C. But perhaps the most illustrious of this discipline's later Athenian masters was a native, the fabulously wealthy Herodes Atticus, consul at Rome in A.D. 143, one of Marcus Aurelius' teachers, and probably his city's most munificent private benefactor.

C. Antiquities

This survey of the material remains of classical Athens will take the perspective of St. Paul (who visited the city in A.D. 51), and will make reference chiefly to those monuments whose state of preservation (or modern restoration) renders them easily identifiable even today (see Fig. ATH.01). Construction dates will be given in parentheses.

If, as is virtually certain, Paul traveled by ship from Berea in Macedonia to Athens (Acts 17:10–15), the Doric-style temple of Poseidon (ca. 444 B.C.) would have come into view on the edge of the cliff as his vessel rounded Cape Sunium at the tip of Attica on its way to the port of Piraeus. After disembarking at Piraeus, Paul would have approached the city passing through the outer Ceramicus, the burial grounds (just outside the W walls) whose streets were lined with graves and cenotaphs surmounted with stone stelae, often adorned with relief sculpture (many still *in situ*). Paul would have entered the city from the NW, through either the Dipylon Gate or the adjacent Sacred Gate. The road from either would have taken him into the Athenian agora where he could have talked with passersby and engaged in discourse with Stoic and Epicurean philosophers (Acts 17:16–18). On a knoll at its W edge stood the Hephaesteum (449–444 B.C.), a Doric temple dedicated to Hephaestus and Athena with metope sculpture depicting the exploits of Heracles and Theseus. Directly across from the Hephaesteum and running along the E side of the agora was the two-tiered Stoa of Attalus (a gift of Attalus II, king of Pergamum in Asia Minor from 159 to 138 B.C.), fully restored in 1953–56 to serve as a museum for the artifacts from the agora excavations conducted by the American School of Classical Studies at Athens.

Strolling eastward from the S end of the Stoa of Attalus, Paul would have soon reached the gate of Athena Archegetis (erected by Augustus ca. 10 B.C.), the Doric-style propylon that served as the W (and main) entrance to the Roman agora. Had he continued through the agora and exited by its E propylon, he would have observed before him and slightly to his left the Horologion or "Tower of the Winds" (built by the astronomer Andronicus of Cyrrhus shortly after 50 B.C.), a low, octagonal marble tower that functioned as a combination sundial, water clock, and weather vane.

When Paul stood on the Areopagus (Acts 17:19–22), he would have had an excellent view of the Acropolis, about 140 ft. higher and a short distance to the SE, and of the four buildings that were constructed there in the 5th century B.C. These four buildings (see Fig. ATH.02), all in Pentelic marble, sum up the achievement of democratic Athens in the fields of architecture and sculpture. An entrance ramp ascended the Acropolis by its narrow W slope and terminated at the Propylaea (437–432 B.C.), its monumental gateway incorporating an interior Ionic colonnade into a fundamentally Doric design. Atop the bastion that juts out W from the S wing of the Propylaea stood the temple of Athena Nike (427–424 B.C.), a small, graceful Ionic structure screened from the 3 edges of the bastion by a marble parapet with a frieze of Victories and seated Athenas sculpted around its outer face (ca. 410 B.C.). Surmounting the Acropolis as its largest building and rising above all other structures was the Parthenon (447–438 B.C.), a Doric-style temple dedicated to Athena Polias whose proportions and optical refinements bring to its natural Doric sturdiness the gracefulness one associates with the Ionic order; its Doric frieze of triglyphs and sculpted metopes and the statuary of its two pediments were complemented with a continuous Ionic frieze depicting the Panathenaic procession. Near the N rim on the Acropolis, at about its midpoint, Paul would have seen an Ionic temple of unique design, the Erechtheum (421–405 B.C.), where both Athena and Poseidon were worshiped; constructed on two levels, it has a lower N porch looking out toward the Roman agora; on its S (Parthenon) side at the higher level is the small, exquisite porch of the Caryatids, columns sculpted in the form of maidens.

Cut into the steeply rising SE slope of the Acropolis was the theater of Dionysus. Built mostly of wood during the golden era of Athenian drama, it was finally reconstructed with stone in the latter half of the 4th century B.C. and continued to receive modifications throughout antiquity. The space between the upmost level of seats and the Acropolis wall was lined with monuments erected by victorious *choregi*, the wealthy sponsors of the choral and dramatic competitions, to support the tripods they had been awarded as their emblem of victory. The Street of the Tripods, a short distance E of the Acropolis, was similarly lined. There the monument of Lysicrates (334 B.C.) is still *in situ*; it is a splendid structure of fine marble with 6 Corinthian columns describing its cylindrical form, and is the only choregic monument to have survived almost completely intact.

Had Paul journeyed SE as far as the city wall, one monument above all others would have impressed itself on his vision; the unfinished Temple of Olympian Zeus, 16 of whose grand columns remain *in situ* (all but one still standing). Begun in the 6th century by the tyrant Pisistratus as a Doric temple in poros, it was brought to half-completion in 174–165 B.C. as a Corinthianstyle marble temple by Antiochus Epiphanes, king of Syria. Beyond the city gates in the SE and on the far bank of the Ilissus lay the stadium; built ca. 330 B.C. for the Panathenaic games and frequently modified and put to other uses in subsequent antiquity. It was fully reconstructed at the turn of the last century and in 1896 was the inaugural site of the modern Olympic Games.

The task of completing the Temple of Olympian Zeus fell to the emperor Hadrian (A.D. 117–38), who also adorned Athens with such additional monuments as the arch and the library which both bear his name. The former, located immediately N of the Temple, is a double-tiered edifice done in the Corinthian manner that functioned as a dividing gateway between old Athens and Hadrian's New Athens. The latter was built just across a major thoroughfare from the N side of the Roman agora; a variety of marbles were prominently displayed in its construction.

Finally, two other post-Pauline monuments require notice, each associated with an illustrious citizen and great private benefactor of Athens. The first is the monument of Philopappus (A.D. 114–16), the remains of which still rise 40 feet above the summit of the Hill of the Muses at what had been the SW

corner of the ancient city (before Hadrian's extension of the city walls in the W). Adorned with an elaborate arrangement of columns and statuary, it was erected by the Athenians as a burial vault for Antiochus Philopappus, an exiled prince of Commagene who settled in Athens and became a Roman consul. The second is the Roman-style theater located just off the SW corner of the Acropolis and donated by Herodes Atticus in honor of his wife (d. A.D. 160). It is the last of the grand monuments of Athens still represented by substantial remains, and in recent years it has been restored to regular usage for musical and dramatic performances.

ATHLAI (PERSON) [Heb *ʿatlāy* (עַתְלָי)]. A descendant of Bebai and one of the returned exiles who was required to divorce his foreign wife (Ezra 10:28). Athlai is a shortened form of Athaliah—"Yahweh has revealed his loftiness" (*IPN*, 191). In the parallel text of 1 Esdr 9:29, the name Emathis appears in the position Athlai holds in Ezra 10:28. Athlai was a member of a family from which groups of exiles returned with Zerubbabel (Ezra 2:11; Neh 7:16) and later with Ezra (Ezra 8:11). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

ATONEMENT IN THE NT. In discussions about the NT, "the Atonement" is generally understood to refer to the work of Jesus in putting right the human situation in relation to God. Throughout the course of Christian history this has been associated above all with the death of Jesus. Such a view can claim considerable support from the NT (cf. 1 Cor 15:3; Col 1:22; 1 Pet 2:24). However, it should also be noted that the saving work of Christ is just as often associated with the resurrection (cf. 1 Cor 15:17; 1 Pet 1:3; see especially Hooker 1978 in relation to Paul). One should therefore be wary of restricting NT views about the atoning work of Christ to discussions of the meaning of Jesus' death alone.

———

A. Introduction

One notable feature of NT ideas about the atonement is their variety. Not only are differences found between NT writers but even the same writer can use what appears at times to be a bewildering variety of models and images to describe how the life, death, and resurrection of Jesus have changed the human situation. Sometimes too a writer can combine different images within a single sentence (cf. John 1:29 discussed below). Further, the NT is "more concerned with the nature of salvation than the precise way in which it has been achieved" (Marshall 1974: 169). Thus it would probably be wrong to press any one image too far and claim that this represents the central NT view.

The variety of different descriptions of the atonement is due in part to the variety of ways in which the human situation itself is described. Very different models and categories are used to describe the "lost" condition of the human race prior to Christ, and the corresponding change brought about by the Christ event. Different descriptions of the human situation inevitably lead to different explanations of how this has been altered by the work of Christ. Thus if the human condition is described in terms of (individual) sins, the atonement can be naturally conceived as a sacrifice which deals with sins. If the human situation is described in terms of being under hostile powers, the atonement can be described as a rescue from, or a victory over, those powers. If the human situation is seen as one of ignorance, the atonement can be seen as enlightenment or revelation. Subsequent Christian theology has often fastened on to some of these models of atonement and absolutized one (or more) of them. However, such a restricted view is never that of the NT writers.

We consider in turn some of the various categories used to describe the atoning work of Jesus in the NT.

B. Sacrifice

The claim that Jesus' death on the cross should be seen as a sacrifice has exerted enormous influence on subsequent Christian theology and piety. It is quite clear that such language has deep roots in the NT itself. It is probably reflected in references to Jesus' death as "blood" (e.g., Rom 5:9; cf. Dunn 1974: 133) and in many of the references to Jesus' death being "for many/our sins/us/others" (cf. Mark 14:24; 1 Cor 15:3). Further, it is clear that this kind of language can be traced to a very early period within primitive Christianity, being reflected in the synoptic tradition (Mark 14:24), in Hebrews (cf. 2:9; 7:27), in what are probably pre-Pauline formulations (Rom 3:25f.; 1 Cor 15:3), as well as in the Johannine tradition (cf. John 1:29; 11:50). Moreover, such language is frequently related to an analysis of the human situation in terms of sinfulness: Jesus' sacrificial death enables the sins of the world to be forgiven. Indeed for many contemporary Christians, such an idea is regarded as *the* model of the atonement.

The use of such ideas applied to Jesus' death is not surprising, given the widespread use of sacrifice in the ancient world. However, the precise background of the application of such ideas to the death of Jesus is much debated. Despite the existence of the sacrificial cult in Judaism, it is recognized that the use of sacrificial language to apply to the death of a *person* is rather harder to parallel in pre-Christian Jewish tradition. The idea of people "dying for *(hyper)*" others can be paralleled extensively in non-Jewish Greek thought (see Williams 1975; Hengel 1981: 1–32). Such an idea is less easy to find in Judaism. It appears to surface in the text of 4 Maccabees, which may be extensively influenced by Hellenistic thought (see Williams); it is also present in the famous Suffering Servant passage of Isa 52:13–53:12, and also in later rabbinic traditions about the atoning value of the death of the righteous (though it is not certain how far these ideas would have been current prior to 70 C.E.; see Williams 1975: 121–35).

One must however be wary of making sacrificial language too monochrome. The sacrificial cult within Judaism and elsewhere was very varied and included provision for many different kinds of sacrifice (see Young 1979: 35–70). Some (but *not* all) sacrifices were to do with sins. In the Jewish cult these were the "sin-offerings." But there were also thank-offerings, offered by the worshipper to God in grateful thanks, but with no explicit idea of atoning for sins. Judaism knew of other kinds of sacrifice as well: there was the Passover sacrifice, commemorating God's great act of liberation of Israel at the Exodus; there was also the sacrifice which accompanied the ritual of the making of the covenant. Neither of these had anything to do with sin directly. Thus one should not necessarily subsume every reference to Jesus' death as a sacrifice under the category of a sin-offering.

The rationale of the Jewish sacrificial system has been much discussed, though with no very conclusive results. Judaism provided no explicit rationale for sacrifice: it was simply the God-given way of dealing with sin, and as such was to be accepted gratefully and humbly. Much discussion has also taken place over whether Jewish sacrifice, and/or Christian interpretations of Jesus' death as a sacrifice, should be regarded as "propitiatory" (i.e., averting the anger of a personal deity) or "expiatory" (i.e., nullifying the effects of sin). The idea of appeasing an angry god by sacrifice is certainly present in some non-Jewish ideas of sacrifice. Much hinges on the translation of the word *hilaskesthai* (and cognates) in the NT, and the equivalent OT words (usually *kpr*). In non-Jewish Gk, the word clearly carries ideas of propitiation. However, in a classic essay Dodd (1935: 82–95) argued that Jewish and Christian usage differs from that decisively. Here, almost uniformly, the words are used in such a way that God (or His representative) is always the subject, not the object of the action in question; the object is always sin or its effects. This then demands an interpretation of expiation, not propitiation, since God can scarcely be said to propitiate himself in any very meaningful sense. Dodd's arguments have convinced many that the NT does not think of Jesus' death as appeasing God's anger; rather, God, through Jesus, deals with and nullifies sin and its effects. (Cf. Young 1975: 72 and many others; for the contrary view, see Morris 1955: 125–85; Hill 1967: 23–48.)

The precise way in which an expiatory sacrifice was thought to "work" is never clarified. It has been maintained by some that an element of substitution was always understood and that the sacrificial victim was thought of as enduring the (divine) punishment for the sin committed, thus enabling the sinner to go free. Such a model has of course exerted considerable influence on popular Christian piety as an interpretation of Jesus' atoning death.

This probably reads too much into the rationale of the sacrificial system. It is in fact very unlikely that the sacrificial victim was ever thought of as a substitute in this way. Such a rationale *might* lie behind the ceremony of the Day of Atonement, when the priest laid hands on one of the goats, thereby transferring the sins to the goat (Lev 16:21). However, this goat was not sacrificed: the goat on whom the sins were "laid" was the scapegoat which was driven away into the desert, and it was the other goat which was offered in sacrifice. In fact it was considered vitally important that the sacrificial victim should be *pure* (see Young 1979: 52). Thus it is unlikely that the sacrificial system was ever conceived of in such a substitutionary sense.

Substitutionary ideas have been thought to lie behind much of Paul's language, though many would argue that "representation" rather than "substitution" does far more justice to Paul's thought. (See Hooker [1971 and 1978]. Dunn [1974] argues that this is inherent in the rationale of sacrifice itself, though this probably reads too much into the texts.) Jesus' death is seen as the point at which Jesus joins humanity at its point of final annihilation and lostness; however, through the resurrection, Jesus overcomes death and becomes the source of new life for all who are "in" him. Such a model is well summed up by Irenaeus' summary statement "he became what we are so that we might become what he is." Jesus' life, death, and resurrection are thus "vicarious" in the sense of achieving something for others by taking their place; but it is not "substitutionary" in the sense that Jesus takes the place of human sinners whilst they go free (or elsewhere): human beings are summoned to *join* Jesus.

The importance of other sacrificial language in Paul is debated. Certainly Paul uses a variety of metaphors. Jesus' death can be seen variously as a new Passover sacrifice (1 Cor 5:7), a new covenant sacrifice (1 Cor 11:25), perhaps as a sin-offering (Rom 8:3, though the precise interpretation is disputed), perhaps as the sin-offering of the Day of Atonement (cf. *hilastērion* in Rom 3:25: again the precise reference is disputed, but see Stuhlmacher 1986: 94–109). Some have argued that all such language is pre-Pauline, and that Paul's "real" thought is to be located elsewhere (cf. *BTNT,* 295–306; Käsemann 1971: 39–46). Certainly the importance of the solidarity of Jesus and the Christian is of vital importance for Paul (so Bultmann, cf. also the previous paragraph, though whether such an idea is due to the adoption of Gnostic categories [so Bultmann also] is more debatable). Also the importance of the cross as showing the radical lostness of human beings who cannot save themselves (so Käsemann) is fundamental for Paul (cf. Romans 1–3). Nevertheless one should perhaps be wary of dismissing sacrificial categories as of no

concern to Paul simply because they are taken over from tradition. Paul's use of his tradition presumably implies a measure of agreement with it, and one should perhaps accept a rich variety in Paul's interpretation of the atonement.

Sacrificial language dominates in the exposition of the author of Hebrews. In particular, the writer sees Jesus' death in terms of the great sacrifice of the Jewish Day of Atonement. (See especially Hebrews 9–10.) Here, in a highly suggestive use of imagery, the author sees the Jewish rite fulfilled in Jesus' death whereby Jesus is both the priest and the sacrificial victim so that he offers himself. It is perhaps worth noting, however, that the author does not use this language simply to explain the atonement. Rather, he uses it primarily to show that the whole of the old Jewish sacrificial cult has now been superseded. This then forms a crucial part of the writer's exhortation to his readers not to lapse back into Judaism. The writer never gives any rationale of the sacrificial system: he simply assumes without question that "without the shedding of blood there is no forgiveness" (Heb 9:22; cf. Taylor 1945: 125). As far as the author is concerned, the only question is whether "blood" still needs to be sacrificed or not. Alongside this idea, the writer of Hebrews also develops the idea that Jesus' death inaugurates the new covenant, and hence Jesus' death is to be seen as a covenant sacrifice (cf. Heb 7:22; 8:6; 9:15; and see Young 1979: 149). Again, however, the main point of the discussion is to show that the old covenant has now become outmoded. Thus the whole argument of Hebrews, which is so clearly indebted to sacrificial categories, ends up by being almost anti-sacrificial in its insistence on the finality of Christ's saving work.

Sacrificial language is also to be found in John, though the highly allusive way in which John writes sometimes makes it difficult to determine his precise meaning. However, it is probable that the words of John the Baptist in John 1:29 ("Behold the Lamb of God") refer to Jesus as the Paschal lamb. This would tie in with the fact that Jesus' death in John coincides with the slaughtering of the Paschal lambs (cf. John 19:14); further, the fact that none of Jesus' bones is broken "fulfills" scripture, and the scripture in question is probably the instruction about the way in which the Passover lambs are to be killed (John 19:36 cf. Exod 12:46). However, the further words of John the Baptist ("… who takes away the sin of the world") may be introducing quite different sacrificial ideas, since the Passover sacrifice was generally not thought of as expiatory.

The extent to which sacrificial ideas can be traced back to Jesus himself is debated. Many have claimed that Jesus did foresee, and interpret, his own death in terms of a sacrifice for sin, with reference to the prophecy of Deutero-Isaiah about the Suffering Servant. Prime evidence for this would be the two synoptic sayings in Mark 10:45; 14:24. (See, with varying nuances, Taylor 1937; Jeremias 1966: 225–31; Hengel 1981: 65–75; Stuhlmacher 1986: 16–29.) However, the theory that Isaiah 53 was fundamental for Jesus is radically questioned today (see Hooker 1959). The language of Mark 14:24 is more closely connected with the idea of the (new) covenant than with that of expiatory sacrifice. The thought may be as much to do with the establishment of a new (covenant) community as with the forgiveness of sins by a sacrifice. The language of Mark 10:45 is also difficult to relate directly to Isaiah 53. The "ransom" (*lytron*) of Mark 10:45 is not really the equivalent of the Servant's death seen as an *ʾašam* (sin-offering) since the two ideas are quite different (see Barrett 1959; Hooker 1959: 74–79). In any case it is not certain how justified it is to trace these sayings back to the pre-Easter Jesus, and, for example, many would regard the ransom saying in Mark 10:45b as a post-Easter gloss on what may well have been a dominical saying about the importance of serving in Mark 10:45a (cf. Luke 22:27). (Cf. Lohse 1963: 117–22; Williams 1975: 211–12.) However, the category of "ransom" (*lytron*) in Mark 10:45 leads on to the next major category discussed here.

C. Redemption

The language of "redemption" (*apolytrōsis*) would have had a rich background for any 1st-century audience. Slaves could be "redeemed" by paying a suitable ransom price; so too could prisoners of war. The association of this language with freeing slaves made it natural for Jews to use the vocabulary of redemption to refer above all to the great act of liberation by God in rescuing the Israelites from slavery in Egypt (cf. Deut 7:8 and elsewhere). Although the redemption of slaves or prisoners in the secular realm always involved the payment of a ransom price (*lytron*), it is very doubtful if Jews ever thought in such

concrete terms in speaking of God's action at the Exodus as a redemption. Rather, God's "redeeming" of Israel simply referred to His rescue, with no idea of a price being paid. (See Hill 1967: 49–81 contra Morris 1955: 9–59.)

NT writers used this language freely, bringing out different aspects of the imagery evoked. Thus texts such as Luke 24:21 simply refer to God's hoped-for intervention in the future in bringing liberation. The same is probably true in Rom 8:23.

Whether NT writers ever conceived of Jesus' death as a "ransom price," a price that had to be paid to secure the release of humanity, is more uncertain. This idea became extremely popular in patristic thought with great discussions about whom the price was paid to (God? or the Devil?) and the nature of the transaction involved. It is however difficult to find such ideas in the NT itself (though see Marshall 1974 for a different view). Texts like Eph 1:7 ("redemption through his blood") and 1 Pet 1:18–19 ("you were redeemed … with the precious blood of Christ") can scarcely be made to support the theory of Jesus' death as a ransom price paid, since both texts do not use the Gk construction of a genitive of price. Both are using the language of redemption more generally to claim that the liberation which the Christian can now enjoy has been achieved by means of Jesus' death, without spelling out the means more precisely (see Hill 1967: 70–74).

The related language of Paul, "you were bought with a price" (1 Cor 6:20; 7:23), should also probably not be pressed too far. Paul is simply using the language of the slave market to stress the fact that Christians have now changed their allegiance: they are no longer under their old master (sin or whatever); they are now under a new master in God. The precise nature of the price is not discussed. Similarly Paul's language of Jesus "redeeming" those under the curse of the Law by becoming a curse for us (Gal 3:13; 4:5) can only with difficulty support the view that Jesus' death is being interpreted as a ransom price paid in a substitutionary sense. Far more important for Paul here seems to be the representative nature of Jesus' death (see Hooker 1971). Jesus' becoming a curse for humanity involves his joining humanity; his life of obedience to death, and his vindication by God in the resurrection, annuls the curse of the Law and enables the new life of freedom to be available to all who are "in" him (cf. Gal 3:14). Again, the language of "redeeming" is probably being used in general terms to indicate the liberation (here from the Law) achieved by Jesus, but without pressing the analogy of secular redemption any further to think in terms of specific ransom prices.

The nearest one gets to an idea of a price being paid is in Mark 10:45, where Jesus' death is said to be a *lytron anti pollon,* "a ransom for many." The use of *anti* ("in place of," "for"), if pressed, does suggest ideas of substitution and equivalence, and the ransom idea in *lytron* could be said to reinforce this. However, one should not read too much into this. There is for example no talk of "sin" here and one should not necessarily interpret the verse as implying a view of Jesus' death as an expiatory sacrifice for sin with a substitutionary idea of sacrifice implied. This probably confuses categories unnecessarily. There is a close parallel to the ideas concerned in *4 Macc* 17:22 (see Williams). However, it is as likely that the *lytron* vocabulary is intended to evoke the language of the great act of redemption in the OT whereby Yahweh redeemed the Israelites from Egypt and established them as the chosen nation. The communal, even covenantal, overtones of the language may be just as important as any ideas of precise equivalents in ransom prices paid (see Hooker 1959: 77–78).

D. Victory over Evil Powers

The language of redemption, when used against an OT background, can very easily slide into a rather different model to describe the atonement: that of victory. Yahweh's action on behalf of Israel constituted not only a setting free of the nation, but also a victory over the forces of Pharaoh. This idea of victory is certainly applied to the death of Jesus in the NT. The language assumes a somewhat dualistic view of the universe, with other spiritual powers holding sway over the human race. Jesus' death is then seen as a victory over these powers. Aulen (1931) has shown how influential this view of the atonement was in patristic thought and how it has dropped out of later theological reflection. The *locus classicus* for this view is Col 2:14–15 and it is implied in many other NT passages. Paul sometimes speaks of various other spiritual powers being now subject to Christ (1 Cor 15:24–25; Phil 2:10; Rom 8:35–38); indeed much of

Paul's language about the overthrow of the power of sin could be classified in this category, since frequently Paul appears to conceive of sin as a malignant power (cf. Rom 7:7–11) rather than a series of human wrongdoings (cf. also Käsemann 1971: 44).

Elsewhere in the NT, the powers opposed to God are conceived as concentrated in a single Devil figure and Jesus' death is interpreted as the final overthrow of Satan (Heb 2:14; John 12:31; 1 John 3:8; Rev 12:7–12). As with the other categories considered, the precise details of the image are never worked out. It is never stated just how the Devil and/or other powers are defeated by Jesus' life, death, and resurrection. Col 2:14–15 uses the striking imagery of a military victory parade with the disarmed powers actually nailed to the cross. The Johannine tradition appears to be based on a forensic model: Satan's overthrow is his final condemnation in, and eviction from, the divine law court (cf. John 16:11; Revelation 12). All the NT talk of the resurrection as the victory over the powers of death and enabling the Christian to share the consequences of that victory (cf. 1 Cor 15:57) may also be included in this category.

E. Reconciliation

All the categories discussed so far could be considered slightly "impersonal" (God dealing with sin, or achieving victory over other powers, almost *extra nos*, "apart from us"). It is worth recalling that the NT can refer to the work of Christ in a much more personal way, with the language of reconciliation. This language is not common in the NT, being confined to the Pauline tradition. Where sacrificial language conceives of the human situation in terms of sinfulness, reconciliation language thinks in terms of personal relationships, severed and restored. It is also striking that Paul is evidently not bound by any one language of atonement in that he can describe the effects of Jesus' death in heavily cultic and forensic language in Rom 5:8–9, only to follow with a parallel statement in Rom 5:10 using the quite different categories of personal relationships, an initial state of "enmity" being ended by God's act of "reconciliation." This language is developed further in the deutero-Pauline tradition where Col 1:20 speaks of the reconciliation of the whole universe through the cross, and Eph 2:14–16 speaks of the reconciliation of the Jewish and Gentile nations.

F. Revelation

Mention must finally be made of the view that Christ's work is primarily revelatory, both of God and of humanity. This is most characteristic of the 4th gospel. While other models of the atonement relate to human need described in terms of sin, guilt, slavery, or enmity, this model can be thought of in terms of humanity as ignorant or in (mental) darkness. Thus the dominant theme is of Jesus as the one who brings light and knowledge and who reveals the true nature of God. The thought of John is heavily influenced by this idea. The coming of Jesus reveals the glory of God (John 1:14) and Jesus as the only begotten Son is uniquely in a position to be able to "explain" or "make known" God (1:18). Jesus comes as the Light of the world, not to judge the world, for the light simply shows up human beings for what they are (cf. 3:16–21). Similarly the Johannine Jesus can speak of "knowing" as the all-important thing for the disciples (17:3). Much of Jesus' talk about the cross in John is in this vein. The crucifixion is the great "hour" which stands over the whole of the ministry of Jesus. It is the moment when the Son of Man will be lifted up, both physically on a cross, and in glory, so that the cross is the moment at which the full glory of God is revealed (17:1). The cross is thus supremely the moment of revelation.

Such a scheme is characteristically Johannine, but it has close affinities with Mark's presentation as well. In Mark the cross is the moment at which Jesus' true identity is finally and definitively revealed to human beings as that of God's Son (Mark 15:39).

Much of this language in John has affinities with Gnostic thought, although it must be said that John is no Gnostic. *Gnosis* ("knowledge") does not occur in John (perhaps deliberately); and the "knowing" which constitutes eternal life (cf. 17:3) is not the knowing about one's origins, etc., which is so characteristic of Gnostic thought. John's "knowing" is much closer to the biblical idea of "knowledge" as signifying close personal relationships (cf. Hos 6:3; 13:5). Still the idea of Jesus' work as above all revealing the full character of God is an important aspect of NT beliefs about what the life, death, and resurrection of Jesus have achieved.

G. Conclusion

NT views about the atoning work of Christ are many and varied. NT writers use a wide variety of models and images to express their beliefs. Perhaps the very variety itself is indicative of the fact that theories about the atonement were probably of second-order importance. What was primary was the experience of forgiveness and new life which the first Christians claimed to enjoy. NT writers were unanimous in believing that this was the work of God Himself acting in and through the life, death, and resurrection of Jesus. In attempting to describe precisely how this had been achieved, the NT used a variety of ideas based on contemporary models in the 1st century thought world. However, common to all these articulations was the claim that what had happened was of universal significance and was the work of God Himself, acting in love. Any contemporary view of the atonement must take this with all seriousness if it is to be true to the NT.

ATONEMENT, DAY OF. See DAY OF ATONEMENT.

ATROTH-BETH-JOAB (PLACE) [Heb *ʿaṭrôt bêt yôʾāb* (עַטְרוֹת בֵּית יוֹאָב)]. A town in Judah, near Bethlehem, listed in the geneology of Hur (a descendant of Judah) through his son Salma (1 Chr 2:54). Some scholars, rather than accepting Atroth-beth-joab as a place name, choose to translate it "Crowns of the house of Joab," from *ʿăṭārâ,* one of the Hebrew words for crown. They assume this phrase either modifies Bethlehem and Netophath (*ISBE* 1: 349) or refers to a separate town in Judah (Odelain and Séguineau 1981: 46). The LXX transliterates the phrase in question as a place name, *Atarōth oikou Iōab.* While not specifically identifying Atroth-beth-joab, other scholars assume it was located between the 2 towns that surround it in the list: Netophah (tentatively identified as modern Kh. Bedd Fā-lûḥ, M.R. 171119), which is SE of Bethlehem; and Manahath (modern el-Mâlḥah, M.R. 167128), which is NW of Bethlehem (*LBHG,* 245). If the town was in this area it would have been on the edge of the Judean wilderness. This placement allowed Kallai (*EncMiqr* 6: 168) to propose a connection between this town and Joab, the head of David's army, who was buried in his house in the wilderness (1 Kgs 1:34), a house earlier identified as his inheritance (2 Sam 15:30).

SUSAN E. MCGARRY

ATROTH-SHOPHAN (PLACE) [Heb ʿ*aṭrōt šôpān* (עַטְרֹת שׁוֹפָן)]. One of several towns built by the descendants of Gad in the Transjordan from territory given them by Moses (Num 32:35). The exact location is unknown (Noth *Numbers* OTL), and scholarly attempts to locate the site are based primarily on textual or topographical evidence. The element ʿ*aṭrōt* is lacking from LXX, and the Vg adds *et* ("and") between ʿ*ăṭrōt* and *šôpān,* thus making 2 place names. In addition, *šôpān* has a variant in both the Samaritan Pentateuch (*špym*) and in the LXX (*sōphar*). This suggests some connection between ʿ*aṭrōt* and ʿ*ăṭārōt* of the previous verse (Num 32:34) since the latter site is specifically mentioned in the Moabite Stone (line 10) as a Gadite city in Moab reconquered by Mesha (see ATAROTH). However, many scholars seem to follow Tristram (1873: 290) who sees the same name repeated for sites barely 2 miles apart, identifying Atroth-Shophan with Jebel (Rujm) ʿAttarus, ca. 2 miles NE of Ataroth, and Ataroth with Khirbet ʿAttarus, ca. 8 miles NW of Dibon. Yet, there are those, like LaSor (*ISBE* 1: 363), who reject the identification of Atroth-Shophan with either Khirbet or Rujm ʿAttarus.

C. GILBERT ROMERO

ATTAI (PERSON) [Heb ʿ*attay* (עַתַּי)]. The name of 3 individuals in the Hebrew Bible.

1. Mentioned in the genealogy of Jerahmeel in the Hezron clan of the tribe of Judah, he was the son of one of Sheshan's daughters and his Egyptian servant Jarha (1 Chr 2:35–36). Attai in turn fathered a son named Nathan. The Chronicler provides a linear genealogy for 12 further generations down to Elishama, possibly due to the anomaly of his Egyptian ancestry.

2. One of the brave and skillful warriors from the tribe of Gad who joined David prior to his becoming king (1 Chr 12:12—Eng12:11). By reporting a contingent from Gad, one of the more northern and Transjordan tribes, the Chronicler emphasizes the breadth of support for David.

3. The second son of King Rehoboam by his favored wife Maacah (2 Chr 11:20); the grandson of Solomon. Large families are often used as a measure of divine blessing in Chronicles (2 Chr 11:18–23). The Chronicler includes the note regarding Rehoboam's favoritism toward Maacah as a way of explaining why Rehoboam's eldest son did not attain the throne (cf. 2 Chr 21:3). (For further discussion, see Dillard *2 Chronicles* WBC, 98–99.)

RAYMOND B. DILLARD

ATTALIA (PLACE) [Gk *Attaleia* (Ἀτταλεια)]. 1. A city of N Lydia near Thyatira formerly called Agoira.

2. Modern Antalya (Adalia), a city on the coast of Pamphilia in S Asia Minor, modern Turkey, near the mouth of the Catarrhactes (Aksu) river (36°50′N; 30°46′E). Paul accompanied by Barnabas left from this port as he returned to Antioch at the completion of his first missionary journey (Acts 14:25), and he probably landed here when he traveled from Paphos to Perga (Acts 13:13) since the latter is landlocked.

Attalia was founded by Attalus II Philadelphus of Pergamum (159–138 B.C.), hence the name, and it became the chief port of Pamphilia. The city was built on a limestone plateau rising about 37 meters above the Catarrhactes River basin near where it empties into the Mediterranean Sea. The city served as the harbor for Perga, the capital of the province. Today the river has dissipated due to local irrigation procedures. The Romans gained control of the region in 79 B.C. when P. Servilius Isauricus fined the territories of the city as a penalty for their alliance with the pirate Zenicetes. The area was later employed by Augustus for the settling of veterans. It did not become a colony, however, until the 3d century A.D. During the Christian era the city was under the ecclesiastical jurisdiction of Perga until it declined in power and Attalia was declared a metropolis in A.D. 1084.

Attalia has substantial archaeological remains. The ruins of the walls and towers of the outer harbor, originally closed by means of a chain, are still visible. The city was enclosed by a double wall encircled by a moat, and portions of the Hellenistic defensive wall can be seen in this wall of the medieval period. A triple arch built by Hadrian still remains as the most imposing structure of antiquity in the region. See Jones 1971: 130–47.

JOHN D. WINELAND

ATTALUS (PERSON) [Gk *Attalos* (Ἄτταλος)]. Attalus II, king of Pergamum (159–138 B.C.), son of Attalus I and brother of Eumenes II (1 Macc 15:22). He appears in a list of recipients of the letter sent by the consul Lucius endorsing the leadership of Simon. The letter stresses the renewal of friendship and alliance between Rome and Judea, forbids war against Judea by Roman allies, and allows for the extradition of prisoners. Attalus II was the strongest ally of Rome in Asia Minor and would have supported such a decree issued by Rome. His position as 2d in the list following Demetrius II reflects the political situation of the day. In fear of the growing power of the Seleucid king Demetrius I, Attalus II had supported Alexander Epiphanes (Balas), a pretender to the Seleucid throne, against Demetrius I Soter. In so doing he indirectly supported Jonathan (1 Macc 10:46–47).

RUSSELL D. NELSON

ATTHARATES (PERSON) [Gk *Attaratēs* (Ἀτταρατης)]. Official who participated in the assembly of the returned exiles when Ezra read the law of Moses to the people (1 Esdr 9:49–52). His prominence among the exiles is suggested by the text recording the blessing he gave to those who responded to Ezra's reading. Although the RSV follows the LXX by treating Attharates as a name, the consensus is that the term is a title the author of 1 Esdras misconstrued. Myers (*1–2 Esdras* AB, 91) and Coggins (*1–2 Esdras* CBC, 72–74) argue that it is a transliteration of the Persian title for governor (Heb *tršt*›). Almost certainly it is a variant of ATTHARIAS in 1 Esdr 5:40 (cf. Neh 8:9). Differences such as this raise questions about the sources of and literary relationship among 1 Esdras, Ezra, and Nehemiah.

MICHAEL DAVID MCGEHEE

ATTHARIAS (PERSON) [Gk *Attharias* (Ἀτθαριας)]. In 1 Esdr 5:40 this term appears as the proper name of an individual who, with Nehemiah supervised the priests. However, comparison of this passage with the parallels in Ezra 2:63 and Neh 7:65 reveals that this may be a textual alteration in the transmission of the Heb *tiršātā*› (LXX *Athersatha*), the Persian title for a provincial governor. The title may belong to either Zerubbabel, Sheshbazzar, or Nehemiah, depending on when one dates the historical context of this list.

CRAIG D. BOWMAN

AUGURY. See MAGIC (OT).

AUGUSTAN COHORT [Gk *speira Sebastē* (σπειρα Σεβαστη)]. An auxiliary unit in the Roman army, one of whose centurions guarded Paul on his sea voyage from Caesarea to Rome (Acts 27:1). Acts 27:42 mentions that the centurion, named JULIUS, was accompanied by soldiers who shared responsibility for guarding the prisoners; it is reasonable to assume that these soldiers were also members of the Augustan cohort. Most auxiliary cohorts were infantry units nominally composed of 500 or 1,000 troops, roughly the size of a modern army battalion. Josephus, however, refers to auxiliary cohorts which joined Vespasian's army during the Jewish War and contained 1,000 cavalry, or 600 infantry combined with 120 cavalry (*JW* 3.4.2 §67). As an auxiliary unit, it was not composed of Roman citizens, but during and after the reign of Claudius its soldiers were promised citizenship upon completion of their 25 years service (Webster 1985: 142–43; Grant 1974: 56).

The Augustan cohort mentioned in Acts was probably the *Cohors Augusta I,* which was based in the Roman province of Syria during the 1st century C.E. (*ILS,* 2683). The same cohort was probably stationed in Batanea, E of the Sea of Galilee, during the reign of Agrippa II late in the 1st century (Broughton 1933: 443). The Greek term *Sebastē* translates the Latin *Augusta,* which leads some scholars to ask if Luke may have confused this unit with the Sebastenian cohort, a unit recruited in the city of Sebaste (= Samaria). Josephus mentions several Sebastenian cohorts, all of which were stationed in Syria (*Ant* 19.9.2 §365; *JW* 2.4.2 §58). However, the Sebastenian cohort would have been referred to as the *speira Sebastēnōn,* and there is no evidence that Luke did confuse the two cohorts. Many cohorts were granted the title "Augustan" for honorable service (Cheesman 1914: 46–47), and since there is proof the *Cohors Augusta I* did serve in the area near Caesarea during the first century C.E., it seems wisest to assume Luke's reference to the unit is correct. Gealy (*IDB* 1: 317) believes that Luke mentions the cohort by name because it enhances Paul's prestige to be placed in the custody of a unit carrying the Augustan name. This is possible, but Luke nowhere else emphasizes the unit's name, even when mentioning soldiers presumably from that cohort (Acts 27:31–32, 42).

MARK J. OLSON

AUGUSTUS (EMPEROR). When he composed his brief history of Rome in A.D. 30, the Roman senator Velleius Paterculus portrayed Augustus as the last and most successful in a series of grand figures who dominated Rome in the course of the 1st century B.C. A little less than a century later, the great historian Cornelius Tacitus took a similar line when he wrote that "neither the domination of Cinna nor that of Sulla lasted long; the power of Pompey and the power of Crassus soon gave way to Caesar, the arms of Antony and Lepidus soon gave way to Augustus, who received the whole state, worn out by civil war, under his command with the title of *princeps*" (*Ann.* 1.1.1). Tacitus' contemporary, the biographer Suetonius, saw Augustus as the second in his series of Romans who gave form to the imperial system of government (the first was Julius Caesar); the anonymous author of some lines preserved in the *Sibylline Oracles* placed Julius first, but noted that Augustus passed on power to a successor (*Orac. Sib.* 5.11–20; 12.12–36). The view inherent in all of these authors was that it was difficult to place a firm date on the foundation of that system of government which modern scholars traditionally describe as the principate and associate with Augustus. Indeed, the Augustan principate arose out of the struggle for power among members of the Roman aristocracy in the course of the 1st century B.C. and was moulded by the political circumstances of Augustus' own rise to power after the assassination of his uncle and adoptive father, Julius Caesar on March 15, 44 B.C. He cannot truly be said to have become dominant until his victory over Mark Antony at Actium in 31 B.C., and it was not until 23 B.C. that he found a formula by which he could govern Rome with some security. For this reason, it is essential to understand the political crisis of the Roman state during his rise to power to understand the way that he modified the political system after his victory.

A. The Early Years

Augustus was born on September 19, 63 B.C., the son of Gaius Octavius, a successful politician who was the first member of his family to achieve prominence at Rome, and Atia, the niece of Julius Caesar. Rome was then in chaos because of the severe social disorder within Italy resulting from civil war and changes in the economic structure of the peninsula during the late 2d and early 1st centuries B.C. This disorder was enhanced by the tendency of ambitious aristocratic politicians to exploit social divisions in pursuit of what was then recognized as the proper ambition for any able aristocrat: personal domination over the Roman state.

By the end of 45 B.C. Julius Caesar emerged as the victor in a series of civil wars which began with his invasion of Italy in 49. It was during this time that the young Augustus (still known by his family name, Gaius Octavius) came to his attention. Impressed by his ability, Caesar intended to take him on the campaign against the Persians which he was planning in 44 and included him in his will as his primary heir and adoptive son. It was, in fact, this adoption in Caesar's will which launched the future emperor on his career. The veterans of Caesar's campaigns were devoted to the memory of their general and provided a powerful base of support for the young man when he returned to Rome to take up his inheritance as Gaius Julius Caesar Octavian (it was customary for Romans to take their adoptive father's name while retaining an adjectival form of their own family name as an additional name, or *cognomen*—hence Octavianus or Octavian, as he is commonly known in English). He found the situation extraordinarily complicated, however. There was a substantial group which supported the assassins, led by Brutus and Cassius, and a serious split among Caesar's remaining supporters as to whether Mark Antony should, as he intended to do, assume Caesar's position. There was an equally important group of generals in W Europe who had decided to wait and see which of the other factions prevailed. At first Octavian appeared to be a convenient figurehead for the group opposing Antony, and when the senate declared war on Antony in 43, as nominal third in command, he accompanied the army under the consuls Hirtius and Pansa that was sent against Antony at Mutina, in N Italy. Two battles were fought outside of Mutina in the spring of that year and, although Antony was defeated, both consuls were killed. Octavian was now in command of a powerful independent force.

At the end of the summer, Octavian made an agreement with Antony and the most important general in S France, Marcus Lepidus, to the effect that they would govern the state as *triumvirs* (essentially 3 dictators—before this a single dictator had occasionally been selected during a time of crisis with absolute power over the state) for a term of 5 years and avenge the murder of Caesar. In part to pay their troops and in part to terrify their political enemies, the *triumvirs* immediately issued an edict of proscription. Any man whose name appeared on the lists they published was thereby sentenced to death and his property was confiscated by the state. This action, for which all 3 partners must have borne an equal measure of responsibility, was long remembered as the bloodiest act of political terrorism in Roman history.

Victory over Brutus and Cassius was won in November of 42 at Philippi in N Greece. After the battle, Octavian returned to Italy and Antony took charge of Rome's E provinces. The next few years were difficult ones. In 41, Octavian had to crush a revolt at Perugia led by Antony's brother, and between 38 and 36 he engaged in difficult naval campaigns against Sextus Pompey, who controlled the seas around Italy. It was only with the victory over Sextus, won by Octavian's close friend Marcus Vipsanius Agrippa, and the subsequent deposition of Lepidus from the triumvirate that Octavian emerged as the dominant figure in the Roman west. It was also at this time that his relations with Antony, who had married his sister Octavia in 40 to seal a treaty between the 2 men after the war around Perugia, began to break down completely.

Antony was estranged from Octavia in 36 and soon married Cleopatra, queen of Egypt. In 33 relations between him and Octavian reached a crisis point; at the beginning of 32 Octavian led a thinly veiled coup at Rome. He forced the senate to declare war on Antony and assumed overall control with the title of *dux*, a position that was essentially that of dictator. The powers which Octavian, Antony and Lepidus had assumed as *triumvirs* in 43 were renewed for a 5-year term in 37; it was the approaching expiration of the 2nd term of the triumvirate that marked the beginning of the crisis at the end of 33 (see Syme 1939: 202–312). On September 2, 31 B.C., the fleet of Octavian, under Agrippa's command, crushed that of Antony and Cleopatra at Actium off the W coast of modern Greece. In the next year Octavian completed his victory by annexing Egypt to the Roman empire. Antony and Cleopatra committed suicide. To honor the victor for his achievements the senate bestowed the name "Augustus" upon him in carefully managed ceremonies between January 13 and 16, 27 B.C. Henceforth Octavian was known as Imperator Caesar Augustus.

B. The Government of Augustus

After his victory, Augustus was faced with administering the empire so as to secure his position and that of his family and to prevent a new outbreak of the chaos of the previous decades. He accomplished this through clever manipulation of the constitution, adroit alliances with leading members of the aristocracy, and skillful selection of commanders for Rome's armies. He also attempted, with less success, to reform what he saw as the moral failings of the Roman state.

The constitutional forms with which Augustus cloaked his autocratic position were many and varied. He felt that these contortions were necessary for a simple reason: There was a long-standing distaste at Rome for the outward forms of monarchy. These smacked of the "degenerate" east or of the tyrant Tarquinius the Proud, the last of Rome's legendary 7 kings, whose expulsion led to the creation of the republican form of government. Moreover, the excessive display of preeminence by one aristocrat was mortally offensive to the sensibilities of others. Caesar's adoption of many of the symbols of monarchy and evident lack of respect for the traditional institutions of government had been the main reason for his assassination.

In the early years Augustus had assumed the powers of a dictator as *triumvir* and then, between 32 and 28, as *dux* or "leader," avoiding the title "dictator" itself because Caesar had adopted it in his later years. In 28 he laid aside these powers and contented himself with one of the two "ordinary" consulships. (These were distinguished from the increasingly common "suffect" consulships because "ordinary" consuls entered office on January 1 and gave their name to the year.) He also became governor of an extended province which included most of the areas in the empire with large garrisons. This state of affairs changed in 23, perhaps because he felt that his constant consulships were offensive to members of the aristocracy who desired the distinction for themselves, and perhaps because he felt that he was strong enough to adopt a new, more powerful position. In that year he laid down the consulship and received the powers of a tribune for life, the proconsulship for life, and the supreme power (*imperium maius*) over all other governors. These powers enabled him to control political life within the city of Rome (as tribune he had the power to bring public business to a halt) and to control Rome's military forces. After receiving these powers and suppressing a conspiracy to murder him, either at the end of 23 or at the beginning of 22, he left Italy to set Rome's eastern frontier in order (Badian 1982; cf. Syme 1986: 387–389). When he returned in 19 he was given the powers of a consul for life and "freedom from the laws." These powers—the consulship, the tribunate of the plebs, and certain other extraordinary powers—served to define the office of *princeps* or emperor for the rest of his reign and for those of his successors.

Augustus' relationship with the aristocracy was summarized by Tacitus as follows: "[T]he most violently opposed had fallen in battle or through proscription, the rest of the nobles, insofar as those who were most readily obedient were raised up with wealth and honor and enhanced with new dignities, preferred the safe present to the dangerous past" (*Ann.* 1.2). The civil wars had had a devastating impact on the governing class of the old Republic; it was indeed true that the majority of those who had not joined Augustus in the course of the wars had been killed. But, even after Actium, Augustus could not depend on the loyalty of the survivors. He carried out revisions of the list of senators, in 29, 18, and 11 B.C. to remove those who he thought were unworthy (or dangerous), and he had a fourth revision carried out by a board of senators in 4 A.D. He also increased the property qualification necessary for entry into the senate and introduced a number of important changes in the way that offices might be held (see Nicolet 1984).

In the course of his reformation of the senate, Augustus concentrated the power of patronage and promotion in his own hands. There were 2 principle features of this control. The first was his power over the provinces in which Rome's main armies were stationed. He therefore had the power to appoint the commanders of these forces; it was virtually impossible for a man of suspect loyalty to obtain one of the military commands that were still cherished by the bellicose members of the aristocracy. The second feature was his virtual control over the electoral process. Tacitus described this as one of the greatest "secrets of power" (*Ann.* 2.36.1). It was very difficult for any man to win office without his approval, and he enhanced this control through the practices of "nomination" and "commendation." For each election, Augustus would publish a list of men whom he supported, or "nominated." These lists would contain

fewer names than there were offices, but inclusion on the list meant that a man was virtually assured of election, thus saving him a great deal of stress and presumably a good deal of expense, since running for office often involved tremendous outlays on public spectacles to court public support. A man who was "commended" as a "candidate of Caesar" would receive the office for which he had been "commended" without having to run for it. This was a very special and coveted honor; by the end of Augustus' reign only 4 men would receive it each year. This put a very real premium on Augustus' goodwill; the senatorial ideology which began to emerge in this period stressed service to the state under the emperor's guidance rather than absolute personal dominance (see Mommsen 1887–88: 917–22; cf. Levick 1967; for general discussion see Millar 1977: 299–313; Talbert 1984: 16–27; Eck 1984: 129–67).

The importance of the emperor's guidance was also stressed through Augustus' constant consultations with the senate. It appears that he brought almost all public business before that body. Indeed, there does not seem to have been any important act of state for which Augustus did not seek senatorial approval. Where our sources tell us that Augustus "did" something, their language is masking the process which involved Augustus either making a personal appearance before the senate to make a proposal or writing to the senate asking it to adopt the course that he desired. He may have adopted this approach to cloak the autocratic nature of his regime, but the result was to promote the extreme subservience of the senate to the autocrat. Senators appear not to have been sure why they were consulted on issues ranging from the recognition of an imperial heir to the composition of provincial juries and thus strove all the more to please the emperor whenever he expressed a desire to hear their views—there was no point to risking one's career by crossing the emperor on such occasions. We hear of very few occasions when a debate in the senate in which the issues were not overshadowed by the desire of the speakers to please the monarch or even to anticipate his desires (see Brunt 1984).

The other great problem that Augustus inherited from the Republic was the poverty and unrest rampant among the Italian lower classes. One solution was simply to ensure peace, and this he was able to do after Actium. Another was to change the periodic redistribution of agrarian land to the rural and urban poor and the settlement of veterans on farms in Italy. He did this in the years after Actium by initiating an extensive program of overseas colonization. Such colonization had been attempted from time to time under the Republic and had been a major feature of Julius Caesar's program just before his death, but nothing had been attempted on anything like the scale which Augustus introduced. A great number of new colonies were founded abroad, and they had the effect not only of alleviating problems in Italy and serving as garrisons in newly pacified areas, but also of speeding the spread of Latin culture throughout W Europe as well as into the east. This was one of Augustus' most significant actions (Salmon 1969: 134–44; Brunt 1972: 589–601).

Within the city of Rome itself, Augustus introduced a more regular supply of subsidized grain for the poor and sought to keep better order through the institution of the *vigiles*, Rome's first professional police force and fire department. He engaged in a massive building program which served to beautify the city and celebrate the glory of his achievements. He issued regular distributions of food and money at festivals and to commemorate important moments in his reign. In doing so he not only alleviated the suffering of the poor, but he also bound the lower classes to his house. Preferential treatment of the population of Rome was thus established as one of the foundations of imperial government (Veyne 1976: 557–791; Rickman 1980: 61–66).

Augustus not only sought to refashion the political structure of the Roman state, but also to restore what he thought was Rome's "pristine moral virtue." In 18 B.C. he issued laws that encouraged the upper classes to have more children by giving preferential treatment to fathers of more than 3 offspring and imposing severe penalties upon the childless. He also issued a severe law aimed at curbing adultery. Later in his reign he took strong action to ensure the "racial purity" of the Roman people by limiting the number of slaves that an individual could free and restricting their access to Roman citizenship. He granted new privileges to senatorial and equestrian families, but he also imposed severe penalties upon members of those families who married slaves or engaged in what he regarded as disgraceful professions, such as acting or fighting as gladiators (Last *CAH* 10:425–64; Brunt 1972: 558–66; Levick 1983: 105–15).

The reign of Augustus was also notable as the golden age of Latin literature. Although Augustus himself can take little or no credit for the development of poets such as Vergil, Propertius, Tibullus, and Horace—all of them began writing well before Actium—he did have an active interest in the arts. Vergil's *Aeneid* and Livy's massive history of Rome created images of Rome's past which Augustus found congenial, even though neither, especially Vergil's, can be considered wholly favorable. With the passing of time, however, his attitude towards literature began to harden. His later years were notable for the exile of the one great talent his reign produced, the poet Ovid, whose work Augustus found offensive (Syme 1978: 169–229; Griffin 1984: 189–215).

There were also a number of developments in the overall governance of the empire and its relations with foreign peoples. One of these was the creation of a regular standing army in place of the republican armies which were raised for specific campaigns. This new army engaged in a number of important campaigns carried out by Augustus' lieutenants, often under the overall command of members of his family. The main areas of operation were Germany and the Balkans. Although there were some setbacks—the most important of which was the destruction of 3 legions by the Germans in 9 A.D.—the empire gained much new territory and began to develop fixed frontiers. There is still debate as to whether this was Augustus' intention in beginning these wars; some have argued that he hoped to conquer the world and was only deterred from this aim by problems at the end of his reign. But it is certainly the case that the frontiers developing along the Rhine and Danube at the time of Augustus' death were readily defensible and were to remain, with very few changes, the limits of Roman power down to the fall of the W empire in the 4th century. The administration of the provinces themselves became somewhat more efficient than it had been under the Republic (Syme *CAH* 10:340–81; Brunt 1963: 170–76; Wells 1972). Augustus was able to exercise some restraint over the rapacity of his officials. In addition, he began to create a new bureaucracy, staffed by freedmen and slaves from his own household as well as by members of the equestrian order, to oversee the administration of the grain supply, of certain minor provinces, of his own enormous estates throughout the empire, and of the significant contribution which he made to the finances of the state from his own funds.

C. The Succession

One of Augustus' primary aims was to ensure that the heir to his "station" in the state, as he called it, would be a member of his own family. As he had no sons and only one daughter, Julia, he had to rely upon nephews, stepchildren, and grandchildren to satisfy his ambition. The first heir-apparent was Augustus' nephew, Marcus Claudius Marcellus who married Julia in 25 B.C. He died in 23, and Augustus then turned to his old friend, Marcus Agrippa. Agrippa married Julia, by whom he had a number of children before his own death in 12 B.C. At the same time that Agrippa was marked out for succession, Augustus also promoted his two stepsons, Drusus and Tiberius, an insurance policy against the death of Agrippa. Tiberius, the elder of the two, was the favorite at this time, and after Agrippa's death he married Julia.

Drusus died in 9 B.C. and, as further insurance, Augustus began to promote the careers of two of his grandsons by Agrippa, Gaius and Lucius. This seems to have caused some friction with Tiberius and in 6 B.C. Tiberius retired from public life to live on the island of Rhodes, much against Augustus' will. His retirement soon became little better than an exile, and a dynastic crisis ensued. Gaius and Lucius were too young to succeed, and as Augustus passed the age of 60, it seemed that he might soon die. Julia, who appears to have detested Tiberius, began to conspire with Augustus' nephew Iullus Antonius (the son of Antony and Octavia). This conspiracy was uncovered in 2 B.C.; Iullus was executed and Julia was exiled on the charge of adultery with a number of members of the nobility (Syme 1974: 912–36).

Augustus' hopes for Gaius and Lucius soon foundered. Lucius died of disease at Marseilles in 2 A.D. and two years later Gaius died as the result of a wound he received while on campaign in the east. Tiberius was recalled and formally adopted by Augustus as his heir. At the same time Augustus also adopted his last surviving grandson, Agrippa Postumus—yet another insurance policy. Agrippa Postumus soon proved inadequate (there is some suggestion that he was insane) and was exiled to an estate outside Rome in 6 A.D.; in 7 he was sent into exile on an island. A year later, after yet another domestic scandal,

Augustus' granddaughter, the younger Julia, was also exiled. In 13 Tiberius was granted the same powers as Augustus, and when Augustus died on August 19, A.D. 14, Tiberius assumed the sole government of the Roman empire. This succession, without civil war, was Augustus' final political achievement.

Augustus was a brutal and difficult man, given at times to severe delusions, and feared or disliked by those who knew him best. Nonetheless, he proved to be a master politician and administrator and, as a result, his reign marks the great watershed in Roman history. He managed to create a system of government that maintained the unity and peace of the Mediterranean world for centuries to come.

D. S. POTTER

AURANUS (PERSON) [Gk *Auranos* (Αὐρανος)]. Commander of a temple guard (2 Macc 4:40). After reports circulated that Lysimacchus had stolen gold vessels from the temple and that crowds were forming into a mob, Lysimacchus armed 3,000 men and placed them under the command of Auranus. The attack on the crowd failed, and Lysimacchus himself was killed near the temple treasury as divine retribution (2 Macc 4:39–42). The description of Auranus as "advanced in both age and folly" contrasts with that of the martyr Eleazar, who was "advanced both in age and noble presence/appearance" (2 Macc 6:18). Goldstein heightens the contrast by suggesting that *auranos* is a variant form of *auaran*, the nickname of Eleazar, son of Mattathias (1 Macc 2:5; 6:43). A pious Eleazar (2 Macc 6:18–31) would be contrasted with the impious Hasmonaean Eleazar (Goldstein *2 Maccabees* AB, 242). However, the tentative nature of this identification and the closer contrasts between the martyr Eleazar and Mattathias (Goldstein *2 Maccabees* AB, 282–86) speak against Auranus being associated with Eleazar, son of Mattathias. Further, the omission of the account of Eleazar's noble death (1 Macc 6:40–47) does not automatically suggest that the author of 2 Maccabees would seek a negative episode as a substitution (Goldstein *1 Maccabees* AB, 79–80).

RUSSELL D. NELSON

AURELIUS, MARCUS. See MARCUS AURELIUS (EMPEROR).

AUTHOR OF LIFE [Gk *archēgos zōēs* (ἀρχηγος ζωης)]. In this expression (Acts 3:15), the word "author" is the rendering of *archēgos* in some English versions (RSV, ASV [margin], NAB, NIV). In 2

other contexts, the word is also rendered "author" in some versions: "author (of salvation)" in Heb 2:10 (ASV, NASB, NIV), and the "author (of our faith)" in Heb 12:2 (KJV, ASV, NASB, NIV). The basic sense here is that of originator or founder (Delling *TDNT* 1:487–88).

Other renderings in these 3 passages and in Acts 5:31, reveal another line of interpretation of the term *archēgos:* as "leader," "pioneer," "captain," and "prince" (Müller, *EWNT* 1: col. 393). For Acts 3:15, examples of this alternative interpretation are evident in such translations as "him who led the way (to life)" (NEB); "the one who leads (to life)" (GNB); and, with less clarity, "the prince (of life)" (KJV, ASV, NASB, JB).

These 4 passages (listed above) constitute all the NT occurrences of the word *archēgos,* and in all of them the reference is to Jesus Christ. By this title he is recognized as the eschatological leader who, by way of the cross and resurrection, leads his followers to faith, salvation, and life, as Moses led God's people in the Exodus (cf. Acts 7:36). This understanding of NT *archēgos* as "leader" is probably preferable to understanding it as "originator" on the basis of Greek and Hellenistic sources.

HERBERT G. GRETHER

AUTHORITATIVE TEACHING (NHC VI,*3*). The 3d tractate of codex VI (pp. 22–35) of the Nag Hammadi codices. The text, a Coptic translation from a Gk original, is well preserved except for lacunas at the top of the first 7 pages (MacRae 1979: 258). The Coptic dialect is Sahidic with some non-Sahidic variations (Krause and Labib 1971: 44–47).

Auth. Teach. offers a highly metaphorical account of the soul's existence from its origin in "the invisible, ineffable worlds," through its encapsulation in a physical body and struggle with the forces of the material realm, to its ultimate salvation and rest. Seams in the narrative structure of the text and changes in person suggest that the present version is dependent upon a collection of originally separate metaphorical accounts (MacRae 1979: 257). In its present form, *Auth. Teach.* is a didactic composition perhaps used as a homily (Ménard 1977: 2; 1978: 288). It belongs to the genre of literature on the soul first identified by Festugière in connection with the Hermetic corpus. Other Nag Hammadi tractates concerned with the soul include *The Exegesis on the Soul* (NHC II,*6*), *The Teachings of Sylvanus* (NHC VII,*4*) and *The Book of Thomas the Contender* (NHC II,*7*) (MacRae 1972: 478–79; Funk 1973: 254).

The anticosmic stance of the *Auth. Teach.* is clear throughout the text. The spiritual soul is described as cast into a body that came from lust, which in turn came from material substance. The material body is the creation of the "dealers-in-bodies," who seek to strike down the invisible soul. The soul is portrayed as a harlot who fell into bestiality, as wheat mixed with chaff. In the body, the soul contests against the wiles of the evil adversaries, who spread hidden nets in order to snare her and draw her down to "man-eaters." An extended metaphor portrays the adversary as a fisherman who baits a hook with various kinds of food (passions). The food is the ruse which draws the soul to the hook by which it is caught and pulled out of freedom into slavery. But the rational soul seeks God and gains salvation and rest through knowledge. She is aided in her quest by her bridegroom, who "applies the word (logos) to her eyes as a medicine to enable her to see with her mind" (22,26–28).

Auth. Teach. offers an important witness to the interest in and speculation on the nature, origin, and fate of the soul in the religious and philosophical cauldron from which Christianity emerged. The language of the text is non-philosophical (MacRae 1972: 477; Ménard 1977: 3), although its understanding of the soul is thoroughly Platonic (van den Broek 1979). The surviving text contains no clear evidence of a typical gnostic cosmogonic myth (MacRae 1979: 259; Funk 1973: 253), but the strong anticosmic dualism, the dichotomy between ignorance and knowledge, and the various metaphors of salvation (e.g., bridal-chamber and rest) would certainly be at home in a gnostic context (Funk 1973: 254; Ménard 1977: 5–6). While no passage in the tractate betrays certain dependence on Jewish or Christian texts, practices or beliefs (MacRae 1972: 476; 1979: 258–59), various passages do suggest that the author knew the NT and considered it authoritative (Funk 1973: 254; van den Broek 1979: 271–76). The use of the term *logos* in the title, *Authentikos logos,* has no relation to the Johannine use of the term as a title for Christ. It is more

closely related to the use of the term in Hermetic literature and/or the role of the *logos* as medicine found in the text itself (MacRae 1972: 476–78; 1979: 257; Ménard 1977: 3–4).

The document supplies no certain internal evidence of provenance or date. Its use of a logos concept, its strong anticosmic stance, and its Platonic doctrine of the soul would be at home in Alexandria by the end of the 2d century C.E. (van den Broek 1979: 281–82).

AVARAN (PERSON) [Gk *Auaran* (Αὐαραν)]. Nickname of Eleazar, the 4th son of Mattathias (1 Macc 2:5). His well-known heroic deed was the killing of an elephant at the battle of Beth-zechariah (1 Macc 6:46). There also his nickname is mentioned (1 Macc 6:43). Several suggestions have been proposed for the meaning of Avaran, but none are convincing. Two Hebrew roots are possible: (1) *ʿwr* = "Awake" (i.e., he was not a soundly sleeping baby?); and (2) *ḥwr* = "pale (face)." The suggestion of *ḥwr* as a root may be combined with the feat of killing the elephant which suggests the meaning of "hole" for *ḥor.* However, this assumes a different function of all the nicknames of Mattathias' sons, which does not fit their intention and assumed meanings. For the nicknames of Mattathias' sons see GADDI and MACCABEE. (See also ELEAZAR.)

URIEL RAPPAPORT

AVEN (PLACE) [Heb *ʾāwen* (אָוֶן)]. A Hebrew word meaning "idolatry," "iniquity," or "nothingness" used by the OT prophets as a derogatory substitute or wordplay in certain place names. Since the Hebrew words *ʾôn* ("power" or "riches") and *ʾāwen* have identical consonants, Aven may be a derisive pun.

1. A place mentioned in the phrase "the high places of Aven" (Hos 10:8). "Aven" has traditionally been understood as an abbreviation of Beth-aven ("House of Idolatry"), Hosea's pejorative name for Bethel ("House of God"). See BETH-AVEN. However, several modern scholars prefer to translate *ʾāwen* as a common noun, i.e., "the high places of transgression" (Mays *Hosea* OTL, 138; Wolff *Hosea* Hermeneia, 171).

2. A valley cited in Amos' denunciation of Syria (Amos 1:5). "The Valley of Aven" may be the plain between Lebanon and Anti-lebanon. Several scholars have attempted to identify Aven more precisely with "Baalbek" (Eissfeldt 1936; Mays *Hosea* OTL, 30–31).

3. A derisive wordplay or misvocalization of the name of the Egyptian city "On" (Heb *ʾôn*) found in the MT (Ezek 30:17). The LXX has *hēliou poleōs* (Heliopolis), the Gk name for On. KJV follows MT with "Aven," while the RSV and NEB render "On." See also ON.

AVESTAN LANGUAGE. See LANGUAGES (ANCIENT IRAN).

AVITH (PLACE) [Heb *ʿăwît* (עֲוִית)]. The residence of the Edomite "king" Hadad son of Bedad (Gen 36:35; 1 Chr 1:46). See HADAD (PERSON). According to the rules of postexilic Heb and Aram orthography, *ʿwyt* may render Ar *Ghuwaith,* attested as a personal name in Safaitic, S Safaitic, Minaean, and Qatabanian (Harding 1971: 459). *Ghuwaith* is the diminutive of Ghauth, which occurs in Safaitic over 150 times (Harding 1971: 452; note that the vocalizations of the two Safaitic names here differ from those of Harding), and in the Aramaic (Idumaean) ostraca from Tell es-Sebaʿ, ca. 400 B.C. (Knauf 1985: 250, n. 28). Knauf (*ibid*) suggested that *Ghuwaith was the clan or tribe to which Hadad son of Bedad belonged, and that Avith was the more or less permanent encampment of this clan or tribe.

According to Burckhardt (1822: 375), the mountain range which terminates the Moabite plateau to the E was called el-Ghuwaithah. This information is not corroborated by later explorers (cf. A. Musil in Brünnow and Domaszewski 1905: 325). Burckhardt's reference is insufficient evidence to speculate about a Moabite origin for the Edomite "king" Hadad son of Bedad, or to suggest a localization for Avith.

ERNST AXEL KNAUF

AVOT, KHIRBET (M.R. 193276). A site which occupies a small rise on a large hill at the head of Naḥal Avivim, a winding ravine which drains into the Huleh Valley basin to the E. Two short emergency seasons of exploratory excavations were undertaken on one of a series of broad terraces on the W slope of the hillock.

The region is mountainous and well-watered, but with few perennial springs. Adjacent to the site is a seasonal water supply which collects in a natural basalt pool at the SE edge of the hill. It is difficult to establish the economic basis for the early settlements on the site, but it seems likely, despite the rugged nature of the terrain and the somewhat harsh winters, that it was primarily agricultural. A tedious but not impossible journey across the ravine leads to the large expanse of the Yiron plateau, still used for pasturing animals, and the lower slopes of the larger hill on which the site lies still bear traces of agricultural terracing.

The earliest evidence of occupation was found in several places above the basalt bedrock and included fragments of a curvilinear wall and related floor on which were found partial vessels belonging to the EB I or EB II horizon. In two other soundings evidence of human interments, including an infant jar-burial, were accompanied by MB pottery, although nothing of a settlement dating to this period was found.

Major architectural remains of the Iron Age I were uncovered which included a number of successive and distinct building phases. No complete plans of buildings were recovered but the buildings seem to have been large, rectangular, multiroomed dwellings, some with plastered floors and adjacent stone-lined storage pits. The buildings were solidly built of heavy stone foundations, and the sophistication of some of the construction techniques is attested by the discovery of one semisubterranean storage room, the lower floor of what must have been a two-story structure. The plan of these buildings, which seems to

follow the contours of the hill, suggests that they may have been built adjacent to each other to create a barrier to the outside.

The Iron I occupation at Kh. Avot could be evidence of the historical process of Naphtali's settlement in the Upper Galilee (cf. Josh 19:32–39). However, on the basis of the archaeological record, there are some real objections to the identification of this site as Israelite.

A distinctive type of pithos at one time identified as a hallmark of Israelite presence (Aharoni 1957) is found at Kh. Avot in quantity and is known from numerous other sites in the region as well as at Stratum XII at Hazor (Yadin et al. 1961: Pl. CLXVII, CLXVIII). Recent excavations of a Canaanite-Phoenician town in W Galilee, TELL KEISAN, have uncovered this same type of vessel (Briend and Humbert 1980: Pl. 68:1–3) making its ethnic identity less viable.

A 2d type of pithos found at Kh. Avot is even more problematic because of what is presently known of its distribution and also what appears to be its foreign pedigree. With its stump base, globular body, tubular neck, and raised wavy-line decoration (see Fig. AVO.01), it is totally alien to local ceramic traditional forms and is suggestive of Cypriot forms which can be traced back to at least the 3d millennium B.C.E. Examples of these vessels have been found at the Upper Galilean sites of Sasa, Mt. Adir, Tel Dan V, possibly at Hazor XII (Yadin et al. 1961: Pl. CCII:19), and at the Phoenician coastal city of Tyre (Bikai 1978: Pl. XL) in level XIII; they are dated to the Iron I Period. Despite its Tyrian provenance it does not seem to be a Phoenician type nor could the pottery of Kh. Avot be considered Phoenician.

To what extent these 2 types of pithoi may reflect the ethnic identity of the inhabitants of Kh. Avot is unclear. What seems certain is that there are N and other foreign elements in the material culture of this Iron I occupation which make its identification with an Israelite tribal settlement problematic.

A further obstacle to the "Israelite" identification is the well developed architectural styles at Kh. Avot which are in direct contrast to the squatter occupation of Hazor XII, identified with Israelite tribes (Yadin 1972: 129). While the ceramic repertoires of these two occupations are comparable, sharing many elements, the contrast in the life styles as implied by the architecture or lack of it can not be easily explained. To what, if any extent the Iron I occupation at Kh. Avot reflects the biblical account of the settlement of Naphtali must remain a matter of conjecture.

Directly above some of the walls of the Iron I stratum were found the very poorly preserved remains of a large, multi-roomed structure of the Persian period. Associated pottery suggests a date somewhere in the 4th century B.C.E.

A number of intrusive burials into this stratum and the earlier strata were encountered over large portions of the terrace that were excavated. The style of these burials, the lack of accompanying grave goods, the state of preservation of the bones, and the anthropological data all indicate a Bedouin population of at least several centuries. Excavations have not been conducted on other parts of the now-protected site, and it is unlikely that the entire occupational sequence of the settlement is known.

ELIOT BRAUN

AVVA (PLACE) [Heb ‹*awwā*› (עַוָּא)]. AVVITES. A town whose residents were deported by the Assyrians and resettled in Samaria sometime after 721 B.C. (2 Kgs 17:24). A number of mss spell the name ‹*awwâ* (final *he*). Simons (*GTTOT,* 111) proposed identifying Avva with ‹Avvah/‹Ivvah in Syria (modern Tell Kafr‹aya, on the Orontes SW of Homs). However, because the biblical text notes that the people of Avva "made Nibhaz and Tartak" after their resettlement (1 Kgs 17:31), others have suggested that these people were Elamites deported from the city of Ama (Akk *m* is often rendered *w* in Heb) who

were successful in reestablishing in Samaria the cults of their native deities Ibnahaza and Dirtaq (Cogan and Tadmor, *2 Kings* AB, 212).
GARY A. HERION

AVVIM (PLACE) [Heb *hā‹awîm* (הָעַוִּים)]. **1.** A "place" listed in the 1st city list of the tribe of Benjamin (Josh 18:23) between Bethel and Parah (modern Kh. Abu Musarrah, M.R. 177137). There is general agreement among scholars that Avvim actually represents not a geographical name but a gentilic (*Joshua* AB, 430). Thus, the Avvim were probably the people of either Ai (*HGB,* 401) or Aiath (modern Kh. Haiyân, M.R. 175145; Press 1955: 687).

2. The early inhabitants of the S coastal region who were displaced from some of their holdings by the people of Caphtor (Deut 2:23), and who continued to live S of the Philistines in the time of the conquest (Josh 13:3). While some consider these people to be the autochthonous inhabitants of the S frontier region (*LBHG,* 237), the LXX rendering of these people (Gk *Euaioi*) is that also used for "Hivites." This may indicate that one must look to earlier Sea Peoples for their origins (*Joshua* AB, 338). The text in Deuteronomy indicates that the Avvim dwelt in villages (*baḥăṣērîm*) as far as Gaza. The LXX, however, translates this *en asērōth* (or *en Asērōth*). It is therefore possible that these people occupied the land from Hazoroth (Num 11:35; modern Ar ‹Ain Khaḍrā, M.R. 096814) deep in the Sinai to the S coast of Palestine near Gaza. It is more common, however, to translate the place where the Avvim dwelt as "villages" or "enclosures." Speiser (1932: 30–31, n. 67) connected these *ḥăṣērîm* with the terra pisée ramparts that were discovered at Tell el-Far‹ah and Tell el-›Ajjûl in the Negeb. Following Albright (1932: 8), he identified these ramparts with a Hyksos occupation and concluded that the Avvim were part of this Hyksos settlement that was succeeded by the Aegeans. Simons (*GTTOT,* 31) argued that because *ḥăṣērîm* were either small unwalled villages of secondary importance or encampments for nomadic or seminomadic people, they could not be connected with the major fortified cities that were situated on these tells. The Avvim reappear in Josh 13:3 as a S neighbor to the 5 cities of the Philistines (*LBHG,* 237). They probably occupied the land between the Philistines and the Egyptians (*GTTOT,* 111).

AVVITES. See AVVA (PLACE).

‹**AYIN.** The 16th letter of the Hebrew alphabet.

AYYAH (PLACE) [Heb ‹*ayyâ* (עַיָּה)]. In 1 Chr 7:20–30, we find a description of the tribe of Ephraim. Their possessions (vv 28–29) included Bethel, Naaran, Gezer, Shechem, Ayyah, Beth-shean, Taanach, Megiddo, and Dor. The traditional tribal allotments include Shechem and the last 4 sites in Cis-Jordanian Manasseh.

For 1 Chr 7:28 several ms traditions (some LXX examplars, Vg, and Targum) support a reading ‹*zh* (Gaza) for MT ‹*yh* (‹Ayyah). If the former reading is correct it would not be the Philistine Gaza, but another site in the hill country (as the context of 1 Chr 7:20–30 demands). The variant name was most probably the result of a confusion between the letter *z* and *y* in the square Jewish script (see Cross 1961: 133–202; Freedman, Mathews, and Hanson 1985: 15–23).

In regard to the identification of Ayyah, Myers (*1 Chronicles* AB, 51) states that the site is unknown. Reed (*IDB* 1: 324), however, suggests equating Ayya with Ai or the nearby Khirbet Haiyan (M.R. 175145). Albright (1924: 144) rejects the equation of Ayyah with Ai, favoring the alternate reading Gaza.

Simons (*GTTOT,* 169; NWBD, 79) proposes Turmus ‹ajja (M.R. 177160) as probably Ayyah. It is located in a small fertile plain E of Sinjil between Sinjil and Seilun (Shiloh). Abel (*GP,* 257) notes it was called Turbasaim in the Middle Ages.

HENRY O. THOMPSON

AZAEL (PERSON) [Gk *Azaēlos* (Ἀζαηλος)]. A descendant of Ezora who divorced his foreign wife during Ezra's reform (1 Esdr 9:34). Although 1 Esdras is often assumed to have been compiled from Ezra, Azael does not appear among the list of names in Ezra 10. Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

AZALIAH (PERSON) [Heb *ʾăṣalyāhû* (אֲצַלְיָהוּ)]. The son of Meshullam and the father of the secretary Shaphan (2 Kgs 22:3). Azaliah's son Shaphan was the state secretary who figured prominently in connection with the discovery and publication of the celebrated book of the law during the reign of King Josiah. "Azaliah" is a verbal sentence-name formed with the perfect conjugation followed by a noun—a type of construction occurring frequently throughout the monarchy. Noth (*IPN,* 193–94) is inclined to link *ʾṣlyh* (i.e., Azaliah) with the Ar *aṣula,* "to be firmly rooted; to be noble," as well as with the Heb *ʾṣyl* (= Ar *aṣîl*), "noble," of Exod 24:11 and to translate the name as "Yahweh has shown himself to be noble." An alternative etymology would produce "Yahweh has set aside." Located in *BMAP* line 44 of papyrus 7 (a Jewish document; pp. 206–7, 222), a possible short form of Azaliah appears in the personal name *ʾṣwl,* father of one of the Jewish witnesses.

EDWIN C. HOSTETTER

AZANIAH (PERSON) [Heb *ʾăzanyâ* (אֲזַנְיָה)]. A Levite and the father of Jeshua, who was a signatory to the code of Nehemiah (Neh 10:10—Eng10:9). The name is most likely a shortened form of *ʾăzanyāhû* which means "Yahweh has heard" (Fowler 1988: 156, 335).

FREDERICK W. SCHMIDT

AZAREL (PERSON) [Heb *ʿăzarʾel* (עֲזַרְאֵל)]. Var. UZZIEL. A few Heb mss vocalize the name as "Azriel" [Heb *ʿazrîʾēl*]. mss exhibit a wide range of variations on the name [*azarael, azaria, ezerel, ezriel, eliel, esdriel, esriel, oz (e)iel, oziel, ozr (e)iel,* and *ozriel*]. The KJV renders the name as Azareel with one exception: Azarael (Neh 12:36). Interestingly, the NEB has both Azareel (1 Chr 12:6; 25:4; 27:22; Ezra 10:41) and Azarel (Neh 11:13; 12:36). The AB upholds the RSV in its consistent use of the name Azarel in the 6 relevant passages below.

1. One of the men supportive of David during his "outlaw" period (1 Chr 12:7—Eng12:6). His name occurs in a list of 23 bowmen, archers, and stone-slingers who joined David at Ziklag. If the men were all Benjaminites (1 Chr 12:2), the reference to "Korahites" [Heb *haqqorḥîm*] in 1 Chr 12:7—Eng12:6 is strange. This might suggest that these Korahite Levites were once resident in the territory of Benjamin, but the greater probability is that the Korahites here have nothing to do with the Levitical Korah, nor even with the Calebite Korah mentioned in 1 Chr 2:43 (Myers *1 Chronicles* AB, 96). Although there can be no certainty, the word may refer to an unattested place in Benjamin or even a place in Judah where these Benjaminites had been living (see Aharoni and Avi-Yonah *MBA,* maps 93–94 and 113). The Chronicler's point in the context (1 Chr 12:1–8—Eng12:1–7) was to emphasize the loyalty which came to David from outside Judah, from Benjamin, King Saul's own tribe.

2. A Levite, a son of Heman, one of the persons set apart for the service of music and song in the time of David (1 Chr 25:18). He is called Uzziel [Heb *ʿuzzîʾēl*] in 1 Chr 25:4. The Chronicler reports, somewhat artificially, how each of Heman's 14 sons was assigned by lot a priestly course of temple

musicianship; this Azarel is associated with the so-called 11th course out of a grand total of 24 courses, each with 12 members (1 Chr 25:4, 8–31).

3. A Danite, the son of Jeroham [Heb *yĕrōhām;* LXX *iōram*] (1 Chr 27:22). His name occurs in a list of military and civil administrators in the time of David. The list constitutes an attempt by the Chronicler to show the tribal inclusiveness of David's "Israel" (1 Chr 27:16–22; Coggins *1 and 2 Chronicles* CBC, 134).

4. A Levitical priest, the son of Ahzai and father of Amashsai, descended from Immer (Neh 11:13). Amashsai, his son, was representative of one of the Levitical families serving in the restored Jerusalem temple in the days of Nehemiah. His correspondent in the synoptic parallel, 1 Chr 9:12, seems to be Adiel [Heb *ʿadîʾel*], father of Maasai (= Amashsai?), likewise a descendant of Immer.

5. Son of a priest, a musician who participated in the procession for the dedication of the wall of Jerusalem in the time of Nehemiah (Neh 12:36).

6. One of the sons of Binnui (RSV), and a contemporary of Ezra (Ezra 10:10, 38, 41). He is included in a list of persons who married foreign women and were induced by Ezra to divorce them along with their children. On the text adopted by the RSV in Ezra 10:38, see the discussion under AMARIAH 10. The parallel, 1 Esdr 9:34, speaks of Azarel [*ezril*] as a son of Ezora [*ezōra*]. See further Braun *1 Chronicles* WBC.

ROGER W. UITTI

AZARIAH (PERSON) [Heb *ʿăzaryâ* (עֲזַרְיָה), *ʿăzaryāhû* (עֲזַרְיָהוּ)]. Azariah is a personal name (meaning "Yahweh has helped") given to a number of individuals in the books of the Heb Bible and the LXX. Identification of some of the individuals remains tentative because of differences between parallel genealogical texts, differences between the MT and the versions, and questions about the intended function of the genealogical material in the various books.

1. Azariah (1 Kgs 4:2) is listed first in the register of King Solomon's officials. Since his title is given as *hakkōhēn* "the priest"—in contrast to the titles of Zadok and Abiathar (1 Kgs 4:4) who are identified as priests [Heb *kō-hănîm*] or Zabud (1 Kgs 4:5) who is called a "priest and king's friend" [Heb *kōhēn rēʿeh hammelek*]—it is likely that he was the high priest responsible to the king for the supervision of the priests and cult of the Jerusalem temple. Here Azariah is called "son of Zadok"; however, the references to "Azariah son of Johanan" in 1 Chr 5:36–37—Eng6:10–11 and to an ancestor of Ezra in Ezra 7:3 and 2 Esdr 1:2 ("Azariah son of Meraioth") may refer to the same person. The genealogies given for this family differ (see Braun *1 Chronicles* WBC, 84; Myers *1–2 Esdras* AB, 154), and are probably intended to be only partial (indicating membership in the family of the high priests) rather than complete for the family.

2. Azariah son of Nathan (1 Kgs 4:5) is identified as the official in King Solomon's administration who supervised the 12 officers responsible for securing provisions for the palace. Commentators generally emend the MT of 1 Kgs 4:7–19b; however, since 12 individuals are named in the MT, the "one officer" in 1 Kgs 4:19b could be understood to refer to Azariah and show that the officials listed in 1 Kgs 4:8b–19a were his subordinates.

3. Azariah son of Amaziah and Jecoliah was made king of Judah at the age of 16 following the assassination of Amaziah (2 Kgs 14:19–22; 15:1–2; 1 Chr 3:11; 2 Chr 26:1). 2 Chr 26:7a involves a play on the name Azariah, although the king is called Uzziah [Heb *ʿuzîyāh, ʿuzîyāhû* (sic codex Leningradensis); *ʿuzzîyāh, ʿuzzîyāhû*] in 2 Chronicles and elsewhere (see 2 Kgs 15:13, 30, 32, 34; 2 Chr 26:1–23; 27:2; Isa 1:1; 6:1; and others). Some scholars hold with Myers (*Ezra, Nehemiah* AB, 149) that Azariah was the king's personal name and Uzziah was adopted as a throne name. Others (Williamson *1–2 Chronicles* NCBC, 333–34; Cogan and Tadmor *2 Kings* AB, 165–66) note that the roots *ʿzr* and *ʿzz* are semantically similar and treat Azariah and Uzziah as variants of one name. His achievements included the restoration of Elath to Judah (1 Kgs 14:22). He is credited with a reign of 52 years during which he did "what was right in the eyes of Yahweh" (2 Kgs 15:2–3; 2 Chr 26:3–4). Scholars usually assume that Azariah was put on the throne of Judah when his father was captured by Jehoash, king of Israel; however, chronological reconstructions vary. Both 2 Kings and 2 Chronicles report that Yahweh smote Azariah

with leprosy. In 2 Kings the report follows the statement that the high places were not destroyed and the people continued to sacrifice and burn incense at the high places (2 Kgs 15:4–5). 2 Chronicles reports that he entered the temple to burn incense and became angry when the chief priest [Heb *kōhēn hārōʾš*], also named Azariah, and a company of 90 priests challenged him. When he became angry with the priests, a skin disease ("leprosy") broke out on his forehead (2 Chr 26:16–21). His affliction forced him to turn over much of the administration of both the palace and the people of the land to his son Jotham.

4. Azariah son of Ethan (1 Chr 2:8) is identified as a grandson of Zerah and great grandson of Judah.

5. Azariah son of Jehu (1 Chr 2:38–39) is mentioned among the descendants of Judah in 1 Chr 2:3–4:24. He is identified as the father of Helez.

6. Azariah son of Ahimaaz (1 Chr 5:35—Eng6:9) was a Levite, a descendant of such important priestly figures as Kohath, Aaron, Phinehas, and Zadok; according to the Chronicler, he was the grandfather of the Azariah (see 1. above) who served as priest in the temple of Solomon.

7. Azariah son of Hilkiah (1 Chr 5:39—Eng6:13) is identified as a Levite and a descendant of the same family as Azariah son of Ahimaaz (6. above) and Azariah (1. above). He was the father of Seraiah and an ancestor of Ezra (Ezra 7:1; 1 Esdr 8:1; 2 Esdr 1:1).

8. Azariah son of Zephaniah (1 Chr 6:21—Eng6:36) is identified as a Levite, a descendant of Kohath through Izhar and an ancestor of Heman the singer. Heman and Asaph were appointed by David to be in charge of the service of song for "the tabernacle of the tent of meeting" and later for the temple of Solomon (1 Chr 6:16–17—Eng6:31–32).

9. Azariah son of Hilkiah (1 Chr 9:11) is identified as one of the priests who returned from the exile to live in Jerusalem. Azariah's name stands out from those of the priests listed in 1 Chr 9:10 because his pedigree is given. Some of the names of Azariah's forebearers are reminiscent of the names of the forebearers of Azariah son of Hilkiah (see 7. above). The title "chief officer of the house of God" [*nĕgîd bêt hāʾĕlōhîm*] properly belongs to Azariah and not to Ahitub, the last name in Azariah's pedigree. Thus Azariah should be understood to be another important figure from the family that included other priests named Azariah (1., 6., and 7. above).

10. Azariah son of Oded (2 Chr 15:1), with the spirit of God upon him, went out to meet King Asa as the king was returning to Jerusalem from a successful campaign against an army of Ethiopians commanded by Zerah and against the cities around Gerar. His message (2 Chr 15:2a–7), directed to the king and the people, stressed that God would be with them when they were with God, and that if they would seek God they would be allowed to find God. Azariah warned them, however, that should they forsake God, God would forsake them. He used an example drawn from the history of Israel to illustrate his point (2 Chr 15:3–6). He exhorted Asa to take courage and not let his hands be weak because there would be a reward for his deeds (2 Chr 15:7). In both the MT and the LXX, 2 Chr 15:8 reports that on hearing these words "and the prophecy of Oded the prophet," Asa continued to remove all the abominable idols from the land. Even the image of Asherah made and worshiped by Asa's mother was removed and destroyed, and she was removed from the office of queen mother. Asa led the people in swearing to enter into a covenant to seek the LORD God of Israel.

11. Azariah [Heb *ʿăzaryāh*] is identified as a son of Jehoshaphat (2 Chr 21:2). King Jehoshaphat had given him and his brothers great gifts of silver, gold, precious stones, and fortified cities in Judah. Jehoram was designated to succeed his father as king, however, because he was the firstborn. When Jehoram gained the throne, he killed Azariah and his brothers as well as some of the officials of Israel.

12. Azariah [Heb *ʿăzaryāhû*] is listed as another son of King Jehoshaphat (2 Chr 21:2) who was killed by Jehoram after Jehoram had gained the throne of their father.

13. Azariah son of Jeroham (2 Chr 23:1) was one of the commanders of hundreds [*śārê hammēʾôt*] who acted with Jehoiada in the crowning of Joash as king, the execution of Athaliah, the making of a covenant declaring that all the people and the new king would be a people of Yahweh, and the destruction of Baal's temple, altars, and priest (2 Chr 23:1–21).

14. Azariah son of Obed (2 Chr 23:1) was another of the commanders of hundreds who cooperated with Jehoiada to depose Athaliah and make Joash king (see 13. above).

15. Azariah (2 Chr 26:17, 20) is identified by the Chronicler as the chief priest [Heb *kōhēn hārō›š*] who withstood King Azariah/Uzziah (see 3. above) when the king entered the temple to burn incense upon the incense altar. He declared that it was not for the king to offer incense but for the priests, the descendants of Aaron, who were consecrated, and he warned that what the king was doing would bring no honor to him. 1 Kgs 4 lists Azariah (see 1. above) as one of the top level officials of Solomon's administration. He was the chief priest [Heb *hakkōhēn*] but was subordinate to the king. The impression of the relationship between chief priest and king given by the report of the confrontation between Azariah and Uzziah is different, and raises questions about the role of the chief priest or high priest in the period of the monarchy. To what extent might the Chronicler's report reflect the power of the postexilic high priesthood? How might the power of the high priesthood have changed over time during the monarchy?

16. Azariah son of Johanan (2 Chr 28:12) is listed as one of the chiefs of the Ephraimites [Heb *rā›šê bĕnê-ĕprayim*] who spoke in support of the prophet Oded when the prophet called upon the army of Israel to release the prisoners they had taken when Pekah was at war with Ahaz. Azariah and the other chiefs gave provisions to the captives from the spoil that had been taken and returned the captives to Jericho.

17. Azariah (2 Chr 29:12) is identified as a descendant of Kohath and Zadok. He was the father of Joel, one of the leaders of the Levites who aided in the cleansing of the temple under King Hezekiah. The Chronicler may have held that he was the chief priest during the reign of Hezekiah (see 18. below) and belonged to the important Levitical family of Israel's high priests which included several men named Azariah (see 1., 6., 7., 9., and 15. above).

18. Azariah (2 Chr 31:10, 13) served as chief priest [Heb *kōhēn hārō›š*] and as chief officer of the house of God [Heb *nĕgîd bêt-hā›ĕlōhîm*] during the reign of Hezekiah. The Chronicler seems to have understood him to belong to the family of Israel's high priests (see 1., 6., 7., 9., 15., and 17. above).

19. Azariah son of Jehallelel (2 Chr 29:12), a descendant of Merari, was one of the Levitical leaders who participated in the cleansing of the temple under King Hezekiah. The emphasis on the role played by the Levites in the cleansing of the temple and in helping the priests to flay the burnt offerings, the inclusion of the names of the Levitical leaders, and the statement that the Levites "were more upright in heart than the priests in sanctifying themselves" (2 Chr 29:34) illustrate the Chronicler's interest in the Levites as an important priestly group in Israel's cult.

20. Azariah son of Maaseiah (Neh 3:23, 24) is identified as one of the people who worked to rebuild the wall of Jerusalem. He restored the section of the wall that was next to his house. The individuals named in Nehemiah 3 should be understood as the leaders of groups of workers presumably including their extended families. This is clear in the cases of Eliashib the high priest (Neh 3:1), Shallum (Neh 3:12), Hanun (Neh 3:13), and Pedaiah (Neh 3:25–26), instances in which individuals are named with groups. In other cases, groups are mentioned but no individuals are named as leaders: the sons of Hassenaah (Neh 3:3), the Tekoites (Neh 3:5, 27), the priests, the men of the Plain (Neh 3:22), and the goldsmiths and merchants (Neh 3:32).

21. Azariah (Neh 7:7) is identified as a leader of exiles returning to Judah from Babylonian exile. The list of leaders and returned exiles in Neh 7:4–72a differs from those found in Ezra 2:1–70 and 1 Esdr 5:7–42 (Myers *Ezra, Nehemiah* AB, 10–22; *1–2 Esdras* AB, 58–71).

22. Azariah (Neh 8:7) was one of the Levites listed by name who helped the people to understand Ezra's reading of the Torah. Whether their help involved both translation and interpretation or interpretation only is a matter of scholarly debate (Fensham *Ezra and Nehemiah* NICOT, 217–18; Williamson *1–2 Chronicles* NCBC, 277–99).

23. Azariah (Neh 10:3—Eng10:2) was one of the priests who put his seal on the covenant made by those who had returned from exile. The covenant obligated the people to live by the commandments and ordinances of Yahweh (Neh 10: 29–30—Eng10:28–29), to avoid intermarriage with foreigners (Neh 10:31—Eng10:30), to refrain from buying from foreigners on the sabbath or holidays, to observe the sabbatical year and to refrain from charging interest (Neh 10:32—Eng10:31), to give one-third of a shekel each year for the service of the temple (Neh 10:33–34—Eng10:32–33), to provide wood for the altar (Neh 10:35—Eng10:34), and to bring the first fruits, firstborn, and tithes (Neh 10:36–40—Eng10:35–39).

24. Azariah (Neh 12:33) was one of those who participated in the dedication of the wall of Jerusalem (Neh 12:27–43). He may perhaps be identified with Azariah son of Maaseiah (see 20. above).

25. Azariah son of Hoshaiah (MT Jer 43:2) is named as one of those who refused to heed Jeremiah's warning not to go to Egypt following the assassination of Gedaliah. The MT lists a Jezaniah son of Hoshaiah as a member of the party that had approached Jeremiah to request that he ask Yahweh what they should do (Jer 42:1). The RSV assumes that this was Azariah. In the LXX (Jer 49:1) the 2 named leaders of the party that approached Jeremiah are Johanan and Azariah, but here and in the report of the people's reaction to Jeremiah's warning (Jer 50:2) the LXX identifies this person as Azariah son of Maaseiah.

26. Azariah (Dan 1:6, 7, 11, 19; 2:17) was one of the young Judean men selected to be trained in the "letters and language of the Chaldeans" (Dan 1:4). He was given a new name, Abednego, and along with Daniel, Hananiah, and Mishael ate vegetables and drank water rather than defile himself by eating the food appointed by the king (Dan 1:8–16). At the end of the training period the king found these 4 young men superior to his own magicians and enchanters (Dan 1:17–21). When the king's magicians and enchanters were unable to tell him both the dream he had dreamed and its interpretation (Daniel 2), the king issued a decree that all the magicians and enchanters were to be killed. Daniel called upon Hananiah, Mishael, and Azariah to seek God's mercy that they might not be destroyed with the rest of Babylon's sages, and the mystery was revealed to Daniel in a night vision. When the king made an image of gold and commanded that when everyone heard the sound of music they were to worship the image (Daniel 3), Hananiah, Mishael, and Azariah (here called Shadrach, Meshach, and Abednego) refused to worship the image, even when the king threatened to have them thrown into a fiery furnace. Their faith, courage, and deliverance made them examples for others who faced coercion by foreign rulers (1 Macc 2:59; 4 Macc 16:21; 18:12). The LXX includes a prayer attributed to Azariah and a hymn of praise attributed to the 3 young men (LXX Dan 3:24–90; Pr Azar).

27. Azariah is identified as a "leader of the people" who commanded forces under Judas Maccabeus. When Judas divided the forces, sending Simon and his forces to Galilee while he and Jonathan took their forces to Gilead, he left Azariah and Joseph son of Zechariah with part of the forces, ordering them to guard Judea but not to engage in battle with the Gentiles until the return of the rest of the forces (1 Macc 5:18–19). Azariah and Joseph, wishing to make a name for themselves, disobeyed their orders and led their forces in attacking Jamnia. Their forces were routed with 2,000 casualties reported (1 Macc 5:55–62).

28. Azariah, a descendant of Immer (1 Esdr 9:21), is listed as one of the priests who had married foreign wives and who were required to put away these wives and their children.

29. Azariah (1 Esdr 9:43) is listed as one of those standing at the right side of Ezra at the reading of the law—perhaps to be identified with Azariah the descendant of Immer (27 above).

AZARIAH, PRAYER OF. See DANIEL, ADDITIONS TO.

AZARIAS (PERSON) [Gk *Azarias* (Ἀζαριας)]. The name assumed by the archangel RAPHAEL in the book of Tobit (5:13—Eng5:12). Tobit, blind and destitute except for money left for safekeeping with a man named Gabael in Rages, prayed for help. God sent Raphael to assist him. The archangel identified himself to Tobit and his son Tobias as Azarias (meaning "God helps"), the son of the great Ananias ("God favors"), one of Tobit's relatives (5:13—Eng5:12). Zimmermann (1958: 75) argues that the names were chosen to please the reader through word plays. The book appears to be one of a couple of dozen efforts to combine two well-known folk tales, familiar to moderns as "The Grateful Dead" and "The Unlucky Bride" (Dancy 1972: 2–3). As is typical in folklore, neither Tobit nor Tobias recognized that Azarias was an angel in disguise.

True to the meaning of his name, Azarias assisted at every hand. He accompanied Tobias to collect Tobit's money from Gabael and instructed Tobias to take the heart, liver, and gall of a huge fish he had

caught (6:5—Eng6:4). Next (7:10—Eng7:9), Azarias negotiated the marriage between Tobias and Sarah, a beautiful kinswoman widowed seven times by a jealous demon (Asmodeus) before her marriages could be consummated (3:8). Azarias instructed Tobias to burn the fish's heart and liver on the wedding night to drive away the demon (6:17–18—Eng6:16–17). During the fourteen-day wedding feast, Azarias took Tobit's receipt to Gabael to secure the money (9:5). Finally, Azarias instructed Tobias to anoint Tobit's eyelids with the fish's gall, thus healing Tobit (11:7–13).

In the intertestamental period, Jewish speculation about ARCHANGELS flourished. Their number varied (principally four or seven), as did their identities. One basic list, which agrees with the book of Tobit (12:15) concerning their number, appears in En. 20:1–7, where they include Uriel, Raphael, Raguel, Michael, Seraqael, Gabriel, and Remiel. Rabinnic commentary on Gen 18:1 *(Gen. Rab.)* attributes their names to Babylonian influence, but modern day scholars contend that the real source was Zoroastrianism (Russell 1964: 258–59).

The Hebrew form of the name, AZARIAH, appears as Abednego in the Hebrew Bible (Dan 1:7). In the addition to Daniel known as The Prayer of Azarias and the Song of the Three Young Men, Azariah offers the prayer on behalf of the three captives and is mentioned again in v 66. Azariah also appears as the name of a Levite who assisted Ezra by interpreting the law (Neh 8:7, 1 Esdr 9:48), and as a general of Judas Maccabeus (1 Macc 5:18, 56, 60).

PAUL L. REDDITT

AZARU (PERSON) [Gk *Azarou* (Ἀζαρου)]. Forefather of an exiled family numbering 432 which returned to Judah with Zerubbabel according to the list in 1 Esdr 5:15. If AZZUR [Heb *ʿazzûr*] (Neh 10:18—Eng10:17) is accepted as an equivalent variant, then 1 Esdr 5:15 supplements Ezra 2:16b as *BHS* suggests (see Williamson *Ezra, Nehemiah* WBC, 25).

CRAIG D. BOWMAN

AZAZ (PERSON) [Heb *ʿāzāz* (עָזָז)]. Name of a Reubenite (1 Chr 5:8), the father of Bela, a kinsman of Beerah (who went into exile under Tiglath-pileser III in the second half of the 8th century according to 1 Chr 5:6). The name Azaz is a hypocoristic form of the theophoric Azaziah, which means "Yahweh is strong." Interestingly enough, although the name is vocalized by the Masoretes as *ʿāzāz* (which would agree with Jerome's *Azaz,* as well as the Ar *ʿazāzun*), the LXX reads *ōzouz,* while the Syr Peshitta reads *ʿūzî.* The Syr is probably explained as being a "Syrianization" of a root which is geminate in Heb, but middle weak in Syr. The LXX may be evidence for a late *ā* > *ō* shift in some dialects of Heb at the time of the LXX, analogous to that which took place in Phoenician, or may simply be an example of the LXX translators not knowing what to do with this name.

H. ELDON CLEM

AZAZEL [Heb *ʿăzāʾzēl* (עֲזָאזֵל)]. The destination or goal to or for which the scapegoat is sent on the Day of Atonement (Lev 16:8, 10, 26).

———

A. The Term
B. The Character of Azazel
C. Azazel before Leviticus 16

———

A. The Term

The meaning of the term *ʿăzāʾzēl* is not entirely clear. The main interpretations are: (a) It is the name of a demon (e.g., Delcor 1976: 35–37; Loretz 1985: 50–57; Tawil 1980). (b) It is a geographical designation meaning something like "precipitous place" or "rugged cliff" (*Sipra,* Aḥare Mot 2:8; *Tg. Ps.-J.* Lev 16:10,

22; Driver 1956: 97–98). (c) It is an abstract noun meaning "destruction" or "entire removal" (e.g., *BDB* 736). (d) It is made up of the terms *ʾēz ʾōzēl* "goat that goes (away)" and is a description of the dispatched goat (cf. the LXX, Vg; it is from this interpretation that we get our term "scapegoat").

Of the four views, understanding *ʿăzāzēl* as an epithet of a demonic personality is the most reasonable. The main evidences for this are: (a) Lev 16:8 prescribes that Aaron is to place a lot on each of the two goats provided by the Israelites. One lot designates one goat as being "for *Yhwh*" while the other lot designates the other goat as being "for *ʿăzāzēl."* As the first lot is for a supernatural being, *Yhwh,* so the second lot should be for a supernatural being of some sort. (b) The goat designated for *ʿăzāzēl* is sent out to *ʿăzāzēl* in the wilderness which is one of the usual abodes of demons (Isa 13:21–22; 34:11–15; perhaps also Lev 17:7; cf. Tob 8:3; Matt 12:43). (c) In pseudepigraphic literature Azazel appears as a full-fledged demonic being (*1 Enoch* 8:1; 9:6; 10:4–8; 13:1; cf. 54:5–6; 55:4; 69:2; *Apoc. Ab.* 13:6–14; 14:4–6; 20:5–7; 22:5; 23:11; 29:6–7; 31:5; on the problems of this tradition, see Hanson 1977: 220–33; Nickelsburg 1977: 397–404; Grabbe 1987: 153–55). (d) While the name could be interpreted as the epithet of a supernatural being while retaining the order of the consonants in the MT (*ʿzzl*), the etymology of the name has been explained as a metathesized form of *ʿzz-l* meaning something like "fierce god" or "angry god" which, if correct, would reveal decisively the demonic character of the being (cf. Tawil 1980; Loretz 1985: 50–57). The *Temple Scroll* and other literature at Qumran contain the form *ʿzzl* (11QTemple 26:13 and see Grabbe 1987: 156).

B. The Character of Azazel

Though Azazel is a demonic personality, caution must be observed in determining his exact character in the Day of Atonement ritual. Just because he is a demon does not automatically mean that he functions like demonic personalities in other religions of the ANE. In fact, there is reason to suppose that in the biblical rite he was to be considered a rather peripheral and impotent figure, hardly more than a place-holder representing the geographical goal of the scapegoat's dispatch (Wright 1987: 21–25). A main reason for believing that the formulators of Leviticus 16 thought of Azazel in this way is the tendency of Israel's monotheistic religion to reject or at least limit any power that would compete with Yahweh (Duhm 1904: 28, 32). Another reason is that the Priestly writings have very little to say about demons. The only other reference to demons besides that to Azazel is in Lev 17:7. But the use of *śĕʿîrîm* ("goat-demons") here seems to be more a pejorative belittling of such beings than an expression of belief in their reality and vitality (cf. similar use of demonic terminology in Deut 32:17; Ps 106:37).

The entirely different treatment of corresponding demonic figures in rites of elimination from the ANE seems to confirm this picture of Azazel (for examples from ancient Anatolia and Mesopotamia, see Wright 1987: 31–74). Many of these rituals speak of offended or angry deities or demons who must be propitiated so that a plague or other evil might be lifted from mankind or an individual. The attacking supernatural beings are addressed with incantations which reveal in some detail the personality of the demonic beings. The human sufferers send offerings of appeasement and substitution to assuage the demonic wrath. For example, in the Hittite ritual of Ashella which seeks to dispel a demoncaused plague among the Hittite army (see Wright 1987: 50–51), leaders of the army decorate rams with colored wools and other materials. They recite: "Whatever god is moving about, whatever god has caused this plague, for you, behold, these rams I have tied up. Be herewith appeased!" The next day the animals are driven into the open country with beer, bread, and perhaps milk as offerings. Before the rams are sent away, the leaders place their hands on the animals and say: "Whatever god has caused this plague—now, behold, the rams are standing; they are very fat in liver, heart, and genital member. Let the flesh of humans be hateful to him. Moreover, be appeased with these rams!" In other rituals, instead of being attacking demons, gods may be custodians of evil. They are called upon to take away and dispose of the evil caused by another source. For their help they receive offerings of thanksgiving. For example, in the Hittite ritual of Ambazzi (Wright 1987: 57), a woman cult officiator removes a bowstring with tin on it from a ritual patient, puts it on a mouse, and says: "I have taken away from you [i.e., the patient] evil and I have put it on the mouse. Let this mouse take it to the high mountains, the deep valleys (and) the distant ways." After this she lets the mouse go, saying: "O Alawaimi [a god], drive this (mouse) forth, and I will give to you a

goat to eat." In contrast, Leviticus 16 does not speak of Azazel in any of these terms: he causes no harm, he receives no offerings (the scapegoat is not a sacrifice), prayers are not made to him. Such a laconic treatment of Azazel in view of these other rituals suggests that Azazel is not an active being that is due any sort of veneration or attention.

C. Azazel Before Leviticus 16

Finally, that Azazel appears in repressed form in the Priestly ritual intimates that he is not an invention of that school of thought but comes from a pre-Priestly form of the rite in which he played a more active role, either as an angry deity as one proposed etymology of his name may suggest (*ʿzz-ʾl*) or as merely a beneficent custodian of evil. The reason that he was retained in the Priestly version of the rite may be due to popular belief which would not allow total expunging of the personality.

DAVID P. WRIGHT

AZAZIAH (PERSON) [Heb *ʿazazyāhû* (עַזַזְיָהוּ)]. The name means "Yahweh is strong." In certain instances, the versions (LXX and Vg) read *ʿuzzîyāhû* (Uzziah) for *ʿazazyāhû* (Azaziah). There are 3 people in the MT who bear this name.

1. A Levite who was appointed to play the lyre during the transfer of the ark of the covenant from the house of Aminadab to Jerusalem (1 Chr 15:21).

2. The father of Hoshea, the chief officer of Ephraim in the reign of David (1 Chr 27:20).

3. One of 12 temple overseers (presumably a Levite) who was in charge of tithes and dedicated contributions. He was appointed by Hezekiah and Azariah the chief temple officer during Hezekiah's reform.

H. ELDON CLEM

AZBUK (PERSON) [Heb *ʿazbûq* (עַזְבּוּק)]. A Judahite of the time of Nehemiah (Neh 3:16). His son, also named Nehemiah, acted as supervisor of half of the Judean district of Beth-zur during the rebuilding of the wall of Jerusalem. The meaning and grammatical analysis of the name *ʿazbûq* is uncertain (perhaps "[the god] Buk is strong"; cf. *ʿazgad,* "[the god] Gad is strong," Neh 10:16).

NORA A. WILLIAMS

AZEKAH (PLACE) [Heb *ʾăzēkâ* (אֲזֵקָה)]. A town within the confines of the N Shephelah district of Judah (Josh 15:35).

A. Historical References

Azekah is first mentioned in the story of the 5 Amorite kings whom Joshua defeated at Gibeon and pursued as far as Azekah (Josh 10:10–11). During the encounter of David with Goliath, the Philistines camped in the valley of Elah between Socoh and Azekah (1 Sam 17:1). Rehoboam (922–915 B.C.) fortified Azekah and included it within the defensive system erected after the division of the United Monarchy (2 Chr 11:9).

An Assyrian inscription mentions Azekah in connection with Sargon II's campaign against Iamani, ruler of Ashdod, in 712 B.C. (Tadmor 1958). Still later, Azekah and Lachish are mentioned as the last remaining fortresses of Judah to withstand the Babylonian onslaught (Jer 34:7). Similar information appears in Lachish letter no. 4 (*ANET,* 322). The town was conquered by Nebuchadnezzar apparently in 588 B.C., a short while before the fall of Jerusalem. With the return from exile, several families of the tribe of Judah resettled in Azekah (Neh 11:30). Fragmentary information from the period following the destruction of the 2d Temple indicates that Azekah was still occupied. Eusebius located Azekah between Eleutheropolis (Beth Govrin) and Jerusalem (*Onomast.* 18:10), a possible reference to Khirbet al-'Almi, E of Tell Zakariya. The Madeba map, which dates from the 2d half of the 6th century A.D., calls the area "Bethzakar," the present-day Kefar Zechariah, which has given its name to Tell Zakariya (Avi Yonah 1954).

B. Site and Identification

Tell Zakariya (M.R. 143123) is located 5.5 miles NE of Beth Govrin. It stands about 117 m above the Elah Valley, which skirts the hill on the N and E. The mound is flat-topped, triangular in shape, and measures 330 by 170 m.

Over a century ago, J. Schwartz identified Tell Zakariya as the site of Azekah on the basis of written sources. F. J. Bliss, who excavated the site (Bliss and Macalister 1902), suggested the name had been transferred later from Azekah to Khirbet Shuweikeh, some 6 km further S in the Elah valley, and that biblical Socoh might conceivably be in the area of Tell Zakariya. However, after the discovery of a large Israelite site at Khirbet Abad (adjacent to Khirbet Socoh), Tell Zakariya has become generally accepted as the site of the town of Azekah.

C. Exploration of the Site

Tell Zakariya was excavated in 1898–99 under the auspices of the Palestine Exploration Fund, and was directed by F. J. Bliss, assisted by R. A. S. Macalister (Bliss and Macalister 1902).

In the SW, building foundations were examined and were found to belong to 3 towers built of rough stones bonded with clay. There were no traces of a wall connecting the towers, which led the excavators to conclude that the towers constituted individual forts intended to protect this side of the mound, which was particularly vulnerable to attack. On the basis of the depth of the foundations and some ceramic finds, the towers were assigned to the Roman-Byzantine period.

A rectangular fortress with towers at each corner was uncovered on the elevated SE section of the mound. Towers also stood along the middle of the E wall. The fortress gate was not discovered, although several doorways were found inside the towers. The entrance levels varied in elevation, and it thus seems that the fortress interior was not of equal height throughout.

Bliss felt that the towers in section I were a later addition to the fortress in section II, while Macalister assumed that they were contemporaneous but constructed by different groups of masons. Both attribute the construction of the fortress to Rehoboam (2 Chr 11:9).

Half of the fortress area was excavated, and bedrock was reached at a depth of approximately 6 m. The excavators were unable to assign periods to the buildings and other remains, nor did they determine the exact number of periods, although they initially distinguished 4 main occupation periods.

Period A is clearly defined by pottery of the type they labeled "Early Pre-Israelite" (see below). Among the objects found was a vessel containing assorted Egyptian jewelry, including two scarabs, one with the name of Thutmose III and the other of Amenhotep II. Period B is a plastered floor slightly above bedrock, with stamped handles containing the word *lmlk* ("[belonging] to the king") and two-winged scarabs. In period C, which the excavators labeled "Jewish" and considered to be later than period B, another plastered floor was discovered, containing four-winged scarab stamped jar handles. Period D has several rock-hewn tombs assigned to the Roman period. Also found were Seleucid, Roman, and Byzantine shards, as well as several graves close to surface level and considered of Arab origin.

A trial pit approximately 30 by 20 m was dug in the center of the mound, where bedrock was reached at no more than 4 m. The pottery consisted mainly of sherds of the so-called Late Pre-Israelite and Jewish

periods. Since Seleucid pottery was extremely rare and no Roman-Byzantine shards were uncovered, the excavators concluded that the mound had been deserted by these periods.

All these finds led the excavators to conclude that the settlement had lasted, with short interruptions, from ca. 1500 B.C. until the Byzantine period. However, Albright (1960) subsequently examined the pottery tables published in the excavation reports and suggested the following amended dates:

Period	*Bliss-Macalister*	*Albright*
A	Early Pre-Israelite ca.?–1500 B.C.	ca. 3000–1800 B.C.
B	Late Pre-Israelite ca. 1550–800 B.C.	1800–1000 B.C.
C	Jewish ca. 800–300 B.C.	1000–587 B.C.
D	Seleucid ca. 300– B.C.	4th–1st cent. B.C.

Today it is possible to introduce additional revisions in the chronology of the various structures on this site. The excavators attributed the fortress to Rehoboam (928–911 B.C.) and dated the 3 towers at the SW extremity of the mound to the Roman-Byzantine period. More recently, S. Yeivin (Avi-Yonah and Yeivin 1955: 289–90; cf. Horowitz 1980) assigned the construction of the fortress to the period of the Judges, and the towers (which in his opinion form part of the city wall) to Rehoboam, who also had the fortress repaired.

Other Israelite fortresses of similar construction have since been found in Judea (Mazar 1982). Also, since the various types of *lmlk* seal impressions can be assigned to the end of the 8th century, it may be assumed that the fortress was in existence at that time.

EPHRAIM STERN

AZEL (PERSON) [Heb *ʾāṣel* (אָצֶל)]. Var. AZALIA (?). A descendant of Saul through the line of Jonathan. His name occurs 6 times in the Heb Bible and twice in the Talmud (*Pesaḥ.* 62b). In the former, the name is part of a list of persons (1 Chr 8:35–36) which cannot be traced to any extant earlier source. When Azel was thought to have lived cannot be determined exactly. The names in the genealogy have been viewed as extending down into late preexilic times or even into the Exile itself. On the whole, it seems reasonable to suppose that Azel lived in the late 7th to early 6th centuries B.C.E. The occurrences of Azel in 1 Chr 9:43, 44, 45 are due to a repetition of the Saulide genealogy in 1 Chronicles 8. This duplication serves to introduce 1 Chronicles 10 which tells the story of Saul's death on Mount Gilboa. Not having chapter and verse divisions by which to cite a biblical text, the writer of the Talmud cites the material from 1 Chr 8:37–9:44 by reference to the name Azel in these verses. The name appears to be a variant form of AZALIAH (2 Kgs 22:3) and may designate "noble" or "laid aside, reserved" in the sense of being protected.

JAMES M. KENNEDY

AZETAS (PERSON) [Gk *Azētas* (Ἀζητας)]. Ancestor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:15). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:16; Neh 7:21). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

AZGAD (PERSON) [Heb *ʿazgād* (עַזְגָּד)]. Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:12 = Neh 7:17 = 1 Esdr 5:13) and later under Ezra (Ezra 8:12 = 1 Esdr 8:38). The leader of the clan affixed the family name to the covenant of Nehemiah in Neh 10:16—Eng10:15. For further discussion of the exilic name lists and bibliography see AKKUB and ATER. The etymology of the name is uncertain. It has been identified as a theophoric name meaning: "Gad (deity) has proved himself strong" (Noth *IPN,* 190) or "Gad is strong" (Fowler, *TPNAH,* 64). Since these names occur only in the postexilic list, the name may have Persian derivation: *izgad* "messenger" (Fowler, *TPNAH,* 64).
CHANEY R. BERGDALL

AZIEL (PERSON) [Heb *ʿăzîʾēl* (עֲזִיאֵל)]. See JAAZIEL (PERSON).

AZIZA (PERSON) [Heb *ʿăzîzā* (עֲזִיזָא)]. A descendant of Zattu and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:27). Aziza is derived from the verbal root *ʿzz* "to be strong" and probably means "the strong one" (*IPN,* 225). In the parallel text of 1 Esdr 9:28, the name Zerdaiah appears in the position Aziza holds in Ezra 10:27. Aziza was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:8; Neh 7:13). For further discussion, see BEDEIAH.
JEFFREY A. FAGER

AZMAVETH (PERSON) [Heb *ʿazmāwet* (עַזְמָוֶת)]. The name of several men in the OT. The name Azmaveth itself means "strong (*ʿaz*) as Death (*māweth*)" or "strong is Death," where Death is the personification of the god of death (cf. Hos 13:14; Hab 2:5; Pss 18:5, 49:5, 116:3; Prov 13:14). The LXX reading, Azmoth, is a legitimate variation on Azmaveth, with the same meaning (see DEATH). See also AZMAVETH (PLACE).

1. One of DAVID'S CHAMPIONS (the *šālišîm;* RSV Mighty Men), called the Barhumite (Heb *habbarḥumî;* 2 Sam 23:31; LXX *ho Barsamites*). 1 Chr 11:33, conversely, lists Azmaveth as the Baharumite (Heb *habbaḥarûmî;* LXX *ho Beermi*), apparently identifying him as a native of Bahurim, a place on the road from Jerusalem into the Jordan valley, and N of the Mount of Olives (see BAHURIM; 2 Sam 3:16; 16:5; 17:18; 19:17, etc.). The disagreement of both parallel texts in the MT as well as the quite different variants in the LXX suggest that the problem here is a corrupt text. Of the available readings, the Baharumite makes the most sense, though the other possibilities are not thereby excluded.

2. The father of Jeziel and Pelet, two archers and slingers of the tribe of Benjamin who were outlaw companions with David at Ziklag (1 Chr 12:3). This Azmaveth may possibly be the same as Azmaveth (1. above).

3. The son of Jehoaddah, a descendant of Saul and Jonathan (1 Chr 8:36, 9:42).

4. The son of Adiel, the treasurer in Jerusalem under David. (1 Chr 27:25).

5. The founder of a house in Israel, father of 42 men who returned from the exile (Ezra 2:24). This verse may, however, refer to 42 men of the city of Beth-Azmaveth (cf. Neh 7:28; see AZMAVETH [PLACE]; *Ezra Nehemiah* WBC, 26).
D. G. SCHLEY

AZMAVETH (PLACE) [Heb *ʿazmāwet* (עַזְמָוֶת)]. Var. BETH-AZMAVETH; BETHASMOTH. A village in the Judean hills N of Jerusalem probably established during the Israelite period (*LBHG,* 108), but remembered in the text from the time of the return from exile. The village is remembered as Azmaveth (Ezra 2:24, Neh 12:29), Beth-Azmaveth (Heb *bêt-ʿazmāwet,* Gk *Bēthasmōth;* Neh 7:28), and Bethasmoth (Gk *Baitasmōn;* 1 Esdr 5:18). Though these names vary, they each appear in parallel accounts of a census of the people who returned to Jerusalem and Judah from captivity in Babylon. The

same number of returnees (42) was recorded for each of them, and they appear in the same place in the list between Anathoth and Kiriatharim. The Azmaveth region is also remembered for providing singers for the dedication of the reconstructed wall of Jerusalem (Neh 12:29). The village has been identified as modern Hizmeh (M.R. 175138), a suggestion first made by Robinson and widely accepted by scholars (Albright 1922: 156). The site near Geba (modern Jeba‹, M.R. 175140) and Anathoth (modern Râs el-Kharrûbeh, M.R. 174135), whose patriarch was most likely the Asmaveth who was a descendant of Saul, has provided archaeological remains from the 2d Temple period (*EncMiqr* 2: 95). See also AZMAVETH (PERSON).

SUSAN E. MCGARRY

AZMON (PLACE) [Heb ‹*aṣmôn* (עַצְמוֹן)]. A station named both in the description of the S frontier of Canaan (Num 34:45), and in the delineation of the extreme S border of the tribal allotment of Judah (Josh 15:4). It is the last station W of the BROOK OF EGYPT. Alt (1953) has persuasively argued that the border list of Joshua 15 is derived from an ancient legal document delineating the territorial claims of the tribes during the period of the Judges. The parallel nature of the S border descriptions in Numbers 34 and Joshua 15 suggests that both depend on a single, presumably premonarchical, tradition. Azmon has often been identified with Ain Qoseimeh, a small spring in the vicinity of Ain el-Qudeirat (KADESH-BARNEA[?]), (*IDB* 1:327), but a more plausible possibility is Ain Muweilih (M.R. 085010), where archaeological survey (Rothenberg and Aharoni 1961: 36–37) has revealed a station on the ancient road to S Sinai dating to the Iron I period.

WADE R. KOTTER

AZNOTH-TABOR (PLACE) [Heb ›*aznôt tābôr* (אַזְנוֹת תָּבוֹר)]. A town that serves as the starting point of the description of the W border of the territory of the tribe of Naphtali (Josh 19:34). Noth (1935: 199–200) has suggested that Josh 19:33 described the N border of the tribal territory; however, the opening phrase of v 34 clearly shows that v 33 actually describes the S border from W to E. Verse 34 opens with the formula "And the border turned back westwards." This formula appears several times in Joshua, indicating that the border description returns to the starting point and then continues in the opposite direction, in this case northwards. The border of the territory of Zebulun is described in opposite directions from one starting point—Sarid (Josh 19: 10, 12); the border of the territory of Asher is described similarly, the starting point being Helkath (Josh 19:25—in LXX "from Helkath"—and in v 27 "And the border turned back eastwards"). It would appear that in the case of Naphtali the starting point is Mt. Tabor; but in order to achieve greater accuracy, *two* starting points appear, HELEPH for the S border (to be sought to the E of Mt. Tabor) and Aznoth-Tabor for the W border (to be sought N of the mountain). Saarisalo (1927: 127) identified the latter at Kh. Umm-Jubeil (M.R. 186237), 4 km N of the mountain, situated on a small hill ideally suited as a starting point for a border description. Saaris-alo reported LB pottery from the site, but recent archaeological surveys report only pottery from Iron Age II and later (Zori 1977: 105; Gal 1982: 20).

RAFAEL FRANKEL

AZOR, TEL (M.R. 131159). Tel Azor is situated about 6 km SE of Tel Aviv. The Arabic name Yazur preserves the ancient name of the site, which should probably be identified with "Azor" mentioned in the

Vatican edition of the LXX (Joshua 19:45) where it appears as one of the cities of Dan (instead of MT *yhd*). Azor (Azuru) is mentioned in the late 8th century B.C. as a place Sennacherib captured from Sidqa king of Ashkelon (*ANET*, 287).

The site, measuring some 15 dunams, has not yet been excavated. A survey has revealed shards of almost all periods from the Chalcolithic to the medieval. On the summit of the mound stand the ruins of a Crusader fortress (Chateau des Plains). In the Kurkar hills adjacent to the site, many tombs were discovered dating to the Chalcolithic, EB I, MB II, LB, and Iron I–II periods. The extent of this vast cemetery is not known; most of it is now covered by the houses of present-day Azor, as well as by the Holon industrial area. The large number of burials in a relatively small tell suggests that this was a regional cemetery, although this hypothesis still needs to be substantiated.

"Salvage excavations" have been carried out from time to time as necessitated by the current building activity. The following excavators should be mentioned: J. Perrot and M. Dothan (1950s); R. Gophna, A. Druks, and Y. Shapira (1960s); A. Ben-Tor and O. Negbi (1970s). So far only a small part of these excavations has been fully described in published writings.

Since J. Perrot's excavations, Azor has become the type-site for Chalcolithic burials in ossuaries. More than 120 such ossuaries made out of clay were unearthed in a burial cave, in which 9 phases have been observed, including one habitation phase. Most of the ossuaries are house-shaped and some have zoomorphic shapes; others are jars. The house-shaped ossuaries are of major importance since they give some idea of the type of dwelling common in this period. Pottery constitutes the great majority of the funerary offerings: the assemblage is typologically closer to the Beer-Sheba than to the Ghassulian culture.

A large number of burial caves date to this period. They are cut into the Kurkar and all have a similar plan: 3 or 4 steps descending into a kidney-shaped burial chamber of ca. 20 square m. The number of those interred in each tomb may reach 100; burials are usually secondary; an occasional cremation has been observed. Most of the interred are of the local Mediterranean stock, but in several cases African-types (most probably Egyptians) have been noted. This corresponds well to the burial offerings: While most of the ceramic finds are clearly paralleled in other EB I assemblages throughout the country (mainly of the Proto-Urban A family of Kenyon's topology), some of the finds (clay vessels, a slate cosmetic palette, a flint knife, and various beads) are imported from Egypt.

An MB II tomb in which humans were buried side by side with horses is noteworthy. This phenomenon has so far been observed in only one other site in Israel, Tell el-Ajjul. In LB tombs, imported pottery (mainly of Cypriot origin) constitutes an important part of the assemblage.

Several tombs are dated to the 12th or 11th century B.C. Burials in pits, in jars, in brick coffins, as well as some cremations, are among the burial practices observed. In all those tombs, rich assemblages of burial gifts were found: the large variety of Philistine ware is especially noteworthy.

Several communal burials belong to this period: bodies and offerings were placed in successive layers in tombs surrounded by a stone fence. Also noteworthy is a group of burials in typical Israelite jars, one of which bears an inscription of the Hebrew name *šlmy*.

AMNON BEN-TOR

AZOTUS (PLACE) [Gk *Azotys* (Ἄζοτυς)]. The name for the Philistine city of ASHDOD in the Apocrypha and the NT. Located halfway between Gaza and Joppa, the ancient city stood less than 3 miles inland. Ashdod was excavated in 1962–72, and its history during the Maccabean and Roman periods is well-documented, particularly in 1 Maccabees and Josephus.

The city of Azotus appears (1 Macc 4:15) as a place of retreat (see Goldstein *1 Maccabees* AB, 265) to which soldiers in the army of Gorgias (one of the officers of Lysias sent to defeat Israel) fled when routed by Judas. Also, Jonathan attacked the city in 147 B.C. (1 Macc 10:78) and burned it along with its villages and its temple to Dagan (10:83–84). Apollonius, the governor of Coele-Syria who was besieging Jamnia, had challenged Jonathan to fight (10:70–73), so Jonathan captured a garrison of Apollonius headquartered at Joppa (10:74–76). Then Apollonius took 3,000 cavalry S to Azotus (i.e. away from Joppa), as though retreating from Jonathan, and left a cavalry of 1,000 behind to catch Jonathan between the two units (10:79; Josephus says [*Ant* 13.4.4 §92] that Apollonius first marched N and then retreated). Apollonius probably chose to fight at Azotus because the level terrain there was better-suited for cavalry than the terrain at Joppa (so Goldstein *1 Maccabees* AB, 422).

Azotus is mentioned again (1 Macc 16:10) in connection with the defeat of Cendebeus, "commander-in-chief of the coastal country" (15:38) under Antiochus VII (reigned 139/8–129/8). John Hyrcanus defeated Cendebeus on a plain outside Modein, sending Cendebeus fleeing to the stronghold at Kedron which he had built (16:9, cf. 15:41). Some of his soldiers fled to the "towers at Azotus." 1 Macc 16:10 reads: "John burned it with fire." The antecedent for "it" is unclear. One might suppose that Azotus was intended, and two Latin MSS read "them," i.e., the towers of Azotus. However, John had followed Cendebeus to Kedron, which is probably the city he torched.

Elsewhere, Azotus appears as the name of a district, rather than a city. In 164 B.C. Judas attacked Azotus (1 Macc 5:68), which was further defined by the appositional phrase "the land of the Philistines" (Goldstein *1 Maccabees* AB, 305). Later (ca. 142 B.C.), Simon fortified Joppa and Gazara (a city on the border of [the territory] of Azotus; 1 Macc 14:34).

One other text mentioning Azotus (1 Macc 9:15) is often considered erroneous. In 160 B.C. Judas fought his last battle, against Bacchides, who had marched from Syria to Jerusalem and then to Berea (9:1–4). Judas was encamped at Elasa nearby (9:5). During the battle Judas attacked the strong flank of the enemy, putting Bacchides' soldiers to flight and pursuing them "as far as Mount Azotus" (9:15). Since Azotus lay approximately 35 miles away, and since the city sits near the coast, and not on a mountain, scholars have often suspected the reading. The *Oxford Annotated Apocrypha* suggests *el-asur*, which lay 6 miles NE of Berea (*el-Bireh*). Goldstein (*1 Maccabees* AB, 373), however, follows the conjecture of Johann David Michaelis (*Deutsche Übersetzung des ersten Buchs der Maccabäer mit Anmerkungen*, 1778) that a copyist misread *ʾšdwt* ("watersheds" or "slopes") as *ʾšdwd* ("Ashdod"). On the other hand, Van Henten (1983: 46) points out that in 3:24, 4:14 and 16:9 the retreating army is also pursued a great distance. In addition, he wants to read the Greek word *orous* not as the genitive singular form *to horos* (mountain) but as an accusative plural of *ho horos*, (boundary) (1983: 47). Thus, the enemy would have fled, not to Mount Azotus (since Azotus is located on the coastal plain), but to the boundary of the territory of Azotus. To the objection that the preposition *heos* takes nouns in the genitive as its object, Van Henten lists examples of its use with the accusative.

Josephus recounts the ensuing history of the city. Alexander Jannaeus held Azotus at the beginning of his reign (*Ant* 13.15.4 §395), and the ruins show evidence of an attack during the Maccabean period, so scholars often assume it was captured by John Hyrcanus. Archaeologists uncovered a coin of Antiochus VIII, dated to 114 B.C., which presumably sets the date after which the city fell into Judaean control. In 63 B.C. Pompey took Azotus away from Judah (*JW* 1.7.7 §156), but Gabinius (governor of Syria from 57–55 B.C.) restored it to Judah under Hyrcanus II (*JW* 1.8.4 §166). Herod's kingdom included the city, which he willed to his sister Salome (*JW* 2.6.3 §98). During the First Revolt the city was captured by the Romans under Vespasian, who stationed a garrison there (*JW* 4.3.2 §130).

In the NT, Azotus is mentioned (Acts 8:40) as the city where Philip the Evangelist was found after baptizing the Ethiopian Eunuch.

PAUL L. REDDITT

AZRAQ (PLACE). Several oases located at the center of a 12,000-km-square internal drainage basin, 80 km E of Amman. The rainfall over the basin varies from just over 200 mm along the N and W fringes to less than 50 mm in the SE, hence pastoralism is the only viable subsistence activity over much of the area. The N portion of the basin is covered by late Tertiary and Quaternary basalts while the S area comprises early Tertiary limestones and marls, and is covered by a pavement of chert gravel. At Azraq there are a number of copious perennial springs which feed 2 areas of marshland (Biraket el-Ora and Biraket Qeissiyeh). There is also a substantial sabkha (Qa el-Azraq) from which salt is extracted by the villagers. (For further environmental details and modern history see Nelson 1973.)

The springs at Azraq have provided a focus for settlement since the Stone Age. In 1956, mechanical diggers uncovered two impressive late Acheulian/Levallois Mousterian sites at Ain el-Assad and C spring. These were briefly examined by Harding and Kirkbride but have only been recently excavated (Rollefson 1980; 1982; Garrard et al. 1987). Numerous sites of Epipalaeolithic and Neolithic date have been located around the marshes and several were sounded in 1985 (Garrard, Stanley Price, and Copeland 1977; Garrard et al. 1985; 1987). One of these, known as Azraq 31 and dating to ca. 6000 B.C., has produced the earliest evidence of ovicaprid pastoralism from the E desert of Jordan. Betts (1983; 1984; 1985) has found many stone corrals, wheel houses, and "desert kites" in the basalt desert N and E of Azraq. Desert kites are V-shaped structures with a corral at the junction end of the V. They usually open onto areas of good grazing and are thought from historic descriptions, rock drawings, and ethnographic accounts to have been used for capturing gazelle and other large herbivores. Some of these structures are associated with Neolithic artifacts, but from travelers accounts others were still in use in the last century (Mendelssohn 1974).

During the classical and medieval periods, Azraq seems to have been an important watering point on the trade route from the Levant through the Wadi es-Sirhan to central Arabia. Three forts guard the approaches to the oasis—Qasr el-Uweinid, Qasr Aseikhim, and Qasr el-Azraq (Kennedy 1982; Bowersock 1983). Qasr el-Uweinid sits on a basalt bluff overlooking the Wadi el-Uweinid, 13 km SW of modern Azraq ed-Duruz. It is a trapezoid structure with remnants of a tower inside. An inscription at the site refers to it as a *castellum novum Severianum,* suggesting a date of around 200 A.D. A second inscription documents the establishment of a *praesidium Severianum* with a vexillation of the legion Third Cyrenaica. Qasr Aseikhin is located about 13 km NE of Azraq ed-Duruz on the summit of a basalt peak. It is a square fortress with rooms arranged around a central courtyard, and it may also date to the reign of Septimius Severus. Qasr el-Azraq is adjacent to Biraket el-Ora in Azraq ed-Duruz, and seems to have been rebuilt on several occasions. Early aerial photographs show the outline of a large, square encampment which could be of Severan date. The present structure was built inside the encampment before the end of the 3d century A.D., as inferred from an inscription which dates to the period of the Tetrarchy. A later inscription inserted in the castle entrance suggests that the fortress was rebuilt during the governorship of Azz el Dyn Aybak between 1213 and 1238 A.D.

Approximately 5 km S of Azraq el-Duruz are the springs and marshes of Biraket Qeissyeh. Surrounding the springs and enclosing an area of about 10 dunums, is a well-built buttressed wall of either classical or early Islamic date. A second similarly well-constructed wall extends from the first wall around the S and E sides of the marshes. Kennedy (1982) suggests it may have been built to separate the fresh water of the marshes from the more saline water of the sabkha, but recent sondages by Garrard indicate that it was not deep enough to achieve this objective, but that it probably represented an estate boundary. Until the large-scale pumping of water of the last two decades, the Azraq marshes supported a very rich wildlife and was a focus for the spring and autumn bird migrations through the area (Nelson 1973).

ANDREW N. GARRARD

AZRIEL (PERSON) [Heb *ʿazrîʾēl* (עַזְרִיאֵל)]. A name, the precise meaning of which is uncertain (*TPNAH,* 133). It is borne by 3 persons mentioned in the Bible.

1. In the historical review of the tribes of Israel, the Chronicler mentions Azriel as one of the 7 eponymous leaders of the half-tribe of E Manasseh (1 Chr 5:23–24). Famous for their military prowess, political leadership, and enlightened leadership as the heads of their father's house, they are credited with enlarging their constituency and its territory, so that the territory from the land of Bashan to Mount Hermon became the land of East Manasseh in the early days of the Transjordanian conquest. The addendum in 1 Chr 5:25,26 must be read with the subject understood as the 21/2 tribes, not the 7 East Manasseh leaders and their constituency.

2. The father of Jerimoth (so MT) and the tribal head of the tribe of Naphtali in the Chronicler's reconstruction of the officialdom of David (1 Chr 27:16–19).

3. The father of Seraiah who functioned as a member of the court of Jehoiakim (Jer 36:26). In 605 B.C., when the relations between Judah and Babylon were deteriorating, Jeremiah collected his oracles and bid Baruch his secretary read them to the people who would attend a fast to be observed in the 9th month. The revolutionary words of the prophet so disturbed the princes in the audience that they brought word immediately to the king. No doubt in fierce anger, Jehoiakim commanded 3 high officers of the royal court to apprehend Baruch and Jeremiah. These 3 court officials were Jerahameel the king's son, Shelemiah the son of Abdeel, and Seraiah the son of Azriel. Since all other data are absent, one can but speculate about Azriel on the basis of his son's high court position and royal mission.
EDWARD R. DALGLISH

AZRIKAM (PERSON) [Heb *ʿazrîqām* (עַזְרִיקָם)]. **1.** The 3d son of Neriah, a descendant of Zerubbabel. His name appears in 1 Chr 3:23 in an extended genealogy of exilic and postexilic Davidic descendants. Scholars are in disagreement about whether the genealogy from v 21b on—from the phrase "the sons of Hananiah"—should be understood as listing the descendants of Zerubbabel or is composed merely of unconnected lists which have been attached at this point (see Williamson *1–2 Chronicles* NCBC, 58; Myers *1 Chronicles* AB, lxxxviii–lxxxix). If Azrikam is considered a descendant of Zerubbabel then he lived 5 generations later, if v 21b is understood as listing the sons of Hananiah; or if the reading of the LXX for v 21b is adopted (see RSV), he lived 9 generations later. The former is more likely (see Myers, AB, 18–21; Williamson, NCBC, 58).

2. A Levite, a descendant of Merari the 3d son of Levi. Azrikam occurs in Merari's line only in the genealogies given in Neh 11:15 and 1 Chr 9:14. In the partially overlapping lists in 1 Chr 6:19, 29–30 = 6:44–47, only Hashabiah appears from 1 Chr 9:14 = Neh 11:15. This may indicate preservation of different lines of the genealogy in different settings. Azrikam belonged to the house which was given responsibility for the outside work of the House of the Lord (Neh 11:15).

3. A descendant of Jonathan, the son of Saul. In both 1 Chr 8:38 and in the repetition of this genealogy in 1 Chr 9:44, Azrikam is listed as the son of Azel in the extended genealogy of Benjamin (1 Chr 8:1–40).

4. The steward or commander of the royal palace (Heb *năgîd habbāyit*) of Ahaz, king of Judah ca. 735–715. In 2 Chr 28:7 he is mentioned along with Maaseiah, the king's son, and Elkanah, second in command to the king. All were killed by Zikri the Ephraimite in an incident connected with the Syro-Ephraimite war. Some have suggested that this Azrikam is identical to 3. above, but this is uncertain (*IDB* 1, 327).

RUSSELL FULLER

AZUBAH (PERSON) [Heb *ʿăzûbâ* (עֲזוּבָה)]. **1.** Mother of Jehoshaphat, king of Judah (1 Kgs 22:42 = 2 Chr 20:31). Azubah's name appears in the regnal formula of her son, Jehoshaphat. She is the daughter of Shilhi, whose place of origin is unknown.

2. Wife of Caleb (1 Chr 2:18). Her name appears in the genealogy of Judah in 1 Chronicles 2, where she is listed as one of the mothers of Caleb's children. Three sons are mentioned specifically in v 18—Jesher, Shobab, and Ardon—but the identity of their mother is unclear (being either Azubah or Jerioth). Upon Azubah's death, Caleb took another wife, Ephrath (1 Chr 2:19).

LINDA S. SCHEARING

AZZAN (PERSON) [Heb *ʿazzān* (עַזָּן)]. The father of the leader of the tribe of Issachar, Paltiel (Num 34:26). The name is derived from the root *ʿwz*, meaning "strength" (*EncMiqr* 6: 132), and Johnson (*IDB* 1: 327) has translated Azzan as "the deity has shown strength." In LXX, this name appears as *oza*, and, in Syr, as *ʿazor*. The name occurs in both Ug (UT 455, no. 1837), possibly as an abbreviation of *ʿzmlk* (Benz 1972: 165), and in a Phoenician seal from Syria (*PTU*, 378).

RAPHAEL I. PANITZ

AZZUR (PERSON) [Heb *ʿazzûr* (עַזּוּר)]. **1.** The father of Hananiah, the prophet from Gibeon (Jer 28:1). Whether a court prophet or not, Hananiah appears to have been well-known and a leader of a pro-royalist movement in the days of Zedekiah (Jer 28:1–17).

2. The father of Jaazaniah, one of the princes of the people in the days of Ezekiel (Ezek 11:1–25). In a vision experience, the exiled prophet Ezekiel discovers himself at the E gate of the house of Yahweh, where he beholds Jaazaniah and Pelatiah, both princes of the people, sharing in a council of 25 men in the formulation of an undisclosed plot. It appears to be either a plan to seek an alliance with Egypt or to usurp unwarranted power in Judah. Ezekiel is advised of the utter failure of the intrigue; a confirmatory sign followed in the death of Pelatiah. We know nothing about Azzur's relationship to his son's political ambition; since the Judean aristocracy would be disposed to assume the power vacated by the exiled royalty, it is most likely that Azzur would be in general sympathy with the movement. At least, he invested his son with the dignity of a prince.

3. One of the 84 signatories who, as one of the chiefs of the people, confirmed the covenant of Nehemiah (Neh 10:14). Among the several prescriptions of the compact were: (1) avoidance of interracial relationships; (2) strict observance of the sabbath; and (3) provision for the support of the temple establishment (Neh 10:1–39).

B

BAAL (DEITY) [Heb *baʿal* (בַּעַל)]. Canaanite storm and fertility god. The name, which means "lord," is an epithet of the god Hadad (lit. "thunderer"). Well-known from the OT, he is now extremely well-attested in the Ugaritic texts, in addition to being mentioned in other ancient texts.

A. Baal in Extrabiblical Texts

1. The Ugaritic Texts. This deity is first attested in the Ebla texts from the second half of the 2d millennium B.C., where he appears as *ʾa-da,* and in the Egyptian Execration Texts of about 1800 B.C., but it is the Ug mythological texts from Ras Shamra on the Syrian coast which shed the most light on him. He is clearly the most active and prominent of all the Canaanite deities, even though El is technically the supreme god, to whose ultimate authority Baal is subordinate. The Ug texts depict him primarily as the great storm god:the fertility of the land depends on the rain this god supplies. His character is well-represented on a famous stele discovered at Ugarit, which shows him standing (on mountains or clouds?) brandishing a club in his right hand and a lance in his left, the upper part having the form of a tree or stylized lightning (cf. *ANEP* pl. 490). In one of the Baal myths, the god uses 2 clubs, clearly symbolizing thunder and lightning, to defeat Yam.

While Baal is regularly spoken of in the Ug texts as the son of Dagon, a god who otherwise is only rarely mentioned there (e.g., *KTU* 1.2.I.19; 1.5.VI.23–24 = *CTA* 2.I.19; 5.IV.23–24), he is also referred to as the son of the supreme god Il (cf. *KTU* 1.3.V.35; 1.4.1V.47 = *CTA* 3.VE.43; 4.IV.47). How these statements are to be reconciled is not completely certain. They could reflect divergent traditions, but it is more likely that Dagon is understood to be literally his father, and that Baal was also the "son" of El in the sense that he was a descendant of El (his grandson?), a member of the pantheon of gods which had its ultimate origin in El.

We come now to Baal's consorts. In the Ug texts it is the goddess Anath who appears as Baal's primary consort. It is she who goes searching for him after his descent into the underworld and participates in his conflict with Mot, for example. Astarte also appears as his consort, though she is not so prominent. As we shall see, the situation is reversed in the OT: Anath appears only as the name of Shamgar's father and vestigially in place names (Anathoth and Beth-Anath), whereas Astarte, her name distorted to Ashtoreth or often Ashtaroth (the plural form), appears frequently even though we are not told much about her. Moreover, Asherah is often paired with Baal in the OT, suggesting that she too is considered to be Baal's consort, a point discussed later in greater detail. Returning to Anath, it is curious to note that she is constantly referred to as "the virgin Anath." It is not to be understood from this that she never had sexual intercourse with Baal; rather, the title appears to be explained by an Egyptian reference to her as the goddess who conceives but never bears (Papyrus Harris).

According to the Ug texts, Baal's dwelling was on Mt. *ṣpn,* probably to be vocalized Ṣapān (some scholars call it Zaphon following the Heb vocalization). The mountain in Hittite is called Ḫazzi, whence its classical name Casius. It is located about 40 km N of Ugarit, at Jebel el-Aqraʿ, 1, 759 m above sea level—appropriately enough, the highest mountain in Syria. The mountain's location to the N of Canaan accounts for the apparent derivation of the Heb word for "north" (*ṣāpôn*) from its name. Echoes of its

mythological sense are found in Ps 48:3—Eng 48:2, where the term is applied to Zion, and also in Isa 14:13. There were also various places in Egypt called Baal-zephon, one of which is mentioned in connection with the Exodus deliverance in Exod 14:2.

The god Baal in the Ugaritic texts has a number of epithets. The most frequently occurring are *ʾaliyn bʿl* "the victor Baal," *rkb ʿrpt* "rider of the clouds," and *zbl bʿl ʾarṣ* "the prince lord (Baal) of the earth." Suggested echoes of the latter 2 expressions in the Bible are discussed below.

Although the god Baal is mentioned in many Ug texts, one work in particular is of central importance, the Baal cycle on 6 tablets in *KTU* 1.1–6 (= *CTA* 1–6). This is broadly divisible into 3 main sections: (i) the conflict between Baal and Yam ("Sea") in *KTU* 1.1–2 (= *CTA* 1–2); (ii) the building of Baal's house (palace/temple) in *KTU* 1.3–4 (= *CTA* 3–4); and (iii) the conflict between Baal and Mot ("Death") in *KTU* 1.5–6 (= *CTA* 5–6). The following is a summary of the main points made in these 6 tablets concerning Baal.

(i) The god Yam sends messengers to El and the assembly of the gods on Mt. *Ll,* demanding that Baal be given up to him. Baal refuses to be given up, and eventually a battle takes place between Baal and Yam. Yam at first appears victorious, but in the end Baal defeats Yam with the help of two clubs made by the craftsman god Kothar-and-Ḫasis, and Baal is proclaimed king.

(ii) A king must naturally have a palace, and so the 2d main division is to a considerable degree taken up with the building of Baal's palace. Anath first demands a palace for her consort from El, using threats, but is unsuccessful. Subsequently, following the urging of Baal and Anath, Athirat requests El to grant Baal a palace; unlike Anath she is successful. Kothar-and-Ḫasis builds the palace, and particular interest centers on the question of constructing a window for the palace, which Kothar-and-Ḫasis urges on Baal. Baal first declines this but eventually comes round to the idea.

(iii) The 3d section concerns the conflict between Baal and Mot. Mot uses threats to bring Baal, together with his accompanying meteorological phenomena, down into the underworld, which is Mot's realm. This duly takes place and a period of dryness comes over the earth. El and Anath each engage in ritual lamentation over Baal's disappearance. Athtar is nominated to be king in Baal's place by Athirat, but he is not tall enough to occupy Baal's throne, so he descends from it. There is a scene in which Anath destroys Mot, the various verbs employed suggesting that she is treating him as if he were corn. El then has a dream in which he sees the fertility of the earth restored, which gives him confidence that Baal is now alive again. Baal smites the sons of Athirat and ascends his throne. Then we read that in the 7th year Mot complains about his fate at the hands of Baal, and a scene follows in which Baal and Mot struggle with each other. After the intervention of Shapash (the sun goddess), Mot concedes defeat.

One problem concerns the relationship between Baal's conflict with Yam and the creation of the world. In the OT we find the conflict with the waters associated with the creation of the world on a number of occasions (cf. Pss 74:12–17; 89:10–15—Eng 89:9–14, etc.). Similarly in the Babylonian text *Enuma elish*, Marduk's defeat of the sea monster Tiamat is connected with the creation of the world. No such conflict occurs in the Baal-Yam text, but the OT and Babylonian parallels nevertheless cause some scholars to assume this connection. There does not seem to be room in our Ug Baal-Yam text for an account of the creation of the world, although it is possible that there was also a primeval conflict between Baal and Anath, on the one hand, and Yam, Leviathan, etc., on the other, which was a prelude to El's creation of the world. Various Ug texts may allude to this (*KTU* 1.3.III.39–46; 1.5.I.1–3; 1.82.1–3; 1.83.3–10 = *CTA* 3.IIID.36–43; 5.I.1–3; *UT* 1001.1–3; 1003.3–10; cf. *KTU* 1.6.VI.51–53 = *CTA* 6.VI.50–52).

There has been considerable discussion whether the Baal cycle and, in particular, the Baal-Mot cycle reflects the seasonal cycle of an ordinary agricultural year or a 7-year (sabbatical) cycle. The chief proponent of a cyclic seasonal interpretation of the whole of the Baal epic is J. C. de Moor (1971), who compares the allusions in the various sections with current climactic conditions known from Syria today. However, there are a number of objections to the details of de Moor's thesis, as for example his reordering of the tablets so that the first 3 are to be read in the sequence 3, 1, 2. Thus, tablet 3 is related to the autumn, tablets 1 and 2 to the winter, tablets 4 and 5 to the spring, and tablet 6 to the summer.

However, de Moor's reordering creates a problem in connection with the building of Baal's house, which de Moor has to suppose was begun, then abandoned, and only later completed. Another problem is that de Moor sometimes advocates novel and debatable translations, e.g. *ṣḥrr* "be dust colored" instead of "be hot."

It would be incorrect, however, to reject all seasonal elements in the work. The crucial passage concerns Anath's destruction of Mot, where she is clearly treating him like corn. Why would a whole series of agricultural images be used if, as some suppose, we simply have a picture of destruction and nothing more? We read that Anath "seized divine Mot, with a blade she split him, with a sieve she winnowed him, with fire she burnt him, with millstones she ground him, in a field she sowed him …" (*KTU* 1.6.II.30–35 = *CTA* 6.II.30–35). From this it would appear that Mot symbolizes the corn in some way, clearly indicating a seasonal rather than a sabbatical cycle. There would be no corn to be symbolized in a period of famine as presupposed by the sabbatical-cycle view, and in any case, nothing else in the text suggests a famine. How then are we to understand the reference to "the 7th year" (*KTU* 1.6.V.8–9 = *CTA* 6.V.8–9)? This is not entirely clear, but proponents of a sabbatical rather than a seasonal interpretation of the Baal-Mot cycle appear to overlook the fact that the destruction of Mot and the resurrection of Baal take place only after "months" have passed (cf. *KTU* 1.6.II.26–27 = *CTA* 6.II.26–27) and that the reference to the 7th year occurs *after* this. The text clearly is therefore *not* saying that Baal is in the underworld for 7 years. (Contrast the Hadad text, *KTU* 1.12.II.44–45 = *CTA* 12.II.45–46, and the Aqhat text, *KTU* 1.19.I.42–44 = *CTA* 19.I.42–44, where Baal does disappear for 7 or 8 years.)

One considerably disputed subject is the relation between Baal and El. Is Baal in conflict with El or are the two gods in harmony? The latter would appear to be nearer the truth, though there are signs of tension. The extreme claim, made, for example, by M. H. Pope (1955:27–32), the Baal deposed El, on the analogy of Zeus' dethroning of Kronos, and that there may be a reference to this in the fragmentary and obscure *KTU* 1.1.V (= *CTA* 1.V) is certainly false. El remains throughout the supreme deity (L'Heureux 1979:1–108) and there are allusions which make it almost certain that Baal was appointed king by El (cf. *KTU* 1.3.V.35–36 = *CTA* 3.VE.43–44; 4.IV.47–48) just as other deities were. Moreover, although Mot is called "the beloved of El," El does lament when he hears of Baal's death (*KTU* 1.5.VI.11–25 = *CTA* 5.VI.11–25) and rejoices when he has his vision of Baal's resurrection, following the destruction of Mot (*KTU* 1.6.III.4–21 = *CTA* 6.III.4–21). Moreover, Shapash says that El will take away Mot's throne if he goes on opposing Baal (*KTU* 1.6.VI.22–29 = *CTA* 6.VI.22–29). Again, although Yam is called "the beloved of El" and El appears prepared to give up Baal to Yam's messengers, the context suggests that this was due to fear on El's part (cf. *KTU* 1.2.I.21–24 = *CTA* 2.I.21–24). To be sure, there are signs of tension between El and Baal, and open hostility does seem to be present in *KTU* 1.12 (= *CTA* 12), the so-called Hadad text, where El is ultimately responsible for the devouring beasts which lure Baal to his death. This, however, belongs to a work separate from the main Baal cycle:in this latter there are references indicating hostility between Baal and the sons of Athirat (*KTU* 1.6.I.39–43; 1.6.V.1 = *CTA* 6.I.39–43; 6.V.1), though not with El himself.

2. Later Phoenician Sources. In the Phoenician inscriptions, various manifestations of the god Baal are attested, e.g., Baal-Shamem (*KAI* 4.3), Baal of Lebanon (*KAI* 31.1, 2), Baal of Sidon (*KAI* 14.18). In Punic inscriptions the leading deity is called Baal-ḥammon (e.g. *KAI* 102.1; 103.1), and it is widely believed that he is to be equated with El, largely because he was called Kronos by classical writers. However, it seems likely, as the name suggests, that this deity was actually a form of Baal:"Baal of the incense altar" (an incense altar features in a number of depictions of his cult). Sometimes he is simply called Baal in Punic texts (he is never called El), which suggests that Baal is the god's name and that it is not simply an epithet meaning "lord." Moreover, in Latin inscriptions he bears the epithets *frugifer* and *deus frugum* (e.g. *CIL* 8.4581), indicating a fertility god, and his consort Tinnit is equated with Astarte (Baal's wife) in a text from Sarepta in Phoenicia (Pritchard 1978:105). Finally, there is evidence that Kronos could, on occasion, denote Baal as well as El, and in Hannibal's oath in his treaty with Philip V of Macedon, recorded in Polybius 7.9.2–3, Baal-ḥammon actually appears to be called Zeus. It was probably

the fact that Kronos devoured his own children that encouraged his equation with Baal-ḥammon, the god of child sacrifice.

Philo of Byblos in his *Phoenician History* clearly has knowledge of the god Baal, but what he says is far removed from the authentic Baal of the Ug texts. In addition to Beelsamen (i.e. Baal-Shamem), who is equated with the sun, Baal appears in Philo both under the name of Zeus Belos, who is one of Kronos' (El's) children, and also under the name of Demarous (= Zeus = Adodos, i.e., Hadad). We read that "greatest Astarte and Zeus," called both Demarous and Adodos, king of gods, were ruling over the land with the consent of Kronos (Attridge and Oden 1981:55). We may compare the picture in the Ug texts, where Baal's kingship seems to be exercised under the authority of El. It is also stated that "Demarous advanced against Pontos, but Pontos routed him (Attridge and Oden 1981:53). This allusion is possibly a reflection of Baal's conflict with Yam (Sea), though it should be pointed out that whereas Baal defeated Yam, Pontos routed Demarous! Although Muth (= Mot) is mentioned, Philo of Byblos displays no knowledge of the Baal-Mot cycle with its account of Baal's death and resurrection.

B. Baal in the OT

1. Israelite Worship of Baal. Prior to the discovery of the Ug texts it was sometimes thought that there were various and quite-separate gods called Baal. This idea was encouraged by the presence in the OT of various compound place names involving Baal, e.g. Baal-peor, Baal-hermon, Baal-meon, Baal-hazor, Baal-gad, etc. However, with the discovery of the Ug texts it became clear that there was one great Canaanite storm-and-fertility deity Baal-Hadad of cosmic stature, so that we must assume that these OT allusions refer to particular local manifestations of this one god. We may compare the variety of local manifestations of the Virgin Mary within Roman Catholicism. The OT itself speaks a number of times of "the Baals" (Judg 2:11; 3:7; etc.). It is not clear whether this is a way of speaking of the different local manifestations of Baal or whether it is speaking of Canaanite deities more generally. We have the same problem over the references to "the Ashtaroth" (Judg 2:13; 1 Sam 7:4; etc.), which could mean local manifestations of Astarte (Ashtoreth) or Canaanite goddesses generally (cf. Akkadian *ilāni u ištarāti,* "gods and goddesses").

Reading the OT, it becomes clear that it was the Baal cult that provided the greatest and most enduring threat to the development of exclusive Yahweh worship within ancient Israel. The fact that the Israelites were settled among the Canaanites, for whom the worship of Baal was so important, and that Palestine is a land utterly dependent for its fertility upon the rain, which was held to be Baal's special realm of influence, accounts for the tempting nature of this cult as well as the strength of the OT polemic against it.

At the time of the entry into the promised land we hear of the temptation to participate in the cult of Baal-Peor at Mt. Peor in the land of Moab (Num 25:1–9; Deut 4:3; Ps 106:28; Hos 9:10). Subsequently, during the period of the Judges, Israel worshiped the Baals (Judg 2:11, 13; 3:7; 10:6, 10; 1 Sam 7:4; 12:10). The text recounts that Gideon pulled down an altar of Baal and cut down an Asherah (Judg 6:25–32). During the Divided Monarchy Ahab married Jezebel, daughter of Ethbaal, king of the Sidonians, and worshiped Baal. He erected an altar for Baal in the house of Baal, which he built in Samaria and made an Asherah (1 Kgs 16:31–33). Ahab's promulgation of the Baal cult provides the background for the famous confrontation between Elijah and the prophets of Baal on Mt. Carmel in 1 Kings 18. Unlike Elijah, Ahab clearly did not see his promulgation of Baal as being incompatible with Yahweh worship; in fact, Ahab's sons Ahaziah and Jehoram bear Yahwistic names. (On the identification of Ahab's Baal, see below.) Ahaziah is said to have worshipped Baal (1 Kgs 22:53)—indeed, we read that he consulted Baal-zebub, the god of Ekron, when he was ill (2 Kgs 1:2–16), a name (lit. "lord of the fly") which looks as though it is a distortion of Baal-zebul ("Baal the Prince," cf. Ug *zbl bʿl* and NT Beelzebul). Ahab's other son, Jehoram, is said to have put away the pillar of Baal which his father had made (2 Kgs 3:2), though he is still regarded by the Deuteronomist as an evil king (2 Kgs 3:2–3). It is clear, however, that Baal worship persisted, for Jehu was later ruthlessly to massacre the Baal priests, prophets, and worshipers in the temple of Baal as well as destroy the temple itself and the pillar of Baal within it (2 Kgs 10:18–27). This act was later to receive the condemnation of the prophet Hosea (cf. Hos 1:4). In addition to the N kingdom (2 Kgs 17:16), Manasseh is singled out as worshipping Baal (2 Kgs 21:3), but Josiah in his great

reformation put an end to his cult (2 Kgs 23:4–5). Among the canonical prophets it is Hosea and Jeremiah who seem most exercised by the Baal cult (e.g., Hos 2:10—Eng 2:8; 13:1; Jer 2:8; 23:13).

In the postexilic period we do not hear of Baal, apart from a reference in Zech 12:11 to the Aramean cult of Hadad-rimmon in the plain of Megiddo. Also we need to remember that Antiochus IV Epiphanes rededicated the temple in Jerusalem in 168 B.C. to Zeus Olympios, who was a Hellenistic form of Baal-Shamem. "The abomination of desolation" (*šiqqûṣ šōmēm* or *šiqqûṣ měšōmēm*) in Dan 9:27; 11:31; 12:11 is a play on the name of the god Baal-Shamem.

Some discussion of the identity of the Baal propagated by Ahab and Jezebel is necessary. It has often been thought that this is a different god from the one presupposed elsewhere in the OT, and is rather to be equated with the Tyrian deity Melqart. This view, however, is to be rejected (Mulder 1979). It is not until a 2d century B.C. inscription from Malta that we find Melqart referred to as Baal ("the Baal [or lord] of Tyre," *KAI* 47:1). There is every reason to believe that Jezebel's Baal was in fact Baal-Shamem, another Tyrian deity who is in fact identical with the Baal attested elsewhere in the OT. (i) The Baal of 1 Kings 18 is clearly a god who was believed to bring lightning and rain; classical sources, however, reveal that Melqart was thought of as being asleep during the winter months when these phenomena abounded. (ii) The treaty between Baal king of Tyre and Esarhaddon king of Assyria in the 7th century B.C. clearly distinguishes Baal-Shamem and 2 other Baal deities, who manifest themselves in the storm, from the god Melqart (*ANET*, 534). (iii) The god of Carmel, where the contest takes place in 1 Kings 18, was always equated with Zeus. Now it was Baal-Shamem who was regularly identified with Zeus, Melqart being rather equated with Herakles.

Because the god Baal was so detested by the biblical tradition, the word *bōšet* "shame" has sometimes been substituted for the god's name by a scribe. This is the case in Jer 3:24; 11:13; and Hos 9:10. This substitution also occurs in various personal names: cf. Ish-bosheth (2 Sam 2:10) for Eshbaal (1 Chr 8:33; 9:39), Mephibosheth (2 Sam 4:4; 9:6; etc.) for Meribaal (or Meribbaal) (1 Chr 8:34; 9:40), and Jerubbesheth (2 Sam 11:21) for Jerubbaal (Gideon, Judg 6:32). Similarly Astarte (Ashtart) is distorted to Ashtoreth, reflecting the vowels of the word *bōšet,* and Molech is probably a comparable distortion, the original form perhaps being Melek.

The worship of the Baals in the OT is sometimes associated with that of the Ashtaroth (Judg 2:13; 10:6; 1 Sam 7:4; 12:10), which must reflect the fact that Astarte was one of Baal's consorts in Canaanite religion. More curious is the repeated pairing of Baal and Asherah (cf. Judg 3:7; 6:25–32; 1 Kgs 16:32–33; 18:19; 2 Kgs 17:16; 21:3), since in the Ug texts Asherah (Athirat) was the consort of El, not of Baal. Did Baal take over Asherah as his consort? The Hittite-Canaanite Elkunirša myth (*ANET*, 519), with its evidence of Asherah's (Ašertu's) flirting with the storm god and alienation from El (Elkunirša), might possibly lend support to this. Alternatively, the pairing of Baal and Asherah may be a sign of confusion on the part of the OT; or again, perhaps this pairing is not intended to imply that one was the consort of the other. Certainty is not possible. As for Anath, who appears prominently as a consort of Baal in the Ug texts, she appears in the OT only vestigially in the place names Anathoth and Beth-Anath, and as the name of Shamgar's father.

There is evidence from the OT that Yahweh and Baal could be equated in syncretistic circles. One may compare the personal name Bealiah, lit. "Yahweh is Baal" (1 Chr 12:6—Eng 12:5), and Hosea's declaration, "And in that day, says the Lord, you will call me 'My husband,' and no longer will you call me 'My Baal' " (2:18—Eng 2:16). This syncretism made the Baal cult all the more insidious from the point of view of the Yahweh purists. The Baal cult or Baalized Yahweh cult is associated in the OT with the high places (*bāmôt*), whose characteristic appurtenances include pillars (*maṣṣēbôt*), i.e., symbols of the male deity, Asherim (wooden cult symbols of the goddess Asherah), and altars. These are sometimes spoken of as being situated "on every high hill and under every luxuriant tree" (cf. 1 Kgs 14:23).

Although there are no indications of this in the Ug texts, it seems likely from a number of OT allusions that sacred prostitution formed part of what was involved in the fertility cult of Baal. That sacred prostitutes existed in Israel is clear from a number of allusions, cf. Hos 4:14, where *hazzōnôt* "the prostitutes" are mentioned parallel with *haqqĕdēšôt* (lit. "the holy ones") in a cultic context, and Gen

38:21–22, where Tamar is described as a *qĕdēšâ,* whereas in v 15 she is called a *zōnâ.* This makes it clear that the word *qĕdēšâ* refers to a sacred prostitute. The masculine form *qādēš* "male cult prostitute" occurs in 1 Kgs 14:24; 15:12; 22:46; 2 Kgs 23:6–7; and Deut 23:17. The fact that "harlotry" and "adultery" constitute such a common metaphor for apostasy to Canaanite worship in the OT is perhaps accountable for in the light of sacred prostitution's role within the Baal cult—cf. Hos 5:3–5; 6:10; 7:4; Jer 2:20; 3:2–4, 9:1(—Eng 9:2); Ezekiel 16 and 23. In fact it is not always clear whether the terminology is literal or metaphorical.

2. OT Use of Baal Motifs. That Yahweh was seen as Baal in some circles is shown by Hos 2:18—Eng 2:16, which criticizes those who refer him as "my Baal," and by the personal name Bealiah (1 Chr 12:6—Eng 12:5), as noted above. However, the OT opposes the equation of Yahweh with Baal (Hos 2:18—Eng 2:16), in contrast with its attitude to El, whose identification with Yahweh is admitted (Exod 6:3). But it is clear that the OT does nevertheless ascribe certain Baalistic functions to Yahweh. For example, there are a number of references in the OT to Yahweh's conflict with the dragon and the sea (e.g., Ps 74:12–15; Isa 27:1; Job 7:12). As at Ugarit the sea conflict is associated with the deity's kingship (cf. Ps 74:12–15; Isa 27:1; Job 7:12). Following Baal's victory over the sea his palace/temple was built for him, and similarly in Exod 15:17 we read of the establishment of Yahweh's sanctuary, described in terms reminiscent of Baal's, following his victory at (rather than with) the sea. In Daniel 7 the imagery of the one like a son of man coming with the clouds of heaven, enthroned by the Ancient of Days and victorious over the beasts of the sea, ultimately derives from the figure of Baal, "rider of the clouds," whose kingship resulted from his victory over the sea, and was subordinate to the supreme god El, "father of years."

Yahweh's manifestation in the storm is sometimes depicted in terms reminiscent of Baal. Thus, in Psalm 29 we find not only the theme of Yahweh's kingship and his conflict with the waters (vv 3, 10), reminiscent of Baal, but also a glorious theophany in the thunderstorm, with seven thunders (vv 3a, 4a, 4b, 5, 7, 8, 9) which are doubtless related to Baal's "seven lightnings … eight storehouses of thunder" (*KTU* 1.101.3–4 = *Ugaritica* V.3.3–4) ("seven/eight" appears to mean "seven"). It is doubtful, however, whether the expression *rōkēb bā‹ărābōt* used of Yahweh in Ps 68:5—Eng 68:4 is to be rendered "rider on the clouds" on the analogy of Baal's Ugaritic epithet *rkb ‹rpt,* contrary to a widely held view. The expected translation of the Hebrew expression would be "rider through the deserts," since *‹ărābâ* regularly means "desert" in the OT, and it should be noted that this fits the context in the Psalm, dealing as it does with the wilderness wanderings. (Cf. too Isa 40:3, *bā‹ărābâ mĕsillâ* "a highway in the desert" with Ps 68:5—Eng 68:4, *sōllû lārōkēb bā‹ăbōt* "raise a highway for him who rides through the deserts.") Probably the Hebrew expression is to be understood as a deliberate distortion of Baal's epithet *rkb ‹rpt.*

Various other imagery ultimately related to Baal has also been taken up in the OT. Allusion has already been made to the use of the term *ṣāpôn* to denote Yahweh's dwelling place in Ps 48:3—Eng 48:2 and Isa 14:13, though the context of the latter passage possibly indicates mediation of the imagery through the Jebusite cult of El-Elyon (cf. Isa 14:14). The imagery of Baal's death and resurrection appears to have left its mark on the book of Hosea. It has long been noted that the imagery of the death and resurrection of Israel (a metaphor for its exile and restoration) in Hos 5:12–6:3 appears to reapply the imagery of a dying and rising fertility deity, in view of the reference to the coming of the rain in the context of resurrection in Hos 6:3. What appears not to have been noticed is the relevance of the parallel imagery of death and resurrection applied to Israel in Hosea 13–14, which is introduced with the words "but he (*sc.* Israel) incurred guilt through Baal and died" (Hos 13:1). This strongly suggests that the imagery of Israel's death and resurrection has been consciously appropriated from the Baal cult, against which the prophet is clearly polemicizing throughout his preaching. In these and other ways Baalistic imagery is appropriated by the OT. (For further discussion see Mulden and de Moor, *baÔal, TDOT* 2:181–200).

BAAL (PERSON) [Heb *baʿal* (בַּעַל)]. This name is shared by 2 people in the Hebrew Bible, both preexilic figures mentioned only in 1 Chronicles. The name's interpretation is debated: some understand it as a reference to the Syro-Canaanite deity Baal (*IPN* 120–22), while others claim that *baʿal* is "master," and is an appellation of YHWH (Gray 1896:141–46). Each of these interpretations is based on different understandings of preexilic Israelite religion, especially the extent to which it was monotheistic, polytheistic, or syncretistic. The evidence is inconclusive; according to 2 Sam 5:20 a place was named Baal-Perazim, "Baal has broken through" because "the LORD has broken through my enemies before me, like a bursting flood," and according to 1 Chr 12:6—Eng 12:5 one of David's heroes was named Bealiah *(bĕ ʿalyâ)* which may fit either "Baal is Yah (weh)" or "Yahweh is the master." The name of one of David's heroes alternates between Beeliada, *bʿlyd* "Baal knows" or "attends to" (1 Chr 14:7) and Eliada, *ʾlyd* "God knows" or "attends to" (2 Sam 5:16; 1 Chr 3:8). This interchange could either suggest that Baal is being used as an appellation of YHWH, who is "master," or that among certain groups, the deities Baal and YHWH were syncretistically identified, a process that is strongly suggested by Hosea, especially 2:18—Eng 2:16 ("And in that day, says the LORD, you will call me, 'my husband, 'and no longer will you call me, 'my Baal.' "). Whether or not the personal name Baal is a pagan theophoric name depends on the extent to which ancient Israel was polytheistic; Kaufmann (1972) and more recently Tigay (*AIR*, 157–94) claim that preexilic Israel was not polytheistic, while Smith (1971:13–56) and others (e.g., Freedman *AIR*, 315–35) claim that it was.

Other biblical names have the element Baal in them (*TPNAH*, 54–63). These names are from the period of Saul and David, and one of the editors of the book of Kings has changed the Baal element in them to *bōšet,* "shame." Names with the element Baal are also attested to 5 times for the later preexilic period in the extrabiblical epigraphic corpus, 4 times in the Samaria ostraca, and once in an inscription from Mesad Hashavyahu (Tigay 1986:65–66). None of these attestations clarify whether the element *baʿal* refers to the divinity or should be rendered "master," as an appellation for *YHWH.*

1. A Reubenite according to the genealogy of 1 Chr 5:5. This genealogy lists the descendents of Joel, whose exact relationship to Reuben is not known. According to v 6, Baal's son Beerah was exiled to Assyria by Tiglath-pileser III, in the 2d half of the 8th century B.C.E. However, "son" in these genealogies often indicates a linear descendent, rather than a "son" of the next generation, so it is difficult to date when this Baal lived. The presence of the potentially problematic name Baal within this genealogy probably attests to its antiquity (Williamson *Chronicles* NCBC, 85). The genealogy in vv 4–5 shares the names Joel and Shimaiah/Shimei/Shema with the Reuben genealogy in v 8. Verse 8 also contains the name Bela *(belaʿ),* which is nearly identical with Baal *(baʿal).* Furthermore, the Peshitta to v 5 reads Bela *(blʿ)* for Baal *(bʿl),* and this reading is favored by some scholars (Richter 1932:130). Thus, the genealogies in vv 4–5 and in v 8 are variants of each other, and, as is typical of genealogical fluidity (Johnson 1969; Wilson 1977), one tradition records the name of the descendent of Joel as Baal, while another lists him as Bela.

2. According to 1 Chr 8:30 and 9:36, a Benjaminite who was not the firstborn son of Gibeah and whose descendents later moved to Jerusalem (8:32 and 9:38; Demsky 1971:17). The use of a Baal name with a Benjaminite is especially interesting because the relatively infrequent names compounded with Baal are found with three members of the family of Saul, a Benjaminite. On the repetition of the Benjaminite genealogy in 1 Chronicles 8 and 9, see AHAZ.

MARC Z. BRETTLER

BAAL (PLACE) [Heb *baʿal* (בַּעַל)]. In 1 Chr 4:33, an alternative form of the toponym BAALATH-BEER.

BAAL-BERITH (DEITY) [Heb *baʿal bĕrît* (בַּעַל בְּרִית)]. The phrase Baal-berith, "lord of the covenant," which appears only in Judg 8:33 and 9:4 (a similar form "El Berith" occurs in Judg 9:46) has attracted many different interpretations. Albright, in his 1941 Ayer Lectures (*ARI* 110), thought that Baal-berith was an appellation of the god Haurôn, yet this proposal has found few adherents. While no other proposal has met with consensus among scholars due primarily to the scant evidence, there is a good deal of speculation centering around the identity of Baal-berith of Shechem and any connection between this deity and the development of covenant theology in ancient Israel.

Many scholars have speculated on the relation between Baal-berith and El Berith. Some favor 2 separate deities. Soggin (*Judges* OTL, 170–71, 186) sees 2 different deities corresponding to the 2 sanctuaries at Shechem (cf. *TDOT*, 2:194). Others (Good *HBD*, 84) have argued that Baal-berith and El Berith are one and the same. Clements (1968:26 n.3) believes that "the title El-Berith was simply an alternative for Baal-berith, with El used in a purely appellative sense." Cross (*CMHE*, 49) has argued that what we have here is an original epithet of the Canaanite deity El who was known at Shechem as both *ʾēlʾĕlōhê yiśrāʾēl,* "El, the god of (the patriarch Jacob) Israel" and *ʾēl baʿl bĕrît* "El, the lord of the covenant." Cross (*CMHE,* 39) also pointed out that *ʾil brt* (= El Berith) occurs in a Hurrian text (RS 24.278) published in Ugaritica V (so too Lipiński 1973:50–51).

Another topic of discussion is the relation of Baal-berith and El Berith to Yahweh. Most scholars (e.g. Cooke *Joshua* CBSC, 221) describe a process whereby as the Israelites took over the LB Canaanite sanctuary at Shechem (cf. Dever's remarks on Migdal Temple I [1987:232]), the Canaanite god Baal-berith/El Berith came to be regarded as a manifestation of Yahweh. Kaufmann (*KRI* 138–39, 260) argues that *baʿal* was an epithet for Yahweh in early times which fits with his theory that "during the age of the judges … there are no Baal priests or prophets, nor any other intimation of a vital effect of polytheism in Israel's life." Tigay, who has followed up on Kaufmann's work, holds out the possibility that we have polytheism in Judges 9:4, 46 (Tigay 1986:41 n.13). See also the discussion of the relation of Yahweh and El in Cross (*CMHE,* 44–75) who suggests that Yahweh was "recognized as originally a cultic name of ʾEl." It is further advocated by Cross that El may have borne the epithet *ḏū yahwī sabaʾôt,* "He who creates the heavenly armies" (*CMHE,* 71).

In later biblical tradition, as evidenced by the Deuteronomistic editing in Judg 8:33, *baʿal bĕrît* was seen to be a pagan deity. Mulder (*TDOT*, 2:194) has pointed out the association of this deity with wine festivals in Judges 9:27, which would support the notion that Baal-berith was "a god of vegetation and a local manifestation of the Baal par excellence."

Baal-berith has also attracted a good deal of attention by those who have speculated on the origin of the idea of covenant in ancient Israel. How did Baal-berith, "the lord of the covenant," function in the treaty itself? Two viable options have been proposed. Outside of the Bible, there are few parallels in the ancient Near East to deities entering into covenant relationships with peoples. Weinfeld (*TDOT*, 2:278) says that "the idea of a covenant between a deity and a people is unknown to us from other religions and cultures" yet compare the inscription from Arslan Tash (*KAI* 27; see Zevit 1977:110–18) and *ʾil brt* mentioned above. Baal-berith and El Berith could be seen as rare examples of a deity in the role of a divine partner or suzerain in the covenant. The Shechemites, who would be seen as the vassal party, are referred to as *bĕnê hămôr,* "sons of the ass," which seems to be a covenantal designation to judge from parallel Mari texts (*ARI* 110; Noth 1984:108–17). Some who follow this line of interpretation have gone so far as to suggest that the Israelites' development of covenant theology was influenced by the cult of Baal-berith which they encountered when they came to Shechem. Clements (1968:31–32), however, argues that though Baal-berith played the role of divine partner, this does not imply that there was any profound influence on the Israelite notion of covenant.

Alternatively, Baal-berith could refer not to a deity in the role of a divine partner (parallel to "unique" biblical usage) but rather to a deity in the role of witness or guardian to the treaty. Here there are abundant parallels in ANE treaties where this was the normal role of the gods. Following this line of interpretation, Baal-berith's function would be as the witness or guarantor of the covenant between two peoples. There is no reference to any battle or conquest of Shechem and most scholars agree that this is due to a covenant which was made between the Israelites and the Shechemites. In fact, every fragment of Shechemite tradition which has come down to us refers to some type of treaty. See SHECHEM (PLACE); COVENANT.

THEODORE J. LEWIS

BAAL-GAD (PLACE) [Heb *baʿal gād* (בַּעַל גָּד)]. A Canaanite city in the valley of Lebanon below Mount Hermon (Josh 11:17). It was the N point of the territory conquered by Joshua, beyond which lay the land that remained unconquered (Josh 13:5). When describing this same region, Judges uses the name Mount Baal-Hermon in place of Baal-gad (Judg 3:3).

According to the descriptions in the Bible, Baal-gad must be located in the region of Laish, a beautiful, lush area which has been hallowed ground from time immemorial. In fact, it is possible that the present-day Banias could be the ancient Baal-gad. It would be no wonder that such a fertile region would be a major seat of Baalism. In later times, the Greeks worshiped Pan in a cavern there, and called the sanctuary-town Paneion and the district Paneas. Later, Philip the Tetrarch beautified the town and called it Caesarea Philippi, while Agrippa II renamed it Neronias.

Baal-gad may have had an important theological function in the biblical text. The Deuteronomistic theologian, by referring to it, shows that a significant part of Yahweh's promise to Israel (Josh 1:4; 11:23) was fulfilled. Moreover, just as the land from Mount Halak in the S to Baal-gad in the N was given by the Lord to Israel under the leadership of Joshua, who observed all the words of the commandment, the land from Baal-gad to Lebo-hamath was also subsequently given to Israel under the leadership of David (2 Sam 8:9–10), yet another obedient leader according to the Deuteronomist (1 Kings 11:38). For further discussion see *GB.*

PAUL BENJAMIN

BAAL-HAMON (PLACE) [Heb *baʿal hāmôn* (בַּעַל הָמוֹן)]. A city or district mentioned in the Song of Songs (8:11). It was the location of a plantation of Solomon's that he granted to planters who made it highly profitable. The name is not attested elsewhere in the MT; it may correspond to the place *Balamōn* mentioned (in Greek) in Jdt 8:3 (see BALAMON). Tell Belʿame (M.R. 177205) has been suggested as the site (Gordis 1974; Pope *Song of Songs* 686), but this is more likely Ibleam (so *LBHG* 148).

Paul Haupt (1902:223; 1903:6) suggested that the spelling of the second element with initial *he* was an intentional alteration of an original name **baʿal ḥammôn* (with initial *ḥet*), avoided because it was the name of a Phoenician god (on the name of this deity, see Schmitz 1990:255–57). The suggestion was furthered by Pope (*Song of Songs* AB, 686–87) with citations of a Phoenician inscription (*KAI* 19.3–4) mentioning the city *Ḥammôn* and allegedly showing the biblical passage to allude to an ancient ritual or myth associated with the goddess Astarte. This, and the interpretation of a Palmyrene text mentioning the divinity *bʿl ḥmn,* are highly speculative and of doubtful relevance. There is no cause to link the name Baal-hamon with the Phoenician divine name.

Interpreted literally, Heb *baʿal hāmôn* means "possessor of a crowd," reflected in the Vulgate's *quea habet populos* (Cant 8:11), or "possessor of wealth" ("Ownalot:" Goulder 1986:69), implicit in Syr *weʾinbê saggī* "and its fruit (was) plentiful" (on the word *hāmôn, TDOT* 3:414–18). The transparency of the name has led to speculation that it is an imaginary site in the imagistic world of the supreme song (suggested by Gordis 1974; assumed by Goulder 1986:69). Others (e.g., Robert 1948) understood the term as a particular application of the image of the vineyard used broadly in biblical language as a metonymy for all of Israel. It seems best, however, to interpret Baal-hamon as an actual site, even if its location cannot be established.

PHILIP C. SCHMITZ

BAAL-HANAN (PERSON) [Heb *baʿal ḥānān* (בַּעַל חָנָן)]. This name, meaning "Baal has shown mercy" (*IPN* 187), belongs to 2 persons in the OT (see below). Outside the OT, the name occurs for the ruler of Arwad at the time of Ashurbanipal (Phoenician **Baʿalḥanōn,* in Akkadian transcription *Ba-ʾ-al-ḫa-nu-nu,* Asb. Prism A II 84; 91).

1. In Gen 36:38–39 = 1 Chr 1:49–50, Baal-Hanan is the 7th ruler in the list of "the kings who ruled in the country of Edom before there was a king of the Israelites," Gen 36:31. Opinions vary about the date of the "Edomite King List," ranging from the 11th century B.C. (Weippert 1982:155), through the 8th to 6th centuries (Bennett 1983:16), to the 6th/5th centuries (Knauf 1985a). Scholars tend to agree, however, that the succession scheme of this list is artificial, and that in all likelihood the rulers listed in it were contemporaries (Bartlett 1972:27; Weippert 1982:155). The name Baal-Hanan is Canaanite, as is the name of the father of this Edomite "king," *ʿAkbōr* "Jerboa" (Knauf 1985a:248).

2. According to 1 Chr 27:28, a certain "Baal-Hanan of Geder" was King David's "commissioner for the olives and sycamores in the lowlands." The list of David's officials 1 Chr 27:25–31 can be regarded as fictitious (Knauf 1985b:13). In this case, this Baal-Hanan might refer to an Idumaean of the postexilic period.

BAAL-HAZOR (PLACE) [Heb *baʿal ḥāṣôr* (בַּעַל חָצוֹר)]. A location near the town of EPHRAIM (2 Sam 13:23) where ABSALOM held a sheepshearing celebration at which he had his brother AMNON murdered for having raped his half-sister TAMAR (2 Sam 13:24–29). The generally accepted location of the place is Jebel el-ʿAṣur (M.R. 177153), a remote place of rugged Cenomanian limestone slopes 3, 332 feet above sea level (*GB* 174; Simons *GTTOT* 30). It may be the same site as the Hazor mentioned in Neh 11:33 (*LBHG* 410), though Simons (*GTTOT* 390) identifies this Hazor differently.

Baal-hazor is not to be confused with the fortified city Hazor N of the Sea of Galilee. Absalom's mountain home was 15 miles N of Jerusalem and about 5 miles S of Shiloh. Simons (*GTTOT* 334) points out that there is no *tell* at Jebel el-ʿAṣur that would indicate the ruins of a formerly inhabited city. The Genesis Apocryphon calls the place where God appeared to Abraham after his separation from Lot (Gen 13:14) by the name Ramath-hazor. A late tradition identifies Ramath-hazor as another name for Baal-hazor (*IDB* 1:331).
HENRY O. THOMPSON

BAAL-HERMON (PLACE) [Heb *baʿal ḥermôn* (בַּעַל חֶרְמוֹן)]. A border point on the land inhabited by the Hivites (Judg 3:3) and intended for the half-tribe of Manasseh on the E side of the Jordan River (1 Chr 5:23). The Deuteronomistic historian concludes that the sons of Manasseh failed to conquer the Hivite lands, including Baal-Hermon, so that Yahweh could test Israel's rebellion in future generations. By this explanation the historian can rationalize Israel's inability to fulfill the potential of completely possessing the promised land.

Baal-Hermon belongs to the mountains of the Anti-lebanon (see Josh 11:17) range at the edge of ancient Hivite territory, and it is most likely a place on the top of Mt. Hermon, if not one of the 3 peaks comprising Mt. Hermon. The half-tribe of Manasseh is located by 1 Chr 5:23 in 3 places (Baal-Hermon, Senir, and Mt. Hermon). Senir is one of the peaks (see Cant 4:8 and the dual *hermônîm* in Ps 42:7—Eng 42:6) and Mt. Hermon is the name of another. Baal-Hermon is possibly the third peak, which means that the E-Jordan tribe of Manasseh is restricted by the Chronicler to the base of this mountain.

PAUL NIMRAH FRANKLYN

BAAL-MEON (PLACE) [Heb *baʿal mĕʿôn* (בַּעַל מְעוֹן)]. Var. BETH-BAAL-MEON; BETH-MEON. A locality listed among the towns and villages of the tribe of Reuben (Num 32:28) which originally belonged to Moab. It is also known as Beth-baal-meon (Josh 13:17) and Beth-meon (Jer 48:23).

Mesha's reference on the Moabite Stone (ca. 830 B.C.) to having built a reservoir for Baal-meon implies that the city reverted to Moabite control (cf. *ANET* 320, line 9). It may have come back under Israelite control (ca. 770 B.C.) as inferred from a reference to "Baala the Baal-meonite" on Ostraca 27 from Samaria (assuming that this is the same city). The Jeremiah passage (48:23) clearly indicates Moabite possession of the town (ca. 600 B.C.).

Eusebius (*Onomast.* 44.21) identified Baal-meon with "the big village in the environs of (the hot springs of) Baaru … with the name of Beelmaus, distant nine miles from, Esbous, place of origin of the prophet

Elisha." In 1807, Seetzen identified it with the ruins of Khirbet Ma‹in (M.R. 219120), 9 km SW of Madaba. The ruins were carefully studied by Musil in 1902.

The investigations have revealed no Iron Age remains, but in 1934 the mosaic floor of a church on the acropolis was unearthed. Two other churches were excavated in 1973 and 1977.

The main feature of the mosaic floor in the church on the acropolis, dated A.D. 719/720, are 11 city plans of Palestine and Jordan: Nikopolis, (Eleuthero)polis, Ascalona, Maioumas, (Ga)za, Od (roa), (Charach M)ouba, Areopolis, Gadara, Esboun (ta), Belemoun (ta). North of the W church a *xenion* (a hostel for pilgrims) and a room of a pribaton (bath) were found—two buildings associated with the public assistance for pilgrims, particularly necessary in a village like Ma‹in, which was near the hot springs of Baaru. Among the ruins were stone inscriptions, fine Nabatean sculptures, together with several Byzantine capitals which were richly decorated with geometrical, floral, and figurative motifs. See also MAON; MEUNIM.

BAAL-PEOR (PLACE) [Heb *ba‹al-pĕ‹ôr* (בַּעַל־פְּעוֹר)]. The place associated with the idol of Moab that tempted Israel while in the wilderness (Deut 4:3; Hos 9:10). According to the narrative account (Numbers 25), while Israel was encamped at Shittim, the men of Israel engaged in immorality with women of Moab. This activity was linked to the idolatrous worship of Baal of Peor. As a result God brought a plague on Israel in which 24, 000 died, and this was only stayed when Phinehas, the son of the high priest, killed Zimri, a Simeonite man, and Cozbi, a Midianite woman with whom Zimri violated the covenant (Num 25:18). According to Mendenhall (1973:105–21) it was an act of ritual intercourse that yoked this Israelite man to the pagan god; thus he broke covenant with the God of Israel.

Baal-peor or Baal of Peor was one of the leading gods of the Moabites, Midianites, and Ammonites, but akin to the Canaanite Baal and Moloch. The sensual rites of worship indicate a connection with the Phoenician Baal and the Moabite Chemosh. The Baal-peor incident carried this sensual aspect in the history of biblical interpretation as well. In particular, Marvin Pope (*Song of Songs* AB, 217–20) points out how sacral sexual intercourse in the Baal-peor festivals relates to interpretation of the biblical Song of Songs. From Jerome's time, writers have commonly associated Baal and Chemosh with the Roman Priapus. Rather than associating Peor, as the rabbis thought, with Heb *pā‹ar* "to fracture," and thus to deprive of virginity, it is best understood as a form of worship in this locality, Baal-peor or Beth-peor, in the mountains of Moab (Deut 3:29, 4:45). For further discussion, see Budd *Numbers* WBC, 274–83 (and bibliography there); Andersen and Freedman *Hosea* AB, 537–38, 540–41; Albright *ARI, YGC.*

BAAL-PERAZIM (PLACE) [Heb *ba‹al pĕrāṣîm* (בַּעַל פְּרָצִים)]. The place where David had his first victory over the Philistine army after moving his capital from Hebron to Jerusalem (2 Sam 5:18–20; 1 Chr 14:9–11). It is identified with "Mount Perazim" (Heb *ha Pĕrāṣîm*) in Isa 28:21. Thus Baal-perazim must be a mountain from where David's army could attack Philistines who "spread themselves out in the valley of Rephaim." The Greek name *Epnō Diakopōn* means "upper breaches," but the first element of the Heb name *Ba‹al* "lord" may be understood as the noun of relation. So the meaning of *Ba‹al Pĕrāṣîm* is literally "lord of breaches," but idiomatically "breach-maker," like the "dreamer" in Gen 37:19 ("the lord of dreams"), the "destroyer" in Prov 18:9 ("the lord of destruction"), and the "archer" in Gen 49:23 ("the lord of arrows"). The second element of the Heb name *Pĕrāṣîm* figuratively means the "outburst" of Yahweh's wrath in 2 Sam 6:8. So the Heb name *Ba‹al Pĕrāṣîm* here may mean " (divine) Outburster"

which is supported by the expression in 2 Sam 5:20:"Yahweh has broken through my enemies before me like the breakthrough of waters." The use of this place name in 2 Sam 5:20 ("So David came to Baal-perazim") is an example of a biblical practice to modernize geographical names. Here, the place name Baal-perazim was used in the context when this name had not yet been given to the place, like "Dan" in Gen 14:14, "Eben-ezer" in 1 Sam 4:1 and 5:1, and "Lehi" in Judg 15:9, 14.
YOSHITAKA KOBAYASHI

BAAL-SHALISHAH (PLACE) [Heb *baʿal šālīšâ* (בַּעַל שָׁלִשָׁה)]. A town (or region) from which a man came bringing "bread of the first fruits, twenty loaves of barley, and fresh ears of grain" to feed Elisha and the sons of the prophets during a famine (2 Kgs 4:42). The Talmud reinforces Baal-shalishah's reputation for agricultural productivity and fertility (*Sanh.* 12a).

The location of Baal-shalishah is tied in with the location of Gilgal, where Elisha and the sons of the prophets were staying. On the one hand, Gilgal here is often assumed to refer to the place near Jericho. Thus, Kallai (1972) identified Baal-shalishah with Kh. el-Marjameh (M.R. 181155) along the upper course of the wadi Samiya (its lower course enters the Jordan valley about 10 km N of Jericho). This identification is problematic, however, insofar as el-Marjameh lies in the wilderness of Ephraim, where the rain-shadow limits annual rainfall and where one would not expect to find a site noted for abundant harvests. On the other hand, because Elisha had been in Shunem and Mt. Carmel immediately before this, it is likely that this "Gilgal" lies somewhere in the N part of the central hill country, probably Jiljulieh (M.R. 171159), 12 km N of Bethel. See GILGAL (PLACE) #2. Eusebius had identified it with "Bethsarith/Bathsarisa" (Jerome rendered "Beth-salisa"), locating it 24 km N of Lydda/Lod. Thus, Baal-shalishah may be identified with Kh. Sirisya (M.R. 151168), overlooking the Sharon plain. The name of Kefr Thilth (M.R. 154174), a village 5.5 km N of Kh. Sirisya, contains the Arabic equivalent of Heb *šalîšâ.* The famine recorded in 2 Kings 4 therefore must have been localized, so that a man from Baal-shalishah about 25 km away could bring surplus food for Elisha and the sons of the prophets.

GARY A. HERION

BAAL-TAMAR (PLACE) [Heb *baʿal tāmār* (בַּעַל תָּמָר)]. The place on the highway between Gibeah (modern Tell el-Ful, M.R. 172136) and Bethel (modern Beitîn, M.R. 172148) where the soldiers of Israel mustered to fight against the Benjaminites who were pursuing them from their garrison at Gibeah (Judg 20:33). The 2 main armies fought here while a second portion of the army of Israel that had been encamped W of Geba (modern Ar Jebaʿ, M.R. 175140) attacked Gibeah and secured the victory over the Benjaminites. Baal-tamar was one among many locations in Israel bearing a divine name. It is possible that it was connected with a temple (*LBHG* 108). Its site has not been conclusively identified, though several possibilities have been mentioned. Press (1951:115) connected Baal-tamar with the palm *(tōmer)* of Deborah (Judg 4:5) on Mount Ephraim. He proposed that Baal-tamar was at the site, upon which the later Judean city of Ataroth was built (modern Kh. Atārāh, M.R. 170142), that was called Beth-tamar in the Byzantine period. Other possibilities are Ras et-Tavil (M.R. 174137) which is NE of Givat Šāʾul, and Ṣahre al Gibiyeh 500 m E of Tel el-Ful (*EncMiqr* 2:293).

SUSAN E. MCGARRY

BAAL-ZEBUB (DEITY) [Heb *baʿal zĕbûb* (בַּעַל זְבוּב)]. A god of Ekron, whom King Ahaziah wished to consult to learn if he would recover from a sickness he was experiencing as a result of a fall (2 Kgs 1:2, 3, 6, 16). However, Elijah pronounced Yahweh's judgment of death on the king for failing to inquire of Yahweh and instead seeking a word from Baal-zebub of Ekron.

The word *baʿal,* "lord," can be understood as the name of Baal, the great Canaanite deity, or as a generic title which could be used for Baal or for any other male divinity. Most scholars are of the opinion that the cult of Ekron mentioned in 2 Kings 1 was a localized form of Baal worship. Nevertheless, the main debate concerning "Baal-zebub" involves understanding the 2d element in the name, with 2 major positions being taken: (a) *zĕbûb* is the original form, and (b) *zbb* is a deliberate distortion of an original *zbl* by Hebrew copyists. The majority of those holding to the 1st position translate *zĕbûb* as "fly" or "flies" (cf. Isa 7:18; Eccl 10:1), interpreting the full name as "lord of the fly/flies." This name, it has been proposed, signifies that the deity of Ekron had control over flies, having the power to send or repulse these noxious disease-bearing insects (and other pests). Comparisons are made with the Greek god Zeus Apomuios ("averter of flies") and the Roman god Myiagrus (on the weakness of these comparisons see Gaster *IDB* 1:332). By extension, Baal-zebub, "lord of the fly/flies," is viewed as a health god warding off pestilence. The question arises, though, as to why Ahaziah, whose "illness" (or injury) was due to a fall and not a disease, would want to consult specifically this divinity of Ekron, supposedly revered for averting disease-bearing flies and pestilence (Gaster *IDB* 1:332). A 2d suggestion, that "Baal-zebub" sent oracles by means of flies, lacks reliable supporting evidence. Gordon (*UT* 388) explains that "lord of the fly" should be compared with the fly ("= divine symbol?") on cylinder seals. Yet on the example cited the representation, if it is a fly, is of undeterminable significance, its relationship to the seal's other images being problematical. Fensham (1967:361–63), noting the fire motif in the Elijah narratives (including 2 Kings 1), thinks *zĕbûb* may be "flame" (thus "Baal the flame"), on the basis of *ḏbb* (Ug *ḏ* changed to *z* in Heb) in *CTA* 3.3.43. However, the meaning of *ḏbb* in the Ug passage remains uncertain.

The other major position, again, sees *bʿl zbl* as the original name of the god, which was intentionally distorted by scribes to show contempt for the deity and to mock his worshipers (*bʿl zbb* meaning "lord of the fly/flies"). Examples (inexact parallels) from the Heb Bible are mentioned where the theophoric element "Baal" in personal names is known to have been deliberately changed. As to the meaning of *zbl,* the Heb *zĕbūl,* "lofty abode," "exalted dwelling," has been cited (thus:"lord of the lofty abode"). A *zbl,* which can be translated "sick (one)," appears in the Ug literature, but it is doubtful that this word is involved in 2 Kings 1 (i.e., "lord of the sick one"), since it carries connotations of disease or plague. Another proposal interprets *zbl* as "prince." In the mythology of Ugarit Baal several times is referred to as *zbl b>l <ars\,* "the prince, the lord of the earth." Baal is also called simply *zbl b>l,* "Prince Baal," as are other deities (e.g., *zbl ym,* "Prince Yam"). Further, the word order of a divine name preceding *zbl* occurs in the Ug texts; e.g., *ršp zbl* and *yrḫ zbl,* which in context are translated "Prince Resheph" and "Prince Yarikh." Thus, *bʿl zbl* could be "Baal the prince," "Prince Baal," or "Baal is prince" (cf. the name Beelzebul in Matt 10:25 and 12:24, 27; Mark 3:22; Luke 11:15, 18, 19).

In summary, on the basis of the available evidence, one cannot reach a proper understanding of "Baal-zebub." Nevertheless, in light of the context of 2 Kings 1, the Ug evidence, and the tendency of Heb scribes at times to distort certain names, it seems best at present to regard "Baal-zebub" as a caconymic ("lord of the fly/flies") for an original "Baal-zebul," "Baal the prince." Why Ahaziah wanted to consult this Baal of Ekron remains unknown. See also BAAL; BEELZEBUL; and *RE* 2:514–16.

WALTER A. MAIER III

BAAL-ZEPHON (PLACE) [Heb *baʿal ṣĕpōn* (בַּעַל צְפֹן)]. A site in the Egyptian E Delta that is mentioned together with Migdol to help locate Pi-hahiroth, near the place where the Israelites crossed the sea (Exod 14:2, 9; Num 33:7). The precise location of Baal-zephon (and of Migdol and Pi-hahiroth as well) is uncertain, but the question is important for the debate regarding the location of the sea crossing and the route of the Exodus. Baal-zephon, after whom the biblical site was named, was a Canaanite god who is well known from the Ugaritic texts. His dwelling place was on Jebel el-Aqraʿ, about 40 km north of Ugarit, which the Semites called *ṣapānu* (Heb *ṣāpôn*) and the non-Semites called *ḥazi,* later Kasios (*TDOT,* 2:186).

At least 3 sanctuaries of Baal-zephon in N Egypt are known: Memphis, Tahpanhes (Tell Defneh), and Mt. Casius at Ras Qasrun. Possibly one of the temples at Tell el-Dabʿa, located 2 km south of Qantir, was dedicated to Baal (Bietak 1981:253). A *migdol* that is probably called "of Baal-zephon" is mentioned in the Cairo papyrus 31169. Its location seems to have been near Wadi Tumilat (Davies 1979:81). There were probably additional Baal-zephon sites in N Egypt, since the Canaanite religion was popular there at various times (Helck 1962; Stadelmann 1967).

Four locations for biblical Baal-zephon have been proposed: two N, one central, and one S. (1) Some posit its location at the Egyptian Mt. Casios near Lake Sirbonis. Eissfeldt (1932) argued that Mt. Casios was located at Mahammidiye on the Mediterranean coast, about 13 km E of Pelusium, but Cazelles (1955) has demonstrated that it was located at Ras Qasrun on the N strip separating Lake Sirbonis from the Mediterranean. (2) The other suggested location in the N is Tahpanhes, modern Tell Defneh near the S tip of Lake Menzaleh (Albright 1950; Wright 1962:62). (3) Others propose a central location near the Bitter Lakes (Simons 1959:248–51; Davies 1979:82). (4) The traditional view located the site near the head of the Gulf of Suez (Servin 1948–49). To a great extent one's view regarding the location of biblical Baal-zephon is tied in with one's view regarding the route of the Exodus. The 2d and 3d options appear to be the most plausible. For persuasive arguments against the 1st and 4th options, see Davies (1979:81–82).

PAUL R. RAABE

BAALAH (PLACE) [Heb *baʿălâ* (בַּעֲלָה)]. **1.** City on the N border of Judah (Josh 15:9, 10; 1 Chr 13:6). Owing to its biblical identification with Kiriath-Jearim (Josh 15:9; 1 Chr 13:6), it is to be located at Tell el-Azhar (Boling *Joshua* AB, 369), alongside one of the major routes leading through the Judean hill country E to Jerusalem (*LBHG* 59). Noth considers the identification of Baalah and Kiriath-Jearim to be a redactional error, although he concedes that Baalah, which in his opinion may have been no more than a cultic site, lay in the vicinity of Kiriath-Jearim (*Josua* HAT, 88–90, 110). He further views variant names for Baalah/Kiriath-Jearim, such as Kiriath-Baal (Josh 15:60, 18:14) and Baale-Judah (2 Sam 6:2), as artificial constructions. He bases his argument on the putative antiquity of the name Kiriath-Jearim and denies the possibility of multiple concurrent names. Boling (*Joshua* AB, 369), reflecting the view of most modern scholarship, views Baalah as an ancient Canaanite name (meaning "wife" or "lady"), reflecting the worship of one of the Canaanite goddesses (Asherah, Astarte, or Anath). He further speculates that the name Baalah was demythologized by the Israelites into Kiriath-Jearim "Woodsville."

2. One of the towns of Judah (Josh 15:29). It was located in the Negeb toward the Edomite border (Josh 15:21). Abel (*GP* 258) located it at Tulul el-Medbah, near Tel Masos (Khirbet el-Meshash). In the lists of the Simeonite tribal allocations within Judah's territory it is called Balah (Josh 19:3) and Bilhah (1 Chr 4:29). Although most scholars do not commit themselves on the question of the original form of the name, Noth (*Josua* HAT, 88) supported Balah, which Albright (1924:150 n. 4) viewed as secondary, choosing what in his view is the most difficult reading, namely Bilhah.

3. A point on the NW border of Judah, called Mount Baalah [Heb *har-habbaʿălâ*] (Josh 15:11). It is commonly identified with the ridge of Mughar, NW of Ekron (Kallai-Kleinmann 1958:145).

CARL S. EHRLICH

BAALATH (PLACE) [Heb *ba‹ălāt* (בַּעֲלָת)]. A town in the W part of the territory of Dan (Josh 19:44), within the lowland regions which that tribe failed to inherit from the Canaanites (Judg 1:34). Baalath appears to have come under Israelite control only in the days of Solomon, when it was fortified (1 Kgs 9:17–18; 2 Chr 8:5–6), along with recently annexed Gezer and with Lower Beth-horon, in order to guard the roads leading to Jerusalem from the plain. Baalath is apparently to be equated with Mt. Baalah (Josh 15:9), on the W boundary of Judah. It has been identified with the site of el-Maghar (M.R. 129138), where sherds of the Bronze and Iron ages have been collected (Kaplan 1953:140–41).

BAALATH-BEER (PLACE) [Heb *ba‹alat bĕ›ēr* (בַּעֲלַת בְּאֵר)]. A site mentioned in the list of towns purportedly assigned to the patrimony of the tribe of Simeon by Joshua after the conquest (Josh 19:8) and called Baal in a later version of this list (1 Chr 4:33). The list, widely believed to derive from administrative documents of the monarchy, locates Baalath-beer at an indeterminate distance and direction from the vicinity of 4 other towns: Ain, Rimmon, Ether, and Ashan. If Rimmon (En-rimmon?) is to be identified with Tel Halif, then Baalath-beer might be sought in the S Shephelah or N Negeb. Alternatively, the list's vague association or identification of Baalath-beer with Ramath-Negeb might place the site in the Negeb E of Beer-sheba (*HGB* 358–59), a location which might suggest the site's identification with the BEALOTH mentioned in Josh 15:24. In any case, any modern location of Baalath-beer is clearly a matter of conjecture. The meaning of the toponym "lady of the well" suggests that the patron deity of Baalath-beer may have been a local goddess related to the Canaanite fertility god Baal.
PATRICK M. ARNOLD

BAALBEK (PLACE). A Canaanite, Phoenician, and Greco-Roman town and cult center in Lebanon, 53 miles (85 km) ENE of Beirut in the N part of the fertile Beqa valley, between the region's 2 major mountain ranges. The cultus was dedicated chiefly to the Semitic god Baal (Hadad/Adad) in his capacity as a deity of sky, storm, and fertility of the land. Although excavations have shown occupation of the site as early as the 3d millennium B.C. (Ragette 1980:16), little is known of the pre-Roman development of Baalbek. Attempts to identify the town with a biblical site, such as Baal-gad, have not been successful.

During the 3d or 2d century B.C. the shrine and town were renamed Heliopolis "City of the Sun" echoing the name of an Egyptian sacred city. From the time of this renaming (if indeed not earlier) until the Islamic conquest in the 7th century A.D., a triad of deities was venerated at the site: Zeus/Jupiter, who may have assumed solar characteristics along with the traditional attributes of Baal; the goddess Aphrodite/Venus (the Syrian Anath/Atargatis); and the youthful god Hermes/Mercury. The assumption that Dionysus/Bacchus was the 3d member of the triad has been shown to be erroneous.

In spite of earthquakes and human destruction, the site has extensive remains dating largely from the 1st through the 3d centuries A.D.; the most important are 6 immense standing columns and other remnants of a temple of Jupiter, a remarkably well-preserved temple popularly known as that of Bacchus, and a small circular temple that has been taken, perhaps mistakenly, to have been dedicated to Venus. Major archaeological excavations were conducted by a German expedition during 1898–1905 (Wiegand); since that time further excavation, along with considerable consolidation and restoration, has been carried out by the Department of Antiquities of Lebanon. Guidebooks to the site include Alouf and Harding; fuller analysis as well as numerous excellent photographs will be found in Jidejian (1975), while Ragette (1980) is helpful for its numerous line-drawings depicting the major temples of Baalbek as they are today and as they may have looked in the past.

BAALE-JUDAH (PLACE) [Heb *baʿălê yĕhûdâ* (בַּעֲלֵי יְהוּדָה)]. See KIRIATH-JEARIM (PLACE).

BAALIS (PERSON) [Heb *baʿălîs* (בַּעֲלִיס)]. An early 6th-century B.C. Ammonite king mentioned only in Jer 40:14. The context indicates that Baalis was either: (1) anti-Babylonian in his foreign policy, seeking to restore the Davidic throne under Ammonite control, and collaborating with and harboring Judean royalty involved in the murder of Gedaliah, the Babylonian-appointed governor residing in Mizpah; or (2) at least disruptive of a stable Judean government in an effort to serve his own ends, perhaps being jealous of any neighbor who had the potential of rivaling his own power.

This king has been identified with the Baʿal-yishʿa mentioned on a seal impression found in 1984 at Tell el-ʿUmeiri, just S of Amman in Jordan (Geraty 1984; 1985). It was found in the sift from topsoil excavated near the W rim of the mound about 50 cm above the remains of a major public structure termed the Ammonite Citadel by the excavators. The seal impression itself (19 mm in diameter) was on the flat end of a fired ceramic cone (21 mm in length) which may have served as a stopper with identification for a juglet of unknown contents.

The finely conceived and executed seal impression is divided into 3 panels. The top and bottom panels contain the Ammonite inscription, dated paleographically to ca. 600 B.C. (Herr 1985b and fc.). The middle panel depicts typically Ammonite iconography (Younker 1985): a 4-winged scarab beetle pushing a solar ball flanked by standards, solar discs, and crescent moons in an assemblage reminiscent of Zeph 1:4–6. The inscription reads *lmlkm-ʾwr ʿbd bʿl-yšʿ,* "belonging to Milkom-ʾur, servant of Baʿal-yishʿa (or Baʿal-yashaʿ)." Both of the personal names, that of the owner of the seal and that of the king he served, constitute "firsts." Milkom-ʾor ("Milkom is light") or Milkom-ʾur ("Milkom's flame"), represents the first-known occurrence in which Milkom, the well-known Ammonite divine name, appears as one of the elements in an Ammonite proper name. According to his title, "servant," this individual would have been a prominent government official in the service of the Ammonite king, Baʿal-yishʿa ("Baal is salvation") or Baʿal-yashaʿ ("Baal saves"). The latter is identified with the Baalis of Jer 40:14, and this reference to him is his first extrabiblical confirmation—despite Wright's (1974:3) claim about "Baʿlay" being on the Tell Siran bottle (a misunderstanding of Cross 1973), misinformation perpetuated by Feinberg (1982:272).

The spellings for the name of the Ammonite king preserved in Jer 40:14 *(bʿlys)* and in the seal impression *(bʿlyšʿ)* are different enough that one may legitimately question the identification. The following points argue in its favor (Shea 1985:112):

1. Of the 9 Ammonite kings now known from the Bible, Assyrian texts, and Ammonite inscriptions (cf. Cross's listing in Herr 1985b:171), the Baalis of Jeremiah is the only one containing "Baal" as a theophoric element.
2. In the more than 100 names assembled thus far in our Ammonite onomasticon, Baalis is the only name containing "Baal" as its theophoric element. Thus the use of "Baal" in an Ammonite king's name is exclusive to the king of the ʿUmeiri sealing and the king mentioned in Jer 40:14. Even though the verbal element in the names differ, it is reasonable to conclude that the 2 references are to the same Ammonite king.

The spelling difference in the verbal element of the name thus requires an explanation. Before the discovery of the seal impression, both Cross (1973:15) and Landes (*IDB* 1:112), recognized that the name Baalis makes no sense as it stands in the MT, so suggested it could be hypocoristicon. Subsequent to the find, Shea (1985) has argued an intentional pious change in the Bible to avoid heathen theology, a view

disputed by Herr (1985a). It is also possible that it could be an unintentional change reflecting the way Judeans heard the name pronounced in Ammonite, partially preserved, perhaps, in Jer 47:14 LXX, as Belisa, where the final vowel would reflect the presence of a final *ʿayin* which would, of course, not have been written in Greek (Geraty 1985:100). That Transjordanian *šin* was pronounced *śin* in Cisjordan is well known from the Shibboleth story in Judg 12:6. Whatever the reason for the difference in spelling, it was accurately hypothetically reconstructed by Puech (1985:10) before the archaeological discovery.

BAALSAMUS (PERSON) [Gk *Baalsamos* (Βααλσαμος)]. See MAASEIAH.

BAANA (PERSON) [Heb *baʿanaʾ* (בַּעֲנָא)]. Three persons in the OT. Baana and Baanah are apparently variant spellings of the same name, as are *uzzāʾ* (2 Sam 6:3) and *uzzâ* (6:7–8), *mîkāʾ* (2 Sam 9:12) and *mîkâ* (1 Chr 8:34–35). There are 2 main approaches to the meaning of Baana (h). The 1st sees it as deriving from *ben-* "son of" plus a 2d element. The loss of *nun* in *bn-* is known, for example, from 10th–9th century B.C. inscriptions from Byblos (*KAI* 6.1; 7.3; 8). The interpretation "son of distress," from *bn-ʿnh* (BDB, 128) founders mainly on the lack of a noun *ʿānâ* "distress." Somewhat more likely is the view that the 2d element is the name of a deity ʿAn (perhaps the masculine counterpart of ʿAnath), believed to be referred to in personal names from Ug (e.g. *bn. ʿn*), Amarna (DUMU *[Bin]-a-na*), and elsewhere (Hoffmon *APNM* 199; cf. 168–69).

The 2d approach understands Baana (h) to begin with the element *bʿl* "Baal/the Lord" (with *lamed* dropped; Noth (*IPN* 40; cf. *TPNAH* 56) adduces a Phoenician example of *bʿsmm* for *bʿlsmm*). Noth saw the name as *bʿ (l) + n* + hypocoristic *-ā,* the *nun* being the first radical of the name's 2d element; the apparently analogous names Baasha and Baara may also be analyzed in this fashion. Alternately, Baana (h) may derive from *baʿalʿānâ* "Baal has answered" (Montgomery *Kings* ICC, 125).

Possibly related names in extrabiblical sources include Palmyrene *bwnʾ* (*IPN* 40), Minean *bʿn* and Safaitic *bʿnh* (Ryckmans 1934:54, 257).

1. Son of Ahilud and a prefect over Solomon's 5th administrative district (1 Kgs 4:12). Baana was charged with supplying provisions for the palace during 1 month of each year (1 Kgs 4:7). His district corresponded roughly to the Jezreel and Beth-Shean valleys, areas dominated until David's time by major Canaanite cities such as Taanach and Megiddo. More precise boundaries cannot be delineated with confidence due to the uncertainty of site identifications (notably Zarethan and Jokmeam, which some read as Jokneam) and difficulties in the text of 1 Kgs 4:12, parts of which appear to have been transposed. See further Wright 1967:59*, 60*, 66*; *LBHG* 308, 313; Naʾaman 1986:187–90. Baana may have been the brother of Jehoshaphat son of Ahilud, a high official (*mzkyr* "Recorder") under David and Solomon: 2 Sam 8:16, 1 Kgs 4:3.

2. Son of Hushai and a prefect over Solomon's 9th district (1 Kgs 4:16; for his duties see Baana #1 above). Baana's district is described as *bʾsr wbʿlwt,* either "in Asher and in Aloth" or "in Asher and Bealoth." Both alternatives are problematic inasmuch as no town Aloth, or N town Bealoth, is known, and it seems unusual for the name of a well-known tribe to be paired with that of an obscure locale. Reading

Maaloth *(mʿlwt)* or the like (unconvincingly connected with the Ladder of Tyre, see Montgomery *Kings* ICC, 126) with some Gk witnesses merely exchanges one unknown for another. A conjectured reading "in Asher and Zebulon" is supported by Cross' demonstration (Wright 1967:59* fig. 1 and n. 8) that *zbwlwn* could have been misread as *wbʿlt* in some scripts. The conjectured reading remains viable in spite of objections which have been raised (Montgomery *Kings* ICC, 126; Ahlström 1979), notably on the grounds of *lectio difficilior,* although, the lack of versional support for the reading "Zebulun" is surprising in view of the lateness of Cross' examples. See further *LBHG* 308, 315; Naʾaman 1986:192–94.

It is quite possible that Baana's father was Hushai the Archite, David's loyal advisor (2 Sam 15:32–37).

3. The father or ancestor of Zadok, one of those who repaired a section of Jerusalem's walls in the days of Nehemiah (Neh 3:4). Possibly identical to BAANAH #3 or #4.

FREDERICK W. KNOBLOCH

BAANAH (PERSON) [Heb *baʿănâ* (בַּעֲנָה)]. **1.** One of the murderers of King Saul's son Ishbosheth (2 Sam 4:2–12). Baanah and his brother Rechab were both company commanders under Ish-bosheth (2 Sam 4:2), who had succeeded Saul as king of Israel. Having slipped into Ish-bosheth's house as he rested at midday, the two killed the king in his bed and brought his head to David, then king of Judah and Ish-bosheth's rival, in anticipation of a reward. David, however, denounced the deed, had the two executed, and had their severed limbs hung beside the pool in his capital Hebron—no doubt powerful deterrents to further regicide and vivid reminders that David denied any involvement in the assassination.

There is no consensus as to whether Baanah was an Israelite, an important issue in understanding Ishbosheth's murder. According to one reading of 2 Sam 4:2–3, Baanah's father Rimmon was a Benjaminite *(mbny bnymn)* who lived in Beeroth *(hbʾrty).* The passage goes on to tell how Beeroth came to be populated by Benjaminites, *viz.* as a result of the flight of the (native) Beerothites to Gittaim, which presumably allowed Benjaminites to move in. This reading involves taking *bʾrty* "Beerothite" in a geographical sense in v 2 ("one who lives in Beeroth") but in an ethnic sense in v 3 ("Beerothite"). In this view Baanah and Rechab were motivated solely by the expectation of a reward from David (McCarter *2 Samuel* AB, 127–28).

Alternately, Baanah was the son of "Rimmon the Beerothite *(hbʾrty)* from (among) the Benjaminites *(mbny bnymn),*" and was therefore of Gibeonite extraction, Beeroth being one of the 4 Gibeonite cities (Josh 9:17). Verse 2 goes on to explain why a foreign Beerothite is associated with the Benjaminites: because Beeroth was located within Benjamin's borders. (Verse 3, loosely connected to the foregoing, adds an explanation of why there were Beerothites living in Gittaim.) If Baanah the Gibeonite killed Saul's son, one cannot fail to connect the episode to the well-known Gibeonite hatred of Saul, even though the biblical narrative does not stress the point. Saul, the Gibeonites said, attempted to exterminate them (perhaps the occasion of the Beerothite's flight to Gittaim); in retaliation the Gibeonites, after Saul's death, demanded and received permission from David to execute 7 of Saul's sons (2 Sam 21:1–9). In this view Baanah and Rechab were motivated by revenge as well as profit (Yeivin 1971:150–54; see references in McCarter *2 Samuel* AB, 127).

2. Man from Netophah in Judah, the father of one of The Thirty, an honor roll of David's warriors (see DAVID). Baanah's son was named Heleb (2 Sam 23:29), Heled (1 Chr 11:30), or Heldai (McCarter *2 Samuel* AB, 492).

3. Leader of the exiles who returned from Babylon with Zerubbabel (Ezr 2:2; Neh 7:7; 1 Esdr 5:8). Possibly the same as BAANA #3.

4. One of the leaders who, in the days of Nehemiah, set his seal on a pledge to observe the law of Moses (Neh 10:28—Eng 10:27).

For the meaning of the name BAANAH see BAANA.

BAARA (PERSON) [Heb *baʿărāʾ* (בַּעֲרָא)]. One of the 4 women mentioned in a very detailed genealogy of Benjamin in 1 Chr 8:1–40 (v 8). Her name appears nowhere else in the MT (LXX *Baada*) and is not found in the Apocrypha or the deuterocanonical literature. Baara means "coarse" or "brutish one." Three of the 4 women mentioned in 1 Chr 8:8–9 are wives of the Benjaminite, Shaharaim—Baara, Hushim, and Hodesh. Baara, along with Hushim, was divorced by Shaharaim. No children are indicated for Shaharaim by Baara, whereas such is the case with the other two. Perhaps this contributes to the divorce. The genealogy in which Baara appears seems to conclude the major genealogical emphases of the Chroniclers (other emphases being Judah and Levi). Shaharaim appears for the 1st time in v 8, which supports scholars such as Williamson (*Chronicles* NCBC, 82) in pointing out that there is no apparent structure to the extended Benjaminite genealogy. Rudolph (*Chronikbücher* HAT, 77) emphasizes certain geographical breaks in the genealogy which seem to show parallel lists of Benjaminite families and their dwelling locations at a particular time, probably either during the reign of Josiah or the postexilic period. However, the fact that v 9 locates the family of Shaharaim, and thus of Baara, in Moab might point to a relationship that goes back to earlier times. Certainly Israelites resided in Moab as indicated in Ruth 1 and 1 Sam 22:3, 4. This would have been more likely prior to the time that Moab regained its independence from Israel. Myers (*1 Chronicles* AB, 60) states that while Moab was under Israel's control the Benjaminite association could clearly have been accurate.

G. EDWIN HARMON

BAASEIAH (PERSON) [Heb *baʿăśēyâ* (בַּעֲשֵׂיָה)]. A Levite, ancestor of Asaph the musician (1 Chr 6:25—Eng 6:40). The name Baaseiah is found only once in a genealogical list of levitical singers which attempts to trace ancestry back to the time of David. The list is secondary, perhaps based upon the preceding list (1 Chr 6:1–15—Eng 6:16–30). The name should probably be read Maaseiah with several mss, LXX^{BL} and Syr.

TOM WAYNE WILLETT

BAASHA (PERSON) [Heb *baʿăšāʾ* (בַּעְשָׁא)]. King of the N kingdom of Israel ca. 900–877 B.C. (1 Kings 15–16). Baasha was the son of Ahijah of the tribe of Issachar and of common birth (1 Kgs 16:2). Baasha is first mentioned abruptly and without introduction in 1 Kgs 15:16 as the opponent in a border war against King Asa of Judah. This border dispute between the N and S kingdoms in 1 Kings 15 represents a literary crossing of the border from stories predominantly about kings of Judah in the Deuteronomistic History (1 Kings 1–14) to stories about kings of N Israel (1 Kings 16—2 Kings 17).

Baasha was the 3d in the series of kings of the N kingdom, following the reigns of Jeroboam and Jeroboam's son Nadab. Baasha gained his kingship by assassinating Nadab in the field in a battle against Israel's archenemy the Philistines after Nadab had ruled for only a few months. Baasha then killed the whole family of Jeroboam and Nadab in order to avoid any rival claims to the kingship. The Deuteronomistic History interprets Baasha's devastation of the house of Jeroboam as a fulfillment of a previous prophecy against Jeroboam (1 Kgs 15:25–30). On a sociopolitical level, the action illustrates the climate of competing rivalries in N Israel with its 10 tribes and their several competing tribal centers and groups. In contrast, the S kingdom was essentially one tribe with one center in Jerusalem, which made for a less tumultuous political atmosphere.

The border war between Baasha and the S king Asa was of long-standing (1 Kgs 15:16, cf. Jer 41:9). The conflict apparently had to do with the position of the boundary between the two kingdoms in the central hill country which was a strategic link in the main transportation route running from S to N. Initially, Baasha gained the upper hand with his control of the town of Ramah which was only 5 miles

from the S capital of Jerusalem (1 Kgs 15:17). However, the S king Asa shrewdly used expensive gifts to entice the Syrian king of Damascus Ben-hadad into breaking his covenant of peace with N Israel and invading Israel along its N border. Baasha was thus forced to abandon the border dispute on his S flank in order to deal with the threat from Damascus. Asa then immediately seized the border town of Ramah and pushed a few miles further N to Mizpah where he used building material left by Baasha for his own fortifications (1 Kgs 15:18–22).

Baasha was told by the prophet Jehu that because of his sinful reign the fate of his house would be like that of Jeroboam. Baasha reigned for nearly a quarter of a century and died a peaceful death, but Baasha's son Elah, who succeeded him as king, was promptly assassinated by a usurper to the throne named Zimri (1 Kgs 16:1–7; cf. 2 Chr 16:1; 1 Kgs 21:22; 2 Kgs 9:9). According to 1 Kgs 16:7, Baasha thus came under judgment not only for destroying the house of Jeroboam but also because Baasha was no better as a ruler than the evil Jeroboam. See Gray *Kings* OTL; Jones *Kings* NCBC.

DENNIS T. OLSON

BAB EDH-DHRAʿ (M.R. 202074). One of several EB settlements in the SE Dead Sea plain (Rast and Schaub 1974), situated on the E edge of the Lisan peninsula. Its importance, among other reasons, lies in being continuously occupied through most of the EB Age (ca. 3300–2100 B.C.), and thus it serves well as a type site for developments during the various phases of this period.

The name for the ruins, Bab edh-Dhraʿ ("gate of the arm"), is apparently not very old. Irby and Mangles (Schaub and Rast 1989) referred to this site by the same name in connection with their explorations in the area in 1818. Unlike es-Safi, however, whose ancient name is now commonly accepted to have been Seghor (Roman) and Zoora (Byzantine), that is, the biblical Zoar, the ancient name of Bab edh-Dhraʿ has passed completely from memory.

Although visited by a number of 19th century explorers, Bab edh-Dhraʿ was unrecognized as a significant archaeological site until a 1924 survey in the SE Dead Sea plain led by Albright and Kyle who identified it as an EB Age site (Albright 1924–25:56–62; Kyle 1928; Mallon 1924; Albright, Kelso, and Thorley 1944).

The 1st excavations at the site were conducted by P. W. Lapp between 1965 and 1967. Lapp's excavations determined that the cemetery contained a variety of tomb types of the different phases of the EB. Lapp also determined that during EB II and III a sizable walled city existed at the site. Since 1973, W. Rast and R. T. Schaub have followed up on Lapp's work, adding new interdisciplinary objectives to the expedition, which grew out of the survey of the entire SE plain (Rast and Schaub 1974). As a result of this work, the site is being studied within the regional framework of the SE Dead Sea plain as a whole.

The earliest EB phase, IA, is known almost exclusively from tomb evidence. These tombs exemplify the widely practiced tradition of shaft-tomb interment, best known from the EB IV phase a millennium later. Vertical shafts, which provided access to the tombs, average somewhat less than 2 m in both depth and diameter. At the base of the shafts a stone-blocked doorway opened into the tomb chamber (average diameter 2 m). A pile of human bones, always toward the center of the chamber, contained small bones in the lower levels surmounted by long bones (humeri and femora) stacked in parallel over the pile. Skulls were normally arranged in a line left of the bone pile. The number of those buried varied between 2 and 10, with both sexes represented, and occasionally adolescents, preadolescents, and even infants. Pottery was typically clustered around the edges of the bone pile on the left and right, and sometimes toward the rear of the chamber. Additional objects in some of the tombs were basalt bowls, mace-heads, basketry, shell bracelets, and clay figurines. In 1 or 2 chambers, remains of what must have been wooden staffs used for herding animals were found. The bone piles were normally placed on reed matting made from plants which still grow in the marshy areas of Wadi Kerak today.

Lapp's interpretation, followed by Rast and Schaub, is that the EB IA occupants were non-sedentary, and that their relation to the site was for the purpose of burial. The few cases of primary burial during the EB IA were probably accounted for by the deaths among members of a group temporarily at the site. Campsite remains are all that have been found in the way of settlement by the EB IA people.

The EB IA population seems not to have been large at any one time, despite early projections of extraordinarily high numbers of burials. Lasting perhaps for little more than a century, the EB IA society consisted of nuclear and extended family groups. Their larger social organization was more in the nature of a "band" than a large tribe. Endogamy was apparently practiced, but exogamy is also indicated by the coexistence of 2 EB IA burial plots, each with its own tradition (Cemeteries A and C).

Schaub and Rast (1984:34–35) have proposed that the dynamics leading to permanent settlement at Bab edh-Dhraʿ are to be sought in the EB IB. Since no substantial settlement remains have appeared in association with the EB IA yet are attested for the following phase, it was during EB IB that year-round settlement began. The EB IB phase is easily recognizable by its decorated pottery, with a line-group painting technique applied to various vessel types. The earliest mudbrick structures, found at the lowest levels of the town site, date to the EB IB.

Along with the beginning of a permanent settlement, a new type of burial tradition consisting of circular houses also occurs. The funerary buildings (or charnel houses) were made from plano-convex mudbricks. The doors of these buildings were flanked by stone slabs, and the entries were also sealed by large stones. The burials in these houses were primary interments, with as many as 20 to 30 interments in a single house. As new burials were deposited, earlier ones were moved against the walls following decarnation.

Urbanization thus did not occur at once at Bab edh-Dhraʿ, but was a gradual development from the EB IB village settlement to the walled city of EB III. The developing town of the EB II phase was an intervening stage between these two. EB II witnessed the establishment of large numbers of rectangular brick houses of the type found at Arad, Jericho, and elsewhere during the EB Age. During this phase as well, the 1st of two sanctuaries was constructed, succeeded in EB III by a later sanctuary of nearly identical proportions directly above it. In the cemetery the circular charnel houses became elongated and rectangular, making it possible to receive an even larger number of burials. The charnel houses of the EB II and EB III phases continued in use until they became overloaded, at which time they were permanently closed.

The EB civilization in the SE Dead Sea plain reached its zenith during EB III. Encompassing more than 10 acres during this phase, a 7 m wide defensive wall girdled Bab edh-Dhraʿ, and a gateway on the W provided access to the Mazra'a plain, where barley, emmer wheat, and other products were cultivated. As in EB II, the interior of the city was densely built up with brick structures, the most prestigious building being the sanctuary with its courtyard and altar. The EB III occupation was the most long-lasting of all the EB phases, as evidenced by cultural residue found to a depth of 4 m in some excavated areas. This phase lasted approximately 350–400 years. The EB III settlement expanded beyond the walled settlement, so that the population numbered perhaps 1, 000 people. The nearby site of Numeira was an offshoot of the flowering EB III city at Bab edh-Dhraʿ.

Several of the EB II charnel houses were reused during the EB III, and new buildings were constructed. Two of the largest tombs of this type (A 51 and A 52), however, were mainly used during the last phase.

Two important historical questions at Bab edh-Dhraʿ are how the EB III city came to an end and what the relation of the succeeding EB IV settlement was to that of the previous EB III city. At approximately 2350 B.C., the EB III city suffered some sort of trauma, leaving it in ruins. In fields XIII and IV the upper part of the defensive wall made of brick fell onto the natural slopes of the site. The mudbrick superstructure of the sanctuary also collapsed, apparently after burning. The charnel houses that were still in use were burned. Their brick walls either fell in, or as seems to be indicated by their position, were pushed in. Many of the charnel house bricks were also burned in the conflagration.

Although a natural disaster such as an earthquake may have been responsible for these events, an external attack against the city, as also at Numeira, cannot be ruled out. However the EB III city met its demise, the following EB IV occupants chose for the most part not to reoccupy the area of the earlier city. Their main areas of settlement were found NE and S of the previous city, in fields IX and X. The one exception was what appeared to be a cult area in field XVI on the N edge of the EB III site. EB IV tomb construction abandoned the use of charnel houses, making use rather of shaft tombs reminiscent of those

1, 000 years earlier. The EB IV tombs, however, contained mostly primary rather than secondary burials, which also suggested that the EB IV occupation at Bab edh-Dhraʿ was more permanent than transient.

Most recently, survey and excavation have discovered further evidence for EB IV near Khanazir in the SE Dead Sea plain. Consisting of numerous shaft tombs enclosed within rectangular structures, these tombs and the lack of evidence for settlement nearby suggest, in contrast to Bab edh-Dhraʿ, a pastoralist population. The EB IV phase in the SE Dead Sea plain lasted approximately 2 centuries until, at about 2150 B.C., the plain was abandoned altogether, perhaps for ecological reasons. Thereafter the region was largely unoccupied until the Iron Age, and more extensively during Roman and Byzantine times. Bab edh-Dhraʿ itself, however, was permanently abandoned following the EB IV.

In addition to its cultural and historical importance, Bab edh-Dhraʿ also figures into discussions regarding the location of biblical Sodom and Gomorrah. The question is whether Bab edh-Dhraʿ (specifically its EB III city) can be related in any way to the biblical city of Sodom, which biblical (Gen 13:10–13; 14; 19) and postbiblical (cf. Philo *Somn* 2.192; *Abr* 140–41) traditions place in the general region of the Dead Sea. Although certain scholars earlier in this century argued to locate Sodom and its related cities at the N end of the Dead Sea, recent scholarship has generally placed the cities at the S end of the Dead Sea valley. Both Albright and Lapp concluded that Bab edh-Dhraʿ was indirectly connected with ancient Sodom. Albright considered the site as a cultic center for the "cities of the plain" which he concluded were buried irrecoverably beneath the waters of the S basin. Lapp (1968:25) concluded that the Bab edh-Dhraʿ necropolis was the cemetery of the "cities of the plain," and he also assumed that Sodom and the related cities in the biblical accounts lay buried below the waters of the S end of the Dead Sea.

Good reasons now seem to exist to place Bab edh-Dhraʿ more directly into the discussions about the biblical traditions of these cities (Rast 1987). The accounts in Genesis, and references to them in prophetic threats and judgments, show that the location of Sodom was only generally perceived by the Israelites as lying somewhere in the Dead Sea region. Two possibilities exist for explaining the uncertainties in their perceptions of the location. One is that Sodom was a fictional place name to begin with, that a city by this name never existed, and that the name came into being as an element in a local story or tale stressing a destruction severe enough to account for the startling physiography of the Dead Sea region. Those who have taken this approach to the Sodom accounts have tended to see the account of Sodom's destruction as a story similar to that of the great flood.

A 2d and different approach to the problem, however, assumes that an ancient city did exist in the Dead Sea region during antiquity, and that its name was remembered but the location of its ruins was forgotten. The latter came about partly because the SE plain was so sparsely inhabited between the end of the EB and the Iron Age (1200–600 B.C.) that local memory scarcely managed to preserve the recollection. Associated with this were also traditions of destruction of the cities which took various forms, all based on something only dimly remembered. Perhaps the disturbances at the end of EB III are at the heart of these recollections.

If the 2d of these approaches is followed, the evidence from Bab edh-Dhraʿ and Numeira becomes important as the only ancient sites in the Dead Sea region with remains which can possibly be tallied with the biblical accounts. The theory of buried cities beneath the sea seems more tenuous, given our new understanding of ancient settlement patterns in the region. Biblical scholarship may therefore find that Bab edh-Dhraʿ is more immediately related to the formation of the traditions about Sodom than earlier recognized.

BABEL (PLACE) [Heb *bābel* (בָּבֶל)]. The name given to a city in the plain of Shinar whose completion was thwarted by Yahweh's intervention (Gen 11:1–9). Conventionally known as the "Tower of Babel" story, Gen 11:1–9 is actually about a city that features a tower (Heb *migdāl*), which was perhaps a fortress or more likely a temple. The episode took place when humankind possessed one common language and had migrated to a single region: Shinar (vv 1–2). There the people decided to make bricks for the construction of a city. Such a city, it was hoped, would establish a reputation for its inhabitants and therefore prevent their dispersal (vv 3–4). On seeing what was taking place, Yahweh confused their language and scattered them over the face of the earth in the belief that inhabiting the same locale and possessing one language would allow human beings to do anything they desired (vv 7–8). This divine act explains the name *bābel,* which sounds like the Heb word for "confuse" *(bālal;* Gk *synecheen).*

Scholars have been divided over the question of the literary makeup of this story as well as over what inspired the account. There is general agreement that the narrative is part of the Yahwist (J) source, but that is the extent of the consensus. Some argue that the Yahwist inherited a single unified tradition, or at least one which had already been combined from multiple sources in the course of oral transmission. Others contend that the Yahwist himself fused the various traditions.

Those who hold that discrete traditions were at some stage combined point to the separate motifs of dispersion, erecting a tower to storm the realm of the gods, and the confusion of tongues found in extrabiblical sources (Kramer 1943; 1968; Westermann 1984:539–40). In their original form, such narrative motifs emphasized either: (1) an important etiology, e.g., why humankind speaks more than one language; or (2) a significant religious teaching, e.g., the danger of encroaching upon the habitat of the gods. Scholars who argue that the Yahwist reworked a fixed tradition or composed a story from separate strands of traditional materials suggest simple literary dependence, citing, for example, the building of the sacred precinct (the Esagila) in Babylon as recorded in the Enuma Elish (Tablet 6:60–62 in *ANET*:69; Speiser *Genesis* AB, 75–76).

Some believe that the inspiration for the Babel story was provided by actual temple ruins in Mesopotamia. According to this view, the tower refers to the famous ziggurat architectural form (a kind of pyramid structure in which each successively higher layer is smaller than the one below it) and possibly to the Entemenanki, the great ziggurat temple of Babylon (Borger 1956:24, 29; *AHW* 1531–32; *LAR* 1:58, 194, 252; *LAR* 2:111, 252–53, 309–10, 390, 405; Hammond 1972:38–40; Oppenheim 1944). Adherents of this interpretation (cited by Westermann 1984:540) posit a Mesopotamian provenance for the account. Given the highly polemical and obviously anti-Babylon slant of the story, however, a Mesopotamian origin seems unlikely, unless one posits that it was written by a citizen of a Mesopotamian city which saw itself as a rival of Babylon. If the story were indeed inspired by actual ruins, it appears more plausible to postulate the original composition of an anti-Babylon tale by an Israelite as opposed to the reworking of an already existent Mesopotamian story. The putative Israelite polemicist, playing on likeness between two words, may have wanted to say that although in the Babylonian language (Akkadian) "Babel" means the "gate of god" *(Bab-ilu),* in our language (Hebrew) it means "confused." Logic would locate such an Israelite composition sometime during the Babylonian exile (after 587 B.C.E.), but this raises the problem of the story's relationship to the Yahwist Source (J), which is usually dated much earlier (Ellis 1968:40–42).

Some scholars believe that this account is historical, arguing not only that it contains allusions to authentic architectural or cultural realities (a viewpoint with which many scholars would concur) but also that it narrates an actual event (DeWitt 1979; Livingston 1974:145–50; Aalders 1981:251–55; Harrison 1969:559–60). Such scholars range from those who suggest that the account is generally and broadly historical (Livingston; Harrison) to those who insist that historicity extends even to the details (Aalders).

While marshaling whatever evidence is available to support their contention, these scholars also reveal that their insistence on the Bible's historicity generally is based on a particular theological construal of divine inspiration and the nature of biblical truth.

Other interpreters direct attention to the theological role of the story. Von Rad (*Genesis* OTL, 148–50) views the account as part of the sin-judgment-grace theme which he believes characterizes the Primeval History (Genesis 2–11). Clines (1978:61–79), however, thinks that von Rad underestimates the fact that, unlike the previous episodes (e.g., Adam/Eve, Cain/Abel, Noah/Flood, etc.), there is no direct message of grace in the Babel story. Thus, the story poses a haunting question:"Is humankind doomed to the punishment of being scattered and confused?" If the Primeval History concluded with the Babel episode the answer to that question would have to be affirmative. Since, however, the subsequent genealogy (Gen 11:10–26) connects the Primeval History to the Ancestral History (Gen 11:27–50:26) by pointing out that Shem (Gen 6:10; 9:18–19; 10:21–31) was the ancestor of Abraham, a negative answer is possible. The punishment inflicted in the Babel story is mitigated by God's renewal of the grace extended to humankind through Abraham, Sarah, and the other ancestors (Clines 1978:76–79; de Pury 1978:80–82).

Others explain the narrative as an explicit 10th century criticism of Solomon, referring either to the hubris underlying the desire for a "name," or to the failure to see that one's "house" and "name" consist of a people and not a temple (Brueggemann 1968:173–74; Lundbom 1983:203–9).

The story may also be interpreted in terms of its final canonical shaping, i.e., one may focus on the effect of the present composite text rather than its constituent parts. Thus, the message of Gen 9:1, 7 that humankind after the Flood was to increase and fill the earth (J) accords with God's original purposes expressed in Gen 1:28 (P = Priestly Source). Genesis 10 (P; cf. 10:32) demonstrates that God's will was being achieved again when humankind once more obstructed the divine plan by regathering in the plain of Shinar. Because of their sin, God once again scattered them (cf. Gen 10:5, 18, 20, 32), this time an act not of blessing but of judgment (Brueggemann *Genesis* IBC, 99–102).

Similarly, the acts of naming provide a clue to canonical significance. Throughout the Primeval History, naming is positive, whether done by God or humankind (cf. Gen 2:19–20, 23; 3:20; 4:25–26; 5:29; 9:26). There are, however, two possible exceptions. One involves the sin committed by the "sons of God" (Gen 6:1–4), who as divine beings or corrupt human beings (Eslinger 1979:65–73) cohabited with the "daughters of men" to produce an extraordinary race. This prompted divine judgment (Gen 6:3). If, as seems likely, the offspring of this union are to be associated with the Nephilim mentioned in Gen 6:4, who are known also as "mighty men" and perhaps more significantly as "men of renown" (Heb "men of the name"), and if the extremely negative appraisal in Gen 6:5–7 is to be understood as Yahweh's further reaction to what has just transpired, then the final canonical shaping may actually be calling attention not only to the fame of these "men of the *name*" but to their infamy as well.

The other exception is in the Babel story itself, where the attempt to "make a name for ourselves" (v 4) is seen as resistance to God's will for populating the earth (Brueggemann *Genesis* IBC, 99), which prompts God's judgment. This is tied to what follows by the subsequent genealogy which proceeds from Shem (= "Name"!) to Abraham (Gen 11:10–26 [P Source]) and by the allusion to the "great name" in Gen 12:2 ([J Source]; cf. von Rad *Genesis* OTL, 148–50). Indeed, from the point of view of canon, all divine actions subsequent to the Babel incident constitute God's gracious attempts to reverse its effects, thus the theologically strategic placement of the story. In the context of the Hebrew canon, the consequences of Babel are initially reversed in God's involvement with the Hebrew ancestors (Genesis 12–50). Ultimate reversal occurs when God makes David's name great and blesses him (2 Sam 7:9, 29).

Finally, within the Christian canon, the account of Pentecost (Acts 2:5–13) may be understood as a NT version of God's gracious reversal of the "Babel condition" (Bruce *Acts* NICNT, 64; Davies 1952:228–29). In the LXX version of the story, God decided to confound (Gk *sygcheōmen*) the people's language (Gk *glōssan*) so that they could not understand one another's speech (Gk *phōnēn*). Conversely, in Acts the disciples "began to speak in other tongues" (2:4; Gk *glōssais*). This in turn produced a "sound" (2:6; Gk *phōnēs*) at which the multitude was "bewildered" or "confused" (2:6; Gk *synechythē*). At Babel, God transformed a single language into many, creating confusion; at Jerusalem the Holy Spirit made it

possible for many languages to be understood as one, creating unity. At Babel, language was used to promote a human agenda ("Let us make a name for ourselves."); at Jerusalem, the "new" language was used to announce the "mighty works of God" (Acts 2:11). At Babel, God scattered the people in judgment (Gen 11:9; Gk *diespeiren*); at Jerusalem, God scattered (Acts 8:1, 4; Gk *diesparésan; diasparentes*) the people to spread the news which would eventuate in worldwide unity (Davies 1952:229).

FRANK ANTHONY SPINA

BABYLON (PLACE) [Heb *bābel* (בָּבֶל); Gk *Babylōn* (Βαβυλων)]. A major city in central

Mesopotamia, located on the Euphrates (32°33´N; 44°24´E). It played an important role in the history of the ANE during the 2d and 1st millennia B.C. Its present name comes from the Hellenized form of the Akk *Bab-Ilu,* literally meaning "the gate of god" which appears in the Bible in the usual form as "Babel." Undoubtedly, it was the most famous E city of antiquity, and also the most fascinating one—for many people it symbolized the whole Mediterranean civilization.

Two different sources explain this exceptional fame. It was first through the writings of Herodotus, who visited the city in the 5th century B.C., that the West became aware of the metropolis. The other source is the biblical writings, both OT and NT. This source does not treat the city with admiration as the Greek writers did, but in a negative manner based on the memory of conflicts between the great Mesopotamian empires and the kingdoms of Israel and Judah. Indeed, "Babylon" became symbolic of wickedness in many biblical writings.

A. Babylon in the OT

In the 11th chapter of Genesis, Babylon first appears as the location of the mythical Tower of Babel. However, it is only in the books of Kings and Isaiah that historically useful material is to be found: The Babylonian king Marduk-apal-iddin II (722–711 B.C.) sent an envoy to Hezekiah (2 Kgs 20:12–13 and Isa 39:1), with the intention of fighting against Sargon of Assyria, who however defeated him. During the time of the Neo-Babylonian Dynasty (founded by Nabopolassar in 626 B.C. and continued by Nebuchadrezzar his son), Babylon first destroyed Nineveh (612 B.C.) and then built up an empire that was to overturn the kingdom of Judah. In 597 B.C. the Babylonians captured Jerusalem, exiled thousands of Israelites including the prophet Ezekiel, and installed Zedekiah on the throne (2 Kings 24; 2 Chronicles 36). Jerusalem was finally destroyed in 586 B.C., Zedekiah was blinded, and much of the population was deported to Babylonia. The fall of Babylon to Cyrus of Persia in 539 B.C. marked the end of the contentions between Babylon and the Hebrews; but it is clear that that century of difficult relationships

greatly influenced the people of Israel and their writings. Consequently, one can understand how the biblical and Greek traditions joined together to confer on Babylon a place of exceptional importance in western thought.

B. The Present Ruins

The ruins of Babylon lie within the suburbs of modern Baghdad. On entering the field of the present ruins one is struck by how widely scattered the tells are. To the N is Tell Babil, which is 22 meters high—an imposing presence in the countryside. It was not a part of the city proper, but constituted the summer palace of Nebuchadrezzar II. It is with the Qasr (fortress) that the ruins of the city really begin, and they extend for nearly 2 km N-S and 1.2 km E-W. However, because the topography is very rugged, the mass of tells does not give a clear idea of the limits of the ancient city. Yet the shape of certain features permits identification. Long, narrow hills which run in a straight line for hundreds of meters are clearly what is left of the 2 city walls; the 1st starts to the N at Tell Babil, runs for about 4 km toward the SE, and then turns toward the SW in the direction of the Euphrates which it meets 3 km further on. A gigantic triangular-shaped space is thus circumscribed by this outer city wall on the E bank of the river; within it, marked off by another chain of hills which formed the inner city wall, is a trapezoidal section whose side measures 1.5 km; it is located along the edge of the river and represents the heart of the city. Finally, a last chain of these distinctive hills encloses a quadrilateral area of 1 km by 1.5 km, which forms the inner city area on the right bank of the river. Thus the limits of the ancient city are still well marked on the ground and testify to the vastness of the city. It is inside the inner city wall that the most important ruins are found, but they do not portray any clear cut plan or design.

C. The Stages of the Excavations

Despite the prestige and infamy surrounding the name of Babylon, none of the 19th century excavators was interested in the city. Yet the reliefs in glazed, baked bricks which were still emerging from the superstructures of the Ishtar gate were the decisive element which finally convinced the Germans Sachau and R. Koldewey to choose Babylon as the inaugural excavation when the Deutsche Orient-Gesellschaft was founded in 1897. On March 26, 1899, the excavation began and continued nonstop until March 7, 1917, when the approach of the British troops led to the departure of the German team and the closing of the work site. Thus for 18 years R. Koldewey directed a team in which the greatest German names in the archaeology of Mesopotamia took their first steps in excavating—W. Andrae, J. Jordan, A. Nöldeke; they worked without ceasing in order to resurrect the best-known city in Mesopotamia.

Starting from Qasr, the 1st excavation involved the N and S Neo-Babylonian palaces, located on either side of the rampart. Following that the work site was expanded to embrace the temple of Ninmah. They then excavated along the processional way from the Ishtar gate to the temple of Marduk and to the ziggurat, pausing to investigate the temple of Ninurta as they progressed (1899–1904). From 1904, it was the discovery of the theater of the Hellenistic period connected to a pilaster and the systematic research on the ramparts which caught their attention; 1907 marked the beginning of the study of a residential area where domestic architecture was the object of a systematic analysis and also where the temple of Ishtar of Agade was uncovered. This was a gigantic task, unrealistic in many respects, and its results may not have been up to expectations. Koldewey himself recognized this when he said that he had not accomplished half of the tasks he had set for himself, for the study of a city of that magnitude was beyond the possibilities of any one team. Furthermore, the collection of materials has not been what one would expect in light of the renown of the capital. Finally it was only the neo-Babylonian city of Nebuchadrezzar which was revealed by all the excavating. With the exception of a deep sounding, practically nothing has been found of the city of Hammurabi, the founder of the 1st Babylon empire (1950–1892 B.C.). Unfortunately the rising of the level of the water table has blocked all the ancient periods of the site.

After that long period of intense archaeological activity, Babylon experienced a period of relative calm; occasionally, a mission accomplished a specific research task such as that conducted by the Warka team, which unsuccessfully attempted to find the house of festivals (Akk *bīt akīti*) to the N of the Ishtar gate. The Department of Antiquities had heavily stressed the conservation or even the restoration of ancient monuments such as the temple of Ninmah immediately to the E beyond the Ishtar gate or the processional

way itself, but for the past 15 years, the policy has been even more ambitious: besides new excavations, such as the temple of Nabu, which was immediately restored after its uncovering, the Department of Antiquities has envisaged a general rescue of the site with a network of systems designed to protect the monument. Although this is an undertaking which ought to be supported, one may wonder if it is entirely realistic. As of the moment, the amount of work which has been carried out helps one to grasp the organization of the city, to become acquainted with the large categories of monuments, and to define those aspects which have made the capital of the Neo-Babylonian empire so original.

D. The City

The city proper was enclosed by a double wall which ran along the edge of a canal bordering a quay made of baked bricks and bitumen and fed by the Euphrates. Nearly a quarter of the surface was occupied by royal or religious buildings located along the river: the great S palace or Nebuchadrezzar's palace, protected at the NW corner by a fortress, the ziggurat called Etemenanki and its immediate buildings—Esagila, the great temple of Marduk, as well as the temples of Nabu, Gula, and Ninurta. There, between the Euphrates and the axis formed by the processional way, was indeed the heart of the capital, even if it is exposed in a disjointed fashion by the excavations. The E part of the inner city, divided by main roads which split up the space into large separate sections, seems to have been occupied by big private dwellings. However, one also finds temples (those of Ishtar of Agade and Ninmah) near the processional way. Judging from the excavated areas, this part was occupied mostly by public buildings and the dwellings of the upper class.

The 2d section of the city extended along the right bank of the river opposite some large religious monuments. It was connected to the main section by a bridge spanning the Euphrates upon 7 piers of brick joined with bitumen and capped with paving stones. It seems that this section was occupied by the common people, no great monuments having as yet been found there. The 3d section of the city, triangular in shape, extended between the right bank of the river and the outer city wall built by Nebuchadrezzar, which was actually 2 parallel walls that encompassed the entire city. Although at present it is impossible to describe the exact nature of what was found to the E and the S, the N appears to have had official buildings. Against the inner city wall, between the river and the Ishtar gate was the N palace; further on there was undoubtedly a festival house which is known from the writings but which the excavations have not succeeded in identifying. To the extreme N, at the place where the outer city wall joined the Euphrates, stood Nebuchadrezzar's summer palace. Nothing is known about the gates of the outer city wall; there were 9 huge gates in the inner city and the right bank called Ishtar, Sin, Marduk, Zabada, Enlil, Urash, Shamash, Adad, and Lugalgirra. The Ishtar gate, the only one that has been excavated, is justly famous for the quality of reliefs in baked, glazed bricks, displaying lions and dragons in interminable lines continuing along the walls of the processional way. This gate has been moved and reconstructed in the Berlin Museum.

E. The Palaces

Of the 3 palaces found, the S palace and the summer palace have been excavated. While they have features in common, the S palace, which is of trapezoidal shape, is the most remarkable. It comprises blocks of buildings round a large courtyard juxtaposed with still other buildings doubtless devoted to economic or administrative functions; on the N side are officials' quarters, sometimes with apartments, and on the S side is a large reception room leading to a courtyard. Five blocks of buildings have been located. The 1st has usually been considered as the headquarters of the garrison. The 2d was used for the administration and its staff. The 3d was for official receptions; the throne room was found there, and the structure was superbly decorated with blue-glazed bricks on which small columns with capitals crowned with half rosettes hung together by garlands of palmettes. The 4th building was the king's apartments and the 5th housed the harem. On discovering a beautiful series of arched rooms at the NE corner, the German excavators thought they had come upon the substructures of the famous hanging gardens of Queen Semiramis; but they turned out to be only the rooms used for storage—thus the location of one of the Seven Wonders of the World is still unknown.

F. The Houses and Temples

The dwellings in the domestic quarter were complex edifices normally composed of a major block of buildings with a large courtyard. This was entered through a reception room. The whole structure was surrounded by rooms with annexes and other blocks of buildings were often built up around this foyer.

Religious architecture of Babylon is particularly well known and is seen as very typical of the city and of Babylonian civilization in general. The layout of temples is never stereotyped, but one always finds the same basic organization, namely a square or rectangular courtyard usually embellished with pilasters or redans. On one of the short sides is a lopsided room with a central entrance followed by a 2d room (and occasionally a 3d one) with exactly the same axis. It was in the last of the group of temples that the podium stood which served as the base of the divine statue. The entrance to the temple was often found opposite the cella and long rooms which at times seem to have given access to an upper level. Outlying buildings which undoubtedly accommodated the clergy were sometimes added to this initial block. The temple of Marduk, which has not been fully excavated, is the largest of these sanctuaries and may be considered as fully representative of this series of temples which includes the temples of Ninmah, Gula, Ninurta, Ishtar of Agade, and Nabu.

G. The Ziggurat

It is surely the ziggurat which has been the focal point of scholarly attention because of its ties with the Tower of Babel. Unfortunately, there is hardly anything left of the ancient monument due to the common practice of reusing mud bricks; excavators have found only the quadrilateral base on a few courses of bricks. The numerous restorations proposed have relied until recently on the scanty archaeological remains, the description by Herodotus, and on a scribe's tablet dating from the Seleucid era which gave a rather obscure description of the monument. These facts led to the restoration of a very tall and straight ziggurat which had little in common with the monuments of this kind discovered at other Mesopotamian sites. However, very recently, J. Vicari has studied the Seleucid tablet and has furnished the basis for a very reasonable restoration of that famous edifice.

JEAN-CLAUDE MARGUERON

TRANS. PAUL SAGER

H. Babylon in the NT

Babylon is used in the NT in a variety of senses: literal, symbolic, or both. All of these categories have been subject to debate.

1. Literal Sense. Babylon used as the name of the ancient Mesopotamian capital and empire which took Judah captive into exile in the 6th century B.C.E. or as a pivotal epoch in Israel's history is found in the Matthean genealogy (1:11, 12, 17) and in Stephen's defense (Acts 7:43). In the latter, the MT and LXX of Amos 5:27 is changed in light of historical events from "beyond Damascus" to "beyond Babylon" as the specific place of Israel's captivity.

2. Literal or Symbolic Sense. In 1 Pet 5:13 greetings are sent from "she who is at Babylon." Babylon has been taken literally as the Mesopotamian Babylon or the Egyptian Babylon. Mesopotamian Babylon was still inhabited in the 1st century C.E. and Peter could have visited it (Erasmus and Calvin). However, it is difficult to believe that Mark and Silvanus, who accompanied Peter, would also go to Mesopotamian Babylon (5:12–13). There is no church tradition linking Peter, Mark, or Silvanus with Mesopotamian Babylon. Neither is there evidence of a church there in the 1st century (but cf. Acts 2:9). In fact the Jews were driven out of Babylon in the reign of Claudius (41–54 C.E.; *Ant* 18 §371–79), a situation which would have limited the possibilities of missions in the city. Dio Cassius (68.30) records that Trajan found Babylon mostly deserted when he visited in 115 C.E. The fact that the Eastern church claims Peter for itself is of little import because it is a recent tradition based upon 1 Pet 5:13.

Egyptian Babylon was a settlement in Egypt near Old Cairo, possibly founded by a portion of Nebuchadnezzar's army and still inhabited in the 1st century (*Ant* 2 §315; Strabo 17.1.30; Diod. Sic. 1.56.3). Clement of Alexandria (*Strom.* 7.17) states that the Alexandrine heretic Basilides claimed to hold Peter's apostolic tradition through Peter's interpreter Glaukias. A strong tradition links Mark with the Alexandrian church and Mark as the companion of Peter. However, Babylon was little more than a Roman military outpost, providing little reason for Peter to have gone there, and there is no evidence that he ever went to Egypt.

Babylon has also been interpreted as a symbol of the church using feminine imagery. It has been suggested that Babylon is a cryptogram used for reasons of security against the Romans, but the content which exhorts obedience to the state (2:13–17) and adherence to moral virtues makes such measures unnecessary. It has also been suggested that Babylon is a symbol of Christians' earthly exile as opposed to their heavenly home, and recalls the language of exile and dispersion in 1:1, 17; 2:11. However, since all Christians are exiles, there is no reason for Peter to refer to writing from exile. The very particular greetings which conclude 1 Peter (5:12–14) indicate that a particular church is in mind.

The general consensus of the church from earliest times is that Babylon in 1 Peter is a symbol for Rome. Two early cursives add *en Romē* as an explanatory addition to 5:13. Early church tradition claims that Babylon in 5:13 is a metaphor for Rome and 1 Peter was written from Rome (Clem. Al. *ap.* Eus. *Hist. Eccl.* 2.15.2). Strong tradition links Peter to Rome, a tradition virtually unchallenged until the Reformation when efforts were made by Erasmus and Calvin to dissociate Peter from the Roman Papacy. Mark is also strongly linked to Rome (Col 4:10; 2 Tim 4:11; Phlm 24) and to Peter as his companion and interpreter in Rome (Papias *ap.* Eus. *Hist. Eccl.* 3.39.5–7; Iren. *Haer.* 3.1; Clem. Al. *ap.* Eus. *Hist. Eccl.* 2.15.2; 6.14.5–7). A comparison of the contents of 1 Peter and *1 Clement* strongly suggests a common background in Roman Christianity.

3. Symbolic Sense. In the book of Revelation, all references to Babylon are symbolic of either a place or a place and an idea (14:8; 16:19; 17:5; 18:2, 10, 21). This is indicated in 17:5 (cf. v 7) where the name Babylon is said to be a *mysterion,* a name to be understood figuratively (cf. names in 2:14, 20; 11:8). As a place, Babylon has been understood as a symbol for Jerusalem, an interpretation based on two questionable assumptions: (1) the prophecies of Jesus in the Gospels have Jerusalem as a central focus. Although this is true, these same prophecies have a worldwide impact and those of Revelation need not be restricted to Jerusalem; (2) Jerusalem persecuted the prophets and Christians as here in Revelation 17–18. However, Rome is better known in the late 1st century for this characteristic.

As a place and an idea, Babylon is symbolic of the power, influence, idolatry, and wickedness of Rome. This was the position of the early church (Tert. *Adv. Marc.* 3:13; *Adv. Jud.* 9; Jerome; Augustine) and has remained the majority opinion. Rome is identified with Babylon in early Judaism, for like Babylon it overthrew Jerusalem and destroyed the temple (*2 Bar.* 11:1–2; 67:7; 2 Esdr 3:1–2, 28; *Sib. Or.* 5.143, 155–61, 434, 440; Str-B 3.816). The similarities between Babylon and Rome as capitals of great empires led naturally to their pairing in symbolism. Like Babylon, Rome ruled the kings of the earth (14:8; 17:1–2, 15, 18), was a center of world trade (14:8; 18:2–3; 11–19, 23), reveled in luxury (18:7, 11–17, 22–23), was a persecutor of God's covenant people (17:6; 18:24; 19:2), and was destined to fall (14:8; 18:2, 10, 21). The portrayal of Babylon in Jer 51:6–10 as a cup in God's hand making all the nations drunk seems to have had considerable influence upon the symbolism of Rome as Babylon in Revelation. Rome is clearly indicated by particular details such as its location on the seven mountains (17:9; cf. vv 3, 7).

As a symbol, Babylon embraces more than the empire, city, and culture of Rome. It is the sphere of idolatry and worldliness under the temporary control of Satan, a worldliness in opposition to the people and work of God, a worldliness epitomized first by Babylon and then by Rome. Babylon as the mother of harlots and abominations in opposition to God (17:5) is the antithesis of the Church as the Bride of Christ, the New Jerusalem, and the Kingdom of God.

BABYLONIA (HISTORY AND CULTURE). See MESOPOTAMIA, HISTORY OF.

BABYLONIAN JUDAISM. See JUDAISM (BABYLONIAN).

BACA, VALLEY OF (PLACE) [Heb *ʿemeq habbāḵā*ʾ (עֵמֶק הַבָּכָא)]. The "valley of Baca" (Ps 84:1—Eng 84:6) is either a historical place name or a symbolical expression for "deep sorrow." The first part of Ps 84:6 seems to mean that by "passing through the experience of deep sorrow, righteous ones can make it the source of life." The Septuagint translated the phrase into Gk as "the valley of weeping." The word *ʿemeq* "valley" has the root meaning of "deep," so the expression may mean "deep sorrow."

However, some have considered it as the "valley of the balsam tree" from the same word in plural form found in 2 Sam 5:24. This is based on the assumption that *bāḵā*ʾ may be a "gum-exuding [weeping] tree" (Morton *IDB* 1:338). Another possibility is that the word *bĕḵāʾîm* (pl. of *bāḵā*ʾ) may mean "weeping rock-walls" in the valley of Rephaim on whose tops David and his troops were waiting for the coming of the Philistine army passing through the valley below (2 Sam 5:24). It seems safe to seek the meaning of *bāḵā*ʾ in relation to the dripping water, since we often find this word in the names related to rivers and wadis, such as Wadi el-Baka in the Sinaitic district and Baca on a wadi in the central Galilee area, W of Meroth. It is also possible to understand *Bĕḵāʾîm* as the place of "weepings" of the Philistine army for their defeat by David. After all these considerations, the expression the "valley of *bāḵā*ʾ*" can best be taken as a symbolical expression "weeping" or "deep sorrow" which fits well in the context of Ps 84:6.*
YOSHITAKA KOBAYASHI

BACCHIDES (PERSON) [Gk *Bakchidē* (Βακχιδη)]. An important supporter of Demetrius I (162–50 B.C.E.). He was ranked as a "friend of the king" and may have held this position already under Antiochus IV (Joseph *Ant* 12. 393). In the first stages of Demetrius I's reign he was entrusted with the governorship of the Trans-Euphrates province (1 Macc 7:8).

The exact position of Bacchides and the extent of his province are debated among scholars. Some think that he was governor of Coele-Syria, called "beyond the river." Others suggest that all the Trans-Euphrates region was assigned to him temporarily at the time Demetrius was occupied with war on his E frontiers.

The name Bacchides is first mentioned in 2 Macc 8:30 as one of the officers outside Judea, with whom Judas fought. But it remains uncertain whether it is the same person with whom we are concerned here.

Our Bacchides is mentioned for sure first in 1 Macc 7:8 as the person who was sent by Demetrius I to help the reinstallment of Alcimus as high priest. Afterwards Bacchides was involved continuously in the events in Judea. As the highest officer in charge he took the field against Judas Maccabeus, after the latter's victory over Nicanor. Bacchides arrived in Judea with a considerable army, and after some movements he met with Judas at Elasa. After a long and fierce battle Judas fell and his army dispersed (1 Macc 9:1–18). It is difficult to ascertain the details of this engagement (see MACCABEAN REVOLT). Yet it is evident that Bacchides generalship was good and professional.

After his victory as Elasa (160 B.C.E.) Bacchides pursued his foes. Though it may be that some truce was achieved for a while, in which Judas' brothers took his body for burial, the conflict continued. Bacchides drove the rebels, now under Jonathan's leadership to the outskirts of Judea (1 Macc 9:32–49) and tried to stabilize the situation under Alcimus. For that aim he fortified various strategic places in Judea, and took hostages (1 Macc 9:50–53).

Yet, in spite of this considerable effort the internal conflict in Judea went on, and Bacchides was called again to interfere in favour of the "Hellenizers" (Alcimus died about May 159 B.C.E.). He got involved in indecisive battles with the rebels at the borders of the Judean desert and being unsuccessful he spent his

anger on the Hellenizers, who involved him in this war. Then in negotiations between him and Jonathan a peace treaty was agreed upon. From this moment the Hasmonean regime progressed continuously.

Summarizing Bacchides's activity and policy in Judea (and this is all we know about him), it may be said that he was an able and efficient officer both militarily and administratively. He did not involve himself with religious affairs, but mainly concerned himself with the political and military aspects of the situation. As with Lysias, when Bacchides became convinced that the material (military and political) investment of the Seleucid government in supporting the Hellenizers was not worthwhile, he changed his policy and came to terms with Jonathan.

URIEL RAPPAPORT

BACENOR (PERSON) [Gk *Bakēnōr* (Βακηνωρ)]. A military commander of Dositheus (2 Macc 12:35). According to 2 Macc 12:32–35, Dositheus captured Gorgias during a battle. While attempting to bring Gorgias back alive, a Thacian horseman cut off Dositheus's arm, allowing Gorgias to escape to Marisa. The name Bacenor occurs nowhere else and is supported here only by texts AqLa^{v}. Bacenor may be used to distinguish this Dositheus from a captain of Judas Maccabeus of the same name (2 Macc 12:17–25). An alternative is to read with texts La$^{a'}$ and the Armenian *toubiakēnōn,* "one of the Toubiankenoi." In this case Dositheus would come from the region of the Tobiads mentioned in 2 Macc 12:17. (See Goldstein *2 Maccabees* AB.)

BAEAN (PLACE) [Gk *Baian* (Βαιαν)]. According to 1 Macc 5:1–2, when the Gentiles in the cities surrounding Judah heard that the Jews had restored the temple (164 B.C.), they began to murder Jews. Judas Maccabeus, however, waged war against the Idumeans and (v 4) "He also remembered the wickedness of the sons of Baean," besieging them in their towers, which he burned (v 5). 2 Macc 10:15–23 sets these events in the context of Gentile oppression against Jews in Judah, but clearly describes the same campaign. The phrase "the sons of Baean" has presented scholars with at least two problems: (1) the derivation of the name and (2) its referent.

Num 32:3 lists a city named Beon among the cities of Gilead requested by Gad and Reuben, and scholars often suppose that Baean refers to Beon (cf. Tedesche and Zeitlin 1950:110). However, Simons (1959:405) suggests that the term derives from the Heb name *bhn* in "sons of Bohan" (cf. Josh 15:6, 18:17). Goldstein (*1 Maccabees* AB, 295) argues instead that Baean derived from the Heb *ṣbʿn* (Sabaanites), but so little detail is given in 1 and 2 Maccabees that one cannot choose the best among these options.

Also debated is whether Baean represents a tribal or a place name, or perhaps both. Simons (1959:405) thinks that the term probably refers to a clan and not—at least primarily—to a region. He cites similar phrases in the context:"sons of Esau" (5:3) and "sons of Ammon" (5:6). Dancy (1954:103) agrees with earlier scholars who understood Baean as the name of a tribal ancestor. Tedesche, however, understands the term as a place name (1950:110). On the whole, Simons' reading of Baean as a clan or tribal name seems best. This tribe lived in Transjordan near the river, and likely operated as highway robbers. It is possible that they lived near the stone of Bohan, though one might hold open the option that they moved around in a region.

PAUL L. REDDITT

BAGOAS (PERSON) [Gk *Bagōas* (Βαγωας)]. The eunuch in charge of Holofernes' personal affairs (Jdt 12:11). Bagoas is a Persian name, and according to Pliny (*HN* 13.41), eunuchs were regularly called "Bagoas." Therefore, this may not be a personal name but a title. The name occurs frequently in extrabiblical sources. Josephus (*Ant* 11.7.1) describes a certain Bagoas as a general of Artaxerxes II Mnemon, who later became the governor of Jerusalem. A Bagoas appears in Diodorus Siculus (*Hist* 31.19.2–3; 16.47.4) as an adviser of Artaxerxes III Ochus in his campaign against Phoenicia and Egypt. In the Elephantine papyrus #30 (*CAP*), the name Bagoas appears in Aramaic as *baggōhî* (this is the Bagoas who was the governor of Jerusalem). Either of these figures may have been in the mind of the author of the book of Judith when he called the servant of Holofernes "Bagoas" (see JUDITH for a discussion of the genre of the book of Judith).

BAGPIPE. See MUSIC AND MUSICAL INSTRUMENTS.

BAHURIM (PLACE) [Heb *baḥûrîm* (בַּחוּרִים)]. Var. BAHARUM. A Benjaminite village on the road from Jerusalem into the Jordan valley, north of the Mount of Olives. Bahurim has been identified tentatively with the site of Ras eṭ-Ṭmim (M.R. 174133) or Khirbet Ibqeʿdan. It is mentioned as the place on the road from Mahanaim to Jerusalem where Abner compelled Paltiel to turn back from following his wife Michal, the daughter of Saul, when she was being taken back to David, her first husband (2 Sam 3:16). Bahurim is also given as the domicile of Shimei ben Gera, who came out cursing David and his men as they fled Jerusalem before the onslaught of Absalom (2 Sam 16:5; 19:17[—Eng 16]; 1 Kgs 2:8). Two of David's spies, Jonathan and Ahimaaz, hid from Absalom in the well of a man of Bahurim (2 Sam 17:18). One of David's champions, Azmaveth, was probably from Bahurim as well (1 Chr 11:33; cf. 2 Sam 23:31).

D. G. SCHLEY

BAITERUS (PERSON) [Gk *Baitērous* (Βαιτηρους)]. Ancestor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:17). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2; Nehemiah 7). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text. The Vg contains the textual variant *Gebbarus.*

MICHAEL DAVID MCGEHEE

BAKBAKKAR (PERSON) [Heb *baqbaqqar* (בַּקְבַּקַּר)]. One of the Levites who lived in Jerusalem after the return from Babylonian exile (1 Chr 9:15). Bakbakkar was one of 4 Levites in Jerusalem at that time who could trace his ancestry back to Asaph, the head of one of three families of Levitical singers appointed by David (1 Chr 15:16–17, 25:1–8) and the author of several psalms (Pss 50, 73–83). It is likely that Bakbakkar continued in his ancestor's footsteps as a Levitical singer. The parallel passage in Nehemiah (Neh 11:15–18) does not mention Bakbakkar but does list a Bakbukiah (Neh 11:17). Curtis and Madsen (*Chronicles* ICC, 172) suggested that these 2 names might refer to the same person. This is possible, but another plausible explanation is that the author of 1 Chronicles 9 simply employed different traditions than did the author of Neh 11 (Braun *1 Chronicles* WBC, 136).

ROBERT C. DUNSTON

BAKBUK (PERSON) [Heb *baqbûq* (בַּקְבּוּק)]. The head of a family of Netînîm (temple servants) listed among those exiles returning from Babylon to Jerusalem and Judah (Ezra 2:51 = Neh 7:53; 1 Esdr 5:31). The name is a *qatqût* formation of the Heb root *bqq* which means "empty (out)" (Zadok 1980:113). The noun *baqbuq* denotes a "flask/bottle" (Jer 19:1, 10; 1 Kgs 14:3). The name could be a shortened form

of the name *baqbuqyāh* (Neh 11:17; 12:9, 25) where *yāh* is to be understood as an emphatic rather than a theophoric afformative (Noth *IPN* 105). In 1 Esdr 5:31 the name is rendered *Akouph, Akoum,* or *Akoub.*

RODNEY H. SHEARER

BAKBUKIAH (PERSON) [Heb *baqbuqyâ* (בַּקְבֻקְיָה)]. A Levite known for singing who is found in the list of priests and Levites (Neh 11:17; 12:9; 12:25). Bakbukiah is likely to be the same person in all 3 places, but some problems exist.

First is the problem related to Nehemiah 12:25. In the Heb text, Bakbukiah is listed as the gatekeeper while Mattaniah, Bakbukiah, and Obadiah are grouped as singers in other related texts (Neh 11:15–18; 12:8–11; 1 Chr 9:14–16; 25:1–8). The last 3 names in Neh 12:25, Meshullam, Talmon, and Akkub, are noted in other lists of gatekeepers (1 Chr 9:17; Ezra 2:42; Neh 7:45; 9:19). Williamson (*Ezra-Nehemiah* WBC, 16) asserts Mattaniah, Bakbukiah, and Obadiah, listed in v 25, actually complete v 24. Myers (*Ezra-Nehemiah* AB, 195) suggests that in v 25 the proper name Meshullam has been mistaken for the Heb word singer. Both agree that the 3 singers appropriately fit with the description of musicians and singers in v 24.

Second, Bakbukiah is not found in the Septuagint, suggesting that Bakbukiah may be a late addition to the Heb text. This agrees with problems that parallel chronologies found in 1 Chr 9:15 and 25:4. In each of these places, Mattaniah is listed with families of Levites who are singers. However, in 1 Chr 9:15, Bakbakkar is paired with Mattaniah, and in 1 Chr 25:4, Bukkiah is paired with Mattaniah. Ward (*IDB* 1:340) and Myers (*Ezra-Nehemiah* AB, 187), suggest that these other 2 names may be variants or misspellings of Bakbukiah.

GARY C. AUGUSTIN

BAKER'S STREET (PLACE) [Heb *ḥûṣ hā‹ōpîm* (חוּץ הָאֹפִים)]. Street in Jerusalem referred to in Jer 37:21. At the order of King Zedekiah, Jeremiah was placed in the courtyard of the guard and given bread from the area called the Baker's Street. It was customary in ancient times in Near East cities for trades and crafts to be grouped together in one street or area—compare the gold shops located in one area of modern Amman. In the OT, baking was highlighted in Gen 40:1–41:13 in the story of Joseph; in 1 Sam 8:13, bakers are listed along with perfumers and cooks as important for governmental service; and in Hos 7:4, the baker and his oven are a fitting metaphor for wayward Israel. In 1 Kgs 20:34, the markets in Damascus which Ben-Hadad offered King Ahab may have included bakeries along with other trades as well as offices for international trade. Later in NT times, besides the foreign trade in luxury garments, precious ointments and jewelry, etc., the baker's trade was important among the local industries of weaving, leather working, dealing in sheep and cattle, woodworking, pottery making, etc. (Jeremias 1967: chaps I and II). Josephus (*Ant* 15. 309) makes reference to the need of professional bakers in a time of famine. No doubt the individual baker's establishment included his living quarters, ovens, and selling area.

———

A. Appearances in the OT

Our sources for the story of Balaam are varied and often conflicting. In the Heb Bible, we have first the famous and, in their present form, largely positive stories in Numbers 22–24, of Balaam son of Beor, the intermediary called by Balak son of Zippor, king of Moab, to curse Israel and therefore give Moab the advantage in any hostilities between the two peoples. Then there are the negative Priestly notices in Num 31:8, 16 that tie Balaam to the apostasy at Peor and maintain that he was killed by the Israelites in a battle against Midian (and the reflex of that tradition in Josh 13:22). Next, the implication in Deut 23:5b–6—Eng 23:4b–5 (cited in Neh 13:2) and the Hebrew of Josh 24:9–10 is that Balaam tried to curse Israel, but that Yahweh would not listen to him, and so Israel was blessed instead. Finally, the mention of Balaam in Mic 6:5 can be interpreted either positively or negatively, i.e., as reflecting the point of view of the Numbers 22–24 stories or the more negative tradition in Deuteronomy 23 and Joshua 24. Balak is mentioned in Judg 11:25, but no reference is made there to Balaam or to the connection between Balak and Balaam reported in Numbers 22–24. The incident at Peor also appears in Deut 4:3; Josh 22:17; Hos 9:10; and Ps 106:28–31, but Balaam is not mentioned in these passages.

The relationship between the character Balaam and the Edomite king Bela son of Beor from Gen 36:32–33 (and 1 Chr 1:43–44) is unclear, but the similarities in their names and even their patronymics suggests either that they both represent reflexes of the same character, or else that the tradition of one character has been conflated with that of another.

B. Source Criticism, Numbers 22–24

The doublets and inconsistencies in the Numbers 22–24 account of Balaam have long led scholars to posit evidence of the J and E sources in these chapters, even though use of the divine names does not correspond perfectly to the expected pattern. It is certainly possible to see that even these "positive" stories can be further divided between a "southern" picture of an intermediary and a "northern" or "Ephraimite" one (to use Robert Wilson's [1980] terms). The following represents something of a consensus: *southern/J*—at least Num 22:3b, 4, part of 5, part of 6, 7a, 11, 22–34, 37, 39, 40a; 23:7a, 18a; 24:1, 2b–3a, 10a, 11b, 15a; *northern/E*—at least Num 22:2–3a, part of 5, part of 6, 7b–10, 12–21, 35–36, 38, 40b–41; almost all the prose in chapter 23; 24:10b–11a, 12a–14a, 25. In the verses that many commentators assign to the J source, Balaam is a diviner, a form of intermediary apparently acceptable in court circles in preexilic Judah, as elsewhere in the ANE; the elders of Moab take "fees for divination" *(qĕsāmîm)* to Balaam (22:7); Balaam is one who as a rule looks for omens *(nĕḥāšîm)* before pronouncing (24:1). The introductions to the oracles, and particularly to the 3d and 4th oracles, could also be a reflex of a southern view of prophecy. We read (Num 23:7, 18; 24:3, 15, 20, 21, 23) that Balaam "took up his discourse" (*way-yiśśă᾽ mĕšālô*), and the pairing of the verb *nś᾽* with *māšāl* turns up (besides Job 27:1 and 29:1) also and only in Isa 14:4; Mic 2:4; and Hab 2:6. Furthermore, in Num 24:4 and 16 Balaam "sees the vision of *šadday,*" and the description of a prophet as one who sees visions (with derivatives of the root *ḥzh*) is one of the hallmarks of the southern view of prophecy. (The mention of the *rûaḥ ᾽ĕlōhîm* in 24:2 is perhaps another connection with southern prophecy:cf. the role of the "spirit" in Ezekiel.) Most would place the episode involving Balaam's she-ass within this southern strand, although many consider the ass pericope to be a completely independent story only secondarily connected to the rest of Numbers 22–24.

In those verses generally called E, however, we see in Balaam a typical Yahweh-prophet, one who can only speak the word that Yahweh puts in his mouth, a phrase reflecting the paradigmatic description of a prophet in Deut 18:18 (see Num 22:38; 23:5, 12, 16; similarly 22:8, 18, 19, 20, 35, 38; 23:3, 15, 17, 26; 24:13). Such a description marks this picture of Balaam as issuing from northern, i.e. Ephraimite circles. It is this strand of the Balaam material that includes the familiar picture of elaborate sacrifices provided by the king, and Balaam's conferences with Yahweh wherein Balaam is given the substance of the first two blessings that so disappoint Balak. Further connections with northern concerns are the names of the hills from which Balaam pronounces his oracles in chaps. 22–23; Bamoth-baal, Pisgah, and Peor describe the area of the same Transjordanian mountain range where Deuteronomic tradition records that Moses delivered his final discourses, died, and was buried (note Beth-Peor in Deut 3:29 and 34:6, and the addition of Pisgah to P's Nebo in 34:1). The mountain range where Balaam delivers his oracles is a sacred place, then, to the northern circles that produced Deuteronomy.

C. History of the Traditions

In terms of their tradition history, the biblical passages concerning Balaam son of Beor divide neatly into two groups: (1) those related to the P traditions that Balaam was responsible for the apostasy with the Midianites at Peor, for which he was killed in Israel's battle against the Midianites reported in Numbers 31; and (2) all the rest, which maintain in some form that Balaam son of Beor, a non-Israelite intermediary, was called by the Moabites (at least) to curse Israel but instead blessed them in the end.

1. The Priestly Account of Balaam. According to the P passages, Balaam was responsible for the apostasy of the Israelites at Peor and was killed by the Israelites in a battle against Midian (Num 31:8, 16); this source lumps Balaam together with Moses as the objects of an Aaronid polemic surrounding the incident at Peor and directed also at the Midianites (cf. 25:6 and 10 for suggestions of Moses' complicity with the apostasy and 25:7–8 and 11–13 for the elevation of Phinehas the Aaronid because of his opposite reaction). This seems to be a completely separate Balaam tradition, but one that did apparently influence the final form of the earlier stories with the insertion of the extraneous "elders of Midian" in 22:4, 7. This Aaronid tradition has also made its mark on Josh 13:22, where Balaam's demise along with the Midianite leaders is reiterated, this time not because of his association with the apostasy at Peor, but simply, it would seem, because he was a diviner, a *qōsēm.* Josh 13:22 shows evidence of familiarity: (1) with the anti-Balaam, anti-Midianite P-tradition in Numbers 31; (2) with the *southern/J* tradition in Num 22:7 to the effect that the elders of Moab (and the elders of Midian) took *qĕsāmîm*, divination fees, Balaam's acceptance of which would have made him a *qōsēm;* and finally (3) with the Deuteronomic description of diviners (along with several other types of intermediaries) as abominations (Deut 18:10–14), and therefore sentenced to die.

2. The Second Grouping. Those passages where a potential curse is turned into a blessing can be further divided into 3 subgroups, according to the reason supplied for this substitution of a blessing.

a. The Northern Tradition. In Numbers 22–24 the change from curse to blessing is attributed to Balaam's inability to do or say anything that Yahweh has not commanded him. The blessing comes about because of Yahweh's desire that Israel be blessed and because of Balaam's position as a true Yahweh-prophet.

b. The Southern Tradition. In Numbers 22–24 the hoped-for curse is again thwarted by Yahweh's desire to bless and power to sway Balaam, this time not because Balaam is a typical Yahweh-prophet, but because of the display of power Balaam encounters on the road (the ass episode, 22:22–34, generally attributed to J). In this version, Balaam had not consulted any deity before leaving on his journey to Balak, but is impressed with the deity who can send an invisible messenger *(mal*ʾ*āk)* with the power to reveal himself to a donkey, in order to convey his wish that Balaam not go to curse Israel. In response to that wish, Balaam abandons his usual procedure of looking for omens (24:1) and simply pronounces his oracles under the influence of the "spirit of God" (*rûaḥ* ʾ*ĕlōhîm*). The result is a blessing.

It has been suggested that the original ending of the ass story has been lost in the combining of the 2 sources, and that the story would have ended either with Yahweh's permission for Balaam to proceed (something like the present v 35, but without the Deuteronomic language), or else with Balaam simply

returning home. In the latter case, v 37 of the same chapter could be excised from its present position and interpreted as a continuation of the southern story. The verse could be read literally to mean that Balaam had not gone to Balak at that point but that Balak had, in fact, found it necessary to travel to Balaam. V 37 would be continued by v 39, which describes Balaam's going with Balak, finally, to Kiriath-huzoth.

c. The Tradition in Deuteronomy 23, Joshua 24, and Nehemiah 13. According to these texts, Balaam made an attempt to curse Israel, but Yahweh turned the curse into a blessing. This time there is no indication that Balaam was a Yahweh-prophet or that he was a diviner who knew a powerful deity when he saw one. The implication is rather that Balaam was inclined against Israel, up to and including the pronouncing of a curse, and that Yahweh simply closed his ears to Balaam's speech. Note that all 3 of these passages relate the Balaam episode in contexts where current fears of pollution from foreigners are clear-cut issues of the author's day: who can enter the sanctuary, whose worship is appropriate, who is an appropriate marriage partner. Therefore, the appearance of a foreigner as a Yahweh-prophet or even as a diviner who could recognize Yahweh's power and pronounce Yahweh's oracles would be unacceptable.

These 3 notices are either representative of a completely different strand of tradition, or else they are creative expansions of the traditions already outlined from Numbers 22–24, perhaps reflecting the tendency that we have noticed in the Priestly tradition to denigrate Balaam. This tendency may be present even in the narrative of Balaam's she-ass, who "sees" the messenger from Yahweh when Balaam the "seer" is blind to the appearance, surely not a good advertisement for Balaam's powers as an intermediary. If the ass episode was meant to poke fun at Balaam, then its use in the story as we have it would portray Yahweh's blessing in the following chapters as even more extraordinary—not only coming from a famous, non-Israelite intermediary, but even from one who is on his own somewhat inept.

3. Oracles 3 and 4. Even within Numbers 22–24, oracles 3 and 4 seem to represent a tradition separate from oracles 1 and 2, and from the prose that surrounds the oracles. (Most commentators would leave 24:21–23 out of consideration here as later additions to the 4th oracle, and some would excise v 20 also.) Whereas oracles 1 and 2 depend on the prose setting for any meaningful interpretation, oracles 3 and 4 can be read and appreciated without any reference to the prose story. Furthermore, Balaam is introduced at the beginning of each of these oracles (24:3–4 and 15–16); such an introduction would not have been necessary had the oracles been composed along with the prose and transmitted originally in anything like their present context. The 3d and 4th oracles, then, are generally thought to have originated separately from the prose story and from oracles 1 and 2, and to have been transmitted separately for some time before being combined with the narrative of the curser-turned-blesser summoned by the Moabite king. It has even been suggested that the rest of Numbers 22–24 was composed specifically to provide a context for the traditional Balaam oracles now in chapter 24, the theme of blessing and cursing suggested by 24:9. If one reads only oracles 3 and 4, one sees nothing of the call from Balak for Balaam to curse Israel, but only clear blessings, in the natural and military realms, so that if we give these poems priority over the rest of the Balaam traditions, we would have to assign them to yet a 3d category, besides C.1 and C.2 above, carrying the simple theme that a foreign seer was the bearer of blessings for Israel. The plausibility of such a tradition concerning Balaam son of Beor has increased recently since the discovery of a non-Israelite (or at least nonorthodox) Balaam tradition in the plaster text from Tell Deir ʿAllā in Jordan (see below).

The 3d and 4th oracles might date from the time of the early monarchy, since 24:17–18 can be interpreted to refer to David's defeat of Edom and Moab (with the *bĕnê-šēt,* children of Sheth, identified with the Palestinian tribal name Shutu known from 2d millennium documents). Moreover, 24:7, as well as v 20 and the LXX reference to Agag (?) in v 23, if these be admitted to the 4th oracle, could plausibly refer to Saul's defeat of Agag and the Amalekites. (Albright's attempt to date the oracles even earlier, based on orthographic typology, has not met with much approval; neither has von Gall's proposal [1900] that they were composed in the Maccabean era.)

D. Literary Relationships

The 3d and 4th oracles have literary connections with the well-known lists of tribal features that occur in early Israelite poetry: the leonine characteristics in Gen 49:9 referring to Judah and in Deut 33:20, 22

referring to Gad and Dan (cf. Num 24:9); the horns of an ox in Deut 33:17 (cf. Num 24:8); and the scepter and predominance of Judah in Gen 49:10 (cf. Num 24:17). The introductory phrase in 24:3, 15 describing each oracle as *nĕ›um hag-geber šĕtûm hā-‹āyin,* "oracle of the man whose eye is perfect," is remarkably similar to what is said about the "Last Words of David" in 2 Sam 23:1, *nĕ›um haggeber huqam ‹āl,* "oracle of the man who was raised on high" (if not "established by God," reading 4QSam[a]' s *hqym ›l*), and to the obscure *nĕ›um haggeber lĕ›îtî›ēl* in Prov 30:1. Once the separateness (and perhaps even priority) of oracles 3 and 4 is established, it is logical to propose that the similarities between the 2d and 3d oracles arise from deliberate imitation in composition, probably of the 2d in imitation of the 3d: so, 23:22 is a reference to 24:8 and 23:24 plays with 24:9.

E. Balaam's Homeland

The location of Balaam's homeland has occasioned much discussion in the scholarly literature. There are several choices offered in the biblical tradition. Pethor, Heb *pĕtôrâ,* "on the river," in Num 22:5, has been plausibly identified with Pitru on the upper Euphrates, known to us from Assyrian inscriptions. The ancient versions are divided as to whether to interpret this word as a geographic reference with locative *-â,* or to read it as a description of Balaam himself as a dream interpreter, from the Heb root *ptr.* A home for Balaam on the upper Euphrates would also bring together the references in Num 23:7 and Deut 23:5—Eng 23:4 that he had come from Aram (Naharaim) and the suggestion that he was operating with the knowledge and methods of a Mesopotamian *bārû-diviner* (Daiches 1909). The upper Euphrates is too far for the southern tradition, however, where Balaam sets off (Num 22:22) riding on a donkey, with just 2 servants to accompany him, hardly preparations for a journey from Pitru to the Arnon. Num 22:5 goes on to say that Balak sent to Balaam in the land of *bĕnê-‹ammô,* which phrase has been variously interpreted as the land of "his people," of "Amaw," or as a scribal error for "the Ammonites." The S tradition would fit more comfortably, certainly, with either the noncommittal "his people" or with "Ammon," to which several of the ancient versions also attest, categorizing "on the river (Euphrates)," at least, and even better "Pethor on the river (Euphrates)," as glosses. It must be pointed out that *›ereṣ bĕnê-‹ammô* never occurs elsewhere in the Bible as a phrase for "his homeland," but in favor of this translation is Balaam's statement in 24:14 that now that Balak has banished him, he will go to his "people," indicating that that is a reasonable description of his situation when Balak called him.

F. The Balaam Text from Tell Deir ‹Allā

Contemporary with these biblical Balaam traditions, but from a separate source, is the plaster inscription discovered at Tell Deir ‹Allā in the E Jordan Valley dating to the end of the 8th century B.C.E. Like the passages usually assigned to J in Numbers 22–24, the Deir ‹Allā inscription offers a picture of Balaam as a southern intermediary, referred to as *ḥzh ›lhn,* "seer of the gods," in the first line of the inscription, and sees a vision (*wyḥzh mḥzh*) like an oracle *(mś›)* from El (I, 1, 2). (The reference to the intermediary as *ḥōzēh* and the description of the oracle as *maśśā›* are 2 of the hallmarks of Wilson's southern intermediary.) The extant lines of this inscription have no connection with the content of the Balaam traditions in the Heb Bible, although their language is often reminiscent of the more familiar Balaam story: *wy›tw ›lwh ›lhn blylh* in I, 1, corresponds nicely to *wayyābō› ›ĕlōhîm ›el-bil‹ām laylâ›* "and God came to Balaam at night," in Num 22:20 (without *laylâ* in v 9); and *wyqm bl‹m mn mḥr* in I, 3, of the Deir ‹Allā text is close to *wayyāqom bil‹ām babbōqer›* "so Balaam rose in the morning," in Num 22:13, 21.

Yahweh is nowhere mentioned in the extant (very fragmentary) text, although several other deities are: at least El and the plural *›lhn, š adday*-gods, and a goddess whose name begins with *š-*. The existence of a (presumably non-Israelite) sanctuary in the E Jordan Valley in the 8th century, where Balaam is revered as prophet, must have influenced the redaction of the biblical Balaam stories: It might, for instance, have been offensive to the Aaronid priestly group as a rival to their Jerusalem sanctuary and traditions, and so have contributed to the negative attitude toward Balaam in Numbers 31 and Joshua 13. See also DEIR ‹ALLĀ.

G. Later Literature

Philo, Josephus, and Pseudo-Philo all mention Balaam in a more or less negative light. Philo, particularly in his *De vita Mosis* and *De migratione Abrahami,* deals with the thorny problem of a

foreigner and an evil man who was said to be a prophet. Philo concludes that he was indeed a soothsayer, but not a true prophet.

Josephus (*Ant* 4), in line with some of the biblical passages discussed above, sees in Balaam a diviner who wanted to curse Israel, but could not because it was not God's will that they be cursed. He found a way to harm Israel, however, in advising Balak to have Midianite women entice Israelite men away from their true worship.

Pseudo-Philo is more forgiving toward Balaam in the *Liber Antiquitatum Biblicarum* (18). Here Balaam understands that Balak is wrong to want to curse Israel, but goes to him anyway. He gives Balak the counsel that led to the Baal-Peor incident after he realizes that in going to Moab he has forfeited divine favor.

Rabbinic commentators generally saw in Balaam a representative of all that was bad in "the nations." He was greedy and he was a sorcerer. He is acknowledged to have prophetic powers, but is seen as all the more dangerous because of his powers. It has been suggested that Balaam's portrayal became more and more derogatory as rabbinic sources used him as an example of a gentile seer in order to comment on the Christian exegetes of their own time.

Balaam is mentioned 3 times in the New Testament:2 Pet 2:15–16; Jude 11; Rev 2:14. In each case the tendency toward a negative appraisal of Balaam noticeable in the later Heb Bible traditions is carried on, although the authors are not always negative for the same reasons. In the first 2 passages, Balaam is used as an example of someone who took money for wrong purposes, and the obvious interpretation is that they refer to the tradition that Balaam indeed tried to curse Israel (and was presumably paid for it, despite Num 24:11). This interpretation may also proceed from a belief that Balaam was wrong to ask God a 2d time for permission to travel with Balak's messengers, but that he did so out of a desire for the money Balak might pay him. It is possible, however, given the references to lust and animal passions in the 2 Peter and Jude passages, that they, like Revelation 2:14, have combined several of the Hebrew Bible traditions about Balaam and are also referring to the Priestly version of the apostasy at Peor where there is the suggestion of sexual immorality (Num 25:6–8) instigated by Balaam (Num 31:15–16). The food sacrificed to idols of Rev 2:14 is clearly an interpretation of the J version of the Baal-Peor apostasy (cf. Num 25:2 and Ps 106:28), for which Balaam is here also blamed.

The statement in Balaam's 4th oracle that "a star shall come forth out of Jacob/and a scepter rise out of Israel" was widely interpreted in the early church as a messianic prediction, as it had been at Qumran and in the Bar Kokhba movement. A non-Israelite sorcerer or magician himself, Balaam was regarded as the founder of the order that produced the Magi of Matthew, the first Gentiles who recognized Jesus as messiah.

JO ANN HACKETT

BALADAN (PERSON) [Heb *balʾădān* (בַּלְאֲדָן)]. According to 2 Kgs 20:12 (= Isa 39:1), the father of Merodach-baladan, a ruler of Babylon who sent a diplomatic delegation to King Hezekiah of Judah.

However, it is very uncertain whether this name is actually that of Merodach-baladan's father. Merodach-baladan [Heb *mĕrōdak bal·ădān*] was a Chaldean ruler of the Bit-Yakin tribe who fomented rebellion against the Assyrians at the end of the 8th century B.C.E. He twice succeeded in wresting control of Babylon from the Assyrians, where he ruled from 721–710 B.C.E. and again for 9 months in 703 B.C.E. (*IDB* 3:355; Wildberger *Isaiah 1–12* BKAT, 1474–75). See MERODACH-BALADAN. The name Merodach-baladan (Akk *marduk-apal-iddina*) means "Marduk has given a son." While it has been suggested that Baladan might be an abbreviated form of the father's name without the name of the deity (X has given a son), it appears more likely that the phrase "son of Baladan" is simply an attempt at some stage of the Biblical text to fill out the name of this king by interpreting the 2d part of his name as a patronym. Merodach-baladan himself claims descent from Eriba-Marduk, a king of Babylon from 782–762 B.C.E. It is possible, but not certain, that this is the true name of his father (Kaiser *Isaiah 1–12* OTL, 409). In Babylonian sources Merodach-baladan is called son of Yakin, but this is surely a reference to membership in his tribe or dynasty and not the name of his father (Hobbs *2 Kings* WBC, 294).

JOHN H. HULL, JR.

BALAH (PLACE) [Heb *bālâ* (בָּלָה)]. Town allotted to Simeon in the Negeb within the tribal territory of Judah (Josh 19:3). See BAALAH.

BALAH, DEIR EL- (PLACE). See DEIR EL-BALAH.

BALAK (PERSON) [Heb *bālāq* (בָּלָק)]. A king of Moab, the son of Zippor, whose encounter with Balaam is described in Numbers 22–24. After the Israelites had defeated the Amorites and were camped in the plains of Moab opposite Jericho, Balak and the elders of Moab and Midian decided to protect themselves from the Hebrews with supernatural power. Acting out of great fear and willing to pay a large fee, Balak sought the assistance of Balaam, a Mesopotamian diviner; Balak was convinced that Balaam's curse on Israel would guarantee a Moabite victory in some future conflict (22:1–7).

After meeting Balaam on the border of Moab (22:36), Balak made every effort to invoke the seer's efficacious pronouncement. Balaam was taken to 4 different locations, including several mountaintops where he could look down upon the people he was expected to curse (22:39, 41; 23:14, 28). Acting as priest, Balak assisted the diviner in sacrificial rituals (22:40; 23:1–4, 14–17, 29–30). As is well known, Balak was frustrated and greatly disappointed, since Balaam could pronounce only blessings on the Moabite king's enemies (23:23).

Balak is virtually unknown in the Bible outside of Numbers 22–24. Balak is mentioned in passing elsewhere in the OT as an example of a futile attempt to thwart God's plans (Josh 24:9–10; Judg 11:25; Mic 6:5). Rev 2:14 discusses Balak and Balaam because of their involvement in the incident at Shittim, the matter of Baal of Peor (Numbers 25; cf. Mic 6:5). While there is much debate concerning the date of the Balak-Balaam traditions, it is obvious that these figures were etched in the memories of later generations.

GERALD L. MATTINGLY

BALAMON (PLACE) [Gk *Balamōn* (Βαλαμων)]. One of two settlements marking the location of a field in which Manasseh, the husband of Judith, was buried (Jdt 8:3), the other location identified being Dothan (Gk *Dothaim*). Although its precise location remains unknown, the text of Judith makes it clear that Balamon, like Dothan, was to be found approximately 8 miles north of Samaria. This is the only reference to Balamon unless, as Stummer (1947:7), Enslin (1972:110), and Moore (*Judith* AB, 44, 180) have conjectured, the word is a corruption of other place names, such as Belmain (4:4) or Belbaim (7:3). Without explanation, but (presumably) on the same basis, Reed (*IDB* 1:378) and others suggest that Balamon might be identified with the villages of Bebai (15:4), Bileam (1 Chr 6:55—Eng 6:70), Ibleam (Josh 17:11–12), and Abel-beth Maacah (2 Sam 20:14–15). Located 20 miles north of Lake Hula, the last

of these would appear an unlikely location for Balamon, given the circumstances described in Jdt 8:3. The possibility of corruption, then, remains a real one, given the large number of place names in Judith which remain unidentified (Moore *Judith* AB, 39–44) and the difficulties inherent in any attempt to reconstruct the book's Heb original. Its clearly fictional character and the general unreliability of the book's geography may, however, preclude any identification (Pfeiffer 1949:296–97; Nickelsburg 1981:106–7). See also BAAL-HAMON.

FREDERICK W. SCHMIDT

BALAS, ALEXANDER (PERSON). See ALEXANDER (PERSON).

BALBAIM (PLACE) [Gk *Belbaim* (Βελβαιμ)]. A site mentioned in the book of Judith, whose exact location is unknown (Jdt 7:3). It is often assumed to be identical with the BELMAIN in 4:4 and the BALAMON in 8:3. If this is the case, it may be identified with Abel-maim (M.R. 204296) some 13 miles south of Scythopolis (so Aharoni and Avi-Yonah *MBA*). Of course, given the genre of the book of Judith, it is entirely possible that the town is fictitious.

SIDNIE ANN WHITE

BALDNESS. See SICKNESS AND DISEASE.

BALM. A historically convenient English translation of the Heb word *ṣŏrî,* found in the OT just 6 times, all with reference to a plant or a derived plant product. The modern botanical identification cannot be established precisely. The LXX translated the Heb word as the Gk *rhētinē* "resin of pine." For the Hellenistic botanist Theophrastus (*Hist. Pl.* 9.2), *rhētinē* was the resins or saps extracted from Aleppo pine and silver fir, the terebinth of Syria, and Phoenician cedar. If the Gk *rhētinē* of Theophrastus and the LXX is an accurate translation of the Heb *ṣorî,* then "balm" was a resinous substance harvested from one or several of these few trees which grew in the regions of Palestine and Transjordan, not one of the resinous aromatic spices or incenses imported into Palestine from Arabia or Abyssinia.

In the past, scholars have often placed balm *(ṣŏrî)* within a somewhat larger group of aromatic plants and plant products which included other plant substances such as *bośem* (balsam) and *nāṭāp,* as some references to them occasionally overlap in meaning, description, or usage. This confusion has been retained even in modern translations of the OT; for instance, in the NEB, Ezek 27:17, *ṣŏrî* is translated "balsam" not "balm," and there are many other examples.

It seems necessary to regard balm *(ṣŏrî)* as a distinct substance in biblical study for several reasons. Balm *(ṣŏrî)* appears to have been native to Palestine or Transjordan and specifically produced in this area, whereas balsam *(bośem)* was imported into Palestine from Arabia or Abyssinia (Miller 1969:101–2; Groom 1981; cf. 1 Kgs 10:2; Ezek 27:22). Famous as a product of Gilead, balm is said to have been exported from there to places like Egypt and Tyre (cf. Gen 37:25, 43:11; Ezek 27:17), but the Hebrew *bośem* is never mentioned as having a special association with Gilead. Balm *(ṣŏrî)* is mentioned as a medicinal product, whereas other incenses or spices such as *bośem* and *nāṭāp* have no such specific distinction and use. In contrast, *bośem* was refined and compounded as a fragrant ingredient of the priestly anointing oil (Exod 25:6; 1 Chr 9:29), of which *ṣŏrî* is never mentioned as a component. Further, *bośem* is often mentioned as a spice with qualities which made it suitable for use by women as a fragrance (Cant 4:10, 4:16, 5:13; Esth 2:12; Isa 3:24), but *ṣŏrî* is never described as such (see also PERFUMES AND SPICES). *Bośem* also had other uses. It was among the fragrant garlands on funeral biers (2 Chr 16:14), but there is no evidence that *ṣŏrî* had such versatile applications. Indeed, it is difficult to see any clear synonymity between *ṣŏrî* and other substances such as *bośem* (balsam) or *nāṭāp. Nāṭāp* has been associated in the past with both of the above, but is too poorly attested to be considered here.

A number of proposals for the identification of *ṣŏrî* (balm) have been made previously, some of which, however, assumed the erroneous identification of *ṣŏrî* with other plant products such as *bośem* and *nāṭāp.* Previous botanical identifications have included *Commiphora opobalsamum, Pistacia lentiscus, Balanites aegyptiaca,* and others (see also FLORA). These must be rejected in favor of one or several of the aromatic tree resins mentioned in the Greek botanists. Indeed even today, remnants of the ancient forests of Gilead (the district of Ajlun in modern Jordan) still contain the ancient sources of *rhētinē* mentioned in the classical writers—Aleppo pine *(Pinus halepensis)* and Phoenician cedar *(Juniperus phoenicia)* (Rushbrooke 1943:427).

In the OT, at least half of the references to balm are to a healing medicinal ointment of some sort, probably made of resin which had been compounded with oil (compare the parallelism of Ugaritic *ẓrw* and *šmn,* and possibly a similar Heb parallelism in Job 29:6 as well if one allows a slight emendation of the text [see Fisher 1972:359]). In Jer 8:22 and 46:11, balm is some sort of salve or ointment which was applied to wounds where there was a loss of skin:"Why has not skin grown over their wound?" Further, Jer 51:8 suggests that balm was a medicine applied to wounds apparently as a soothing salve. It is important to note, however, that our knowledge of the medicinal use of balm is derived from Jeremiah alone, who speaks allegorically of societal and national healing. From passages in Jeremiah it can be inferred that *ṣŏrî,* the "Balm of Gilead," was regarded with high esteem as the healing salve specific to the region of Gilead ("for which our country is famous," see Gen 43:11), or was an ingredient of this product. There seems to be no reason as yet to reject the current English translation of *ṣŏrî* as "balm," as the English word balm implies both a soothing medicament as well as a pleasant odor.

BALSAM. See BALM.

BAMOTH (PLACE) [Heb *bāmôt* (בָּמוֹת)]. One of the Israelite encampments in N Moab E of the Shittim Valley near Mt. Nebo (Num 21:19–20). Many scholars (e.g., Gray *Numbers* ICC, 291) identify Bamoth with BAMOTH-BAAL (Num 22:41; Josh 13:17) and with the *bt bmt* ("Beth-bamoth") of the Moabite Stone (line 27 [*ANET* 320]). Noth (*Numbers* OTL, 182) rejected the interpretation of MT *bāmôt-baʿal* as a geographic name in spite of Josh 13:17, but his view is not typical. Boling (*Joshua* AB, 342) has reaffirmed the identification of Bamoth with Bamoth-baal, and proposes Khirbet el-Qeiqiyeh S of Mt. Nebo as the probable ancient site.

The Moabite itinerary of the Wilderness/Conquest narratives is problematic (see Meek 1960:41–48; Walsh 1977; Briend 1986), and the text of Num 21:10–20 is arguably conflated (see Miller 1989:585–87, citing earlier studies). Conclusions regarding the identity of sites must therefore remain open to revision.

C. GILBERT ROMERO

BAMOTH-BAAL (PLACE) [Heb *bāmôt baʿal* (בָּמוֹת בַּעַל)]. One of the stopping points in the Hebrew migration through Moab (Num 21:19–20, where the place is listed by its shorter name of Bamoth). It is most likely that Bamoth-baal and Bamoth are identical because the names are similar and the geographical information in the OT that relates to these place-names localizes both to the same region. This settlement was assigned to the tribe of Reuben and was counted among the towns in the tableland of

Heshbon (Josh 13:17). Although the identification is not certain, it is possible that Bamoth-baal/Bamoth is the same as Beth-bamoth, mentioned in the Mesha Inscription (line 27).

The Num 21:10–20 narrative on Israel's journey around S Moab and through N Moab names Bamoth in a series of 4 locations: Mattanah, Nahaliel, Bamoth, and "the valley lying in the region of Moab by the top of Pisgah" (Num 21:19–20). While the 1st 2 sites are unknown, the 4th place is clearly in the NW corner of Moab, near Mt. Pisgah and Mt. Nebo, in the mountains of Abarim. The 3d place, therefore, Bamoth, is in the same general direction as Pisgah and Nebo and is some distance to the N of the Arnon. The edge of the Transjordanian plateau in NW Moab is also the appropriate setting for the episode involving Balak and Balaam (Numbers 22–24).

More specifically, the RSV text of Num 22:41 says that a place called Bamoth-baal was one of several peaks to which Balak took Balaam. This elevated locale was chosen by the Moabite king so that Balaam could see the people whom he had been hired to curse, the Israelites who were encamped in the plains of Moab, opposite Jericho. While the RSV regards Bamoth-baal as a proper name, the KJV translates these Hebrew words in 22:41 as "the high places of Baal." This is, of course, a literal rendering of the Hebrew, but there are many biblical place-names with significant meanings that are not translated. Furthermore, the other 3 places to which Balak took Balaam had specific designations, proper names. It is likely that many of the hills on the Abarim ridge provided the setting where a number of deities were worshiped (e.g., Baal, Nebo/Nabu, Peor). Some of these hills were probably crowned with cultic installations of some sort, including high places. There is every reason to believe that a specific place named Bamoth-baal could have served such a function, as is indicated in the description of the sacrificial ritual performed by Balak and Balaam (cf. Num 23:1–6).

The exact location of Bamoth-baal is unknown, but it was undoubtedly on one of the heights of Abarim, in the vicinity of Pisgah and Nebo. One specific site is usually mentioned by those inclined to localize Bamoth-baal, a place called Khirbet el-Quweiqiyeh. Musil (1907–8) referred to this site as el-Quēzije (or Qweiziyeh), which is located ca. 3 miles northwest of Medeba and 11/2 miles S of Khirbet el-Mekhaiyet, which is often identified as the town of Nebo. Archaeological confirmation is lacking, but the location fulfills all of the geographical requirements of the Bible and the place is revered by the local population.

A. Studies of Banditry

Banditry has attracted the attention of social historians (e.g., Hobsbawm 1985) in recent years for several reasons. First, from a distance banditry has a certain air of romance. Second, it is a phenomenon of great complexity which can assume various forms, some of which involve resistance against the existing social order. Third, the extent to which banditry occurs in a society is often considered a reflection of the degree of internal control and social stability achieved by the system.

Banditry was frequent at least in some periods and some areas of the Roman empire. For Judea and its vicinity there is a good deal of evidence from various periods. Here too it assumed various forms. In the mountains of the Lebanon and in Trachonitis in S Syria an impoverished population harassed the farmers in the plains and the traders traveling along the roads through the area. These forms of robbery were sometimes condoned by local dynasts who shared in the profits. In Judea banditry had often strong ideological roots and some of the bandits might be called guerilla fighters by those sympathetic to their cause, for the prime target was the Roman authorities whose rule some considered illegitimate.

Banditry did not come to an end with the suppression of the 1st Jewish Revolt (A.D. 66–70) or the Bar Kokhba war (A.D. 132–135). In fact there is a good deal of evidence from the Byzantine period which cannot be considered here (Isaac 1984; fc. chap. 2). What follows is a brief survey of the evidence in roughly chronological and geographical order.

B. Banditry in Lebanon

At the time of Pompey's E campaign in 63 B.C. several regions are known to have suffered from brigandage. One people well known for their bellicose nature were the Ituraeans who lived in the Lebanon mountains and the Beqaʿ Valley. In the reign of Augustus, the geographer Strabo writes in his description of the Lebanon:

> Now all the mountainous parts are held by Ituraeans and Arabians, all of whom are robbers, but the people in the plains are farmers; and when the latter are harassed by the robbers at different times they require different kinds of help. These robbers use strongholds as bases of operation; those, for example, who hold Libanus possess, high up on the mountain, Sinna and Borrama and other fortresses like them, and down below, Botrys and Gigartus and the caves by the sea and the castle that was erected on Theuprosopon. Pompey destroyed these places; and from them the robbers overran both Byblus and the city that comes next after Byblus, I mean the city Berytus, which lie between Sidon and Theuprosopon. (Strabo 16.2.18 §756; trans. H. L. Jones, Loeb.)

C. Banditry in Trachonitis

Further E there were similar problems. In the same work, Strabo claims that the Roman army had taken effective measures following the annexation of the area into the province of Syria. The lava plateau between Damascus and Bostra, modern El Leja (= "a refuge"; a place in which to hide), was known in antiquity as Trachonitis. Strabo has the following to say:

> And then, toward the parts inhabited promiscuously by Arabians and Ituraeans, are mountains hard to pass, in which there are deep-mouthed caves, one of which can admit as many as four thousand people in times of incursions, such as are made against the Damasceni from many places. For the most part, indeed, the barbarians have been robbing the merchants from Arabia Felix, but this is less the case now that the band of robbers under Zenodorus has been broken up through the good government established by the Romans and through the security established by the Roman soldiers that are kept in Syria. (Strabo xvi 2, 20 [756]; trans. H. L. Jones, Loeb)

In 23 B.C. Augustus gave Trachonitis, Batanaea (Bashan), and Auranitis (Hauran) to the allied king Herod of Judea. His task here was to suppress the robber bands in Trachonitis who had operated in Damascus with the support of a local ruler, Zenodorus the Tetrarch (Joseph. *Ant* 15. 10.1 §§343–48; *JW* 1.20.4 §§398–400; concerning Zenodorus see *HJP²* 1.565–66). Zenodorus received a share of the profit, according to Josephus.

> It was not easy to restrain people who had made brigandage a habit and had no other means of making a living, since they had neither city or field of their own but only underground shelters and caves, where they lived together with their cattle. They had also managed to collect supplies of water and of food beforehand, and so were able to hold out for a very long time in their hidden retreat. Moreover, the entrances (to their caves) were narrow, and only one person at a time could enter, while the interiors were incredibly large and constructed to provide plenty of room, and the ground above their dwellings was not high but almost level with the (surrounding) surface. The whole place consisted of rocks that were rugged and difficult of access unless one used a path with a guide leading the way, for nmt even these paths were straight, but had many turns and windings. (Joseph. *Ant* 15.10.1 §§346–47)

It is worthwhile to consider these passages in full because they are independent sources which agree and supplement each other. Strabo and Josephus both mention that the major problem was the fact that the territory of Damascus and the roads there suffered from bandits. Both say that the bandits hid in caves. These caves have been identified by archaeologists working in the region. In Israel numerous artificial caves have been found in recent years, clearly used as hiding places in the Roman period. Strabo adds that the banditry was of special concern to the Romans because both the rural population around Damascus, and traders were attacked. Josephus, on the other hand, insists on the economic cause of brigandage, and there can be no doubt that economic hardship lay at the root of the difficulties in the region. (It may be added that the lava fields of Trachonitis were a dangerous area as recently as the beginning of this century.)

Wetzstein, who knew the area in the 1850s, alleges that the Turkish authorities never dared to act against the inhabitants of the region, no matter how much the villagers around Damascus suffered from their depredations. He notes that they might be controlled only by a permanent garrison in their land. The caves described by Josephus were famous in Wetzstein's time as well. We may note the expression "a robbers' cave" used as a matter of course in the NT (Matt 21:13).

In the 19th century, as in antiquity, brigands used to hide in caves in Trachonitis, and, as in Josephus, there was the need for a guide to lead the way. According to Josephus, who presumably relied on his source Nicolaus of Damascus, Herod pacified the region. However, 14 years later the inhabitants rebelled. Herod (according to Josephus) prevented them from practising banditry and forced them to till the soil and live quietly. This they did not want to do, and even had they been willing the land was too poor, so they again attacked their neighbours. Here again the economic roots of the problem become apparent. Herod's army took action and some of the robbers fled to Arabia. There they were provided with a base of operations against Judea (i.e., Galilee) and Coele-Syria (i.e., the territory of Damascus). This is another instance of support and involvement on the part of local rulers. Herod first attacked the home base of the bandits in Trachonitis, but the foray was ineffective because the brigands had a base of operations in Nabatean territory. There "they numbered about a thousand" (*Ant* 16.9.1–2 §§271–85). Herod attacked them there and destroyed their base, which led to conflict between Herod and the Nabataeans. As a supplementary measure in his efforts to suppress banditry, Herod settled 3, 000 Idumaeans, his own countrymen, in Trachonitis. This got Herod into difficulties with the emperor Augustus, for allied rulers were not allowed to interfere independently in the affairs of other allies. He was reprimanded, following which the inhabitants of Trachonitis and the Nabateans returned to brigandage and attacked the Idumaean settlers in Trachonitis.

Herod obviously failed to gain control of Trachonitis, for afterward he planted Jewish settlers at Bathyra in Batanaea (perhaps to be identified with Baṣīr, E of aṣ-Ṣanamein [Aere]) (Joseph. *Ant* 17.2.1 §§23–30; for the identification see Dussaud 1927:331; *HJP²* 1.565). The settlement in itself was successful. The presence of Jewish settlers is attested by carvings found at Nava, which is a site on the route from Damascus to Scythopolis used by Jewish travelers to and from Babylonia. The Jewish settlements were intended to serve as a buffer between Trachonitis and Galilee (Joseph. *Ant* 17.2.1–2 §§23–31). This implies that Herod had given up attempts permanently to subdue the population of Trachonitis itself.

A well-known but fragmentary Gk inscription set up at Canatha on the slopes of Jebel Druze SE of Trachonitis in the reign of either Agrippa I or Agrippa II mentions people who hide in holes like animals (*OGIS* 424; *IGRR* iii 1223; Waddington and Le Bas 1870, no. 2329, with extensive comments).

The ancient sources make it clear that Trachonitis was a poor region which did not allow of profitable cultivation, and the very factors which contributed to its poverty made it suitable as a shelter for brigands. This had consequences not only for the region itself, but also for neighboring fertile lands which suffered depredations. Because important trade routes passed through and near by the region, international trade also suffered from such insecurity. At first Augustus gave his client Herod instructions to solve the problem, but this resulted in armed conflict with another client, a state of affairs that the Romans would not tolerate. The system failed to function. Local problems such as these, often not mentioned in literary sources, might colvince the Romans that it was preferable to annex a region. Eventually the Roman army

took the matter in hand. However, arms alone cannot solve such problems for good. The factors of geography which cause instability, poverty, and inaccessibility, do not change. Hence we learn that Samaritan rebels fled to Trachonitis in the 6th century (Theophanes *A.M.* 6048; *Historia Miscella* xvi, PL 16.991).

The information regarding banditry in Trachonitis is important, for the situation there had nothing to do with the specifically Jewish resistance to Roman rule in Judea. It was a state of insecurity with social and economic causes in which ideology played no major role. Yet we know of this only thanks to the diligence of 2 good sources, Strabo and Josephus. The possibility must be considered that there was banditry in Trachonitis in other periods of antiquity when there was no author interested in writing about it. Further it is quite possible that there were other areas with endemic unrest of which we know nothing. The complexities which the Romans faced in Syria-Palestine will have occurred in other areas and other times as well.

D. Banditry in Judea

Several sources accuse the Jews in Judaea of brigandage before the Roman conquest. Josephus represents the Hasmonean Hyrcanus as accusing Aristobulus before Pompey of instigating raids against neighboring peoples and acts of piracy at sea (*Ant* 24.3.2 §43). Strabo says that

> the tyrannies (scil. of the Hasmonaeans) were the cause of brigandage, for some rebelled and harassed the countryside, both their own and neighbouring lands, while others collaborated with the rulers and seized the possessions of others and subdued much of Syria and Phoenicia. (Strabo 16.2.37 §761)

Again, in his description of the coast of Sharon from Joppe (Jaffa) to Mt. Carmel, Strabo says that "the ports of robbers clearly are merely robbers' dens" (16.2.28 §758). Similar accusations are found in the *Historia Philippica* in Justin's epitome of Pompeius Trogus (Prologus, L. xxxix; 11.2.4). There it is stated that the Jews and the Arabs harassed Syria by brigandage. It is difficult to say whether this refers only to the Hasmonean conquests of territory outside Judea proper, or also to armed clashes or raids of which we possess no written record.

Statements like these must be distinguished from the information on banditry in Trachonitis. Accusations of Jewish state-sponsored brigandage, like those levelled by Strabo against Zenodorus and by Josephus against the Nabateans, may not be true. Their intention was to justify armed intervention by a third party. The alleged purpose of Pompey's E campaign was the suppression of piracy, and accusations of robbery and piracy clearly served as justification for the subjugation of various peoples. However, it is possible as well that there really was a good deal of banditry in the region in the period of Seleucid decline and before the Roman takeover.

In Judea and Arabia there is much evidence of internal problems. For some periods the sources regarding Judea-Palestine are relatively good as compared with other provinces. Banditry was a problem in periods other than those well known through Josephus' work. In the period which he covers, before and after the Roman conquest, various forms of banditry described by him were endemic.

1. Before A.D. 66. It has been shown that the Roman army was faced with problems of banditry in Lebanon and S Syria. According to ancient sources, banditry was frequent in mountainous and inaccessible areas where the population could not and would not maintain itself at subsistence level by means of agriculture. Judea, and particularly Galilee, were relatively rich countries, but there, as is seen in the next section, banditry of a different kind undermined security.

Josephus provides a good deal of information on unrest in Judea from Herod's death until the outbreak of the 1st Jewish Revolt. Josephus is extremely hostile toward those who physically resisted Roman rule. Moreover, for his account the early part of the 1st century, he relies on a source close to Herod which accordingly was hostile itself.

It was Herod's task as client king to suppress banditry. His first act as governor of Galilee in 47–46 B.C. was an attack on a bandit leader Ezekias who harassed Tyrian villages, a symptom perhaps of tension between ethnic groups in the region. Many of Ezekias' followers were killed, the Syrians were satisfied, and so was the governor of Syria, Sextus Julius Caesar (*Ant* 14.9.2 §159; *JW* 1.10.5 §204). Herod, however, was called to account before the Sanhedrin in Jerusalem because he had killed Jews. We have

no further information on Ezekias and his followers, but it is significant that his son Judas was one of the first Zealots, and many of his descendants were active in the resistance to Rome before and during the 1st Revolt, all of them called *leistai* (bandits) by Josephus. The last was Eleazar ben Yair, commander of the defendants of Masada. The manner in which Josephus describes these men and their followers leaves no doubt that the primary motive for their resistance to Rome was religious commitment. It is therefore possible that the banditry practised by Ezekias had other motives besides purely economic ones (see also ZEALOTS).

In 38 B.C. Herod led a campaign against (what Josephus calls) bandits in caves near Arbela in Galilee. There is no information on the nature of the bandits' activities (*Ant* 14.15.4 §415–16; 15.5 §420–30; *JW* 1.16.2 §304–5; 16.4 §309–13). However, an old man who killed his family and jumped down a cliff himself, "submitting to death rather than slavery," apparently was motivated in his struggle by religious ideology rather than economic misery. Martyrdom and suicide by those resisting the foreign tyrant go back at least to 2 Maccabees (see SUICIDE).

The militants are described by Josephus sometimes with admiration, more often with animosity. He recognizes the force of their convictions. They have "an invincible passion for liberty and take God for their only leader and lord" (*Ant* 18.1.6 §23). Their willingness to die for their way of life was an integral part of their ideology, connected with a belief in recompense in the world to come (*JW* 1.33.1 §650; cf. *Ant* 17.6.1 §152; *JW* 1.16.2 §311). Josephus does not hide the fact that he was expected by his comrades to commit suicide rather than surrender at Jotapata (*JW* 3.8.4 §355). The speech of Eleazar ben Yair, commander of the defendants of Masada, is Josephus' eloquent statement of their determination "neither to serve the Romans nor any other save God" (*JW* 7.8.6 §323). More often, however, Josephus describes the rebels as plain criminals. It is also impossible to distinguish resistance against Rome as the foreign power from resistance against the Jewish ruling class which represented the Roman authority in Judea.

The extant information is scanty and colored by the hostility of the sources. There is no basis in the evidence which would justify distinguishing between social and revolutionary banditry (if such a distinction should be made), but it is clear that Judea, from Herod's rise to power until the outbreak of the 1st Jewish Revolt, saw the emergence of groups which refused to accept the order which Rome generally imposed on clients and new provinces. Whenever the sources speak of bandits or murderers, the possibility exists that these are not merely economic or antisocial elements, but Jews motivated by ideology and religion.

It is therefore important to note that there are instances of popular support for, or collaboration with, brigands. The Barabbas released upon popular request at the time of Jesus' trial was, according to Mark, "among the rebels [Gk *stasiastōn*] who had committed murder in the insurrection" (Mark 15:7; cf. Luke 23:19), but John calls him a bandit (Gk *lęstēs;* John 18:40). Around the middle of the century there was serious trouble between Jews and Samaritans. "The masses … took up arms and invited the assistance of Eleazar ben Dinai—he was a brigand who for many years had had his home in the mountains" (*Ant* 20.6.1 §121; *JW* 2.12.4 §235). Eleazar is also known from Talmudic sources. He is said to have inspired so many murders that the regular sacrifice of atonement for an unknown murderer was discontinued. He began to be called Ben Harazḥan, son of the murderer (*m. Soṭa* 9:9). However, elsewhere in Talmudic literature he is described as "one who prematurely tried to free the Jews" (*Cant. Rab.* 2:18). Here we have one and the same man seen from the perspective of local, non-Roman sources, as either a murderer or a premature freedom fighter. Even at the stage when these sources were composed, there were differences of opinion about those who practiced armed resistance to Rome.

The Romans held the local population collectively responsible for guerilla attacks in the countryside. These were followed by massive retaliation. When a Roman company was attacked near Emmaus, the town was burned at the orders of Varus (*Ant* 17.10.9 §291; *JW* 2.5.1 §71). In 4 B.C. the arsenal of the royal palace at Sepphoris in Galilee was attacked and the arms stored there were seized. Varus burned the city and reduced the inhabitants to slavery (*JW* 2.5.1 §68; *Ant* 17.10.9 §289). On the road from Emmaus to Jerusalem a slave of the emperor was once attacked and robbed. The governor Cumanus then sent troops to the neighboring villages to bring the inhabitants to him and reprimanded them because they had

let the bandits escape (*Ant* 20.5.4 §113; *JW* 2.12.2 §228). These incidents also give an impression of the tactics followed by the rebels. They would attack small groups of soldiers or officials on the move and attack arsenals in order acquire arms, supplies, and money for themselves. From an incident told by Josephus it is clear that the villages were often searched in a manner which could easily lead to violence. This was in fact standing procedure established by law, as later formulated by Ulpian on the duties of the proconsul:"He must besides pursuing temple robbers, kidnappers and thieves, mete out to each of them the punishment he deserves and chastise people sheltering them; without them a robber cannot hide for very long" (*Digest* 1.18.13, Praef.). Such practices, however, could easily be accompanied by acts of provocation which would aggravate tension and hostility.

As a commander of the Jewish insurgents in Galilee, Josephus incorporated into his army 4, 500 so-called brigands, which he then proceeds to call mercenaries because he paid them (*Life* 14 §77; cf. *JW* 2.20.7 §581). These were the troops in whom he placed most confidence (*JW* 2.20.7 §583). It is clear also that these were ideologically motivated bandits. They might rob anyone, Jew or gentile, poor or rich, but they would never support the Romans.

It is typical of their attitude toward the empire that Talmudic sources, which all belong to the period after the major wars with Rome, often describe representatives of the Roman government as bandits (Heb/Aram *lîṣṭîm*). Many sources describe tax collectors and customs officials in such terms (e.g., *t. B. Meṣ* 9:25; *t. Šebu.* 2:14). The Roman occupation is depicted as a direct cause of instability and banditry. In the words of R. Aha:"Where the empire takes over government, there appear bands and bands of *lîṣṭîm*" (*Lev. Rab.* 9:8). It is not clear whether the implication is that Roman rule causes impoverishment and hence banditry among the population, or whether Roman officials and tax collectors are themselves bandits. Josephus recognized the connection between maladministration and the breakdown of security. During the crisis in A.D. 39/40, Jewish leaders asked the governor of Syria to point out to Caligula "that, since the land was unsown, there would be a harvest of banditry because the requirements of tribute could not be met." This is a clear expression of the realization that banditry could be the result of poverty and oppressive taxation. Yet, the occasion for this statement was a conflict about a purely religious affair which nearly led to revolt. Elsewhere Josephus says that famine strengthened the zealots (*Ant* 18.1.1 §8).

These pronouncements show again that social and economic factors could reinforce banditry and insecurity in Judea as elsewhere, but it does not justify a denial of the obvious conclusion: that resistance to Roman rule was particularly fierce in Judea, as a result of the single feature which distinguished the Jews from other peoples, namely their religious attitudes.

2. A.D. 70–132. Banditry with ideological overtones did not come to an end with the suppression of the 1st Jewish Revolt. This appears from Talmudic sources. For instance, a source relating to the 2d century tells of the arrest of a member of a band of *lîṣṭîm* (bandits) in Cappadocia (*t. Yebam.* 5:5; cf. *y. Yebam.* 2:4b; *b. Yebam.* 25b). The *Palestinian Talmud* says he was arrested in Caesarea in Cappadocia; the *Babylonian Talmud* mentions Magiza, i.e. Mazaca. Before he was executed he had a last request:"Go to the wife of Shimon ben Cahana and tell her that I killed him as he entered the town of Lydda." Shimon ben Cahana was a pupil of R. Eliezer ben Hyrcanus (ca. 100–130), who taught at Lydda, and a teacher of Raban Simeon ben Gamaliel, ca. 130–160 (cf. *t. Para* 12:6.). This establishes a rough chronology: Shimon ben Cahana belongs to the period between the 1st Revolt and the revolt of Bar Kokhba. The sources discuss when a confession of murder may serve as evidence which would allow the widow of the victim to remarry. The murderer of Shimon ben Cahana, by his declaration, saw to it that his victim's wife was legally declared a widow and so could remarry. This is remarkable behavior for the murderer of a well-known scholar and can be accounted for by the hypothesis that this was a case of political murder.

Another case also refers to a well-known scholar in the same period, R. Ḥanania ben Teradion, one of the wealthiest men in Galilee and treasurer of a fund for the poor (*b. B. Bat.* 10b). His son first joined a band of *lîṣṭîm* and then proceeded to betray them (*Lam. Rab.* 3:6; cf. *Ṣem.* 12.13). This was discovered and he was killed by his former comrades. After 3 days they gave his body up for burial out of respect for the father. However, instead of mourning him in the usual manner, his father, mother, and sister vehemently cursed the son. The father, R. Ḥanania, was executed by the Romans after the revolt of Bar

Kokhba (cf. *b. ʿAbod. Zar.* 17b–18a). It is obvious that his son would not have joined a band of robbers for economic reasons, nor would one expect simple bandits to have particular respect for a wealthy scholar—as expressed by the return of the body. The behavior of the family can be explained by the assumption that (1) the term *lîsṭîm* here stands for "guerrilla fighters" and (2) the scholar and the fighters supported a common cause.

A 3d source describes *lîsṭîm* who met with pupils of R. Akiba making for the S on their way to Acco. They made their way together for a distance, and when they separated the bandits expressed their admiration for R. Akiba and his pupils (*b. ʿAbod. Zar.* 25b; cf. Alon 1984:570–72). This again is evidence of a relation of respect and even warmth between a distinguished scholar and people described as bandits. The scholar was one of the leaders of the revolt of Bar Kokhba, and the obvious explanation is that the "bandits" were guerilla fighters who maintained good relations with Jewish leaders.

To the same period belongs a story of some Galileans who had killed a man. They fled to Lydda and there appealed to R. Tarphon to hide them. R. Tarphon, influential in the years before the Bar Kokhba revolt, did not help them, but he did not betray them either (*b. Nid.* 61a; cf. Alon 1984:570–72). Two points are significant: first, the fact that the murderers thought an influential rabbi might be prepared to help them, and second, the circumstance that R. Tarphon did not hand over murderers to the authorities. It is likely that the murder again was a political execution.

In recent years remarkable material evidence has been found of the methods used by the guerilla fighters in Judea in the form of numerous subterranean hiding places. Most are found in ancient settlements, their entrances masked by cisterns or innocent-looking cavities in the rock (Gichon 1982:30–42; Kloner 1983:210–21). The evidence has now been published fully in a book with copious illustrations but questionable conclusions regarding the dating (Kloner and Tepper 1987).

3. After Bar Kokhba. Jewish sources give the impression that banditry remained endemic in the 2d century and afterward. Talmudic sources rarely provide explicit or unambiguous statements. It is not uncommon for each source to be analysed in isolation and interpreted in a different manner, but this ignores the historical reality which the sources, taken together, indicate in outline (see Schäfer 1981).

A source of the 2d century mentions a hypothetical case in which a Nazirite (who is not allowed to shave) is shaved by *lîsṭîm* (*m. Nazir* 6:3; cf. *Sipre Num.* 25). That probably would not be the work of ordinary robbers. To the same period belongs the rule concerning payment of ransom for a wife taken captive. If she was imprisoned by the authorities, the husband was not obliged to pay ransom; if she was taken by *lîsṭîm,* he was (*t. Ketub.* 4:5; cf. *b. Ketub.* 51b). The reason for this distinction was that a wife in the hands of the authorities might be expected to consent to having sexual relations with her captors. When she was the prisoner of *lîsṭîm* there was no such risk. It is an implicit assumption which says much about the sort of people *lîsṭîm* are taken to be.

It is generally assumed that Judea essentially became a quiet province in the later 2d century. The evidence on *lîsṭîm* in Talmudic sources, however, relates to the 3d century as well. In the 3d century R. Jose ben R. Bun predicted that *lîsṭîm* would occupy the throne of Israel "in the fourth generation." (*y. Hor.* 3:7c) The source ostensibly discusses the biblical period, but it is improbable that R. Jose here refers to a tradition from biblical times. The statement reflects the realities of his own time, the 3d-century period of crisis marked by anarchy and various forms of banditry.

Another source of the early 3d century reminds one of the episode, described above, concerning the murderers who appealed to R. Tarphon. Here it is a conspirator sought by the authorities who actually was hidden by R. Judah ben Levi. (*Gen Rab.* 94:9; *j. Ter.* 8:6b). It is significant that there is no indication in any of these cases of moral condemnation of the bandits as such.

There are many more references to *lîsṭîm* in Talmudic sources. They appear 12 times in the Mishnah, 17 times in the Tosephta, 20 times in the Jerusalem Talmud, and 40 times in the Babylonian Talmud. Often they cannot be dated accurately, and it is not always possible to determine whether the examples reflect historical reality of purely academic dispute. Where this is not in doubt it is not always clear whether the *lîsṭîm* mentioned in the sources were regular robbers and, when they were not, whether they were part of the imperial establishment or belonged to its enemies, as observed above. Since the Roman authorities

were not considered a legitimate government by the Jews, any representative of the occupying forces could be called a bandit by the Jews. The term "bandit" might be applied to anyone who used force to achieve his aims, whether on behalf of the Romans or in the struggle against them. The sources discussed above as well as the great number of other references to bandits in Talmudic sources leave no doubt that guerrilla fighting, terrorism, and ordinary brigandage were a chronic problem in Judea throughout the 2d and 3d centuries.

This impression is strengthened by a story in the *History* of Cassius Dio. In the reign of Severus, according to Dio, a remarkable event took place:"While Severus was very proud of his achievements [in the East], as if he had surpassed all people in insight and courage, … a certain bandit named Claudius was overrunning Judea and Syria and was therefore being chased with great ardour. And once he came to Severus with some cavalry, as if he were a tribune, and greeted him and embraced him, and he was not found out then nor caught afterwards" (Dio 75.2.4). There is no reason to believe that these bandits were Jews. The story resembles another recounted by Dio regarding the Italian bandit named Bulla (76.10). Dio tells the story of Claudius with relish, for his point is that Severus was engaged in futile foreign wars while he could not control banditry at home, right under his nose. We know of these events simply because a senator disliked imperial policy at the time, but that cannot lead to the conclusion that there was no banditry at other times. In fact, the Severan period is usually considered a time of relatively good relations between the Jews in Judea and the imperial authorities.

BENJAMIN ISAAC

BANGLES. See JEWELRY.

BANI (PERSON) [Heb *bānî* (בָּנִי)]. The name of several persons found especially in the postexilic literature of Chronicles and Ezra-Nehemiah. *Bānî* is a short form of the more recognizable name BENAIAH [Heb *bĕnāyāh, bĕnāyāhû*], meaning "Yahweh has built" (from the root *bānâ,* "to build").

1. Bani the Gadite is listed as one of David's champions in 2 Sam 23:36. The corresponding reference in 1 Chr 11:38, however, reads Mibhar the son of Hagri (Heb *hagrî,* "Hagri"; instead of Heb *haggadî,* "the Gadite"), suggesting a corrupt text. The LXX references, which read "the son of Gaddi" (2 Sam 23:36)

and "the son of Agari" (1 Chr 11:38) confirm this conclusion. It is thus impossible to know whether the mention of Bani here is in fact accurate.

2. Bani, the father of Azmi, was the 5th ancestor removed from Levi in the clan of Merari (1 Chr 6:31—Eng v 46). His descendant, Asaph (to whom many psalms are attributed), served in the cultic services under David.

3. Bani, from the sons of Perez, the son of Judah, was an ancestor in the family line of Uthai, one of the exiles who returned to dwell in postexilic Jerusalem (1 Chr 9:4), according to the conjectural RSV reading based on the LXX. The MT, however, reads "the son of Benjamin (Heb *bnymn*), of the sons of Perez." The name Bani here is without substantial textual support, and the MT reading of Benjamin should be preferred.

4. According to Ezra 2:10, the ancestor of one of the large family groups returning from the Exile: the sons of Bani, numbering 642. The parallel text in 1 Esdr 5:12 records the sons of Bani as numbering 648, while the parallel reading in Neh 7:15 lists "the sons of Binnui," numbering 648. Inasmuch as Bani and Binnui are short forms of the same name (see BINNUI) and that the Heb *šĕmōnâ* (eight) is easily corrupted to *šĕnayim* (two)—or *vice versa*, it is likely that the text of the lists has been corrupted. The parallel list in 1 Esdr 5:8 names one Baanah as a clan leader returning from the Exile, while 1 Esdr 5:26 lists the line of Bannas returning with the Levites. Since the names Bani, Binnui, Baanah, and Bannas are all variations on the name Benaiah, the parallel references in Ezra 2:10 and Neh 7:15 probably refer to the same person. It is not clear, however, that 1 Esdr 5:8, 26 refer to the same person listed in Ezra 2:10 and Neh 7:15. A proposed deletion of Bani in Ezra 2:10 and its reinstatement in Ezra 2:40 and Neh 7:43 lacks textual support.

5. On the other hand, Bani may have been dropped from the list in Ezra 8:10, as is suggested by several variants, as well as 1 Esdr 8:36 ("and from the sons of Bani, Asalimoth, the son of Josaphias, and with him one hundred sixty men;" cf. MT [Ezra 8:10]:"and from the sons of Shelomith, the son of Josipiah, and with him one hundred sixty men"). The name Bani appears to have been dropped inadvertently from the MT at this point on account of its similarity to the preceding *mibbĕnê.* If this deduction is correct, Bani was another clan chief who accompanied Ezra back from Babylon.

6. According to the lists (Ezra 10:29, 34 = 1 Esdr 9:30 [Gk *mani*], 34) of those who had married foreign wives, several of the sons of Bani were among the accused. The MT reading of Ezra 10:38—"and Bani and Binnui: Shimei" —is probably a corruption of "and from the sons of (Heb *ûmibbĕnê*) Binnui: Shimei" (the difficulty the scribes had in distinguishing the Heb *bānî* from *mibbĕnê* has been noted above (#5).

7. Bani occurs twice in the list of those who set their seal to Nehemiah's covenant: once as a Levite (Neh 10:14—Eng v 13), and once as a chief of the people (Neh 10:15—Eng v 14).

8. Bani was one who helped Ezra the scribe instruct the people in the law (Neh 8:7).

9. Bani, the father of one Uzzi, an overseer of the Levites and a singer of the order of Asaph under Nehemiah (Neh 11:22).

10. Bani, the father of one Rehum, a Levite under Nehemiah charged with repairing a section of Jerusalem's wall adjoining that repaired by Nehemiah (Neh 3:17).

11. Bani is listed 3 times in Neh 9:4–5, twice in the series "Jeshua, Bani, Kadmiel," as one of the Levites calling out the liturgy at the Feast of Tabernacles under Ezra. The 3d instance, following the name Sherebiah in Neh 9:4, may be a dittography of the previous occurrence.

BANKING. See INTEREST AND USURY; TRADE AND COMMERCE.

BANNAS (PERSON) [Gk *Bannos* (Βαννος)]. Possibly a variant of BANI or BINNUI, Bannas is found in 1 Esdr 5:26 as the levitical ancestor of some of the exiles who returned to Jerusalem.

D. G. SCHLEY

BANQUET, MESSIANIC. See MESSIANIC BANQUET.

BANQUETING HALL/HOUSE [Heb *bêt hayyāyin* (בֵּית הַיָּיִן)*; bêt mišteh* (בֵּית מִשְׁתֶּה)*; bêt marzēaḥ* (בֵּית מַרְזֵחַ)]. In the ANE, banqueting was common among humans and gods (cf. Judg 9:13). While a "house of banqueting" may certainly refer to any place where drinking takes place, the frequent occurrence of a "house" in ceremonial and ritual contexts (cf. especially *bêt marzēaḥ* below) suggests that specific meeting places were built which functioned specifically for these banqueting purposes. Even the gods could own such "houses" (cf. *KTU* 1.114).

A. House of Wine
B. House of Drinking
C. The *Marzēaḥ*
1. At Ugarit
2. In the Hebrew Bible
3. Elsewhere
D. Conclusions

———

A. House of Wine

The expression "house of wine," *(bêt hayyāyin)*, which occurs only in Cant 2:4, has occasioned a good deal of discussion. Some scholars have proposed meanings such as a wedding banquet hall, a ritual banquet house, a wine cellar, and a tavern, while others have stated that nothing more is intended than simply a house in which wine is drunk (cf. Pope *Song of Songs* AB, 374–75). The latter is more probable in the present context (cf. Cant 1:16b–17). Fox (1985:108, 283–84) has pointed out similar booths for lovers' trysts in the Egyptian love songs.

B. House of Drinking

A more common term for a banqueting house is *bêt mišteh* which literally means "house of drinking." Jeremiah was forbidden a normal life as a sign of the impending disaster about to befall the nation. He was commanded not to enter a *bêt mišteh* which may refer to a wedding celebration (Jer 16:8–9). Alternatively, some (e.g. Pope *Song of Songs* AB, 216) have argued that the *bêt mišteh* here is roughly synonymous with a banquet house by another name mentioned in Jer 16:5, the *bŏt marzēaḥ* (see below). Similarly, Qoh 7:2 contrasts the "house of feasting" with the "house of mourning."

A similar term *bŏt miš teh hayyāyin* is used in Esth 7:8 to refer to the place where Esther had prepared the "wine feast," *miš teh hayyāyin.* In Daniel 5, Belshazzar holds a feast in his banquet hall *(bŏt mištĕyāʾ)* and invites his lords, wives, and concubines to drink wine from the vessels which Nebuchadnezzar had stolen from the Jerusalem temple.

C. The *Marzēaḥ*

The Semitic institution known as the *marzēaḥ* has generated a considerable number of studies (for up-to-date bibliography, see Lewis 1989:80 n.1). Although the word is spelled differently in the various languages (e.g. Akk *ma-ar-zi-ḫi, mar-ze-i, mar-zi-i, mar-za-i;* Ug *mrzḥ* and presumably *mrzʿ*), most scholars have, for the sake of discussion, adopted the convention of using the Hebrew term *marzēaḥ.* Suggestions for a possible etymology for the word *marzēaḥ* date back to Joseph Qimḥi, yet no proposal has found wide acceptance among scholars (Lewis 1989:93). References to the *marzēaḥ* are widespread in the literature of the ANE and span nearly 2 millennia, as evidenced by Ug and Akk texts from Ugarit; passages in the books of Amos and Jeremiah; an unpublished Transjordanian settlement text of the late 7th century; Phoenician texts from Carthage and Piraeus; Aram texts from Elephantine, Palmyra, and Nabatea; rabbinical references by both the Tannaim and the Amoraim; and the mosaic map at Madeba (6th century A.D.). For convenient collections and analyses of the relevant texts see Bryan (1973), Porten (1968:179–86), and Lewis (1989:80–94).

Pope (*Song of Songs* AB, 210–29; 1981:176–79) is the best example of scholars who have argued that the *marzēaḥ* was a feast for and with the departed ancestors. On the other hand, scholars such as Bryan

(1973) feel that such interpretations go beyond the evidence. The question of whether the *marzēaḥ* was associated with the dead has recently been reexamined (Lewis 1989:80–94).

1. At Ugarit. The *marzēaḥ* at Ugarit was a socioreligious organization whose leader was called a "chief," *(rb),* and whose members were called "the men of the *marzēaḥ,* " *(mt mrzḥ).* The property of the *marzēaḥ* organization included vineyards, fields, storerooms, and most notably a "house." The *bḏt marzēaḥ* occurs in almost every text and seems to designate the meeting place for the organization. It was presumably owned by the organization and paid for out of membership dues. It seems that the "house" could be leased as well (*KTU* 3.9). The most conspicuous activity of the *marzēaḥ* is its association with drinking (cf. El's behavior in *KTU* 1.114 and the organization's ownership of vineyards). The *marzēaḥ* organizations could grow quite powerful as evidenced by their participation in large transactions requiring many witnesses (RS 14.16) and their property-owning status. Greenfield (1976:451–55) has noted that the organization "had state sanction since the king transferred and confirmed the ownership of *marzēaḥ* property." A notable religious feature is the association of the *marzēaḥ* organizations with a particular patron deity (cf. Šatrana in RS 15.70; Hurrian Ishtar in RS 18.01; and most likely Anat in *KTU* 4.642).

2. In the Hebrew Bible. The *marzēaḥ* occurs twice in the Heb Bible. In Amos 6:7 it is vocalized *mirzaḥ* (< **marzaḥ* < **marziḥ*) and occurs in a context where the prophet is denouncing the complacent and self-sufficient in Zion. In an elaborate woe-oracle he cries out against those living a life of luxury, sprawled on their ivory beds and taking their fill of food, drink, and music. The *marzēaḥ* described here (usually translated as "revelry") is a luxurious banquet with no hint of funerary imagery.

Jeremiah 16:5 provides the strongest evidence for the *marzēaḥ* as a funerary banquet. The context is undeniably one of mourning and bereavement over the dead. Jeremiah is commanded not to enter the *bḏt marzēaḥ* (cf. the same architectural entity in the Ug texts) nor to go there to lament or grieve. In Jer 16:8 we have mention of a *bḏt miš teh,* "a drinking house," which seems to be roughly synonymous with *bḏt marzēaḥ.* Some scholars have argued that *bêt mišteh lō› tābô›* in v 8 forms an inclusio with *›al tābō› bêt marzēaḥ* in 16:5 (note also the chiasm).

The common denominator between the *marzēaḥ* of Amos and Jeremiah is not its funerary characteristics but its association with drinking. This is similar to the picture we get from the Ug texts. The *marzēaḥ* was an organization known for its drinking festivals which in some cases came to be associated with funerary feasts, perhaps due to the large quantity of beer which was consumed by mourners to console themselves.

3. Elsewhere. The *marzēaḥ* is mentioned in the following: (a) an unpublished Transjordanian "deed of removal" *(spr mrḥq*) from the late 7th century B.C.E.; (b) 3 Phoenician texts including the Marseilles Tariff (*KAI* 69.16), the Piraeus inscription (*KAI* 60.1) and a recently published 4th century dedicatory inscription inscribed on a bronze *philaē* (Avigad and Greenfield 1982:118–28); (c) an ostracon from Elephantine (Sayce 1909:154–55; Lidzbarski *Ephem* 3:119–21), (d) a Nabatean text referring to "the *marzēaḥ* of Obodas the god" (Dalman 1912:92–94) and a series of fragmentary Nabatean inscriptions (Negev 1961:127–38; 1963:113–17), (e) a large body of Palmyrene material (du Mesnil du Buisson 1962; Milik 1972; Bryan 1973:170–97, 213–25); (f) two rabbinic texts (*Targum Pseudo-Jonathan* and *Sifre Numbers*) referring to the Baal-peor incident in Numbers 25; and (g) the phrase *BĒTOMARSEA* [= *bêt marzēaḥ*] *Ē K (AI) MAIOUMAS* on the Madeba Map.

D. Conclusions

Four features appear quite consistently throughout much of the *marzēaḥ* material: the reference to a banquet "house" belonging to the *marzēaḥ* organization or guild; the reference to a leader *(rb mrzḥ›* or *symposiarchēs*); devotion to a deity or deities; and a good deal of drinking. The LXX of Jer 16:5 translated *marzēaḥ* to *thiasos* which evokes images of Bacchic revelry. The strongest evidence for the association of the *marzēaḥ* with the deceased is the Nabatean text referring to "Obodas the god." Nabatean kings, starting with Obodas I were regularly deified. As a social institution, the *marzēaḥ* was an organization focused on the more affluent of the various societies (Greenfield 1976:455).

In conclusion, banqueting halls were commonplace in the ANE as evidenced by the textual and archaeological material (see Stager 1985:172–87; King 1988:137–61). One can only wonder whether

drinking was used as a means of entering into communion with the dead. Compare the 3 parts of the Anthesteria ("opening of jars" *[pithoegia],* "beakers" *[choes],* "kettles" *[chytri]*) which was the collective name for the 3-day feast of Dionysus during the Anthesterion, the month when people thought that the ghosts of the dead returned (Burkert 1985:238).

———

A. Introductory

1. Greek Terminology. The Gk verb for "baptize," *baptizein,* is formed from *baptein,* "dip," and means "dip frequently or intensively, plunge, immerse." By Plato's time and onwards it is often used in a figurative sense (e.g., in the passive, "soaked" in wine, Plato *Symp.* 176 B). It appears 4 times in the LXX: 4 Kgdms 5:14 (Naaman in the Jordan), Jdt 12:7 (purification), Sir 34:30—Eng 34:25 (purification after touching a corpse), Isa 21:4 (figuratively of lawlessness). The noun *baptisma* is only used in Christian

literature, where it refers to the baptism of John or to Christian baptism. The word *baptismos* is used in a wider sense for dipping, washing (of dishes Mark 7:4), of ritual washings (Heb 9:10; John's baptism, Joseph. *Ant.* 18.117; Christian baptism, Col 2:12 [variant]. A synonymous noun is *loutron* "bath" used of both ordinary and ceremonial baths, but in the NT only with reference to baptism. The corresponding verb *louein* "wash, bathe" is encountered in its everyday use in, e.g., 2 Pet 2:22 and John 13:10. It refers to ceremonial baths in Lev 15:11 and to Christian baptism (probably) in the compound form *apolouein* in 1 Cor 6:11.

2. Phenomenology. Rites of immersion were not uncommon in the world in which early Christianity developed. One type of symbolism with which they were frequently connected was that of purification: from sin, from destruction, from the profane sphere before entering an holy area, from something under a taboo, etc. See, e.g., Lev 16:4, 24 (the high priest before and after the rites of atonement); Leviticus 15 (on menstruating women); 1 QS 3:5–9 (cleansing from sins); *Sib. Or.* 4.165 (a baptism of repentance); Joseph. *Ant.* 18.117 (on John's baptism); Joseph. *Life.* 11 (on Bannus' ablutions for purity's sake); Apul., *Met.* 11.23 (purification at the initiation into the Isis mysteries); *b. Yebam.* 47 ab (on proselyte baptism).

Such cleansings can take place when one stands on the verge of a new state in life or is entering into a new community or upon a new phase of life, etc. Thus they can function as rites of initiation or as rites of passage. Depending on the way in which one regards the situation being left behind and the one being entered, such rites can be connected with ideas of a new birth, of a new life, or of salvation as contrasted to nothingness, chaos, death, or destruction.

3. General Orientative Remarks. In this article attention is concentrated on the ideas of baptism conveyed by the different existing NT texts from the perspective of their historical situation. This does not mean that questions of "history of tradition" are totally left aside or that problems of the prehistory of motifs, etc., are not touched upon, nor that issues of origin are not dealt with. Such problems, however, play a less important role in this presentation. Although one's way of assessing them often has consequences for one's work on the Pauline material, for example, the NT passages themselves will occupy the center of interest. While the results of such exegetical work are subject to the same lack of security as those of all historical research, attempts at reconstructing backgrounds, origins and hidden developments and changes in a history of tradition—legitimate and necessary as they are—take place on even shakier ground.

The reader should be prepared to allow for different understandings of our material. Insofar as texts are part of the communication process, it is normal to try to take into account the situation in which somebody said something to somebody in order to achieve something. But that does not necessarily mean that the author's basic ideas behind the text and their connotations were the same as those of the reader or audience even in the original situation. If, for example, Paul himself, when writing Romans 6, was not inspired by ideas concerning the initiates' dying and rising with a divinity celebrated in some mystery religion, the readers of his epistles in antiquity might very well have had their understanding colored by such associations or experiences (cf. Tert. *De Bapt.* 5, accusing the cults of Isis, of Mithras, and of Eleusis of imitating the Christian rite).

4. History of Religions Background. As already intimated, many religions in antiquity practised different washings and baths. This holds true for the mysteries of Eleusis, of Mithras, and of Isis; the OT prescribed several ablutions to be performed, rules which were observed by Jews also in NT times (John 2:6); the Qumran community laid a particular stress on them, and Bannus (Joseph. *Life.* 10) and John the Baptist were not alone in practising baptisms outside of mainstream Judaism; other baptismal movements also appeared in the Transjordanian/Syrian area. Sometime during the 1st century C.E. proselyte baptism was introduced in Judaism, and when baptism received a central place in Mandeism, the rite as such was certainly no novelty, regardless of whether it should be regarded as pre-Christian or not.

One should beware of assigning the same or even similar meanings to these rites. As rites they are open to several interpretations; in each case it is to be expected that the meaning of the rite is provided by the ritual context or otherwise through instruction or tradition.

B. Baptism of John

1. The Rite and Its Significance. The sources for our knowledge of John's baptism are the notices in the NT and a brief passage in Josephus (*Ant* 18.116–18). The baptism he performed was closely bound to his preaching, which looked forward to God's coming for judgment. He summoned his audience to repentance from this perspective, and in view of the coming judgment one underwent the baptism "unto the remission of sins" (Mark 1:4; cf. Joseph., *Ant* 18.116–18).

Although a scholarly consensus holds that John did not take over or adapt any particular baptism from his milieu, his appearance and preaching, as well as his baptism, can be regarded as one expression of expectations and ideas concerning the *eschaton* which are reflected in, among others, OT pseudepigrapha and Qumran texts. In addition, passages of such contents often contain echoes of OT passages such as Deuteronomy 30–31, Isaiah 40, Ezekiel 36, or Jeremiah 31. Thus, e.g., *Jub.* 1:22–25 and 1 QS 4:18–23 look forward to a time of repentance, when God will cleanse his people from evil through holy spirit, or give them a holy spirit and cleanse them so they do not turn away from him any more. Furthermore, when NT passages apropos of the Baptist (Mark 1:2; Matt 11:3, 10, 14; Luke 1:17, 78, etc.) indirectly refer to Malachi 3–4, this means adducing a text which illustrates the spiritual climate in which John appeared. There, in the perspective of the coming Day of Yahweh, we encounter the following motifs: a messenger sent before God (3:1), God's coming (3:1–2, 5), the coming of the Day (3:2; 4:1, 5), purification through fire (3:2–4), burning (4:1), returning to God (3:7) from sins against fellowmen (3:5) and against God (3:8–9, 13–15), the sending of Eliah before the Day comes (4:5).

John's baptism took place in view of the "coming one," who was to "baptize with the Holy Spirit and fire" (Matt 3:11–12 = Luke 3:16–17; to be preferred to Mark 1:8:"the Holy Spirit" only). The fire baptism is almost certainly an instance of judgment imagery (cf., e.g., Dan 7:10; Rev 20:10; *4 Esdr* 13:10; *Mek. Exod.* to 18.1; ed. Lauterbach vol. 2, p. 163); if we assume that "the spirit" is not a Christian interpretation, it may originally either have meant something like Isa 4:4 "a spirit of judgment and a spirit of burning"; or it may have referred to the positive outcome of the Day, which is more probable with regard to material like the passages from 1 QS and *Jub.* just mentioned.

The same background material also gives a reasonable context for distinguishing John's baptism from most other ritual baths and washings in that one most likely underwent it but once and did not perform the rite on oneself but received the baptism passively. These features, understood in the light of the Jewish material cited above, indicate that John's baptism meant that prior to the approaching divine judgment the repentants who had confessed their sins received the gift of remission. (This seems more probable than interpreting the baptism as meaning an assurance or a hope of being remitted in the coming judgment.) In contrast to the Qumran community, John directed his call for repentance and baptism to all the people, notwithstanding which the rite came in fact to function like a rite of initiation into a group of people who, being pardoned, expected "the stronger one" to come. They also probably followed an ethic which was inspired by John's preaching and its eschatological outlook (Mark 2:18; Luke 3:10–14; 11:1). John's appearance in the wilderness and baptizing in the Jordan point to some sort of Exodus typology, meaning that here a renewed Israel was being created. The group hardly formed anything like a community or a sect, but NT passages (Mark 2:18–19; 6:29; Matt 11:2; Luke 11:1; John 1:35–37; 3:22; 25; Acts 19:1–7; see also *Ps. Clem. recogn.* 1.54, 60; ed. Rehm), as well as certain traces in the Mandean material, point to the existence of groups that regarded themselves as "disciples of John," both in his lifetime and after.

In the NT gospels, John and his baptism are given a two-sided treatment. On the one hand, they are seen as the necessary preparation for Jesus, the Messiah; on the other, their importance is played down. For Mark, John and his baptism certainly belong to "the beginning of the gospel of Jesus Christ, God's son" (Mark 1:1), but his baptism is contrasted with that of him who follows after, "the stronger one," viz., Jesus, who will baptize "with the Spirit." (Consequently, Jesus does not begin his public preaching until "after" John has been arrested; Mark 1:14). Mark does not return to the topic of baptism, but presumably his readers have had the common early Christian conviction of being equipped with the Holy Spirit, and consequently have associated John's words with Christian baptism.

Matthew (3:5–6) does not say that John's baptism was for the remission of sins—perhaps the evangelist was of the opinion that remission was only given through Jesus (Matt 1:21; 26:28). That the coming one

was to baptize "in Holy Spirit and fire" (3:11) may possibly have been understood as saying 2 things: the "fire" probably refers to the judgment (3:10, 12; 7:19; 13:40, 42, 50; 18:9; 25:41), a judgment held by the Son of Man (13:40–43; 25:31–46). On the other hand, the Matthew context suggests that the baptism "in the Holy Spirit" is the baptism in the name of the Trinity (28:19), ordered by the risen Son of Man.

In Luke the baptism with the Spirit clearly is the one described in Acts, through which "the coming one" gathers his people (Luke 3:17); since the author repeats John's saying in Acts (1:5) without mentioning the fire (in spite of Acts 2:3!), it seems that by baptism "in fire" (Luke 3:16) he refers to the future burning of the chaff, i.e., the annihilation of the evil in judgment. John's water-baptism is contrasted to the Christian community's receiving of the Spirit (Acts 1:5; 19:1–7).

In the Gospel of John, finally, John's water-baptism is still seen as ordered by God (1:33), but John's role is only that of the precursor. He must "diminish" (3:30) at the arrival of him over whom the Spirit descends and who baptizes with the Holy Spirit (1:33). Thus, the importance of John's baptism is further played down and contrasted with Christ's Spirit-baptism. In the context of John, the latter means that through the completion of the work of the Son, leading to his "glorification" (cf., e.g., 7:39), the life-giving effects of this work are given to men (see further below, on John 3:5).

2. Jesus' Baptism by John. That Jesus was baptized by John is historically certain. It must have been embarrassing to the early Church that its Lord had taken on the ritual sign of repentance, and thus, in some way or another, regarded himself in the light of John's preaching of confession of sins and a return to God in view of the approaching final crisis, including the coming of the stronger one. The history of tradition of the story is problematic (Mark 1:9–11; the "Q" version, distinguishable in Matt 3:13–17 = Luke 3:21–22, is rather similar; see also John 1:32–34). As presented finally in all 3 of the Synoptic Gospels, the story has a Christological accent.

Thus, in Mark (1:9–11) the brief mention of Jesus' baptism (v 9b) is immediately followed by a report of a combined vision and audition by Jesus, which make evident to the reader who the main character of the Gospel is, viz., the divinely authorized messianic Son. In Matthew a dialogue between John and Jesus is added (3:14-15), which explains that Jesus is baptized, not because he—the stronger one—needs it, but because both of them must "fulfill (5:17) all righteousness," i.e., the baptism belongs to that which God wants. This motif of righteousness is related to the sonship (in 3:17 proclaimed to others than Jesus): in Matthew divine sonship means radical obedience to God's will (4:1–11; 26:39; 27:43). Thus, Matthew's baptism story presents Jesus as an example in humility and obedience (Matt 5:9, 45). For Matthew's reader, Jesus' baptism may also have been taken to indicate that he became a model: as he was baptized, so were the Christians of later times (28:19), and as he fulfilled all righteousness, so righteousness was demanded from them (5:20; 28:20).

In Luke's version (Luke 3:21–22), the baptism itself is pushed even further aside and separated from what follows through a reference to Jesus' praying; in this way the language of the story moves it rapidly towards the public presentation and proclamation of Jesus as God's son, working under God's Spirit (3:38; 4:1, 14, 18). Finally, in John knowledge of Jesus' baptism seems to be presupposed (1:32–34; 3:26), although it is not explicitly mentioned.

We have seen that in their redaction Mark and Luke have not connected Jesus' baptism with that of the Church, but given it a Christological function. So has Matthew, but in such a way that Jesus can be seen also as an example in baptism. On the other hand, Christian readers of Mark and Luke who believed that their baptism was combined with the receiving of the Spirit and who were wont to see themselves in some sense as God's sons or children (Rom 8:14; Gal 3:26)—or who at least knew to turn to God as "Abba" (Luke 11:2; cf. Mark 11:25; Rom 8:15; Gal 4:6)—might naturally have seen their own baptism prefigured in Jesus' baptism by John.

C. Baptism of the Early Church

1. The Beginnings. a. Origin of Christian Baptism. Several reasons favor the assumption that baptism was practised from the very beginning in the early Church as some sort of initiatory rite. Not only does Luke take it for granted in Acts, but so do authors who represent other strands of the early Church and as far as we can see they do so independently of each other (Paul, "John," "Matthew"). Indications that in

some place there was no baptizism from the beginning fail to convince most NT scholars. Thus, the lack in Matthew 10 of a commission to baptize is usually explained in other ways. The case is similar to that of the prohibition to go the Gentiles (10:5): In both instances Matthew has his reader wait until 28:17–20. Luke takes care of baptism as the initiatory rite in Acts 2. (It seems to have been an impossible thought to the synoptists to insert a commission to baptize into the story of Jesus' public ministry.) Acts 18:24–19:7 certainly raises some questions for anyone who assumes that baptism was generally practised in early Christianity from its beginning. But it seems that the difficulty is rather the result of Luke's redaction in combining the 2 passages than an indication that in the A.D. 50s there were Jesus-disciples who did not know of Christian baptism.

Thus, if the practice of baptism was general from the beginning of the early Church, all the more intriguing is the question of its origin. John 3:22 and 26 suggest that Jesus had been involved in baptizing, but this is corrected in 4:2 which says that it was his disciples who baptized. Should this be a case in which John provides us with more and better historical knowledge than the Synoptic Gospels, it would point only to such an activity occurring at the very beginning of Jesus' career. Jesus himself apparently did not baptize, and thereafter, in the main part of his public ministry, baptizing apparently had to give way to his preaching and disappeared. Thus, the Jesus who preached the gospel of the Kingdom and summoned people to conversion and belief, did not combine this proclamation with a demand for or invitation to baptism.

The historical riddle is not solved by Matt 28:19, since, according to a wide scholarly consensus, it is not an authentic saying of Jesus, not even an elaboration of a Jesus-saying on baptism. Jewish proselyte baptism has been proposed as the usage the early Church took over and christianized. The practice did exist in the 1st century C.E. and therefore early enough to be adopted by the Christians. Certainly it was more of an initiation rite than the purification baths and the sprinklings prescribed in the OT, and thus invites a comparison with Christian baptism. But it was not associated with any remission of sins or with any other eschatological meanings, nor was it a passive rite: one immersed oneself, although in the presence of 2 men learned in the Law (*b. Yebam.* 47a). Thus, proselyte baptism was hardly the occasioning factor behind Christian baptism, nor for that matter behind John's baptism.

Instead, according to a rather common scholarly opinion, John's baptism is the point of departure of Christian baptismal practice. We have already seen that John's baptism was connected with eschatological expectations, and so was the baptismal rite of the early Church (Acts 2:38–40; John 3:5; Rom 6:4–5; Tit 3:5–7). Both were associated with an act of conversion and were performed "unto the remission of sins" (Mark 1:4; Acts 2:38 etc.). Repentance opened the door to a community which in some respect or another formed a preparatory stage for the *eschaton*. Thus each of the two rites also became a kind of initiation rite, which was only performed once. (This is certain in the case of Christian baptism and probably in that of John). Last, but not least, as already mentioned, both rites were received passively, in that someone else immersed the person being baptized or poured water on him. That Jesus and (some of) his disciples had been baptized by John should have favored the adoption of a baptismal rite, but as we now have them, the versions of the baptism of Jesus show no traces of its having been an etiological story with the function of explaining the adoption of the rite.

If the early Church thus inherited its baptism from John, we would like to know the reason why but are only left with the impression that it was a natural practice—one did not have to defend or to explain it, at least not in such a way as to be visible in the documents left behind. But the conviction of Jesus' followers that his resurrection brought about a decisive shift in eschatological perspective (Acts 17:31; 1 Cor 15:20–21; 1 Thess 1:10) is most likely to have been an important factor that made it natural to take up John's baptism, loaded as it was with eschatological associations. But the role of Jesus Christ and the Christ-event necessitated its becoming a baptism "into the name of the Lord Jesus" or something similar.

b. "Into the name of the Lord Jesus." It is relatively certain that in the early Church one commonly referred to baptism as being done "into the name of the Lord Jesus" or something similar. One strange thing with this phrase is that the construction in what seems to be its earliest form, viz. "into the name of

…" (Gk *eis to onoma*) was not otherwise used in normal Gk, except for the language of banking, in which it referred to the account/name "into" which a sum of money was placed. It does not occur in the LXX.

NT scholarship has generally assumed that the phrase meant that the baptized person was dedicated to the heavenly *kyrios.* One has either assumed (with W. Heitmüller) that the one baptized was compared with a sum of money added to somebody's bank account, or one has adduced a Mishnah passage quoted by P. Billerbeck, *m. Zebaḥ.* 4.6, which states that a sacrifice has to be offered "into the name of the Name." This expression is then understood as saying that the sacrifice must be offered to God. The difficulty with the first explanation is that it is hard to imagine how one came upon the idea of using such odd imagery. The second one certainly explains the Gk phrase: it is a literal translation of Heb-Aram *lšm/lšwm.* The suggested meaning of the phrase has not enough support, however, in the material adduced. The context of the cited *m. Zebaḥ.* 4.6 rules that the sacrifice also has to be offered "into the name of the offerer," i.e., that one should bear in mind who it is that presents the offering. This observation shows that the Heb-Aram phrase does not have anything to do with dedication. Nor does the Gk phrase insofar as it would be a literal translation of the Sem wording.

In this situation the present writer has suggested that the phrase was coined by the Palestinian Church in Heb (or Aram) and that it was then translated literally into Gk. One should look, however, for a different meaning of the phrase than the ones noted so far. Among other usages of the *lšm/lšwm* there was also one which is found in ritual contexts. Thus we hear of gatherings "into the name of Heaven" (*m. ʾAbot* 4.11), of sacrifices slaughtered "into the name of the Name" (*m. Zebaḥ.* 4.6), or "into the name of the mountains" (*m. Ḥul* 2.8), of circumcision "into the name of Mount Gerizim" (*t. ʿAbod. Zar.* 3.13), and of knowing "into whose name" one vows (*m. Nid.* 5.6). In these and similar examples the phrase indicates what the fundamental reference of the rite in question is. It is reasonable to assume that early Christianity characterized its baptism using this halfway technical language, and that the formula followed the rite also into Gk-speaking circles. Matthew is witness to the usage of the expression also in other contexts (10:41–42; 18:20), as well as applied to baptism (28:19). In Acts, Luke reveals that "into the name of the Lord Jesus" (Acts 8:16; 19:5) was the formula that he had learned. It is also known by Paul, perhaps as connected with another way of naming Christ (1 Cor 1:13, 15 say only "Christ," Gal 3:27 "into Christ," and Rom 6:3 "into Christ Jesus."

Applying baptism to the analogies mentioned in the preceding paragraph should indicate that baptizing "into the name of Jesus" (etc.) meant that one saw Jesus as the fundamental reference of the rite. This could involve a negative and a positive definition. Negatively it distinguished Christian baptism from other similar rites (not least the baptism of John, as in Acts 19:1–7). Positively it should suggest what baptism meant with Jesus as its fundamental reference, viz., there should be some sort of Christology behind it. But the more specific implications of the expression are likely to have been different in different times and places. If it meant one thing in its first context, this would not preclude its being understood or interpreted in a different manner in another situation or by other early Christian theologians.

In Acts 2:38 and 10:48 the phrase is "in the name …" (the Gk prepositions being *epi* and *en* respectively). It has been assumed that they represent variant traditions. In the opinion of the present writer they should rather be explained as examples of Luke's technique as an author of letting the characters in his book speak in a way that suited them. Thus Peter, the revered apostle, is made to express himself in a biblical style when talking of baptism in 2:38 and 10:48: The prepositional phrases in these cases are common in the LXX (which Luke also imitates elsewhere), whereas, as we have seen, the Gk "into the name …" *(eis to onoma)* is both unbiblical and a bit strange as compared to normal Gk.

It should also be mentioned, however, that both in Biblical Gk and in rabbinic traditions the "name" phrases could be rather loose and have relatively small weight. Thus, in a rabbinical discussion one could slip from "into the name of x" to "into x" without changing the sense of the phrase (e.g., *m. ʿAbod. Zar.* 3.7; cf. *b. ʿAbod. Zar.* 48a). In Luke 21:12, Luke can write "because of my name," where the parallels in Mark and Matthew say "because of me," and the same Luke in Acts 10:43 can write about forgiveness of sins "through his name" and in Acts 13:38 "through him." Similarly in the Psalms, one calls "on the Lord's name" as well as "on the Lord." This flexibility probably is true also of the baptismal formula and

would then be the explanation why Paul can switch between "into the name" (1 Cor 1:13) and "into" without "the name" (as in 1 Cor 10:2 etc.). Such a flexibility may have facilitated Paul's finding a particular meaning in the phrase "baptized into Christ," —viz. that of being put into and united with the body of Christ. Luke's usage of "*in* the name" (*en* or *epi;* Acts 2:38; 10:48), apparently without meaning anything else than do the "into" formulas, is another indication of how the name phraseology was not very fixed. In spite of the normal conservatism of ritual language, one was not totally bound; thus Paul is probably thinking of baptism in 1 Cor 6:11, but there the phrase is "*in* the name of the Lord" instead of "into …"

The repeated use of "into the name" etc., raises the question whether the name of Jesus (etc.) was actually mentioned at the ministration of baptism. In the NT, Jas 2:7 has been cited as support for the supposition that it was. *Herm. Sim.* 8:6, 4 alludes to the passage, but without clear reference to baptism, while Just. *1 Apol.* 61.10–13 refers to such a practice using similar language. The usage of the *lšm* phrase in the rabbinic regulations may possibly add some extra strength to the supposition. It seems that when somebody presented an offering in the temple, he declared what kind of offering he was giving: cf., e.g., *b. Pesaḥ.* 60a: "Behold, I slaughter the Pesah into its name," i.e., "this is a passover sacrifice." The parallel would then intimate that the purpose or the fundamental reference of baptism was mentioned at the rite and that this was done in such a way that Jesus was mentioned. Indirectly Paul's argument in 1 Cor 1:13, 15 also suggests such a practice.

2. Corpus Paulinum. a. Paul. Paul does not present any direct teaching on baptism as such, but several times he argues other matters by making use of ways of thinking of baptism. In order that his argument be accepted by his addressees, he often refers to or quotes opinions on or understandings of baptism which have also been held by other early Christian theologians, including his opponents or those addressees whom he did not know personally. In most of these cases we can feel certain that Paul has agreed with them; in others he may have modified the opinion he cites (Rom 6:3–4) or just quoted it as an argument without sharing it (1 Cor 15:29). Given this place of baptism in Paul's writings, we have to realize that his view on baptism is largely hidden behind his epistles, in which we mostly only perceive what he regards as implications or consequences of his theology of baptism. Consequently any attempt to make a historically based reconstruction of Paul's thinking in these matters runs the risk of stressing wrong aspects and leaving out others which may have been important to him, but did not happen to be needed for his arguments in the letters we have access to. To these cautions should be added the circumstance that one of the more important texts, Rom 6:1–14, places the interpreter before an exceptionally great number of difficulties in terms of language, content, and function with regard to the receivers.

In 1 Cor 1:12–17 Paul says that he is thankful that he baptized only a few of the Corinthians, "for Christ did not send me to baptize but to preach the gospel" (v 17). This remark is generally understood as showing no contempt on Paul's part for baptism. Rather he let his coworkers baptize, and it is probable that baptizing meant not only performing the rite but also taking an active part in preparation for it. This can explain how people came to rally around a teacher like Apollos (1 Cor 1:12).

As noted, Paul knows of the baptismal formula "into the name of …" But in his arguments he may instead write "into (Gk *eis*) Christ" (Rom 6:3; Gal 3:27; cf. 1 Cor 10:2:"into Moses," and 1 Cor 12:13:"into one body"), or "in (Gk *en*) the name of the Lord Jesus Christ" (1 Cor 6:11). In this way Paul connects certain concepts about Christ and his importance with baptism. Thus in 1 Cor 1:12 it seems that the "party" designations ("I belong to Apollos" etc.) make Paul think of one effect of baptism, viz., that one can say "I belong to Christ" (1 Cor 1:12; 3:23; Gal 3:29). Then he immediately ironically states that he himself was not crucified for the Corinthians, nor were they baptized "into Paul's name." This indicates that to Paul baptism somehow made Christ's crucifixion a crucifixion "for" (Gk *hyper*) the one baptized. In other words, one "belongs to Christ" through baptism, which applies Christ's vicarious death to the person being baptized. Thus the soteriological center of Paul's thinking was a central motif in his understanding of baptism.

The preaching which gathered around this center had to be received in faith, a faith that meant that the believer was put right with God (justified), according to the contents of the kerygma. Inasmuch as it also

is intimated that one enters this blessed state through baptism, the question arises regarding the relationship between faith and baptism. There is no tension or contradiction to be seen between the two. Thus, according to Gal 3:26–29 men are "God's sons through faith in Christ Jesus," but this statement is explained by the next one, which says "for all of you who were baptized into Christ, put on Christ." One may say that faith is the subjective side of the receiving of the gift of salvation, baptism the objective side. Furthermore, although 1 Cor 6:11 might be traditional, in its Pauline context it interprets the gifts of baptism as not only "you were washed," and "you were sanctified," but also "you were justified," namely "in the name of the Lord Jesus Christ." Here baptism is associated with all the wealth Paul otherwise connects with the salvific gospel which reveals the righteousness of God through faith (Rom 1:16–17; 5:1–2, etc.).

Already the short remark in 1 Cor 1:13 and its implications point to how Paul—and other early Christian theologians—have wrestled, in part unconsciously, with a task that occurs in many religions: how to relate a fundamental divine act in the past to later times, be that act creation, the Exodus, the death and refinding of Osiris, or Christ's death and resurrection. One needs a bridge between past and present, or, to use different language, an actualization of the past in the present or an understanding of the present in the light of the past. In our case, a kind of actualization of Jesus' salvific act was made in the preaching of the gospel and in its reception in faith *and* in baptism as well.

The topic of actualizing Christ's death and resurrection—the fundamental salvific act—reappears somewhat more specifically, in Rom 6:1–14, where it is part of Paul's argument in defense of the principle of justification by faith without following the Law. His real or imagined opponents accuse him of holding that the law-free gospel he preached meant that one had better "remain in sin, in order that grace may abound" (3:8; 6:1, 15). Over against this accusation Paul launches a tightly knit and rather complicated argument, which partly makes use of elements from tradition. His thesis is that "we who died to sin" cannot "live in it" (6:2).

The argument takes its departure in the statement that baptism "into Christ Jesus" means baptism "into his death" (v 3), indeed, being "buried with him" (v 4) (cf. the tradition in 1 Cor 15:3–7:"Christ died, … was buried, … was raised …") The statement in v 3 is something on which Paul and his opponents agree—otherwise the argument would not work. In other words, baptism "actualized" Christ's death for the one being baptized. The dying and burial with Christ also had an aim, namely that, as he was raised, "so also we should walk in newness of life" (v 4b), i.e., here it is Christ's resurrection which is actualized. In v 5 the consequences of baptism are expressed in a slightly different way. The sentence presents them in a protasis-apodosis construction. The protasis (v 5a) "if we are united with the counterpart of his death" is a variation of the statement concerning the sharing of Christ's death (v 3). Also the apodosis varies the preceding argument, viz., that baptism means that one should walk in newness of life:"we shall be (united with the counterpart) to his resurrection" (a literal rendering of a relatively common way of understanding the difficult construction.) It is now noteworthy that, according to Paul, baptism into Christ's death meant life with the raised Christ in an ethical duty to "newness of life" in the present time (v 4b), and also a hope of sharing his resurrectional life in the (personal or cosmic) *eschaton.* (Some, however, take the future in v 5b as hortative.) From v 6 onwards Paul explains, reconfirms and develops his argument:"we (who died in baptism)" is specified as "our old person," who was "crucified with (Christ)," i.e., the former ("adamitic") conditions under the reign of sin in hostility to God (cf. 5:10) or in estrangement from him, were abolished. Step by step, Paul then forces his way through to a conclusion in 6:12–14:"Thus sin must not reign in your mortal body, so that you obey its passions" (v 12). He arrives there via these stepping stones concerning Christ: "somebody who is dead is not accused of sin (lit.: is justified from sin)" (v 7); Christ died, and did so "to sin once for all" (v 10); Christ is alive (v 9); Christ "lives to God" (v 10). Here are the parallel steps concerning Christians:"we died with him" (v 8); "you must consider yourselves dead to sin (v 11a); "we shall live with him" (v 8); "we must consider ourselves alive to God" (v 11b).

This sketchy scrutiny of Rom 6:1–14 has pointed to some negative and some positive consequences of baptism as Paul sees it: It meant a liberation not from sinning, but from sin's reign, from living according

to the conditions of its power. Liberation is real but not automatic; it must be realized in a life lived to God, a life that looks forward to its fulfillment in resurrection (v 5, 8) and eternal life (v 22–23).

The baptismal liberation from sin's power is a positive, dynamic factor in the life of the Christian: In Rom 6:4 it is called "newness of life." This can be contrasted to "our old man" (v 6), and stands for new conditions in which one lives in and under Christ (cf. "new creation," 2 Cor 5:17; Gal 6:15). These conditions are described in another picture in Gal 3:27: in baptism one "puts on Christ." In Biblical language, clothes can be a metaphor for life conditions, essential equipment, etc. (2 Chr 6:41 and Isa 61:10: salvation; Ps 93:1: power; Bar 5:1: glory of God, etc.). Thus Christ, what he has achieved, what he is, and what he stands for, is the life-conditioning, decisive basis of a Christian existence.

The same new conditions are also touched upon in 1 Cor 6:11, "you were sanctified," i.e., brought into a realm which more than others belongs to God and where he is present in a particular sense. This "sanctification," together with a "washing" and a "justification" took place "in the name of our Lord Jesus Christ" and "in the Spirit of our God," i.e., the Christ-related blessings of baptism were given through the powerful working in the present by God himself, who stands behind the giving as well as the reception of these blessings. Lastly it must be pointed out that, precisely as in Romans 6, Paul is arguing a case of morality in 1 Cor 6: It is important to his argument that these God-given new life-conditions bring with them a duty to practice them in an ethically responsible life. Once again, the eschatological perspective is present: In the argument Paul says as a warning, "The unrighteous will not inherit the kingdom of God" (6:9).

That the Spirit is the power at work in baptism is also expressed in 1 Cor 12:13. Also here Paul takes a recognized opinion as a point of departure for an argument:"We were baptized in (or: through) one spirit into one body." We need not discuss whether the Spirit is thought of here as the mode or the means of baptism into the one body—it is both. But it is also a gift connected with baptism, as is seen from the next clause "and we were all made to drink of one Spirit" or, better, "we all had one Spirit poured over us" (v 13b). Possibly 2 Cor 1:22 also refers to baptism (as a seal) on which occasion God also gave the Spirit as a pledge—a pledge of the further eschatological gifts, the Spirit itself being one of them (Rom 8:23; cf. Acts 2:16–21).

1 Cor 12:13 also points to another aspect of Paul's thought on baptism: that it brings with it a unity of the ones baptized. This unity is constituted by the one life, which is given from and in community with the one Christ (in his body, the church in Corinth), as well as by the one Spirit. Whereas in 1 Cor this view is a point of departure for an argument concerning how to deal with the different pneumatic gifts, the same theme also appears in Galatians (3:26–29), and there is an argument for the view that Gentile Christians are God's sons through faith and therefore Abraham's seed (see also 1 Cor 1:10–13). In both passages we encounter what may be a traditional formula:"there is neither Jew nor Greek, there is neither slave nor freeman, there is no male and female" (the last clause only in Galatians; cf. also Col 3:11). This means seeing baptism as having rather radical consequences. The common life in Christ, into which one was baptized, implied a unity and a solidarity which questioned religious, cultural, and social conditions of the ordinary world order.

It has been suggested that this close Christ-relationship which, according to Paul, is a consequence of baptism, was also implied in his use of the formula " (baptize) into Christ." Namely, should this expression be understood locatively, so that baptism meant being put into Christ, the New Adam, a kind of corporate personality? As the expression is so vague and, therefore, so capable of several interpretations, such an understanding is not impossible. For the same reason 1 Cor 10:2 ("our fathers … were all baptized into Moses") cannot decisively speak against it, although the idea is certainly not that the Israelites were incorporated, so to speak, into Moses, but rather that "Moses" represented the salvation and revelation at the Exodus.

Finally, Paul can also speak of the Christ relationship established through faith and baptism using terms of ownership (1 Cor 1:12; Gal 3:27; cf. 1 Cor 3:23). That a man "belongs to" or is a slave to his god, who is his "master" or "lord," is a common idea in the world of religions (see, e.g., Isa 44:5). Man's god has him at his command and takes care of him. Given the widely spread confession of Jesus as the Lord

(kyrios), the idea of belonging to him is near at hand (1 Cor 7:22). The metaphor of sealing in 2 Cor 1:22 has a similar meaning and may possibly refer to baptism. As a matter of fact, the idea of being sanctified at baptism (1 Cor 6:11) has similar connotations, for priests, offerings, buildings, etc., are "sanctified" (see, e.g., Exod 28:36; 29:44; Judg 17:3; 2 Chr 29:5) to God, and belong to him for that reason; they are there for his service and are under his protection. We should also remember that an essential aspect in the thinking concerning the covenant between God and his people was that he was their God and they his people (e.g., Deut 29:13; for the new covenant see, e.g., Jer 31:31).

b. Extra-Pauline Understandings of Baptism in Paul's Letters. We have touched upon interpretations of baptism which Paul presupposes are known and accepted by his addressees. Since these addressees in some cases are unknown to him (which is largely true of his Roman addressees) and are sometimes opposed to him (Romans; 1, 2 Corinthians), it is reasonable to assume that these interpretations are also held by non-Pauline theologians in the early Church.

Such "extra-Pauline" interpretations of baptism involve views of entering a relationship to Christ, receiving the remission of one's sins for Christ's sake (1 Cor 1:13; 6:11), dying and rising with him (Rom 6:3–8), becoming his possession or his slave (1 Cor 3:23; 2 Cor 1:22; Gal 3:29). The Spirit was somehow also connected with baptism in other minds than Paul's. Thus, some have been of the opinion that the Spirit was at work in baptism and that Christians then were endowed with it (1 Cor 6:11; 12:13). In Rom 6:3–8 there are good reasons to believe that Paul subjects the more widespread view to adaptation. This view may have been that baptism meant sharing Christ's resurrection (Col 2:12; 3:1), i.e., some sort of "realized eschatology," whereas Paul is anxious to stress that the resurrection belongs to the future. The adaptation may be caused by an enthusiastic understanding of baptism that Paul has met in Corinth, and which he seeks to restrain. It can be discerned behind the overestimation of glossolalia (the language of the angels, 1 Cor 13:1?) and behind the denial of the coming death and resurrection (1 Corinthians 15; 2 Tim 2:18). A belief that baptism ensured life in an almost magic way may also explain the practice of being baptized on behalf of dead people, mentioned in 1 Cor 15:29. A similar attitude of overestimating the effect of baptism (and of the eucharist) in Corinth seems to lie behind 1 Cor 10:1–13. Paul attacks a sense of security that can be built on such an attitude. That "the fathers" were baptized (in the sea), ate the spiritual food, and drank of Christ (the rock) as Paul points out, did not save them from God's wrath when they sinned.

c. The Pauline School. The author of Colossians stands close to Paul and is well versed in his letters. (Note, however, that some exegetes do not think that Colossians is deutero-Pauline.) In using baptismal motifs as a basis for arguing against a certain "philosophy," he differs somewhat from Paul's thinking as seen in Rom 6:4–5: According to Colossians baptism is not only a death and a burial with Christ (2:12, 20), but also a resurrection with him "through faith in the power of God who raised him from the dead" (2:12). The role of faith is natural also to this author, but it is emphasized that it is directed towards a victor: Baptism means, namely, sharing the destiny of Christ who, in his resurrection, triumphed over the cosmic powers (2:15) which were the authorities to which the "philosophy" referred (2:8, 16–23). As united with this sovereign, the baptized Christians are carried—indeed even "filled" —by his divine "fullness" (2:9–10). Entering the flock of this supreme ruler meant being pardoned all previous sins (1:14; 2:13) and being saved from the power of darkness (1:13), and being moved instead by God into the kingdom of his son and becoming an heir of the lot of the holy ones in light (1:12). The life the Christian has "with Christ" after the death "with him" is a "hidden" one, but one which looks forward to glory at Christ's "revelation" (3:4), which is to say that the present participation in Christ's triumph is coupled with an eschatological expectation.

Baptism is mentioned also under the imagery of circumcision (2:11). On the one hand, this is made to signify that in baptism the "body of the flesh" (2:11), or the "old person and his deeds" (3:9), was put away, i.e., the previous conditions were changed in which one's person was dominated by this-worldly, nondivine factors. On the other hand, it also indicated that the hindrance to belonging to God's people was eliminated (cf. 2:13).

The optimistic and empowering aspect of the consequences of baptism in Colossians is balanced by the parenesis in 3:1–4:6. As in Romans 6, it is a principal point that the life given in baptism has to be lived. The new—indeed radically new—conditions of a new humanity united with Christ and sustained by him as the true image of God (3:10–11; Gal. 3:27–28) imply an imperative to strive for their realization in life and may even have been a social challenge.

Ephesians contains many echoes from the author's thought on baptism, so many, in fact, that it has been suggested that the epistle is a baptism homily or represents a baptismal liturgy. This can hardly be regarded as more than conjecture. But given that the epistle stands in the same Pauline tradition as Colossians (although later), one cannot but recognize the indirect references to baptism and its impact. In Ephesians, however, as distinguished from earlier texts in the Pauline tradition, baptism is not brought in to serve an argument concerning something else, but seems to be almost the warp on which the whole letter is woven.

Baptism becomes a focus of God's immense salvific work: He is the one active behind it and in it (1:3–14; 2:4–10), from the election before the foundation of the world and via the work of Christ on to the eschatological goal, the "heritage," of which the Spirit is a pledge (1:14). The pre-Christian state of the addressees was like a death or a darkness or a sleep (2:1, 5; 5:8, 14). More specifically, they were sinful Gentiles, not belonging to God's people (2:1–3, 11–12). But faith in the gospel of salvation, along with receiving baptism (1:13), meant forgiveness (1:7; 2:7; 4:32) and life and light—already now—through Christ (2:5–6; 5:14). They were "sealed" through the Spirit of the promise (1:13), i.e., the Spirit signified that they belonged to God and had the promise of receiving the heritage (cf. Ezek 9:4; Isa 44:5). Given this picture of the pre-Christian situation, baptism is not described as a death or burial with Christ, but as a resurrection with him, indeed, being enthroned with him (Eph 2:6). The Christian is carried by the same divine power as Christ (1:20) and has "access to the Father" (2:18), or using another image, the Christian is joined to a Temple of God, built on Christ, the cornerstone (2:20–22). This ecclesiological perspective of "realized eschatology" is found also in 5:25–26: Christ gave himself up for the Church "in order that he sanctify her, cleansing her by the washing of water, in the word." In individual baptisms, Christ's self-sacrifice is applied, and the rite adds new members to the Church, which is presented as a bride, cleansed by the bridal bath. The phrase "in the word" is difficult: Either it refers to something said at baptism which in some way mentioned Christ and/or his work, or it has to do with Christ's sanctifying the Church through his word. That this Church is one is mentioned in the formula of 4:5–6: Baptism unites all believers in the same faith in the one Lord.

Also in Ephesians the new, real conditions given in baptism are the basis of a duty to live a moral life (4:22–24). The older conditions are certainly left behind (2:1, 5; 5:8, 14), but nevertheless they still make their claims; so "the old man" must be put off and "the new man" must be put on (4:20–24), i.e., the life in Christ has to be realized as exemplified in the parenesis in 4:25–5:14.

Also in Titus (3:5) baptism is the crucial point in the application of God's saving act through Christ to the individual. In imitation of Paul, the author contrasts God's grace behind this means of salvation to man's deeds of righteousness, which did not bring this salvation. The pre-Christian situation is painted in dark colors: foolishness, disobedience, lusts, etc. (3:3). In baptism, however, God saved the Christian from this condition for a life of "righteousness" (1 Tim 6:11; Titus 2:12; 3:7). The effect of baptism is described as "regeneration" (cf. John 3:5; 1 Pet 2:2) and renewal (cf. 2 Cor 5:17; Gal 6:15; Eph 2:15; 4:24). The former imagery can be compared with the Jewish statement that a proselyte is as a newborn child (*b. Yebam.* 48b). The renewal is effected by the Holy Spirit, the gift of which is connected with baptism, and it all gives the Christian the hope of inheriting eternal life (3:5–7). That the admonitions in 3:8–11 follow the utterances on baptism is a sign that also for this author baptismal renewal has to have a counterpart in real life.

3. Gospel of Matthew. It has been noted above that Matthew's version of the story of Jesus' baptism (3:13–17) not only has a Christological point; it also presents Jesus' baptism as a model of the audience's baptism. Matt 28:19 represents the evangelist's conviction that his Church practiced baptism in accordance with Jesus' will and reflects the baptismal formula in use there (cf. *Did.* 7:1, 3). The main verb

of the commission in 28:19 is "make disciples." Becoming a disciple in Matthew's view means to cling to Jesus, to whom the Father has given all authority (v 18), listen to his words, and do his will. Baptism is the step into discipleship—faith is not mentioned, but is presupposed (cf. 18:6). Matt 18:20 ("gather 'into' my name") demonstrates that Matthew retains what above was claimed to be the original meaning of performing a rite "into the name of …," viz., that the name indicated the fundamental reference of the rite. What is new in Matthew is the mention of the Trinity in the baptismal formula (the actual thought of the Father and the Spirit together with the Son is found also in Ephesians 1–2 and Titus 3, dealt with above). God the origin and goal, whom Jesus called his Father (7:21; 10:32; 26:42 etc.) and whose will he performed (26:42), was also the Father of the disciples (5:16, 45, 48; 6:9 etc.). He turned to man in the words and works of the Son, but also in the Spirit, the power of the present, active God (1:18; 12:28; cf. 10:20). Thus, the rite of baptism had as its basis the salvific work of a God who communicated with man in these ways. Probably the words of John the Baptist in 3:11 ("baptize in holy spirit") are seen as fulfilled in Christian baptism—because of the central position of Jesus Christ for discipleship it can be said that, in a sense, he is the one who baptizes.

4. Acts of the Apostles. It should be borne in mind that Acts is simply a narrative telling how the witnesses of Jesus advanced step by step from Jerusalem to the world with the gospel (1:8). What is said of baptism therefore belongs to the story of this process and should not be isolated from it. The attempts to reconstruct different baptismal rites and/or theologies using Acts as a source rest on rather unstable ground, and will be left aside here.

Luke takes baptism for granted. It is treated as the undisputed initiation rite of the Church, and when mission enters a new, decisive phase, baptism is mentioned as a natural step in connection with people's acceptance of the message about Christ, i.e., becoming believers (or sometimes "repenting," 2:38; 11:18 etc.). Thus, baptism is reported at the following milestones in the narrative:2:38–41 (Pentecost in Jerusalem); 8:12 (Samaria); 8:35–39 (the Ethiopian eunuch); 9:18 (Paul); 10:44–48 (Cornelius); 16:14–15, 30–34 (Lydia and the jailer in Philippi); 18:8 (Corinth).

Entering the Christian community through faith and baptism means to be "saved" (2:40; 11:14; 16:30–31), and in 2:40 what one is saved from is specified:"this crooked generation" (cf. Deut 32:5), i.e., from those who have turned away from God. In 8:10–13 the magic practices of Simon form a dark background to faith and baptism. One side of this salvation is the remission of sins, which explicitly is one of the gifts of baptism in 2:38; 10:43, 48; 22:16. However, both "salvation" and remission of sins are among the eschatological blessings which, according to Luke, are present already in the Christian community (2:17–21); the final kingdom is not yet there (1:6–8), but God is present in the community bestowing some of the eschatological gifts. To these also belongs the Holy Spirit (2:17–18), the gift of which is connected with baptism (2:38; 8:14–17; 9:17–18; 10:47–48; 19:1–6).

Four times Luke cites something like a baptism formula "in the name of Jesus Christ" (2:38; 10:48) or "into the name of the Lord Jesus" (8:16; 19:5). The differences are probably more a matter of Luke's style than anything else (see "Into the name of the Lord Jesus" above), but the question arises as to what the expression may mean in the context of Acts. A likely suggestion is that the "name" expression indicates that the rite in some way was based on and/or was an objective application of the message about Jesus Christ which lead to faith in him. Basic points in the preaching of the apostles are these, according to the program in Luke 24:44–49: In Christ's name one shall preach repentance and remission of sins to all nations (v 47), a presupposition of which is his (the Messiah's) death and resurrection, predicted by the Scriptures (v 44–46); and, in addition, his glorified status (v 50–51, 26) from which he sends the Spirit (v 49). Thus, the apostolic message, as presented also in the speeches of Acts, has some important items in common with what is said of baptism. The christological basis of baptism is the same: Jesus is the vindicated and glorified one, the promised Messiah, the mighty and generous Sovereign, the Lord. The one who repents and believes is received by him and graciously pardoned (the death of Jesus seems to play but a minor part in this connection; compare, however, Luke 22:20). From his exalted position on the right hand of the Divine Majesty, Jesus sends the Spirit, who is active in the preaching of the gospel and in giving spiritual gifts.

In 2 instances Acts seems to present "irregularities." The first is 8:14–17, where Peter and John are reported to have to come from Jerusalem to Samaria to lay their hands on the baptized converts in order that they should receive the Holy Spirit. The second is 10:47–48, according to which the Spirit falls on Cornelius and those in his house, so as to compel Peter to order their being baptized. When regarded within the framework of the story of Acts as a whole, these irregularities can be explained without serious problems. Precisely as irregularities they become signposts in the development of the Christian mission. In the 1st case the Samaritans' place within the fulfillment of the promises is confirmed, and in the 2d the move into the Gentile world and the reception of uncircumcised Gentiles into God's people are enforced by God's Spirit itself. This is acknowledged by the Jerusalem Christians in 11:1–18); the conclusion is that "God has given the (opportunity of) repentance unto life also to the Gentiles" (v 18).

Lastly, it should be mentioned that in Acts we can surmise some details in the ritual of baptism. A laying on of hands (with prayer for the Spirit) is mentioned in 8:15–17 and 19:6 (cf. 9:17); a question arises whether there is any hindrance that a particular candidate be baptized (8:36; 10:47); there is a mention or invocation of the name of the "Lord Jesus" (22:16) in such a way that the rite could rightly be called a baptism "into the name of the Lord Jesus" (or something similar). Finally, the designation "the believers" for the Christians may possibly indicate that the rite included a question as to whether one believed in Jesus the Lord (etc.), which received the answer "I believe" (cf. Hipp., *Apost.* 21.12–18, ed. Dix, and the variant reading in Acts 8:37).

5. First Peter. Although baptism is mentioned only once in 1 Peter (3:21), it plays an important role as a basic presupposition for the presentation in the epistle. In fact, it is so important that scholars have suggested that it represents (parts of) a baptismal liturgy or a baptismal homily. Even though such a supposition may go somewhat too far, there is a wide consensus that 1 Peter makes substantial use of ideas associated with baptism. Furthermore, such ideas, to a large extent, seem to be expressed in more or less established turns of phrase.

The writer does not really argue a case in a progressive chain of reasoning, and thus the logical relationships between the ideas are not always explicit. This is also true of the passages where baptism appears to be of some importance to the contents. He seems, however, to want to strengthen and comfort his addressees in leading a faithful and moral Christian life in the face of pressures from the surrounding world. He does so by affirming that suffering as Christ's disciple is part of the discipleship and, not least, that the Christians also have a hope of glory—"an inheritance imperishable and undefiled and unfading, kept for you in heaven" (1:4).

Baptism is obviously a decisive part of the Christian initiation, to which the author refers repeatedly, although not explicitly, as a foundation of his exhortations. It is called a rebirth (1:3, 23; cf. 2:2); it means a new human existence, one brought about by God himself (1:3, 23) through his living word, the gospel (1:23–25). This new existence is sustained and guarded by God (1:5) and looks forward in hope to the coming salvation when Christ is "revealed" (1:4–5, 7, 9, 13, 21; 3:15). The Christ-relationship of the Christian initiation means, not least, that it is his resurrection that is the reason for the hope (1:3, 21) and for the salvific effects of baptism (3:21). His vicarious and redemptive passion and death are mentioned (1:2, 18–19; 2:24; 3:18); they are apparently a presupposition for the possibility of being reborn, but are not brought into any explicit connection with baptism. In the present time, awaiting faithfully the coming glory, the Christians are tested (1:7) and may have to suffer as Christ had to (2:19–23; 3:14–18; 4:1–2, 12–14, 19). Being a minority (3:20), the addressees may feel tempted to conform to their old existence marked by Gentile vices (1:14; 4:2–4), but their new life means that they are holy, belonging to God (1:15–16, 22–25); so they are called instead to live this holiness in obedience in communion with Christ (1:13–14, 22; 2:1–10).

In 3:20–21, the only passage in 1 Peter which explicitly mentions baptism, there are a couple of linguistic difficulties which complicate its understanding. Much, however, is clear enough. Thus, the OT story of Noah and the Flood (Genesis 6–9) is made to prefigure what baptism means to the addressees. Like Noah's family they are few, living in a world which deserves judgment from a patient God. And as Noah and his family were saved in the ark, in a corresponding way the addressees are saved (present

tense) "through water" in baptism. One of the linguistic difficulties occurs here, but regardless of how one tries to solve it, the meaning should be something like the one just intimated. The author's explanatory comment does not make matters easier: Baptism is said to mean "not the removal of dirt of the flesh, but an appeal to God for a good conscience through the resurrection of Jesus Christ," or "… but a pledge to God of a good conscience through the resurrection …". There is a tendency in modern translations and commentaries to favor the latter understanding. Actually, it is in harmony with that which the author otherwise indicates as being one of the aspects of Christian initiation: namely, an upright entering into a covenant with God, a pledge to be holy and obedient (1:13–16; 22–23; 3:8–12), with divine salvation also implied. According to 3:21 this salvation is something taking place in baptism, and according to 1:5, 9 it is a goal, owned in hope. Its foundation, both in 1:5, 9 and 3:21, is Christ's resurrection, the Christ who is now enthroned in glory (3:22). Thus also in 3:19–22 baptism means being brought by God into a new existence, different from the former one, and, because of Christ's resurrection and glory, one can look forward to the glorious fulfillment. On the other hand, the new existence means engaging in a life that demands to be realized, even under pressure.

6. The Johannine Writings. In the 4th gospel as we now have it, 3:1–21 is the only passage which, with some certainty, deals with Christian baptism. (John 13:8–10 and 19:34 are debatable as witnesses and, for that matter, hardly give more information than we already have in 3:1–21).

It is important to take the whole of the dialogue of 3:1–21 into account when assessing 3:3, 5, where baptism is almost explicitly mentioned ("reborn" and "reborn of water and Spirit," respectively). The dialogue is constituted by 3 phases, each leading to a statement of Jesus, introduced by a repeated "amen" (3:3, 5, 11). The 1st phase states the precondition of seeing the kingdom of God: being born anew and/or from above (the Greek word *anōthen* having both meanings; 3:3). The 2d statement specifies the 1st: in order to enter the kingdom of God one must be born of water and Spirit (3:5). In the 3d and prolonged statement, the conditional clauses of the 1st and 2d phases are changed into a semantically equivalent construction: "Whoever believes in him (i.e., the Son), will … have eternal life" (3:15). Thus, the basic question is how to attain eternal life, which puts this term in its specifically Johannine context, i.e., it is owned already in this life (cf. 3:36; 5:24; 17:3, etc.). It is not this-worldly, limited and conditioned by "flesh" (3:6; cf. 6:63) or death (the implicit background of 3:14), but has its ultimate source in God (3:3, cf. 1:13) and depends on God's loving initiative (3:16–17). It has come to this world through the Son, whose life-giving activity in word and deed culminated in his "exaltation" on the cross (3:14) and his ascension (3:13). This "going to the Father" was the presupposition for the giving of the Spirit, which pursues the work of the Son. Thus, though in its own way, the 4th gospel works out the Christ-connection of baptism. Christ's death-exaltation makes its life-giving "possible" (3:9), viz., through the activity of the inscrutinable Spirit (3:8). On the other hand, faith on man's side is the necessary disposition for accepting this life (3:15–18; cf. 1:12; 3:36; 5:24; 11:25; 20:31, etc.).

There is no clear mention of baptism in 1 John, although 5:7–8 (the witnesses, Spirit, water, blood) may refer to it as one testimony to the life-giving death of Jesus. At the same time, ideas which occur in baptismal contexts in other NT books are so numerous that there have been suggestions that the epistle cites parts of a rite of initiation, including baptism; that it reflects a baptismal homily; or, less specifically, that it contains echoes from instruction in connection with entrance into the Christian community. In any case, a central concept is the one of being born of God (2:29; 3:9; 4:7; 5:1, 5, 18; cf. John 3:5) and this out of his love (3:1; 4:9, 10, 16). Thereby Jesus Christ is of central importance (3:5; 4:9–10, 14). Sinless, he took away sin (1:7; 2:2; 3:5; 4:10). When the Christian life of the addressees "began" (2:24; 3:11), they received the remission of their sins (2:12) and obtained life in the name of Jesus Christ (3:14; 4:9; 5:12); they were instructed not to love the world but to overcome it (2:15–17; 5:4–5) and to live under the Spirit (3:24; 4:13) in love for one another (2:7–11; 3:18, 23; 4:7–11, 17–21), confessing Jesus as Christ, God's Son (3:23; 4:2, 15; 5:1). This complex is the frame of reference for the warnings and the admonition of the epistle: Being pure and holy they should live accordingly (2:1, 5–6; 3:3). It is quite likely that it reflects essential features in the author's thought on baptism.

7. Other NT Writings. Heb 10:19–25 probably contains an allusion to baptism and baptismal practice: Using priestly imagery, the author summons his audience to "draw near," "with the hearts sprinkled from an evil conscience and with the body washed with pure water" (v 22). This should refer to the remission of sins as a gift of baptism. In 9:9–10, 13–14, etc., the remission is brought about by Christ's self-sacrifice, which, then, would be "applied" in baptism. There is a homology connected to baptism, a confession to Christ which gives hope (10:23; see further 3:1; 4:14). A 2d conversion for the one who willfully turns away, is declared to be impossible in 6:4–6 and 10:26–29. The idea is probably also associated with baptism, which meant "enlightenment," "tasting a heavenly gift," "partaking of the Holy Spirit," and of "the power of the coming age" (6:4–5). Given the short eschatological perspective of the author (10:37), he has no hope for the renegade. The same Hebrews 6 seems to start with a reference to the instruction given to the catecumens (v 1–2).

If 2 Pet 1:9 refers to baptism, it represents a widely spread early Christian conviction in its understanding of it, when it mentions cleansing from previous sins.

Mark 16:16 does not belong to the original gospel of Mark, but to a secondary, though canonical ending, dating from the 2d century (16:9–20). Verses 15–16 contain a commissioning of the disciples to preach the gospel to the whole world. This proclamation is received in belief or unbelief, and as usual belief is combined with baptism. As in Tit 3:5 and 1 Pet 3:21, it means salvation. Here it means the salvation at the *eschaton* and is contrasted to condemnation, the lot of those who have not accepted the proclamation.

8. "One baptism" —Many Interpretations? The presentation above has investigated the different ways in which some early Christians have thought about baptism. The differences are great enough to justify the conclusion that one can hardly add all the views together, call the result "The NT Doctrine of Baptism," and assume that one has done justice to the NT authors by doing so. This is so, even when taking into consideration that Paul is the author who beyond comparison delivers the most material on the topic and easily may dominate such an additive presentation. Given the differences, there are, however, more resemblances between the different witnesses than one might expect in view of the foregoing exposition. It may therefore be justified to conclude with a few words on this aspect.

At the very beginning of Christian baptismal practice there were some aspects and circumstances pertaining to it which seem, somehow, to have been determinative for the ways in which different theologians and traditions in early Christianity came to think of baptism. In all probability, the rite was taken over from John the Baptist, which has an important implication: that eschatological expectations similar to those of the Baptist were associated with Christian baptism. Another decisive element was the conviction that Jesus had risen from the dead and that his resurrection meant a new situation in man's relationship to God, notably as seen in the (short) eschatological perspective. Furthermore, baptism was connected with the Christian preaching to Jews and Gentiles; it had the Christ-event at its center and demanded conversion and/or faith. Lastly, the ones who believed were baptized "into the name of the Lord Jesus" (etc.), which presumably meant that Jesus the Lord—his person and his work—was the fundamental reference for the rite.

NT interpreters of later times easily overlook the constancy with which the eschatological outlook reappears in baptismal passages in the NT. It is realized in different ways: in demand for ethical responsibility in view of the approaching judgment; in references to the hope which looks forward to the final salvation or to the promised heritage; in the question how one enters the kingdom of God or receives eternal life.

But the eschatological perspective does not only mean looking forward. It also means an inaugurated eschatology, in that the salvific gifts of the *eschaton* are regarded as already present, although in varying degrees and in different ways by different authors. The Christ-event, especially the resurrection of Christ, is the beginning of this inaugurated *eschaton*; the preaching of the gospel continues this inauguration; and baptism is the door through which men enter it in connection with faith and/or conversion. It means leaving behind sin, alienation from God, etc., and entering a new, trusting, and sound relation to God. The remission of sins and the activity and presence of the Holy Spirit thus belong to the gifts of this

inaugurated *eschaton.* These radically new life-conditions are described in different ways, often in terms from Jewish eschatological expectations. They imply a duty to lead a Christian life which deserves this designation. The degrees in which one believes eschatology to be "realized" vary, and we encounter a relatively wide range of views. On the one hand, there is the eschatology behind 2 Tim 2:18 which is "over-realized" according to Pauline standards, and several scholars suggest that the case is the same with some enthusiasts in Corinth. On the other hand, there are the more tempered views of the authors of Acts or of the Epistle to Titus.

When baptism is performed "into the name of the Lord Jesus" (etc.), this indicates the key position held by Christ in relation to this inaugurated *eschaton.* It was inaugurated through his life, death, and resurrection. And though he was also the extramundane guarantee and point of orientation of the new life-conditions, he was nevertheless not distant.

It seems fair to suggest that the general ideas concerning early Christian baptism, intimated in the preceding few paragraphs, form what appears to be a common ground on which different theologians and traditions of the early Church have developed their understandings of baptism in keeping with their respective theological outlooks. This is not to say that this common ground should be something like an abstraction or generalization of NT statements on baptism which one could call the NT doctrine of baptism. But in so far as such a "doctrine" is to have a basis that is historically motivated, it should do justice to the general aspects of baptism found on this common ground. However, such a statement already means starting to ask hermeneutical questions which need to be dealt with when wrestling with such a "doctrinal" problem, but which cannot be taken up here.

BAQ‘AH VALLEY (JORDAN).

A valley 15 km NW of Amman and 625 meters above sea level on the Transjordanian plateau which has been the focus of a University Museum (Univ. of Pennsylvania) expedition since 1977. The project is under the general directorship of P. E. McGovern and has been jointly funded by the Museum and its Applied Science Center for Archaeology (MASCA), the National Geographic Society, the Jordanian Department of Antiquities, and several private foundations. A major goal of the project, in addition to recovering stratigraphic sequences of poorly known periods, has been to demonstrate how scientific techniques can be integrated into archaeological investigations, especially salvage operations where constraints of time, manpower, and money exist.

A. General Description

The Baq‘ah (derived from the ancient Semitic root for "valley") is a unique geomorphological feature on the plateau at the juncture of three flexures in the earth's crust. Its elliptical, self-contained area of × km stands in marked contrast to the surrounding terrain of hills and deep wadies cutting down to the Jordan Valley. The almost continuous human occupation of valley from the late Middle Paleolithic (ca. 50, 000 years ago) to the present is a consequence of several factors: its centralized position on the plateau (the ancient King's Highway probably ran through the middle of the valley); the rich soil *(terra rossa)* suitable for agriculture; one of the highest concentrations of perennial springs on the plateau; a moderate upland climate sustaining diverse plant and animal species; and other natural resources (e.g., large clay deposits).

B. Archaeology of the Valley

Based on the data recovered in four seasons of survey and excavation (1977, 1978, 1980, and 1981), five periods in particular stand out: (1) the Early Bronze Age; (2) the Late Bronze Age; (3) the Early Iron Age; (4) the Late Iron Age, extending into the Persian period; and (5) the early Roman period.

Archaeological investigation has focused on the NW (Umm ad-Danānīr) region of the Baq‘ah, which has more springs and visible ancient remains than any other sector of the valley. See Fig. BAQ.01. A 52.5-hectare area was systematically traversed, and based on artifact clusters, architectural remains, and

specific research problems, several sites were chosen for geophysical prospecting. With the additional subsurface data from the latter surveys, certain areas were then targeted for test excavations. The archaeological results of such an approach attest to its value. Other areas of the valley, according to a preliminary assessment, would appear to have had much sparser occupation, apart from Tell Ṣafūṭ on the SW periphery of the valley; the stratigraphic sequence of this site is comparable to that of Khirbet Umm ad-Danānīr (below).

1. Early Bronze Age. Urban settlement began in the Baqʿah at least by EB II (ca. 2900 B.C.). The impressive site of al-Qeṣīr ("the fortress"; site 7 on Fig. BAQ.01) covers the 5-hectare summit of the hill of the same name at an elevation of about 800 m above sea level (200 m above the valley floor). An encircling stone fortification wall further enhanced the site's defensive position. Al-Qeṣīr is one of a number of large hilltop EB settlements in central Transjordan, none of which has as yet been excavated.

Aerial photography revealed the ground plans of many circular and rectangular stone buildings. Cisterns up to several hundred meters in diameter, hewn out of the bedrock, were located on four sides of the summit. Systematic sharding of the area within the walls showed that the site had been most intensively settled during EB II–III (ca. 2900–2300 B.C.). A marked decrease in occupation occurred in the subsequent transitional period of EB IV (ca. 2300–1950 B.C.), after which the site was abandoned.

2. Late Bronze Age. LB remains are exceptionally well represented in the Umm ad-Danānīr region, considering that no earlier survey had found evidence for the period and that the traditional hypothesis (see Glueck 1970, which is a later modification of his 1940 hypothesis) maintained that Transjordan S of the Wadi Zarqa had been occupied primarily by nomads or "semi-nomads," with urban centers confined to a few larger sites, throughout the MB and LB Ages. The archaeological findings from the Baqʿah over the past eight years conflict with this hypothesis (McGovern 1986a), and in conjunction with investigation elsewhere on the central plateau, it now appears more reasonable to posit a settlement pattern of variously sized LB communities, at least in the area from the Wadi Zarqa S to Madaba (cf. Harding 1967:32–34; Zayadine 1973:19–21).

A large LB cemetery of 20 burial caves on the lower slopes of Jebel al-Qeṣīr and Jebel al-Hawāyah (Fig. BAQ.01) were located and investigated. Many of these had been fully or partly robbed out, but it was possible to obtain details about the sizes and shapes of LB caves (circular, elliptical, and two-chambered, with maximum dimensions varying from 1 to 10 m) and their phases of use. The location of undisturbed caves and burial deposits was achieved using a highly sensitive magnetic detecting device, a cesium magnetometer. The burial features were generally silted-up features, and the greater accumulation of soil was more magnetic than the surrounding bedrock; consequently, they showed up as magnetic highs, even where there was no visible evidence of tombs on the surface.

The two most important LB burial deposits were recovered from Caves A2 and B3, belonging to LB I (ca. 1550–1400 B.C.) and LB II (ca. 1400–1200 B.C.), respectively. From a sounding confined to a 20-m area of Cave A2 (about a quarter of the tomb) came over fifty whole vessels, numerous small finds (including 4 scarabs, 4 cylinder seals, and 75 glass beads), which had been buried with 22 individuals of both sexes and various ages (infants, children, adolescents, and adults). The burial assemblage, which was similar to that of urban communities elsewhere in Palestine (e.g., Tomb 1145 at Megiddo [Guy 1938:94–99] and Tomb 1 at Pella [Smith 1973]), testified to a sedentary lifestyle and well-developed trade connections. This was also borne out by the local origin of the majority of the pottery; it derived from a clay deposit in the wadi near the spring of ʿain Umm ad-Danānīr as confirmed by neutron activation analysis.

The urban character of the LB Baqʿah community was further emphasized by the finds from Cave B3, including about 300 vessels (most of which were made from the local clay), 4 Mycenaean IIIB/IIIA (2) stirrup jars (from central mainland Greece, according to their chemical profiles), a Cypriot White Slip II "milk bowl" and Base Ring II juglet fragments, and a large collection of jewelry (including an iron anklet/bracelet fragment comparable to Iron IA examples, a cylinder seal, an Egyptian signet ring, and glass and faience beads). The burial goods were associated with a minimum of 64 individuals of all ages and both sexes. The principal paleopathologies (arthritis and dental caries), which were also observed in

the Cave A2 population, are characteristic of sedentary groups, and two cultivants (emmer wheat and bread or club wheat) from Cave B3, along with the remains of large herding animals (cattle) in both LB burial caves, supported this interpretation.

The LB settlement at Khirbet Umm ad-Danānīr (site 3), although thus far excavated only to a limited extent, provided the remaining piece of the puzzle posed by the burial cave evidence. The site was strategically situated on a cliff overlooking the pass into the Baqʿah through the S branch of the Wadi Umm ad-Danānīr, along which an ancient route to the Jordan Valley probably ran. It was located downhill from the EB settlement of al-Qeṣīr (above) on the same hill and closer to the strongest spring in the region, ʿain Umm ad-Danānīr.

Detailed mapping of visible surface remains showed that an area of approximately 2.5 hectares had been enclosed by a wall comprising two lines of boulders (1–1.5 m in length). The size and stratification of the site, as revealed by subsequent excavation, are considerable by Transjordanian standards.

A major discovery was made in the one excavation square where LB levels were reached. More than 3 m from the surface, beneath primarily Iron Age and Roman remains, an LB II refuse pit, about 1 m in diameter and 0.5 m deep, was exposed and half excavated. It was found to contain the charred remains of a variety of animals (sheep/goat, *Equus,* cattle, and some kind of carnivore, possibly a mountain lion), half of a hollow bull rhyton (almost identical to an example from Cave A2), and several large pottery vessels (kraters, jugs, bowls, a storage jar, and a cooking pot), which were all made from the local clay and, except for their larger sizes, were identical to pottery types from Cave B3. Further, the clay lining of the pit merged with a floor that was attached to a boulder wall similar to the proposed city wall. The pit can be compared to refuse pits in the vicinity of buildings at other LB sites (e.g., the Lachish Fosse temple). Its contents and association with a massive wall point to a well-established sedentary community during this period.

Rujm al-Ḥenū East (site 1), which is more than 500 m SW of Khirbet Umm ad-Danānīr, near the middle of the valley, was most probably constructed in the LB Age (McGovern 1983), as evidenced by the discovery of over 20 LB sherds from a surface survey and five test soundings. However, the deposition on the inside was less than 1.0 m thick and only several courses remained of the structure, most of whose large boulders (over 1 m in length) had most likely been used to construct the corners and towers of Rujm al-Ḥenū West (site 2) in the Iron IIC/Persian period. Moreover, the LB sherds all derived from mixed loci containing Roman, Byzantine, and Islamic material, and may represent only robbing and dumping activity sometime between the Roman period and the present.

The surface ground plan of Rujm al-Ḥenū East resembles that of the LB Amman Airport Building (Hennessy 1966: figs. 1 and 2, pl. 33A), 15 km to the SE. The latter is of the *Quadratbau* architectural type, which, as the name implies, has a square layout with a central unit ("courtyard") surrounded by outer rooms. Because of the rich deposits within the airport building and the minimal evidence of a permanent settlement in that vicinity (Hennessy 1966), it was proposed that the building might have been a tribal shrine, possibly a temple or mortuary cult structure of a nomadic group such as the Israelites (Campbell and Wright 1969). Rujm al-Ḥenū East provided the opportunity to test this hypothesis at another building of a similar type.

Rujm al-Ḥenū East differed from the airport structure in being rectangular (ca. × m) and in not having any surface remains of crosswalls that defined the central courtyard and rooms on the north. An electrical resistivity survey was first carried out to locate additional crosswalls and to determine the extent of buried structures in the vicinity, which might constitute a settlement. This geophysical technique takes advantage of the fact that dense materials (such as the stones of a wall) will block an applied electrical current and give higher resistivity readings than the surrounding soil.

The follow-up test excavations revealed that most of the high anomalies were due to irregularities in the near-surface bedrock. An undated wall, found extending several meters westward, along the same line as one of the interior walls, might belong to a pathway boundary, an addition to the building, or a separate structure. No additional interior crosswalls, however, were discovered; indeed, several crosswalls on the E and S sides of the building proved to be secondary. Thus, it is likely that the original layout completely

lacked crosswalls, which would represent a major departure from the classical *Quadratbau* type. On the other hand, there might well be variant architectural traditions of the same general type, especially in the Amman area, where boulder construction was common (e.g., the Iron IIC/Persian *qasr* type buildings could be rectangular or square and did not adhere to a fixed pattern). Possibly, Rujm al-Ḥenū East served as an agricultural villa (cf. *ArchPal* 36, 92–93 on the interpretation of the MB III–LB I *Quadratbau* structure on Mt. Gerizim). It was built on a bedrock outcrop in the midst of rich agricultural fields, like the Iron IIC/Persian structures which probably functioned as farmsteads (below); and as the nearby primary settlement at Khirbet Umm ad-Danānīr increased in population, it would have been an obvious area in which to expand.

3. Iron IA. An early Iron Age burial cave (A4), which was located by the magnetometer survey, turned out to be one of the largest tombs of this period ever discovered in Palestine. Into a circular cave only 4.5 m in diameter, 227 individuals of all ages and both sexes had been crammed. Most of the burials had been secondarily disturbed and commingled as a result of moving older skeletons to make space for new interments. The cave had two entrances: the main one, which was blocked by five boulders and which faced onto a 20 m^2 "forecourt," entered by a sloping ramp; and a back entrance, with a single boulder wedged into it and with a series of bedrock steps leading down from it into the cave.

The associated burial goods attested to a lower standard of living and fewer foreign contacts in Iron IA than in the LB Age. Thus, the pottery vessel–to-burial ratio (70:227) for Cave A4 was approximately the inverse of that for the LB burial groups. Imports were limited to marine mollusks, most of which were cowries from the Red Sea. Even more notably, marked changes were apparent in the three basic industries: pottery, metals, and silicate technology.

In the case of the pottery, some of these changes could be traced back to LB II. The amount of inclusions (quartz and especially calcite) gradually increased from LB I through Iron IA, even though the same clay source at ʿain Umm ad-Danānīr was exploited throughout this period. Perhaps to avoid calcite disintegration, lower firing temperatures became the rule in the early Iron Age.

A similar trend can be traced in fabrication techniques. Whereas most vessels were made on the wheel in LB I, coil building of medium-sized vessels was the preferred method in LB II. Coil building became the exclusive technique in Iron IA, often with a greater appreciation for the advantages and limitations of the materials and method. Rather than representing a low point in the Palestinian potter's craft, coiling, turning, surface wet-smoothing, trimming, and firing were now directed toward making pottery well suited to the admittedly poorer clay body. Well-contoured forms whose walls and bases were trimmed to a uniform narrow thickness were the result. Some of the changes in traditional pottery styles and the introduction of new forms in Iron IA may reflect this transformation in the pottery industry. Similarly, the relative lack of paints and slips in the early Iron Age may well be more a function of the reduced availability of fine clay fractions than of a deliberate change or the introduction of a new tradition from the outside.

One of the most important discoveries in the Iron IA burial cave was a group of 11 complete mild steel jewelry artifacts (anklets, bracelets, and rings), which more than tripled the number of published iron objects from early Iron Palestine. Some continuity between the Bronze and Iron Ages was evident from the discovery of a similar iron anklet or bracelet in LB II Cave B3. However, the number of Iron IA artifacts and their very uniform carbon composition demonstrated an especially well-developed metallurgical expertise in smelting and working iron (steel) in Iron IA. The 78 copper-base artifacts, again only jewelry and of essentially the same types as those in iron (steel), exhibited similarly high technological standards; they were exclusively tin-alloyed bronzes which had very consistent and high levels of tin, averaging 11 percent.

Glass/frit technology, which probably developed locally on the central Transjordanian plateau in the LB Age (McGovern 1985b), had virtually disappeared by Iron IA in the Baqʿah. Only one faience, two frit, and five beads of a dark red glass were found in Cave A4. The high amounts of iron oxide in the red glass (up to 50 percent by weight in contrast to the 5–10 percent content in LB red glass) suggested that they were reworked iron ore slag, which constituted a by-product from the contemporary iron (steel) industry.

By the early Iron Age, a very obvious shift was apparent in the three basic industries. The specific changes leading up to the transformed industries, however, had already begun to occur in the LB Age, and presumably some of the underlying causes of change were to be found in the earlier period as well. Moreover, the lack of traumatic injuries in the LB and early Iron populations, as well as the total lack of weapons in Cave A4, suggested that these changes had come about peacefully. Cultural continuity between the LB and early Iron periods was clear from the uninterrupted use of the same cemetery and the continuous occupation of Khirbet Umm ad-Danānīr into Iron IA (numerous surface sherds of the latter period were recovered, although excavated evidence is yet to be recovered, possibly because the Iron IA settlement was small in size).

The changes in the three basic industries (pottery, metals, and silicates) on the central Transjordanian plateau can best be understood within a framework of indigenous socioeconomic transformation (in contrast to the standard hypotheses for understanding the LB/early Iron transition: invasion, peaceful infiltration, or peasant revolt). The very isolation of the central Transjordanian plateau and the availability of certain raw materials there (e.g., copper, iron, and manganese ores) might account for some of the changes. Well-documented invasions elsewhere in Palestine, particularly along the coast toward the end of the LB Age, would also have had serious repercussions on the socioeconomic structure of city-states in the interior of the country. An even more general circumstance contributing to change would have been a gradual climatic deterioration with lower precipitation levels, beginning in LB II (Horowitz 1978; for Greece, see Betancourt 1976). With a contracting subsistence base, the symbiotic relation between transhumant and sendentary groups would have been seriously threatened.

If this reconstruction is correct, at least in its general outlines, then the LB city-state could not have survived. Many of those in the urban population, who would have been thrown out of work by economic dislocations, would have needed to seek out alternative means of support. The establishment of small outlying village communities, which have been documented in other parts of the hill country, and the contraction of larger settlements would be anticipated. The consolidation of technological advances in a frontier setting, even its accentuation as a manifestation of the "new culture," especially after the collapse of hierarchical control in the urban centers, would also be expected. For example, in the case of the highly innovative iron (steel) industry, one of the few known sources of iron ore in the Levant is located a short distance N of the Baqʿah in the Wadi Zarqa-Ajlun area, which appears to have been a hinterland in most periods. It may be hypothesized that native metalsmiths began to exploit some of the deposits in this area on a larger scale as a result of the disintegration of LB urban culture and the dispersal of the population (the large tracts of oak forest there could also have met the extensive fuel requirements of iron smelting).

4. Iron IIC/Persian. Numerous Iron IIC/Persian structures are scattered throughout the Baqʿah. Some of these are isolated buildings, primarily circular towers (*rujūm malfūf*); others form extensive complexes of large rectangular and square enclosures (*qasr* type) and *rujūm malfūf.*

Five Iron IIC/Persian sites were located by intensive surveying of the Umm ad-Danānīr region (sites 2, 3, 4, 5, and 6 on Fig. BAQ.01). Apart from Khirbet Umm ad-Danānīr, all were constructed on bedrock outcrops in proximity to arable land. This accords with an interpretation of the buildings as primarily habitation quarters for the rural Ammonite population (Glueck 1939:163). The Iron IIC/Persian period appears to have been an especially prosperous one in Transjordan, and the spatial distribution of the sites implies a settlement pattern that maximally exploited available agricultural land and accommodated a growing population (McGovern 1985a).

The standard interpretation of the *qasr* and *rujūm malfūf* buildings as watchtowers or fortresses that protected approaches to Amman (Glueck 1970:183) does not rule out their use as farming communities or villas. Rujm al-Ḥenū West and Rujm al-Ḥāwī (sites 2 and 5) are virtually mirror images of one another, with circular towers facing the western pass and rectangular bastions opposite one another. They are equidistant from the main road, which probably follows the line of an ancient route, and as such are ideally situated to have served as border posts.

5. Early Roman III. Extensive building projects were carried out at Khirbet Umm ad-Danānīr during the Early Roman III period. In a 4 × 20 m area on a middle terrace of the site, a large structure of this

period emerged immediately below the surface. A central room of the building was characterized by a northern wall with seven orthostats, placed about 0.5 m apart and several still having the overlying stretchers in place. A representative collection of Early Roman III pottery and artifacts (including glass vessel and bracelet fragments, iron pins and rods, and limestone vessels of Herodian design) were recovered. Large Roman architectural elements were discovered further down the slope, and most of the visible remains on the lower terraces probably belong to this period (4 B.C.–A.D. 73).

PATRICK E. MCGOVERN

BAR KOKHBA. The name given to Simon bar Kosiba, leader of the unsuccessful Jewish revolt against Rome ca. 132–135 C.E. Today the name is often used as an adjective to modify this "Second Jewish Revolt" or "Bar Kokhba Revolt" (the first being the Jewish War of 66–70 C.E.), as well as a cache of documents discovered in the Judean desert that were written at the time of this war, including some letters written by Simon himself (i.e., "Bar Kokhba Letters"). Rabbi Akiba, who considered Simon bar Kosiba to be the Messiah, called him "son of the star" (Aram *kôkbā*), perhaps suggesting a messianic interpretation of Num 24:17. In rabbinic writings the *s* in the name is usually changed to a *z* (bar Koziba), implying in derogatory fashion that Simon was regarded as "the son of a lie" (i.e., a liar).

BAR KOKHBA REVOLT

Jewish armed resistance against Roman rule in Judea reached its culmination and exhausted itself in the Revolt of Bar Kokhba (132–35 C.E.). Great numbers of rebels participated in the insurrection, employing guerrilla tactics, and large reinforcements were needed to suppress it. The rebels were united under the leadership of one man:Simeon Bar Kokhba. The revolt resulted in the emergence of a short-lived independent state marked by the organization of local authorities, the issue of coinage, and the leasing of state land.

———

A. Evidence

1. Talmudic Sources. The revolt of Bar Kokhba is mentioned rather extensively in Talmudic literature. Most references to the revolt are found in three groups: *j. Taʿan.* iv 68d–69b; *Lam. Rab.* ii 4; and *b. Giṭ.* 57a–58a. They focus on (1) Bar Kokhba's leadership; (2) the attitude of the sages toward the rebellion and Bar Kokhba himself; (3) the fall of Bethar; and (4) the aftermath of the revolt. Talmudic sources must be taken into account especially when considering the geographical scope of the war and the possible conquest of Jerusalem and the reconstruction of the temple by the rebels. For discussion see Alon 1980–84:430–60, 570–637; Schäfer 1981; Isaac and Oppenheimer 1985.

2. Greek and Latin Sources. The account of Cassius Dio forms the only consistent survey of the war, but the text is preserved only in the medieval epitome of Ioannes Xiphilinus, a monk of the 11th century (*D.C.* lxix 12.1–13, 111 15.1). It is to be noted also that this is a general description of the war, not a chronological account. It must also be noted that Xiphilinus produced not so much a *précis* of Dio's work as a selection usually but not always keeping to the original order and retaining much of Dio's wording. It is therefore quite likely that we have most of what Dio wrote on the subject. The *Historia Augusta* is the only source to mention a ban on circumcision preceding the revolt as the cause of the revolt (*Scriptores Historiae Augustae, vita Hadriani* 14.2). There are altogether four contemporary references to the war:Appianus, *Syriaca* 50.252; Fronto, *de bello Parthico* 2; Pausanias, *Graeciae descriptio* 15.5; and Apollodorus of Damascus 8.10. The last does not even refer to the revolt specifically. Christian sources, remote in time and antagonistic toward the Jews, yet have features in common with the Talmudic sources:references (1) to Bar Kokhba as leader of the revolt, (2) to Tineius Rufus the legate of Judea, and (3) to the fall of Bethar (for the Greek and Latin sources see Stern 1980, nos. 332; 342; 353; 340).

3. Samaritan Chronicles. The Samaritan Chronicles have not been discussed systematically. They date to the Middle Ages and are very probably influenced by the relationship between Jews and Samaritans as it developed in the period after the revolt. See discussion by Alon 1980–84:603–7.

4. Archaeological Exploration. Archaeological evidence is immediately relevant for the study of the Bar Kokhba revolt, the more so given the paucity of literary sources. Particularly important is the coinage, now fully treated by L. Mildenberg (1984). Coin hoards help to determine the geographical scope of the revolt (Barag 1980:30–3). The great size of the Bar Kokhba coinage, and the quantities of coins issued, give an impression of the organization of the rebel government and of the population and the economy of Judea at the time of the revolt. The legends and symbols on the coins embody the only extant contemporary pronouncements of the values and objectives of the insurgents. Among the most spectacular discoveries are the hiding places in the Judean desert with personal belongings and documents of insurgents (see Bar Kokhba Letters below). Also of interest are the numerous subterranean hiding places, some of which were certainly used during the revolt of Bar Kokhba.

B. Causes of the War

The modern literature disagrees on the origins of the war. The following causes or combination of causes are found in recent publications:

(1) The revolt was caused by Hadrian's decision to transform Jerusalem into a pagan city, as stated by Cassius Dio.
(2) It was caused by a ban on circumcision as indicated in the *Historia Augusta.*
(3) These sources are combined. The revolt was then caused by the decision to found Aelia Capitolina and by a ban on circumcision.
(4) Hadrian declared, or was believed to have decided, that the temple in Jerusalem might be rebuilt. When it appeared that he would not permit this the Jews rebelled.

(5) Various scholars have suggested that the destruction of the temple created a psychological climate which led to renewed violence, irrespective of any decisions which may have formed the immediate cause of the revolt.
(6) It has been suggested that the economic situation contributed to the outbreak of the revolt (Alon 1980–84:572–77; Applebaum 1976:385–95).

Most scholars advocate the third alternative in one form or another. Several consider the foundation of Aelia Capitolina the sole cause of the revolt. The various opinions are listed in Isaac and Oppenheimer (1985:44–46). The alleged permission given by Hadrian to rebuild the temple, subsequently withdrawn, is not now ever considered a primary cause of the revolt, but some contemporary studies are not prepared to reject the theory absolutely and assume there may be some truth in it. In this connection the importance of the coinage must be emphasized. The coin legends "Jerusalem" and "For the Freedom of Jerusalem" and the design of the temple on the coinage are to be considered progammatic declarations (Mildenberg 1980:325; 1984:29–31). This evidence does not allow a determination as to whether Jerusalem was taken by the insurgents, but the coins are the only extant contemporary pronouncements regarding the values and objectives of the rebels. They provide clear evidence of the central importance of Jerusalem in the war.

Far more obscure is the testimony of the fifth Sibylline Oracle, composed by a Jew before the end of Hadrian's reign. Lines 46–50 contain praise of Hadrian which has been variously interpreted (1) as confirmation that Hadrian was popular among the Jews early in his reign (Alon 1980–84:453) or (2) as an indication of the attitude of the Jews toward Hadrian at the time of his visit in Judea in 130 C.E. (Bowersock 1980:134). Note also the different view of Schäfer 1981:48–50.

The date of the formal foundation of the Roman colony of Aelia Capitolina before the outbreak of the war can still be inferred only from the testimony of Cassius Dio. Archaeological excavations in Jerusalem have so far produced few remains of the Roman city and certainly do not allow any chronological conclusions as regards the foundation of the colony. Attempts to resolve the problem once and for all with the help of numismatic evidence are unconvincing (Mildenberg 1980:333). The lack of proof naturally does not justify conclusions to the contrary, for Cassius Dio still contains the only explicit pronouncement on the subject.

It may be added that the various opinions expressed in the modern literature on the causes of the revolt often reflected and still reflect varying attitudes toward the Roman empire, the Jewish people, and resistance to imperial authority. Another factor which often determines interpretations is the evaluation of Talmudic sources, considered by some unsuitable as historical source material, by others valuable if judiciously interpreted.

C. Prior Unrest

There is no historical source which offers a running account of the period between the first revolt in 70 C.E. and the Bar Kokhba war, and recourse must be had to Talmudic literature and isolated items such as inscriptions and archaeological material. It is likely that there existed a connection between the activities of the Jewish authorities at Jabneh and the outbreak of the revolt, notably their emphatic expectations of the speedy reconstruction of the temple and the unity of the Jewish people (Alon 1980–84:111–8; 253–65; 288–307). The fierce rebellion of the Jews in the Diaspora in 115–117 C.E. is well attested, but it is a matter of debate to what extent the Jews in Judea participated (Isaac and Oppenheimer 1985:50, n. 70). One Roman action is certain and may be relevant:the Roman garrison was strengthened well before the outbreak of the revolt, possibly in or after 117 C.E. (Isaac and Roll 1979:54–66). This definitely shows that the garrison left by Titus in 70 C.E. was insufficient after several decades and that there was serious unrest in Judea.

The only explicit statement in any historical source is again found in the work of Cassius Dio, who tells that preparations for the war were made during the period between Hadrian's visit to Judea (in 130 C.E.) and the outbreak of the revolt. The latter is dated 132 according to Eusebius' *Chronicle* (see Schürer *HJP²* 1:542, n. 126).

D. Course of the War

Given the paucity of literary sources, any attempt to describe the course of the war is speculative. We know nothing of the first stage of the revolt beyond the fact that it was successful enough for a provisional administration to function, as reflected in the documents discovered in the Judean desert. Another major project realized by the rebel government was the reissue of great quantities of local city coinage (Mildenberg 1984).

1. The Geographical Scope of the Revolt. The available evidence relates almost exclusively to Judea in the narrow and proper sense. A number of references in Talmudic sources may point to incidents in Galilee, but otherwise there is no clear proof that the war spread to that region. There is, however, no consensus on these matters (various opinions cited in Isaac and Oppenheimer 1985:53, n. 88). Nevertheless it is indisputable that all hoards containing Jewish coins of the revolt were discovered in Judea, notably in the Hebron mountains, west of Jerusalem, and in the Judean desert (Barag 1980). Further confirmation of the fact that the focus of rebellion was in Judea is found in Talmudic sources which contain enactments dealing with the acquisition by Jews of landed property, confiscated by the Romans *(siqārîqôn).* These were temporarily annulled in Judea, but not in Galilee. This is best explained by assuming that it was a response to large-scale land expropriations by the Romans. The intention was to preserve Jewish occupation of the land in Judea, while there was apparently no need for such measures in Galilee (*j. Giṭ.* v 47b).

After the revolt the focus of Jewish life was transferred to Galilee and the authorities established themselves at the village of Ushah (Alon 1980–84:663–80). The movement of refugees from Judea to Galilee is illustrated by the organization in settlements in Galilee of priestly courses which were in Judea in the period of the Second Temple (Klein 1967:62–68; Avi-Yonah 1962:137–9; Kahane 1978–79:9–29).

2. Conquest of Jerusalem. There is no decisive evidence to show whether Jerusalem was captured by the Jews in the revolt. The best source, Cassius Dio, is silent on the subject. Appianus and Christian authors lend support to the view that the city fell into Jewish hands and was reconquered by Roman troops (Appianus, *Syriaca* 50.252; Eusebius, *d.c.* vi 18.10; *h.e.* iv 5.2; v 12.1). The coin legend "For the Freedom of Jerusalem" has been explained as celebrating the capture of the city, and the legend "Jerusalem" has been interpreted as a mint indication. Both, however, may equally well be considered programmatic statements, expressing hopes or aims rather than achievements (Mildenberg 1984:29–31). Serious doubts are raised by the archaeological evidence, for in the excavations carried out in the Old City of Jerusalem since 1967 almost no coins of the Bar Kokhba revolt have been found (Applebaum 1976:27; more recent publications have not altered the validity of this observation).

3. The Roman Forces. Since there is no literary source which gives a full list, at least of the legions involved in the suppression in the revolt, we must have recourse to random information derived from epigraphic discoveries. As a result it is impossible to estimate the numbers of troops in Judea at any stage of the war (Schürer *HJP²* 1:547–9, n. 150; further references in Isaac and Oppenheimer 1985:56, n. 102). The governor of Judea at the outbreak of the war was Tineius Rufus (Eusebius, *h.e.* iv 6.1; *Chron. Hadr.* xvi; see also the Talmudic sources). He was a consular by that time (*HJP²* 1:518). Fronto, *de bello Parthico* 2, refers to great numbers of Roman soldiers killed under Hadrian in Britain (ca. 118 C.E.) and in the Jewish rebellion. Pausanias, *Graeciae descriptio* 15.5, another contemporary author, mentions the Jewish war as the only event to disturb the peace in Hadrian's reign. Cassius Dio states that Hadrian sent his best officers to Judea under the supreme command of Julius Severus (lxix 13.2; cf. the career inscription *ILS* 1056) and also notes the great number of Roman casualties (14.3). Finally it may be considered certain that Hadrian himself traveled to Judea during the war. This may be inferred from Dio *(loc. cit.),* Hadrian writing to the Senate, and from a letter written by Appollodorus of Damascus to Hadrian about siege implements (Stern 1980:136, no. 322; also:Jerome, in *Joel* i 4; *Chronicon Paschale* i). It is proved by several inscriptions: *ILS* 1065, which mentions Q. Lollius Urbicus as legate of Hadrian; and *CIL* vi 974, which refers to Hadrian himself. Finally there is evidence of the participation of praetorian cohorts in the war which presumably indicates that these accompanied the emperor to Judea (*ILS* 2081).

E. Bar Kokhba, Leader of the Revolt

It is no coincidence that the revolt of Bar Kokhba was the only Jewish war fought against foreign rule in antiquity to have been named after one leader (for instance: *S. Olam Rab.*:"the war of Ben Koziba"). In Talmudic sources he is given the titles *nāśîʾ* ("ruler" or "prince") and "Messiah," and the years of his reign are described as "kingship" (for instance, *b. Sanh.* 97b). In his letters he assumes the title *nĕśîʾ yiśraʾēl,* and on coins he appears as "*šimʿôn nĕśîʾ yiśrāʾēl.*" The title *nāśîʾ* has been interpreted in various ways. It has been explained as denoting a limited form of authority, lower in status than that of king and comparable to that of ethnarch, the title of the first Hasmonaean rulers (Alon 1980–84:622). Others assume that it refers to the ideal king as in Ezekiel's vision of the end of Days (Oppenheimer 1982:51).

R. Akiba declared of Bar Kokhba, "This is the King Messiah" (*j. Taʿan.* iv 68d; cf. *Lam. Rab.* ii 4). The role of messiah, attributed to him, has also been variously interpreted as a divine and supernatural savior and redeemer, and as a general and leader of ordinary human stature whose title merely emphasizes his royal rank (see Oppenheimer 1983, with further references).

Bar Kokhba is not mentioned by Cassius Dio or in the *Historia Augusta.* In literary sources he appears only in Talmudic literature and in Christian sources. These describe him as a murderer and a bandit, but at the same time they attribute to him miracles and supernatural signs (Eusebius, *h.e.* iv 6, 2; Jerome, *Apol.* in *Libr. Rufini* iii 31; and Alon 1980–84:ii.34).

Talmudic sources refer to Bar Kokhba ambivalently. On the one hand they emphasize his legendary strength, R. Akiba's admiration for him, and even his obedience to the sages. On the other, they criticize his addresses to God, "Do not help and do not humiliate," and it is said that he was put to death by the sages when it appeared that he was a false messiah. The Talmud recalls him as Ben Koziba, "son of a lie," a pejorative play on his actual name, Bar/Ben Kosiba (as found in the Bar Kokhba letters). He apparently was designated Bar Kokhba, "son of a star," (a messianic designation) by his supporters.

Bar Kokhba's letters, discovered in the Judean desert, give a partial but genuine impression of his personality. He seems to have been a forceful general and ruler who dealt in person with details of discipline and daily life in his army units. His leadership extended beyond the sphere of military matters, for part of his letters are concerned with the leasing of lands on his behalf. It can be seen that he insisted on the observance of religious commandments such as those of the Sabbath, the four types of tree branches for *sūkkôt* (the Feast of Tabernacles), and precepts connected with the produce of the land.

F. The Aftermath

Talmudic literature gives vivid and extensive descriptions of the horrors of the Jewish defeat, and much is written about the bitter fate of the besieged at Bethar (*j. Taʿan.* iv 69a; *Lam. Rab.* ii 4; archaeological evidence from the "Cave of Horrors," Aharoni 1962:186–99). Cassius Dio emphasizes the extent of the destruction in Judea, the numbers of those fallen in battle and the destruction of forts and settlements. After the revolt the Romans issued a series of disciplinary decrees, the nature of which has been much debated (Herr 1972; Lieberman 1939–44; 1975; Schäfer 1981:194–235).

AHARON OPPENHEIMER

BAR KOKHBA LETTERS

The Bar Kokhba Letters are autograph letters and documents written in Hebrew, Aramaic, and Greek, which were discovered in caves W of the Dead Sea between 1950 and 1965. Some were actually written by Simon bar Kosiba, leader of the Second Jewish Revolt (ca. 132–135 C.E.), and all constitute important sources for this historical event.

A. Introduction and History of the Finds

It is a rare and transporting occurrence in the study of the ancient world when one comes face to face with new and unquestionably genuine material written by a known historical figure. Yet that is what has happened in the case of the legendary leader of the Second Jewish Revolt against Rome, Bar Kokhba—and not just once, but several times. Classical and rabbinic sources had provided some information on this man and the war, usually dated 132–135 C.E. But the Greek and Latin authors had no interest in the details of the conflict, about which they were silent. The rabbinic sources added little in the way of solid historical facts; they incarnated a minimal skeleton of fact with the flesh of fantasy and legend. Thus there was tremendous excitement when, beginning in the early 1950s and continuing for about a decade, documentary materials from the time of Bar Kokhba came to light. It is necessary to consider the letters in the context of all of these materials for reasons which will become clear.

Written materials from caves in the Wadi Murabba‘at began to turn up in Jerusalem late in 1951. An archaeological expedition was mounted to explore four caves between 21 January and 21 March 1952. Along with significant biblical manuscripts, documents written in Hebrew, Aramaic, Greek, and Arabic were discovered. These documents spanned the period from the 1st century C.E. to about the 10th century, but by far the most important ones date to the time of the Second Revolt. In addition to a number of letters from Bar Kokhba to his lieutenants, contracts written during his regime or just prior to it shed significant light on the situation at the time of the war. Without them the already enigmatic letters would be even more difficult to interpret.

At this same time, Bedouin had discovered and now offered for sale additional materials related to the revolt. The find spot for these materials was for long a mystery, but it later was discovered that Bedouin had pilfered one or more caves in the Wadi Seiyal (Naḥal Ṣeelim). They apparently also had found materials in the nearby caves of Wadi Ḫabra (Naḥal Ḥever). Naḥal Ṣeelim was explored by Israeli archaeologists between 24 January and 2 February 1960, but the documentary finds were extremely fragmentary. Archaeologists also investigated Naḥal Ḥever during a two-week campaign in 1960 and

again in the spring of 1961. The discoveries here were spectacular. One of the caves, known as the "Cave of Letters," yielded three separate collections of documents. The first was a packet of fifteen letters, many from Bar Kokhba himself but some from subordinates, to military leaders in charge at En-Gedi. This was an important military site in the Second Revolt located four and one-half km N of the caves. A second group of materials, the "Archive of the En-Gedites," comprises a group of six contracts concerned with the leasing of state lands. These are written in Hebrew and Aramaic. The third group of documents from the Cave of Letters was the archive of Babatha daughter of Simeon. This group numbered 36 or 37 (the number is uncertain because of unplaceable fragments), and deals with property and litigation concerned with Babatha and her family. The dates span the years 93/94–132 C.E., and the documents are in Nabatean, Aramaic, and Greek. Although Babatha lived most of her life in Maoza, in the Roman province of Arabia, at the outbreak of the war she evidently fled to En-Gedi and, eventually, to the cave where her archive was unearthed.
